FINAL COURSE STUDY MATERIAL

PAPER 1

FINANCIAL REPORTING

MODULE – 1

BOARD OF STUDIES
THE INSTITUTE OF CHARTERED ACCOUNTANTS OF INDIA

This Study Material has been prepared by the faculty of the Board of Studies. The objective of the Study Material is to provide teaching material to the students to enable them to obtain knowledge and skills in the subject. In case students need any clarifications or have any suggestions to make for further improvement of the material contained herein, they may write to the Director of Studies.

All care has been taken to provide interpretations and discussions in a manner useful for the students. However, the Study Material has not been specifically discussed by the Council of the Institute or any of its Committees and the views expressed herein may not be taken to necessarily represent the views of the Council or any of its Committees.

Revised Edition	:	January, 2017
Website	:	www.icai.org
Department/ Committee	:	Board of Studies
E-mail	:	bosnoida@icai.in
ISBN No.	:	
Price	:	
Published by	:	The Publication Department on behalf of The Institute of Chartered Accountants of India, ICAI Bhawan, Post Box No. 7100, Indraprastha Marg, New Delhi-110 002, India. Typeset and designed at Board of Studies.
Printed by	:	

SYLLABUS

PAPER 1 : FINANCIAL REPORTING

(One paper – Three hours – 100 marks)

Level of Knowledge: Advanced knowledge

Objectives:

(a) To gain ability to analyze financial statements including consolidated financial statements of group companies and financial reports of various types of entities,

(b) To gain ability to apply valuation principles,

(c) To familiarise with recent developments in the area of financial reporting,

(d) To gain ability to solve financial reporting and valuation cases.

Contents:

1. Accounting Standards and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

2. Introduction of Indian Accounting Standards (Ind AS); Comparative study of ASs vis-a-vis Ind ASs; Carve outs/ins in Ind ASs vis-à-vis International Financial Reporting Standards (IFRSs).

3. Corporate Financial Reporting - Issues and problems with special reference to published financial statements.

4. Accounting for Corporate Restructuring (including inter-company holdings).

5. Consolidated Financial Statements of Group Companies

   Concept of a Group, purposes of consolidated financial statements, minority interest, Goodwill , Consolidation procedures – Minority interests, Goodwill, Treatment of pre-acquisition and post-acquisition profit .

   Consolidation with two or more subsidiaries, consolidation with foreign subsidiaries.

   Consolidated profit and loss account, balance sheet and cash flow statement.

   Treatment of investment in associates in consolidated financial statements.

   Treatment of investments in joint ventures in consolidated financial statements.

6. Accounting and reporting of financial instruments

   Meaning, recognition, derecognition and offset, compound financial instruments

Measurement of financial instruments

Hedge accounting

Disclosures

7. Share based payments

   Meaning, Equity settled transactions, Transaction with employees and non- employees

   Determination of fair value of equity instruments

   Vesting conditions

   Modification, cancellation and settlement

   Disclosures

8. Financial Reporting by Mutual funds, Non-banking finance companies, Merchant bankers, Stock and commodity market intermediaries.

9. Valuation

   (a) Concept of Valuation

   (b) Valuation of Tangible Fixed Assets

   (c) Valuation of Intangibles including brand valuation and valuation of goodwill

   (d) Valuation of liabilities

   (e) Valuation of Shares

   (f) Valuation of Business

10. Developments in Financial Reporting

   (a) Value Added Statement

   (b) Economic Value Added, Market Value Added, Shareholders' Value Added

   (c) Human Resource Reporting

Note– If either old Accounting Standards (ASs), Guidance Notes (GNs), Announcements and Limited Revisions to ASs are withdrawn or new ASs, GNs, Announcements and Limited Revisions to AS are issued by the Institute of Chartered Accountants of India in place of existing ASs, GNs, Announcements and Limited Revisions to AS, the syllabus will accordingly exclude / include such new developments in the place of the existing ones with effect from the date to be notified by the Institute.

A WORD ABOUT STUDY MATERIAL

The paper of Financial Reporting in the Final Course concentrates on aspects of preparing and analyzing financial statements. Students are expected to acquire advanced knowledge in this paper. The importance of the subject of financial reporting is growing over the years due to various factors like liberalization, flow of cross-border capital, emergence of global corporations and movement towards better corporate governance practices. Standardization of accounting policies and financial reporting norms are significant aspects that make the subject more interesting in the recent years. It may be noted that significant changes are taking place in the area of Accounting Standards and Guidance Notes. Many new Accounting Standards and Guidance Notes have been formulated by the Institute of Chartered Accountants of India keeping in mind the growing importance of financial reporting in the corporate scenario. Existing Accounting Standards and Guidance Notes are also revised from time to time. Keeping all this in view, it has been decided to publish a separate book containing the Framework for Preparation and Presentation of Financial Statements, Accounting Standards and relevant Guidance Notes. For text of Framework for Preparation and Presentation of Financial Statements, Accounting Standards and Guidance Notes the students are advised to refer the publication on Accounting Pronouncements.

The students are required to develop understanding of the Accounting Standards and the relevant Guidance notes and gain ability to apply the provisions contained therein to practical situations. The last decade has witnessed a sea change in the global economic scenario. The emergence of transnational corporations in search of money, not only for fuelling growth, but to sustain ongoing activities has necessitated raising of capital from all parts of the world. When an enterprise decides to raise capital from the foreign markets, the rules and regulations of that country will apply and the enterprise should be able to understand the differences between the rules governing financial reporting in the foreign country as compared to that of its own country. Thus translations and re-instatements of financial statements are of great significance. Therefore, chapter based on Indian Accounting Standards, has also been included in the Final Course curriculum.

The Financial Reporting study material has been divided into three modules dealing with conceptual theoretical framework of the topics specified in the syllabus in detail while practice manual contains number of illustrations for practice. Care has been taken to present the chapters in the same sequence as prescribed in the syllabus to facilitate easy understanding by the students. Small illustrations have been incorporated in each chapter/unit to explain the concepts/principles covered in the chapter/unit.

The students are expected to cover the entire syllabus and practice on their own while going through the Practice Manual. The main aim of the Practice Manual is to provide guidance as to the manner of writing answers in the examination. The Practice Manual will serve as a useful and handy reference guide while preparing for Final Examination. Further, it will enhance the understanding about the pattern of questions set and the manner of answering such questions. It will enable solving the problems in the best possible manner and guide the students to improve their performance in the examinations. It will also help them to work upon their grey areas and plan a strategy to tackle theoretical as well as practical problems.

Students are also advised to update themselves with the latest changes in the area of financial reporting. For this they may refer to academic updates in the monthly journal 'The Chartered Accountant' and the Students' Journal 'The Chartered Accountant Student' (published by the Board of Studies), financial newspapers, SEBI and Corporate Law Journal, published financial statements of companies etc. Latest relevant amendments in SEBI Regulations, notified sections of the Companies Act, 2013 and RBI notifications for NBFCs have been incorporated in this revised edition.

An effort has been made to arrange the questions in more logical manner i.e. sub-topic wise or on the basis of accounting standards to will help the students in preparing for the Final Course Examination.

Any additions made in the chapters, whether theoretical or practical illustrations, have been highlighted with grey shading or in bold-italics in the study material for easy identification and quick reference.

In case you need any clarification/guidance, you may send your queries at seema@icai.in; shilpa@icai.in; asha.verma@icai.in.

Happy Reading and Best Wishes!

SIGNIFICANT ADDITIONS/AMENDMENTS IN THIS EDITION

Chapter/Unit No.	Name of the Chapter	Changes
Chapter 1	Accounting Standards and Guidance Notes	
Unit 3	Valuation of Inventories	Para 3.6 amended
Unit 5	Contingencies and Events occurring after the Balance Sheet Date	Para 5.3 amended
	Unit on Depreciation Accounting	Deleted
Unit 9	Property, Plant and Equipment	Newly added by deleting the old unit on 'Accounting for Fixed Assets'
Unit 12	Accounting for Investment	Para 12.7 amended
Unit 13	Accounting for Amalgamation	Para 13.2 amended
		Para 13.7 amended

Accounting Standards and Guidance Notes

UNIT 1: INTRODUCTION TO ACCOUNTING STANDARDS

Accounting Standards (ASs) are written policy documents issued by expert accounting body or by government or other regulatory body covering the aspects of recognition, measurement, treatment, presentation and disclosure of accounting transactions in the financial statements.

1.1 Objectives of Accounting Standards

Accounting as a 'language of business' communicates the financial results of an enterprise to various stakeholders by means of financial statements. If the financial accounting process is not properly regulated, there is possibility of financial statements being misleading, tendentious and providing a distorted picture of the business, rather than the true state of affairs. In order to ensure transparency, consistency, comparability, adequacy and reliability of financial reporting, it is essential to standardize the accounting principles and policies. Accounting Standards provide framework and standard accounting policies so that the financial statements of different enterprises become comparable.

The Accounting Standards reduce the accounting alternatives in the preparation of rational financial statements thereby ensuring comparability of financial statements of different enterprises. The Accounting Standards deal with the issues of

(i) recognition of events and transactions in the financial statements,

(ii) measurement of these transactions and events,

(iii) presentation of these transactions and events in the financial statements in a manner that is meaningful and understandable to the reader, and

(iv) the disclosure requirements which should be there to enable the public at large and the stakeholders and the potential investors in particular, to get an insight into these financial statements which helps the users to take prudent and informed business decisions.

The objective of Accounting Standards is to standardize diverse accounting policies with a view to eliminate, to the maximum possible extent,

(i) the non-comparability of financial statements and thereby improving the reliability of financial statements, and

(ii) to provide a set of standard accounting policies, valuation norms and disclosure requirements.

The Institute of Chartered Accountants of India (ICAI), being a premier accounting body in the country, took upon itself the leadership role by constituting the Accounting Standards Board (ASB) in 1977. The ICAI has taken significant initiatives in the setting and issuing procedure of Accounting Standards to ensure that the standard-setting process is fully consultative and transparent. The ASB considers the International Accounting Standards (IASs)/International Financial Reporting Standards (IFRSs) while framing Indian Accounting Standards (ASs) and try to integrate them, in the light of the applicable laws, customs, usages and business environment in the country. The concept of Accounting Standards and the standards setting process in India has already been discussed, in detail, in Intermediate (IPC) Paper 1: Accounting Study Material – Chapter 1.

1.2 Benefits and Limitations

Accounting standards seek to describe the accounting principles, the valuation techniques and the methods of applying the accounting principles in the preparation and presentation of financial statements so that they may give a true and fair view. By setting the accounting standards the accountant has following benefits:

(i) Standards reduce to a reasonable extent or eliminate altogether confusing variations in the accounting treatments used to prepare financial statements.

(ii) There are certain areas where important information are not statutorily required to be disclosed. Standards may call for disclosure beyond that required by law.

(iii) The application of accounting standards would, to a limited extent, facilitate comparison of financial statements of companies situated in different parts of the world and also of different companies situated in the same country. However, it should be noted in this respect that differences in the institutions, traditions and legal systems from one country to another give rise to differences in accounting standards adopted in different countries.

However, there are some limitations of setting of accounting standards:

(i) Alternative solutions to certain accounting problems may each have arguments to recommend them. Therefore, the choice between different alternative accounting treatments may become difficult.

(ii) There may be a trend towards rigidity and away from flexibility in applying the accounting standards.

(ii) Accounting standards cannot override the statute. The standards are required to be framed within the ambit of prevailing statutes.

1.3 Standard-Setting Process

The need for accounting standards specifically suitable for the country's economic environment was also felt in India. Recognising the need to harmonise the diverse accounting policies and practices in India and keeping in view the international developments in the field of accounting, the Council of the Institute of Chartered Accountants of India (ICAI) constituted the Accounting Standards Board (ASB) on 21st April, 1977. The composition of ASB is broad based to ensure due representation and the participation of all those who are interested in the formulation and implementation of these standards. Apart from the elected members of the Council of the ICAI nominated on the ASB, there are various Central Government nominees, nominees from various other professional institutes like the Institute of Cost Accountants of India, Institute of Company Secretaries of India, Representatives of Industry Associations, Reserve Bank of India, Securities and Exchange Board of India, Controller General of Accounts, Central Board of Excise and Customs, Representative of Academic and Financial Institutions, other eminent professionals co-opted by the ICAI and any representative(s) of other body, as considered appropriate by the ICAI.

The preliminary drafts of the standards are prepared by the Study Groups which take up specific subjects assigned to them. The draft so prepared is considered by ASB and sent to various outside bodies like FICCI, ASSOCHAM, SCOPE, CLB, C & AG, ICAI (earlier ICWAI), ICSI, CBDT etc. After taking into consideration their views, the draft of the standards is issued as an Exposure Draft (ED) for comments by members of ICAI and the public at large. The comments on the ED are considered by ASB and a final draft of the standard is submitted to the Council of the ICAI for its approval and is thereafter issued as a definitive standard.

1.4 How Many Accounting Standards?

The council of the Institute of Chartered Accountants of India has, so far, issued ***thirty-two Accounting Standards. However, AS 6 on 'Depreciation Accounting' has been withdrawn on revision of AS 10 'Property, Plant and Equipment*' and*** AS 8 on 'Accounting for Research and Development' has been withdrawn consequent to the issuance of AS 26 on 'Intangible Assets'. Thus effectively, there are ***30*** Accounting Standards at present. The 'Accounting Standards' issued by the Accounting Standards Board establish standards which have to be complied by the business entities so that the financial statements are prepared in accordance with generally accepted accounting principles.

1.5 Status of Accounting Standards

It has already been mentioned that the standards are developed by the Accounting Standards Board (ASB) of the Institute of Chartered Accountants of India and are issued under the authority of its Council. The institute not being a legislative body can enforce compliance with its standards only by its members. Also, the standards cannot override laws and local regulations. The accounting standards are nevertheless made mandatory from the dates specified in respective standards and are generally applicable to all enterprises, subject to certain exception as stated below. The implication of mandatory status of an accounting standard depends on whether the statute governing the enterprise concerned requires compliance with the standard. The Companies Act had earlier notified 28 accounting standards and mandated the corporate entities to comply with the provisions stated therein. ***However, in 2016 the MCA has***

* Earlier AS 10 was on 'Accounting for Fixed Assets'.

withdrawn AS 6. Hence, effectively there are now only 27 notified accounting standards as per the Companies (Accounting Standards) Rules, 2006 (as amended in 2016).

In assessing whether an accounting standard is applicable, one must find correct answer to the following three questions.

(a) Does it apply to the enterprise concerned? If yes, the next question is:

(b) Does it apply to the financial statement concerned? If yes, the next question is:

(c) Does it apply to the financial item concerned?

The preface to the statements of accounting standards answers the above questions.

1.6 Applicability of Accounting Standards

For the purpose of compliance of the accounting Standards, the ICAI had earlier issued an announcement on 'Criteria for Classification of Entities and Applicability of Accounting Standards'. As per the announcement, entities were classified into three levels. Level II entities and Level III entities as per the said Announcement were considered to be Small and Medium Entities (SMEs).

However, when the accounting standards were notified by the Central Government in consultation with the National Advisory Committee on Accounting Standards*, the Central Government also issued the 'Criteria for Classification of Entities and Applicability of Accounting Standards' for the companies.

According to the 'Criteria for Classification of Entities and Applicability of Accounting Standards' as issued by the Government, there are two levels, namely, Small and Medium-sized Companies (SMCs) as defined in the Companies (Accounting Standards) Rules, 2006 and companies other than SMCs. Non-SMCs are required to comply with all the Accounting Standards in their entirety, while certain exemptions/ relaxations have been given to SMCs.

Consequent to certain differences in the criteria for classification of the levels of entities as issued by the ICAI and as notified by the Central Government for companies, the Accounting Standard Board of the ICAI decided to revise its ''Criteria for Classification of Entities and Applicability of Accounting Standards' and make the same applicable only to non-corporate entities. Though the classification criteria and applicability of accounting standards has been

*The Companies Act, 1956 is being replaced by the Companies Act 2013 in a phased manner. Now, as per Section 133 of the Companies Act, 2013, the Central Government may prescribe the standards of accounting or any addendum thereto, as recommended by the Institute of Chartered Accountants of India, constituted under section 3 of the Chartered Accountants Act, 1949, in consultation with and after examination of the recommendations made by the National Financial Reporting Authority (NFRA). Section 132 of the Companies Act, 2013 deals with constitution of NFRA. It may be noted that this section is not notified till 30th November, 2016.

However, the Ministry of Corporate Affairs has, vide clarification dated 13th September, 2013, announced that the existing Accounting Standards notified under the Companies Act, 1956 shall continue to apply till the Standards of Accounting or any addendum thereto are prescribed by Central Government in consultation and recommendation of the National Financial Reporting Authority.

largely aligned with the criteria prescribed for corporate entities, it was decided to continue with the three levels of entities for non-corporate entities vis-à-vis two levels prescribed for corporate entities as per the government notification.

'Criteria for Classification of Entities and Applicability of Accounting Standards' for corporate entities and non-corporate entities have been explained in the coming paragraphs.

1.6.1 Criteria for classification of non-corporate entities as decided by the Institute of Chartered Accountants of India

Level I Entities

Non-corporate entities which fall in any one or more of the following categories, at the end of the relevant accounting period, are classified as Level I entities:

(i) Entities whose equity or debt securities are listed or are in the process of listing on any stock exchange, whether in India or outside India.

(ii) Banks (including co-operative banks), financial institutions or entities carrying on insurance business.

(iii) All commercial, industrial and business reporting entities, whose turnover (excluding other income) exceeds rupees fifty crore in the immediately preceding accounting year.

(iv) All commercial, industrial and business reporting entities having borrowings (including public deposits) in excess of rupees ten crore at any time during the immediately preceding accounting year.

(v) Holding and subsidiary entities of any one of the above.

Level II Entities (SMEs)

Non-corporate entities which are not Level I entities but fall in any one or more of the following categories are classified as Level II entities:

(i) All commercial, industrial and business reporting entities, whose turnover (excluding other income) exceeds rupees one crore* but does not exceed rupees fifty crore in the immediately preceding accounting year.

(ii) All commercial, industrial and business reporting entities having borrowings (including public deposits) in excess of rupees one crore but not in excess of rupees ten crore at any time during the immediately preceding accounting year.

(iii) Holding and subsidiary entities of any one of the above.

Level III Entities (SMEs)

Non-corporate entities which are not covered under Level I and Level II are considered as Level III entities.

*This change is made as per the announcement 'Revision in the criteria for classifying Level II non-corporate entities'. This revision is applicable with effect from the accounting year commencing on or after April 01, 2012.

Additional requirements

(1) An SME which does not disclose certain information pursuant to the exemptions or relaxations given to it should disclose (by way of a note to its financial statements) the fact that it is an SME and has complied with the Accounting Standards insofar as they are applicable to entities falling in Level II or Level III, as the case may be.

(2) Where an entity, being covered in Level II or Level III, had qualified for any exemption or relaxation previously but no longer qualifies for the relevant exemption or relaxation in the current accounting period, the relevant standards or requirements become applicable from the current period and the figures for the corresponding period of the previous accounting period need not be revised merely by reason of its having ceased to be covered in Level II or Level III, as the case may be. The fact that the entity was covered in Level II or Level III, as the case may be, in the previous period and it had availed of the exemptions or relaxations available to that Level of entities should be disclosed in the notes to the financial statements.

(3) Where an entity has been covered in Level I and subsequently, ceases to be so covered, the entity will not qualify for exemption/relaxation available to Level II entities, until the entity ceases to be covered in Level I for two consecutive years. Similar is the case in respect of an entity, which has been covered in Level I or Level II and subsequently, gets covered under Level III.

(4) If an entity covered in Level II or Level III opts not to avail of the exemptions or relaxations available to that Level of entities in respect of any but not all of the Accounting Standards, it should disclose the Standard(s) in respect of which it has availed the exemption or relaxation.

(5) If an entity covered in Level II or Level III desires to disclose the information not required to be disclosed pursuant to the exemptions or relaxations available to that Level of entities, it should disclose that information in compliance with the relevant Accounting Standard.

(6) An entity covered in Level II or Level III may opt for availing certain exemptions or relaxations from compliance with the requirements prescribed in an Accounting Standard: Provided that such a partial exemption or relaxation and disclosure should not be permitted to mislead any person or public.

(7) In respect of Accounting Standard (AS) 15, *Employee Benefits*, exemptions/ relaxations are available to Level II and Level III entities, under two sub-classifications, viz., (i) entities whose average number of persons employed during the year is 50 or more, and (ii) entities whose average number of persons employed during the year is less than 50. The requirements stated in paragraphs (1) to (6) above, mutatis mutandis, apply to these sub-classifications.

Illustration 1

M/s Omega & Co. (a partnership firm), had a turnover of ₹ 1.25 crores (excluding other income) and borrowings of ₹ 0.95 crores in the previous year. It wants to avail the exemptions available in application of Accounting Standards to non-corporate entities for the year ended 31.3.2016. Advise the management *of M/s Omega & Co in respect of the exemptions of provisions of ASs, as per the directive issued by the ICAI.*

Solution

The question deals with the issue of Applicability of Accounting Standards to a non-corporate entity. For availment of the exemptions, first of all, it has to be seen that M/s Omega & Co. falls in which level of the non-corporate entities. Its classification will be done on the basis of the classification of non-corporate entities as prescribed by the ICAI. According to the ICAI, non-corporate entities can be classified under 3 levels viz Level I, Level II (SMEs) and Level III (SMEs).

An entity whose turnover (excluding other income) does not exceed rupees fifty crore in the immediately preceding accounting year, will fall under the category of Level I entities. Non-corporate entities which are not Level I entities but fall in any one or more of the following categories are classified as Level II entities:

(i) All commercial, industrial and business reporting entities, whose turnover (excluding other income) exceeds rupees one crore but does not exceed rupees fifty crore in the immediately preceding accounting year.

(ii) All commercial, industrial and business reporting entities having borrowings (including public deposits) in excess of rupees one crore but not in excess of rupees ten crore at any time during the immediately preceding accounting year.

(iii) Holding and subsidiary entities of any one of the above.

As the turnover of M/s Omega & Co. is more than ₹ 1 crore, it falls under 1st criteria of Level II non-corporate entities as defined above. Even if its borrowings of ₹ 0.95 crores is less than ₹ 1 crores, it will be classified as Level II Entity. In this case, AS 3, AS 17, AS 21, AS 23, AS 27 will not be applicable to M/s Omega & Co. Relaxations from certain requirements in respect of AS 15, AS 19, AS 20, AS 25, AS 28 and AS 29 are also available to M/s Omega & Co.

1.6.2 Criteria for classification of Companies under the Companies (Accounting Standards) Rules, 2006

Small and Medium-Sized Company (SMC) as defined in Clause 2(f) of the Companies (Accounting Standards) Rules, 2006:

"Small and Medium Sized Company" (SMC) means, a company-

(i) whose equity or debt securities are not listed or are not in the process of listing on any stock exchange, whether in India or outside India;

(ii) which is not a bank, financial institution or an insurance company;

(iii) whose turnover (excluding other income) does not exceed rupees fifty crore in the immediately preceding accounting year;

(iv) which does not have borrowings (including public deposits) in excess of rupees ten crore at any time during the immediately preceding accounting year; and

(v) which is not a holding or subsidiary company of a company which is not a small and medium-sized company.

Explanation: For the purposes of clause 2(f), a company shall qualify as a Small and Medium Sized Company, if the conditions mentioned therein are satisfied as at the end of the relevant accounting period.

Non-SMCs

Companies not falling within the definition of SMC are considered as Non- SMCs.

Instructions

A. General Instructions

1. SMCs shall follow the following instructions while complying with Accounting Standards under these Rules:

    1.1 The SMC which does not disclose certain information pursuant to the exemptions or relaxations given to it shall disclose (by way of a note to its financial statements) the fact that it is an SMC and has complied with the Accounting Standards insofar as they are applicable to an SMC on the following lines:

    "The Company is a Small and Medium Sized Company (SMC) as defined in the General Instructions in respect of Accounting Standards notified under the Companies Act Accordingly, the Company has complied with the Accounting Standards as applicable to a Small and Medium Sized Company."

    1.2 Where a company, being an SMC, has qualified for any exemption or relaxation previously but no longer qualifies for the relevant exemption or relaxation in the current accounting period, the relevant standards or requirements become applicable from the current period and the figures for the corresponding period of the previous accounting period need not be revised merely by reason of its having ceased to be an SMC. The fact that the company was an SMC in the previous period and it had availed of the exemptions or relaxations available to SMCs shall be disclosed in the notes to the financial statements.

    1.3 If an SMC opts not to avail of the exemptions or relaxations available to an SMC in respect of any but not all of the Accounting Standards, it shall disclose the standard(s) in respect of which it has availed the exemption or relaxation.

    1.4 If an SMC desires to disclose the information not required to be disclosed pursuant to the exemptions or relaxations available to the SMCs, it shall disclose that information in compliance with the relevant accounting standard.

    1.5 The SMC may opt for availing certain exemptions or relaxations from compliance with the requirements prescribed in an Accounting Standard:

    Provided that such a partial exemption or relaxation and disclosure shall not be permitted to mislead any person or public.

B Other Instructions

Rule 5 of the Companies (Accounting Standards) Rules, 2006, provides as below:

"5. An existing company, which was previously not a Small and Medium Sized Company (SMC) and subsequently becomes an SMC, shall not be qualified for exemption or relaxation in respect of Accounting Standards available to an SMC until the company remains an SMC for two consecutive accounting periods."

1.6.3 Applicability of Accounting Standards to Companies

1.6.3.1 Accounting Standards applicable to all companies in their entirety for accounting periods commencing on or after 7th December, 2006

AS 1	Disclosures of Accounting Policies
AS 2	Valuation of Inventories
AS 4	Contingencies and Events Occurring After the Balance Sheet Date
AS 5	Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies
AS 7	Construction Contracts (revised 2002)
AS 9	Revenue Recognition
AS 10	***Property, Plant and Equipment*****
AS 11	The Effects of Changes in Foreign Exchange Rates (revised 2003)
AS 12	Accounting for Government Grants
AS 13	Accounting for Investments
AS 14	Accounting for Amalgamations
AS 16	Borrowing Costs
AS 18	Related Party Disclosures
AS 22	Accounting for Taxes on Income
AS 24	Discontinuing Operations
AS 26	Intangible Assets

***** Revised AS 10 is on 'Property, Plant and Equipment' which is applicable for corporate entities and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2016 while for non-corporate entities the same has been withdrawn and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2017 onwards.***

AS 6 has been withdrawn by the MCA on 30.3.2016 for corporate entities and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2016 while for non-corporate entities the same has been withdrawn and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2017 onwards. Provisions with respect to Depreciation has been incorporated in revised AS 10.

1.6.3.2 Exemptions or Relaxations for SMCs as defined in the Notification

(A) Accounting Standards not applicable to SMCs in their entirety:

AS 3 Cash Flow Statements

AS 17 Segment Reporting

(B) Accounting Standards not applicable to SMCs since the relevant Regulations require compliance with them only by certain Non-SMCs:*

(i) AS 21, Consolidated Financial Statements

(ii) AS 23, Accounting for Investments in Associates in Consolidated Financial Statements

(iii) AS 27, Financial Reporting of Interests in Joint Ventures (to the extent of requirements relating to Consolidated Financial Statements)

(C) Accounting Standards in respect of which relaxations from certain requirements have been given to SMCs:

(i) Accounting Standard (AS) 15, Employee Benefits (revised 2005)

(a) paragraphs 11 to 16 of the standard to the extent they deal with recognition and measurement of short-term accumulating compensated absences which are non-vesting (i.e., short-term accumulating compensated absences in respect of which employees are not entitled to cash payment for unused entitlement on leaving);

(b) paragraphs 46 and 139 of the Standard which deal with discounting of amounts that fall due more than 12 months after the balance sheet date;

(c) recognition and measurement principles laid down in paragraphs 50 to 116 and presentation and disclosure requirements laid down in paragraphs 117 to 123 of the Standard in respect of accounting for defined benefit plans. However, such companies should actuarially determine and provide for the accrued liability in respect of defined benefit plans by using the Projected Unit Credit Method and the discount rate used should be determined by reference to market yields at the balance sheet date on government bonds as per paragraph 78 of the Standard. Such companies should disclose actuarial assumptions as per paragraph 120(l) of the Standard; and

(d) recognition and measurement principles laid down in paragraphs 129 to 131 of the Standard in respect of accounting for other long term employee benefits. However, such companies should actuarially determine and provide for the accrued liability in respect of other long-term employee benefits by using the Projected Unit Credit Method and the discount rate used should be determined

---

* AS 21, AS 23 and AS 27 (relating to consolidated financial statements) are required to be complied with by a company if the company, pursuant to the requirements of a statute/regulator or voluntarily, prepares and presents consolidated financial statements.

by reference to market yields at the balance sheet date on government bonds as per paragraph 78 of the Standard.

(ii) AS 19, Leases

Paragraphs 22 (c), (e) and (f); 25 (a), (b) and (e); 37 (a) and (f); and 46 (b) and (d) relating to disclosures are not applicable to SMCs.

(iii) AS 20, Earnings Per Share

Disclosure of diluted earnings per share (both including and excluding extraordinary items) is exempted for SMCs.

(iv) AS 28, Impairment of Assets

SMCs are allowed to measure the 'value in use' on the basis of reasonable estimate thereof instead of computing the value in use by present value technique. Consequently, if an SMC chooses to measure the 'value in use' by not using the present value technique, the relevant provisions of AS 28, such as discount rate etc., would not be applicable to such an SMC. Further, such an SMC need not disclose the information required by paragraph 121(g) of the Standard.

(v) AS 29, Provisions, Contingent Liabilities and Contingent Assets

Paragraphs 66 and 67 relating to disclosures are not applicable to SMCs.

(D) AS 25, Interim Financial Reporting, does not require a company to present interim financial report. It is applicable only if a company is required or elects to prepare and present an interim financial report. Only certain Non-SMCs are required by the concerned regulators to present interim financial results, e.g, quarterly financial results required by the SEBI. Therefore, the recognition and measurement requirements contained in this Standard are applicable to those Non-SMCs for preparation of interim financial results.

1.6.4 Applicability of Accounting Standards to Non-corporate Entities

1.6.4.1 Accounting Standards applicable to all Non-corporate Entities in their entirety (Level I, Level II and Level III)

AS 1	Disclosures of Accounting Policies
AS 2	Valuation of Inventories
AS 4	Contingencies and Events Occurring After the Balance Sheet Date
AS 5	Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies
AS 7	Construction Contracts (revised 2002)
AS 9	Revenue Recognition

AS 10	***Property, Plant and Equipment*****
AS 11	The Effects of Changes in Foreign Exchange Rates (revised 2003)
AS 12	Accounting for Government Grants
AS 13	Accounting for Investments
AS 14	Accounting for Amalgamations
AS 16	Borrowing Costs
AS 22	Accounting for Taxes on Income
AS 26	Intangible Assets

1.6.4.2 Exemptions or Relaxations for Non-corporate Entities falling in Level II and Level III (SMEs)

(A) Accounting Standards not applicable to Non-corporate Entities falling in Level II in their entirety:

AS 3	Cash Flow Statements
AS 17	Segment Reporting

(B) Accounting Standards not applicable to Non-corporate Entities falling in Level III in their entirety:

AS 3	Cash Flow Statements
AS 17	Segment Reporting
AS 18	Related Party Disclosures
AS 24	Discontinuing Operations

(C) Accounting Standards not applicable to all Non-corporate Entities since the relevant Regulators require compliance with them only by certain Level I entities:

(i)	AS 21, Consolidated Financial Statements
(ii)	AS 23, Accounting for Investments in Associates in Consolidated Financial Statements

***** Revised AS 10 is on 'Property, Plant and Equipment' which is applicable for corporate entities and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2016 while for non-corporate entities the same has been withdrawn and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2017 onwards.***

AS 6 has been withdrawn by the MCA on 30.3.2016 for corporate entities and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2016 while for non-corporate entities the same has been withdrawn and will come into effect prospectively in respect of accounting periods commencing on or after April 1, 2017 onwards.

(iii)	AS 27, Financial Reporting of Interests in Joint Ventures (to the extent of requirements relating to Consolidated Financial Statements)

(D) *Accounting Standards in respect of which relaxations from certain requirements have been given to Non-corporate Entities falling in Level II and Level III (SMEs):*

(i) Accounting Standard (AS) 15, Employee Benefits (revised 2005)

(1) Level II and Level III Non-corporate entities whose average number of persons employed during the year is 50 or more are exempted from the applicability of the following paragraphs:

(a) paragraphs 11 to 16 of the standard to the extent they deal with recognition and measurement of short-term accumulating compensated absences which are non-vesting (i.e., short-term accumulating compensated absences in respect of which employees are not entitled to cash payment for unused entitlement on leaving);

(b) paragraphs 46 and 139 of the Standard which deal with discounting of amounts that fall due more than 12 months after the balance sheet date;

(c) recognition and measurement principles laid down in paragraphs 50 to 116 and presentation and disclosure requirements laid down in paragraphs 117 to 123 of the Standard in respect of accounting for defined benefit plans. However, such entities should actuarially determine and provide for the accrued liability in respect of defined benefit plans by using the Projected Unit Credit Method and the discount rate used should be determined by reference to market yields at the balance sheet date on government bonds as per paragraph 78 of the Standard. Such entities should disclose actuarial assumptions as per paragraph 120(l) of the Standard; and

(d) recognition and measurement principles laid down in paragraphs 129 to 131 of the Standard in respect of accounting for other long-term employee benefits. However, such entities should actuarially determine and provide for the accrued liability in respect of other long-term employee benefits by using the Projected Unit Credit Method and the discount rate used should be determined by reference to market yields at the balance sheet date on government bonds as per paragraph 78 of the Standard.

(2) Level II and Level III Non-corporate entities whose average number of persons employed during the year is less than 50 are exempted from the applicability of the following paragraphs:

(a) paragraphs 11 to 16 of the standard to the extent they deal with recognition and measurement of short-term accumulating compensated absences which are non-vesting (i.e., short-term accumulating compensated absences in respect of which employees are not entitled to cash payment for unused entitlement on leaving);

(b) paragraphs 46 and 139 of the Standard which deal with discounting of amounts that fall due more than 12 months after the balance sheet date;

(c) recognition and measurement principles laid down in paragraphs 50 to 116 and presentation and disclosure requirements laid down in paragraphs 117 to 123 of the Standard in respect of accounting for defined benefit plans. However, such entities may calculate and account for the accrued liability under the defined benefit plans by reference to some other rational method, e.g., a method based on the assumption that such benefits are payable to all employees at the end of the accounting year; and

(d) recognition and measurement principles laid down in paragraphs 129 to 131 of the Standard in respect of accounting for other long-term employee benefits. Such entities may calculate and account for the accrued liability under the other long-term employee benefits by reference to some other rational method, e.g., a method based on the assumption that such benefits are payable to all employees at the end of the accounting year.

(ii) AS 19, Leases

Paragraphs 22 (c), (e) and (f); 25 (a), (b) and (e); 37 (a) and (f); and 46 (b) and (d) relating to disclosures are not applicable to non-corporate entities falling in Level II. Paragraphs 22 (c), (e) and (f); 25 (a), (b) and (e); 37 (a), (f) and (g); and 46 (b), (d) and (e) relating to disclosures are not applicable to Level III entities.

(iii) AS 20, Earnings Per Share

Diluted earnings per share (both including and excluding extraordinary items) is not required to be disclosed by non-corporate entities falling in Level II and Level III and information required by paragraph 48(ii) of AS 20 is not required to be disclosed by Level III entities if this standard is applicable to these entities.

(iv) AS 28, Impairment of Assets

Non-corporate entities falling in Level II and Level III are allowed to measure the 'value in use' on the basis of reasonable estimate thereof instead of computing the value in use by present value technique. Consequently, if a non-corporate entity falling in Level II or Level III chooses to measure the 'value in use' by not using the present value technique, the relevant provisions of AS 28, such as discount rate etc., would not be applicable to such an entity. Further, such an entity need not disclose the information required by paragraph 121(g) of the Standard.

(v) AS 29, Provisions, Contingent Liabilities and Contingent Assets

Paragraphs 66 and 67 relating to disclosures are not applicable to non-corporate entities falling in Level II and Level III.

(E) AS 25, Interim Financial Reporting, does not require a non-corporate entity to present interim financial report. It is applicable only if a non-corporate entity is required or elects to prepare and present an interim financial report. Only certain Level I non-corporate entities are required by the concerned regulators to present interim financial results e.g.,

quarterly financial results required by the SEBI. Therefore, the recognition and measurement requirements contained in this Standard are applicable to those Level I non-corporate entities for preparation of interim financial results.

1.7 List of Accounting Standards

Following is the list of Accounting Standards with their respective date of applicability:

AS No.	*AS Title*	*Date*
1	Disclosure of Accounting Policies	01/04/1993
2	Valuation of Inventories (Revised)	01/04/1999
3	Cash Flow Statement (Revised)	01/04/2001
4	Contingencies and Events Occurring after the Balance Sheet Date	01/04/1998
5	Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies (Revised)	01/04/1996
6	Depreciation Accounting	***Withdrawn w.e.f 1.4.2016 after issuance of revised AS 10 on PPE***
7	Construction Contracts (Revised)	01/04/2002
8	Research & Development	Now included in AS 26
9	Revenue Recognition	01/04/1993
10	***Property, Plant and Equipment (revised 2016)***	***01/04/2016***
11	The Effects of Changes in Foreign Exchange Rates (Revised)	01/04/2004
12	Accounting for Government Grants	01/04/1994
13	Accounting for Investments	01/04/1995
14	Accounting for Amalgamations	01/04/1995
15	Employee Benefits	01/04/2006
16	Borrowing Costs	01/04/2000
17	Segment Reporting	01/04/2001
18	Related Party Disclosures	01/04/2001
19	Leases	01/04/2001
20	Earnings Per Share	01/04/2001
21	Consolidated Financial Statements	01/04/2001

22	Accounting for Taxes on Income	01/04/2006
23	Accounting for Investments in Associates in Consolidated Financial Statements	01/04/2002
24	Discontinuing Operations	01/04/2004
25	Interim Financial Reporting	01/04/2002
26	Intangible Assets	01/04/2003
27	Financial Reporting of Interests in Joint Ventures	01/04/2002
28	Impairment of Assets	01/04/2008
29	Provisions, Contingent Liabilities and Contingent Assets	01/04/2004
30*	Financial Instruments: Recognition and Measurement	01/04/2009 (Encourage to follow**)
31*	Financial Instruments: Presentation	01/04/2009 (Encourage to follow**)
32*	Financial Instruments: Disclosures	01/04/2009 (Encourage to follow**)

AS 1 to AS 29 (excluding ***AS 6 and*** AS 8) have been discussed in detail in the succeeding units of this chapter. AS 30, 31 and 32 are not applicable from the examination point of view hence not discussed in detail.

1.8 Development in the area of Accounting Standards in India

1.8.1 Need for Convergence towards Global Standards

In the present era of globalisation and liberalisation, the world has become an economic village. The globalisation of the business world and the attendant structures and the regulations, which support it, as well as the development of e-commerce make it imperative to have a single globally accepted financial reporting system. A number of multi-national companies are establishing their businesses in various countries with emerging economies and *vice versa*. The entities in emerging economies are increasingly accessing the global markets to fulfill their capital needs by getting their securities listed on the stock exchanges outside their country. Capital markets are, thus, becoming integrated consistent with this world-wide trend. More and more Indian companies are being listed on overseas stock exchanges. The use of different

*AS 30, 31 and 32 are not applicable from the examination point of view. However, the same have been mentioned above for knowledge purpose only.

**The status of AS 30, 31 and 32 is "Encourage to Follow" for non-corporate entities. For corporate entities these standards are not notified, hence not applicable. For them Ind AS will be made applicable in a phase manner.

accounting frameworks in different countries, which require inconsistent treatment and presentation of the same underlying economic transactions, creates confusion for users of financial statements. This confusion leads to inefficiency in capital markets across the world. Therefore, increasing complexity of business transactions and globalisation of capital markets call for a single set of high quality accounting standards.

High standards of financial reporting underpin the trust investors place in financial and non-financial information. Thus, the case for a single set of globally accepted accounting standards has prompted many countries to pursue convergence of national accounting standards with IFRSs.

International Financial Reporting Standards (IFRSs) are considered a "principles-based" set of standards. In fact, they establish broad rules rather than dictating specific treatments. Every major nation is moving toward adopting them to some extent. Large number of authorities requires public companies to use IFRS for stock-exchange listing purposes, and in addition, banks, insurance companies and stock exchanges may use them for their statutorily required reports. So over the next few years, thousands of companies will adopt the international

1.8.2 Benefits of Convergence with IFRSs

There are many beneficiaries of convergence with IFRSs such as the economy, investors, industry etc.

The Economy: When the markets expand globally the need for convergence increases since the convergence benefits the economy by increasing growth of its international business. It facilitates maintenance of orderly and efficient capital markets and also helps to increase the capital formation and thereby economic growth. It encourages international investing and thereby leads to more foreign capital flows to the country.

Investors: A strong case for convergence can be made from the viewpoint of the investors who wish to invest outside their own country. Investors want the information that is more relevant, reliable, timely and comparable across the jurisdictions. Financial statements prepared using a common set of accounting standards help investors better understand investment opportunities as opposed to financial statements prepared using a different set of national accounting standards. Investors' confidence is strong when accounting standards used are globally accepted. Convergence with IFRSs contributes to investors' understanding and confidence in high quality financial statements.

The Industry: A major force in the movement towards convergence has been the interest of the industry. The industry is able to raise capital from foreign markets at lower cost if it can create confidence in the minds of foreign investors that their financial statements comply with globally accepted accounting standards. With the diversity in accounting standards from country to country, enterprises which operate in different countries face a multitude of accounting requirements prevailing in the countries. The burden of financial reporting is lessened with convergence of accounting standards because it simplifies the process of preparing the individual and group financial statements and thereby reduces the costs of preparing the financial statements using different sets of accounting standards.

1.9 Convergence Strategy

In the scenario of globalisation, India cannot insulate itself from the developments taking place worldwide. In India, so far as the ICAI and the Government authorities such as the National Advisory Committee on Accounting Standards established under the Companies Act, 1956, and various regulators such as Securities and Exchange Board of India and Reserve Bank of India are concerned, the aim has always been to comply with the IFRSs to the extent possible with the objective to formulate sound financial reporting standards. The ICAI, being a member of the International Federation of Accountants (IFAC), considered the IFRSs and tried to integrate them, to the extent possible, in the light of the laws, customs, practices and business environment prevailing in India.

UNIT 2 : AS 1 : DISCLOSURE OF ACCOUNTING POLICIES

2.1 Introduction

Irrespective of extent of standardisation, diversity in accounting policies is unavoidable for two reasons. First, accounting standards cannot and do not cover all possible areas of accounting and enterprises have the freedom of adopting any reasonable accounting policy in areas not covered by a standard. Second, since enterprises operate in diverse situations, it is impossible to develop a single set of policies applicable to all enterprises for all time. The accounting standards therefore permit more than one accounting policy even in areas covered by it. Differences in accounting policies lead to differences in reported information even if underlying transactions are same. The qualitative characteristic of comparability of financial statements therefore suffers due to diversity of accounting policies. Since uniformity is impossible, and accounting standards permit more than one alternative in many cases, it is not enough to say that all standards have been complied with. For these reasons, accounting standard 1 requires enterprises to disclose accounting policies actually adopted by them in preparation of their financial statements. Such disclosures allow the users of financial statements to take the differences in accounting policies into consideration and to make necessary adjustments in their analysis of such statements.

During 1977, when ASB was established, the business environment in India was such that enterprises were reluctant to prepare accounting notes, few enterprises used to disclose the important accounting policies but the degree and method of disclosure varies considerably. Some enterprises used to disclose them as part of main financial statement, few others as a supplementary.

Therefore the main aim of this statement is not only to promote disclosure of accounting policies but also to determine that all accounting policies are disclosed at one place as main part of the financial statement.

AS 1 deals with the disclosure of significant accounting policies followed in preparing and presenting financial statements. The purpose of the Standard is to promote better understanding of financial statements by establishing through an Accounting Standard the disclosure of significant accounting policies and the manner in which accounting policies are disclosed in the financial statements. Such disclosure would also facilitate a more meaningful comparison between financial statements of different enterprises.

2.2 Applicability

This AS was issued in 1979 and is now mandatory and applicable for all enterprises.

2.3 Fundamental Accounting Assumptions

The Accounting Standard 1 recognises three fundamental accounting assumptions. These are:

(a) Going Concern

(b) Consistency and

(c) Accrual.

So long as these assumptions are followed in preparation of financial statements, no disclosure of such adherence is necessary. Any departure from any of these assumptions should however be disclosed.

***(a) Going Concern Assumption*:** The enterprise is normally viewed as a going concern, i.e. as continuing operations for the foreseeable future. It is assumed that the enterprise has neither the intention nor the necessity of liquidation or curtailing, materially its scale of operations.

Accordingly, assets and liabilities are recorded on the basis that the enterprise will be able to realise its assets and discharge its liabilities in the normal course of business. If an enterprise is not a going concern, valuation of its assets and liabilities on historical cost becomes irrelevant and as a consequence its profit/loss may not give reliable information.

Example: A Ltd. has proposed to acquire B Ltd. in January, 2017. The acquisition of B Ltd. took place during May 2017, since then B Ltd. is no more a going concern. This fact should be disclosed in the financial statements of B Ltd. for the year ended March 31, 2017.

***(b) Accrual Assumption*:** Revenues and costs are recorded as they are accrued, i.e., revenue items are recognized as they are earned or incurred and recorded in the financial statements of the periods to which they relate even though payment and receipt of actual cash has not been taken place. This assumption is the core of accrual accounting system.

Example: Credit sales of goods on March 01, 2017; money receivable after three months are recognised as sales during the financial year 2016-17 itself and amount due is debited to the customer's account. Similarly, credit purchase of goods is also recorded as purchases during the year when purchase takes place and amount payable is credited to the suppliers account in the year of purchase though the payment is made in the next financial year.

***(c) Consistency Assumption*:** It is assumed that accounting policies are consistent from one period to another. Unless this is done, comparatives are rendered meaningless. If comparability is lost, the relevance of accounting data for users' judgment and decision-making is gone.

Example: If enterprise has opted for written down value method of charging depreciation then in the following years, it should stick to this method only, unless under changed environment it is considered highly inappropriate to continue with it.

2.4 Disclosure of Deviations from Fundamental Accounting Assumptions

If the fundamental accounting assumptions, viz. Going concern, Consistency and Accrual are followed in financial statements, specific disclosure is not required. If a fundamental accounting assumption is not followed, the fact should be disclosed.

The principle of consistency refers to the practice of using same accounting policies for similar transactions in all accounting periods. The deviation from the principle of consistency therefore means a change in accounting policy.

2.5 Accounting Policies

The accounting policies refer to the specific accounting principles and the methods of applying those principles adopted by the enterprise in the preparation and presentation of financial statements.

Accountant has to make decisions from various options for recording or disclosing items in the books of accounts e.g.:

Items to be disclosed	*Method of disclosure or valuation*
Inventories	FIFO, Weighted Average etc.
Cash Flow Statement	Direct Method, Indirect Method
Depreciation	Straight Line Method, Reducing Balance Method, Depletion Method etc.

This list is exhaustive i.e. endless. For every item right from valuation of assets and liabilities to recognition of revenue, providing for expected losses, for each event, accountant need to form principles and evolve a method to adopt those principles. This method of forming and applying accounting principles is known as accounting policies.

As we say that accounts is both science and art. It is a science because we have some tested accounting principles, which are applicable universally, but simultaneously the application of these principles depends on the personal ability of each accountant. Since different accountants may have different approach, we generally find that in different enterprise under same industry, different accounting policy is followed. Though ICAI along with Government is trying to reduce the number of accounting policies followed in India but still it cannot be reduced to one.

Since accounting policy adopted will have considerable effect on the financial results disclosed by the financial statement, it makes it almost difficult to compare two financial statements.

2.6 Considerations in the Selection of Accounting Policies

The primary consideration in the selection of accounting policies by an enterprise is that the financial statements prepared and presented on the basis of such accounting policies should represent a **true and fair view of the state of affairs of the enterprise as at the balance sheet date and of the profit or loss for the period ended on that date.** To ensure the true and fair consideration this statement issues following guidelines:

***Prudence*:** As defined in the statement, prudence means recognising all losses immediately but ignoring anticipated profits. Business environment is highly dynamic, therefore, enterprises has to keep anticipate the future and take managerial decisions accordingly. In view of the uncertainty attached to future events, profits are not anticipated but recognised only when realised though not necessarily in cash. Provision is made for all known liabilities and losses even though the amount cannot be determined with certainty and represents only a best estimate in the light of available information.

Example: If valuation of inventory is always done at cost, consider a situation where market price of the relevant goods has reduced below the cost price, then valuing inventory at cost price means ignoring anticipated losses. Similarly if inventory is always valued at market price, then take a situation where cost price is below market price, indirectly we are recognising the anticipated gross profit on inventory in the books. Therefore, accounting policy should be cost price or market price whichever is less, in this case we are ignoring anticipated profits (if any) but any anticipated losses would be taken care of.

Substance over form: The accounting treatment and presentation in financial statements of transactions and events should be governed by their substance and not merely by the legal form.

Example: The ownership of an asset purchased on hire purchase is not transferred till the payment of the last instalment is made but the asset is shown in the books of the hire purchaser. Similarly, in the case of the amalgamation, the entry for amalgamation in the books of the amalgamated company is recorded on the basis of the status of the shareholders of amalgamating company after amalgamation i.e. if all or almost all the shareholders of the amalgamated company has become shareholder of the amalgamating company by virtue of amalgamation, we record all the transactions as Amalgamation in nature of Merger otherwise it is recorded as Amalgamation in nature of Purchase.

Materiality: Financial statements should disclose all 'material' items, ie items the knowledge of which might influence the decisions of the user of the financial statements.

The materiality of an item is decided on the basis that whether non-disclosure of the item will effect the decision making of the user of accounts. If the answer is positive then the item is material and should be disclosed, in case answer is negative, item is immaterial. This statement does not mean that immaterial item should not be disclosed, disclosure or non-disclosure of an immaterial item is left at the discretion of the accountant but disclosure of material item is been made mandatory.

Example: Any penalty paid by the enterprise should be disclosed separately even though the amount paid is negligible, payment of any tax also should be disclosed separately and not to be merged with office expenses or miscellaneous expense.

2.7 Disclosure of Accounting Policies

(i) To ensure proper understanding of financial statements, it is necessary that **all significant accounting policies adopted** in the preparation and presentation of financial statements **should be disclosed**.

(ii) The **disclosure of the significant accounting policies** as such should **form part of the financial statements** and the significant accounting policies should normally be **disclosed at one place**.

2.8 Disclosure of Changes in Accounting Policies

Any change in the accounting policies which has a material effect in the current period or which is reasonably expected to have a material effect in a later period should be disclosed. In the case of a change in accounting policies, which has a material effect in the current period, the amount by which any item in the financial statements is affected by such change should also be disclosed to the extent ascertainable. Where such amount is not ascertainable, wholly or in part, the fact should be indicated.

2.9 Illustrations

Illustration 1

ABC Ltd. was making provision for non-moving inventories based on no issues for the last 12 months up to 31.3.2016.

The company wants to provide during the year ending 31.3.2017 based on technical evaluation:

Total value of inventory	*₹ 100 lakhs*
Provision required based on 12 months issue	*₹ 3.5 lakhs*
Provision required based on technical evaluation	*₹ 2.5 lakhs*

Does this amount to change in Accounting Policy? Can the company change the method of provision?

Solution

The decision of making provision for non-moving inventories on the basis of technical evaluation does not amount to change in accounting policy. Accounting policy of a company may require that provision for non-moving inventories should be made. The method of estimating the amount of provision may be changed in case a more prudent estimate can be made.

In the given case, considering the total value of inventory, the change in the amount of required provision of non-moving inventory from ₹ 3.5 lakhs to ₹ 2.5 lakhs is also not material. The disclosure can be made for such change in the following lines by way of notes to the accounts in the annual accounts of ABC Ltd. for the year 2016-17:

"The company has provided for non-moving inventories on the basis of technical evaluation unlike preceding years. Had the same method been followed as in the previous year, the profit for the year and the corresponding effect on the year end net assets would have been lower by ₹ 1 lakh."

Illustration 2

Jagannath Ltd. had made a rights issue of shares in 2015. In the offer document to its members, it had projected a surplus of ₹ 40 crores during the accounting year to end on 31st March, 2017. The draft results for the year, prepared on the hitherto followed accounting policies and presented for perusal of the board of directors showed a deficit of ₹ 10 crores. The board in consultation with the managing director, decided on the following:

(i) Value year-end inventory at works cost (₹ 50 crores) instead of the hitherto method of valuation of inventory at prime cost (₹ 30 crores).

(ii) Provide depreciation for the year on straight line basis on account of substantial additions in gross block during the year, instead of on the reducing balance method, which was hitherto adopted. As a consequence, the charge for depreciation at ₹ 27 crores is lower than the amount of ₹ 45 crores which would have been provided had the old method been followed, by ₹ 18 cores.

(iii) Not to provide for "after sales expenses" during the warranty period. Till the last year, provision at 2% of sales used to be made under the concept of "matching of costs against revenue" and actual expenses used to be charged against the provision. The board now decided to account for expenses as and when actually incurred. Sales during the year total to ₹ 600 crores.

(iv) Provide for permanent fall in the value of investments - which fall had taken place over the past five years - the provision being ₹ 10 crores.

As chief accountant of the company, you are asked by the managing director to draft the notes on accounts for inclusion in the annual report for 2016-2017.

Solution

As per AS 1, any change in the accounting policies which has a material effect in the current period or which is reasonably expected to have a material effect in later periods should be disclosed. In the case of a change in accounting policies which has a material effect in the current period, the amount by which any item in the financial statements is affected by such change should also be disclosed to the extent ascertainable. Where such amount is not ascertainable, wholly or in part, the fact should be indicated. Accordingly, the notes on accounts should properly disclose the change and its effect.

Notes on Accounts:

(i) During the year inventory has been valued at factory cost, against the practice of valuing it at prime cost as was the practice till last year. This has been done to take cognizance of the more capital intensive method of production on account of heavy capital expenditure during the year. As a result of this change, the year-end inventory has been valued at ₹ 50 crores and the profit for the year is increased by ₹ 20 crores.

(ii) In view of the heavy capital intensive method of production introduced during the year, the company has decided to change the method of providing depreciation from reducing balance method to straight line method. As a result of this change, depreciation has been provided at ₹ 27 crores which is lower than the charge which would have been made had the old method and the old rates been applied, by ₹ 18 crores. To that extent, the profit for the year is increased.

(iii) So far, the company has been providing 2% of sales for meeting "after sales expenses during the warranty period. With the improved method of production, the probability of defects occurring in the products has reduced considerably. Hence, the company has decided not to make provision for such expenses but to account for the same as and when expenses are incurred. Due to this change, the profit for the year is increased by ₹ 12 crores than would have been the case if the old policy were to continue.

(iv) The company has decided to provide ₹ 10 crores for the permanent fall in the value of investments which has taken place over the period of past five years. The provision so made has reduced the profit disclosed in the accounts by ₹ 10 crores.

Illustration 3

XYZ Company is engaged in the business of financial services and is undergoing tight liquidity position, since most of the assets of the company are blocked in various claims/petitions in a Special Court. XYZ has accepted Inter-Corporate Deposits (ICDs) and, it is making its best efforts to settle the dues. There were claims at varied rates of interest, from lenders, from the due date of ICDs to the date of repayment. The company has provided interest, as per the terms of the contract till the due date and a note for non-provision of interest on the due date to date of repayment was affected in the financial statements. On account of uncertainties existing regarding the determination of the amount and in the absence of any specific legal obligation at present as per the terms of contracts, the company considers that these claims are in the nature of "claims against the company not acknowledged as debt", and the same has been disclosed by way of a note in the accounts instead of making a provision in the profit and loss accounts. State whether the treatment done by the Company is correct or not.

Solution

Para 17of AS-1 'Disclosure of Accounting Policies' recognises 'prudence' as one of the major considerations governing the selection and application of accounting policies. In view of the uncertainty attached to future events, profits are not anticipated but recognised only when realised though not necessarily in cash. Provision is made for all known liabilities and losses even though the amount cannot be determined with certainty and represents only a best estimate in the light of available information.

Also as per para 10 of the AS 1, 'accrual' is one of the fundamental accounting assumptions. Irrespective of the terms of the contract, so long as the principal amount of a loan is not repaid, the lender cannot be replaced in a disadvantageous position for non-payment of interest in respect of overdue amount. From the aforesaid, it is apparent that the company has an obligation on account of the overdue interest. In this situation, the company should provide for the liability (since it is not waived by the lenders) at an amount estimated or on reasonable basis based on facts and circumstances of each case. However, in respect of the overdue interest amounts, which are settled, the liability should be accrued to the extent of amounts settled. Non-provision of the overdue interest liability amounts to violation of accrual basis of accounting. Therefore, the treatment, done by the company, of not providing the interest amount from due date to the date of repayment is not correct.

Reference: The students are advised to refer the full text of AS 1 "Disclosure of Accounting Policies".

UNIT 3 : AS 2 : VALUATION OF INVENTORIES

3.1 Introduction

The accounting treatment for inventories is prescribed in AS 2 'Valuation of Inventories', which provides guidance for determining the value at which inventories, are carried in the financial statements until related revenues are recognised. It also provides guidance on the cost formulas that are used to assign costs to inventories and any write-down thereof to net realisable value.

This Standard does not apply in accounting for the following inventories:

(a) Work in progress arising under construction contracts, including directly related service contracts.

(b) Work in progress arising in the ordinary course of business of service providers.

(c) Shares, debentures and other financial instruments held as inventory-in-trade and

(d) Producers' inventories of livestock, agricultural and forest products, and mineral oils, ores and gases to the extent that they are measured at net realisable value in accordance with well-established practices in those industries.

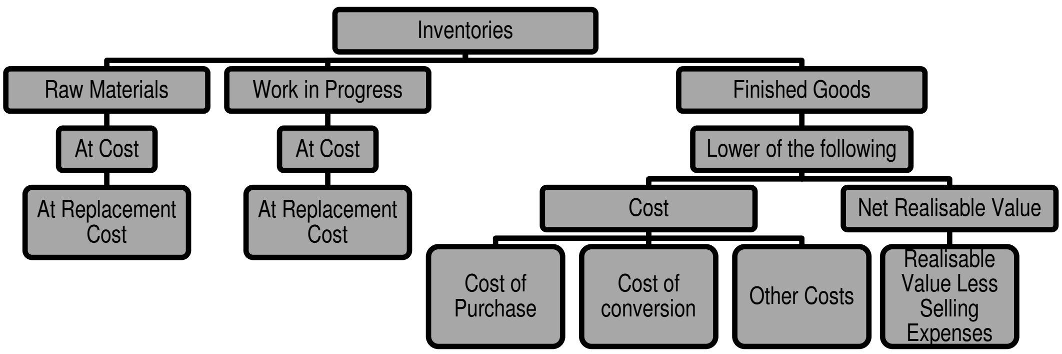
3.2 Scope

AS 2 defines inventories as assets-

(a) Held for sale in the ordinary course of business. It means finished goods ready for sale in case of a manufacturer and for traders, goods purchased by them with the intention of resale but not yet sold. These are known as Finished Goods.

(b) In the process of production for such sale. These refer to the goods which are introduced to the production process but the production is not yet completed i.e. not fully converted into finished goods. These are known as Work-in-Progress.

(c) In the form of materials or supplies to be consumed in the production process or in the rendering of services. It refers to all the materials and spares i.e. to be consumed in the process of production. These are known as Raw Materials.



3.3 Measurement of Inventories

Inventories should be valued at the lower of cost and net realisable value.

3.3.1 Cost of Inventories

Cost of goods is the summation of:

(a) Cost of Purchase.

(b) Cost of Conversion.

(c) Other cost necessary to bring the inventory in present location and condition.

As shown in the above diagram, finished goods should be valued at cost or market price whichever is lower, in other words, finished goods are valued at the lower of cost or net realisable value.

Cost has three elements as discussed below:

Cost of Purchase Cost of purchase includes the purchase price plus all other necessary expenses directly attributable to purchase of inventory like, taxes and duties (other than those subsequently recoverable by the enterprise from the taxing authorities), carriage inward, loading/unloading excluding expenses recoverable from the supplier.

From the above sum, following items are deducted, duty drawback, CENVAT, VAT, trade discount, rebates.

Cost of Conversion For a trading company cost of purchase along with other cost (discussed below) constitutes cost of inventory, but for a manufacturer cost of inventory also includes cost of conversion. Readers can recollect the calculation of factory cost calculated in Cost Accounting:

Direct Material + Direct Labour = Prime Cost

Prime Cost + Factory Variable Overhead + Factory Fixed Overhead = Factory Cost.

Direct material is included in cost of purchase and the remaining items i.e. direct labour and overheads are termed as cost of conversion.

Direct labour is cost of workers in the unit who are directly associated with the production process, in other words we can say that direct labour is the cost of labour which can be directly attributed to the units of production.

Overheads are indirect expenses. Variable overheads are indirect expenses which is directly related to production i.e., it changes with the change in production in the same proportion (increase or decrease). Fixed overheads generally remains constant, it varies only when there is some major shift in production.

Since, direct labour and variable overheads are directly related with the production level, it is advisable to include them in cost of conversion on the basis of normal capacity. Because any difference between normal capacity and actual production will also bring in proportionate change in projected cost and actual cost.

For example: A unit is expected to produce 1 lacs units in a year with the projected labour cost ₹ 20 lacs and variable overhead ₹ 10 lacs. But the actual cost was only ₹ 18 lacs labour charges and ₹ 9 lacs overheads with production only 90,000 units. Now if we take these costs on normal capacity basis then direct labour is ₹ 20 per unit (20 lacs/1 lac) and variable overhead is ₹ 10 per unit (10 lacs/1 lac). Therefore, in cost of conversion we include direct labour (90,000 x 20) ₹ 18 lacs and variable overheads (90,000 x 10) ₹ 9 lacs.

Fixed overheads per unit are taken on the basis of normal capacity when actual production is equal to normal capacity or the difference is minor. In case when actual production increases normal capacity considerably, actual fixed overheads are included, however, the amount of fixed production overheads allocated to each unit of production is decreased so that inventories are not measured above cost. When actual production is substantially less than normal capacity, fixed overhead per unit is included on the basis of normal capacity i.e. the amount of fixed production overheads allocated to each unit of production is not increased as a consequence of low production or idle plant. Unallocated overheads are recognised as an expense in the period in which they are incurred.

To understand the reason for such a provision we take an example

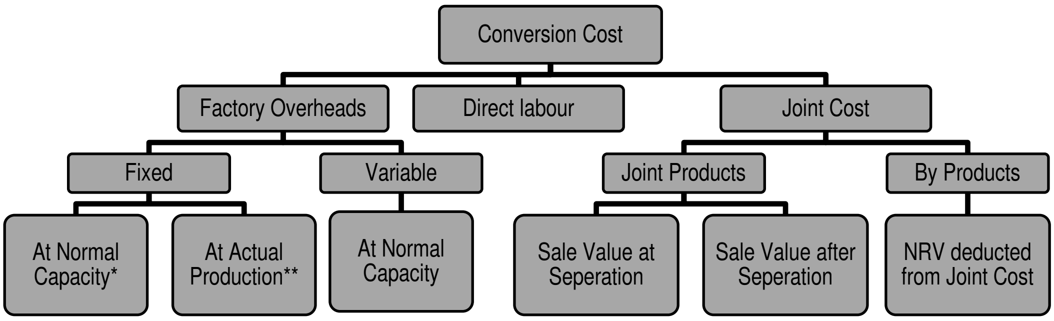
ABC Ltd. has a plant with the capacity to produce 1 lac unit of a product per annum and the expected fixed overhead is ₹ 18 lacs. Fixed overhead on the basis of normal capacity is ₹ 18 (18 lacs/1 lac).

Case 1: Actual production is 1 lac units. Fixed overhead on the basis of normal capacity and actual overhead will lead to same figure of ₹ 18 lacs. Therefore it is advisable to include this on normal capacity.

Case 2: Actual production is 90,000 units. Fixed overhead is not going to change with the change in output and will remain constant at ₹ 18 lacs, therefore, overheads on actual basis is ₹ 20 (18 lacs/ 90 thousands). Hence by valuing inventory at ₹ 20 each for fixed overhead purpose, it will be overvalued and the losses of ₹ 1.8 lacs will also be included in closing inventory leading to a higher gross profit then actually earned. Therefore, it is advisable to include fixed overhead per unit on normal capacity to actual production (90,000 x 18) ₹ 16.2 lacs and rest ₹ 1.2 lacs shall be transferred to Profit & Loss Account.

Case 3: Actual production is 1.2 lacs units. Fixed overhead is not going to change with the change in output and will remain constant at ₹ 18 lacs, therefore, overheads on actual basis is ₹ 15 (18 lacs/ 1.2 lacs). Hence by valuing inventory at ₹ 18 each for fixed overhead purpose, we will be adding the element of cost to inventory which actually has not been incurred. At ₹ 18 per unit, total fixed overhead comes to ₹ 21.6 lacs whereas, actual fixed overhead expense is only ₹ 18 lacs. Therefore, it is advisable to include fixed overhead on actual basis (1.2 lacs x 15) ₹ 18 lacs.

Sometimes, a single production process may result in more than one product. In case, this additional product is the intended item and has a good market value, they are known as joint products. The cost of conversion incurred on all the production and not identifiable separately is allocated among the products on some rational and consistent basis. The allocation may be based, for example, on the relative sales value of each product either at the stage in the production process when the products become separately identifiable, or at the completion of production. If this additional product doesn't have good market value then they are



considered as by-products. In this case, the net realisable value of the by-product is deducted from the total cost of conversion to calculate the cost of conversion for main product.

* When actual production is almost equal or lower than normal capacity.

** When actual production is higher than normal capacity.

Other Costs Other costs are included in the cost of inventories only to the extent that they are incurred in bringing the inventories to their present location and condition. For example, it may be appropriate to include overheads other than production overheads or the costs of designing products for specific customers in the cost of inventories.

Exclusion from the Cost of Inventories

AS 2 gives the following as examples of costs that should be excluded from the cost of inventories and recognised as expenses in the period in which they are incurred:

(a) Abnormal amounts of wasted materials, labour, or other production costs.

(b) Storage costs, unless those costs are necessary in the production process prior to a further production stage.

(c) Administrative overheads that do not contribute to bringing the inventories to their present location and condition and

(d) Selling and distribution costs.

Borrowing Costs

Interest and other borrowing costs are usually considered as not relating to bringing the inventories to their present location and condition and are, therefore, usually not included in the cost of inventories.

There may, however, be few exceptions to the above rule. As per AS 16, borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalised as part of the cost of the qualifying asset. Accordingly, inventories that necessarily take a substantial period of time to bring them to a saleable condition are qualifying assets.

As per AS 16, for inventories that are qualifying assets, any directly attributable borrowing costs should be capitalised as part of their cost.

Illustration 1

A Ltd. purchased 1,00,000 MT at ₹ 100 each of raw material and introduced it in the production process and get 85,000 MT as output. Normal wastage is 5%. In the process, company incurred the following expenses:

Direct Labour	*₹ 10,00,000*
Direct Variable Overheads	*₹ 1,00,000*
Direct Fixed Overheads	*₹ 1,00,000*
(Including interest ₹ 40,625)	

Of the above 80,000 MT was sold during the year and remaining 5,000 MT remained in closing inventory. Due to fall in demand in market the selling price for the finished goods on the closing day was estimated to be ₹ 105 per MT. Calculate the value of closing inventory.

Solution

Calculation of cost for closing inventory

Particulars	*₹*
Cost of Purchase (1,00,000 x 100)	1,00,00,000
Direct Labour	10,00,000
Variable Overhead	1,00,000
Fixed Overhead $\frac{(1,00,000 - 40,625)}{95,000}$	59,375
Cost of Production for normal output i.e. 95,000 MT	1,11,59,375
Cost of closing inventory per unit (1,11,59,375/95,000)	₹ 117.47 (approx)
Net Realisable Value per unit	₹ 105

Since, net realisable value is less than cost, closing inventory will be valued at ₹ 105. Therefore, closing inventory is ₹ 5,25,000 (5,000 x 105).

Note: Abnormal wastage of 10,000 MT i.e.10,000 MT x ₹ 117.47 = ₹ 11,74,670 will be separately accounted for in the books.

Illustration 2

In a manufacturing process of Vijoy Limited, one by-product BP emerges besides two main products MP1 and MP2 apart from scrap. Details of cost of production process are here under:

Item	*Unit*	*Amount (₹)*	*Output (unit)*	*Closing inventory*
Raw material	*15,000*	*1,60,000*	*MP1-6,250*	*800*
Wages	*-*	*82,000*	*MP2- 5,000*	*200*

Fixed overhead	-	*58,000*	*BP-1,600*	-
Variable overhead	-	*40,000*	-	-

Average market price of MP1 and MP2 is ₹ 80 per unit and ₹ 50 per unit respectively, by-product is sold @ ₹ 25 per unit. There is a profit of ₹ 5,000 on sale of by-product after incurring separate processing charges of ₹ 4,000 and packing charges of ₹ 6,000, ₹ 6,000 was realised from sale of scrap.

Calculate the value of closing inventory of MP1 and MP2.

Solution

As per para 10 of AS 2 'Valuation of Inventories', most by-products as well as scrap or waste materials, by their nature, are immaterial. They are often measured at net realizable value and this value is deducted from the cost of the main product.

1. Calculation of net realizable value of by-product, BP

		₹
Selling price of by-product BP	(1,600 units x ₹ 25 per unit)	40,000
Less: Separate processing charges of by-product BP		(4,000)
Packing charges		(6,000)
Net realizable value of by-product BP		30,000

2. Calculation of cost of conversion for allocation between joint products MP1 and MP2

	₹	₹
Raw material		1,60,000
Wages		82,000
Fixed overhead		58,000
Variable overhead		40,000
		3,40,000
Less: NRV of by-product BP (See calculation 1)	(30,000)	
Sale value of scrap	(6,000)	(36,000)
Joint cost to be allocated between MP1 and MP2		3,04,000

3. Determination of "basis for allocation" and allocation of joint cost to MP1 and MP2

	MP1	MP2
Output in units (a)	6,250 units	5,000 units
Sales price per unit (b)	₹ 80	₹ 50
Sales value (a x b)	₹ 5,00,000	₹2,50,000
Ratio of allocation	2	1
Joint cost of ₹ 3,04,000 allocated in the ratio of 2:1 (c)	₹ 2,02,667	₹ 1,01,333
Cost per unit [c/a]	₹ 32.43	₹ 20.27

4. Determination of value of closing inventory of MP1 and MP2

	MP1	*MP2*
Closing inventory in units	800 units	200 units
Cost per unit	₹ 32.43	₹ 20.27
Value of closing inventory	₹ 25,944	₹ 4,054

3.4 Cost Formula

Following are the various cost formulae suggested by the standard:

Specific Identification Method It is suitable for the inventories where each unit of inventory along with their associated cost can be separately identified. In other words, it is suitable where one unit of inventory is not interchangeable with another unit. Under this method each unit is valued specifically on its original cost. Examples for such goods are ship building, machinery building.

The specific identification method is not appropriate for the routine production of inventories that are ordinarily interchangeable, since, in such circumstances, an enterprise could obtain predetermined effects on the net profit or loss for the period by selecting a particular method of ascertaining the items that remain in inventories.

For items which are interchangeable, most appropriate method of cost valuation is either of the following two:

FIFO (First In First Out) It is assumed under this method that whatever is received first is issued first, which means, the inventory left over belongs to the latest purchases. Closing inventory is valued at the rates for the equivalent units purchased at last. During inflation inventory is valued at higher price and during decrease in price, inventory is valued at lower price.

Weighted Average Cost Under this method of inventory valuation, to determine the cost per unit, total cost of production during the year is divided by total units. In other words, for price per unit of the closing inventory we take the average price of the total goods purchased or produced during the year.

Following are cost formulae or techniques of measurement of cost suggested by the Accounting Standard for some special cases:

Standard Cost Method Inventories are valued on the basis of the set standards, which are realistic and reviewed regularly and where necessary, revised in the light of the current conditions. Standard costs take into account normal levels of consumption of materials and supplies, labour, efficiency and capacity utilisation.

Retail Method It is recommended for retail business or in the business where the inventory comprises of many items, the individual costs of which are not readily ascertainable. All the inventories are valued at the selling price, which is then adjusted with normal gross profit ratio and selling expenses to reach at its cost.

Illustration 3

Ambica Stores is a departmental store, which sell goods on retail basis. It makes a gross profit of 20% on net sales. The following figures for the year-end are available:

Opening Inventory ₹ 50,000; Purchases ₹ 3,60,000; Purchase Returns ₹ 10,000; Freight Inwards ₹ 10,000; Gross Sales ₹ 4,50,000; Sales Returns ₹ 11,250; Carriage Outwards ₹ 5,000.

Compute the estimated cost of the inventory on the closing date.

Solution

Calculation of cost of closing inventory

Particulars	₹
Opening Inventory	50,000
Purchases less returns (₹3,60,000 –₹ 10,000)	3,50,000
Freight Inwards	10,000
	4,10,000
Less: Net Sales (₹ 4,50,000 –₹ 11,250)	(4,38,750)
	(28,750)
Add: Gross Profits (₹ 4,38,750 x 20%)	87,750
Closing Inventory	59,000

3.5 Net Realisable Value (NRV)

Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale.

When we say that inventory should be valued at the lower of cost or net realisable value, one should note that only under two circumstances cost of inventories will surpass its net realisable value:

1. The goods are damaged or obsolete and not expected to realise the normal sale price.
2. The cost necessary for the production of goods has gone up by greater degree.

Both the above cases we don't expect in the normal functioning of the business, hence whenever it is found that goods are valued at NRV, care should be taken to study the existing market position for the relevant products.

NRV of the goods are estimated on item to item basis and only items of the same characteristics are grouped together. Such estimation is made at the time of finalisation of accounts and circumstances existing on the date of balance sheet evident from the events after the balance sheet confirming the estimation should be taken into consideration. And assessment is made on each balance sheet date of such estimation.

While estimating the NRV, the purpose of holding the inventory should also be taken into consideration. For example, the net realisable value of the quantity of inventory held to satisfy firm sales or service contracts is based on the contract price. If the sales contracts are for less than the inventory quantities held, the net realisable value of the excess inventory is based on general selling prices. Contingent losses on firm sales contracts in excess of inventory quantities held and contingent losses on firm purchase contracts are dealt with in accordance with the principles enunciated in AS 4, Contingencies and Events Occurring after the Balance Sheet Date.

For example, concern has 10,000 units in inventory, of which 6,000 is to be delivered for ₹ 40 each as per a contract with one of the customer. Cost of inventory is ₹ 45 and NRV estimated to be ₹ 50. In this case 6,000 units will be valued @ ₹ 40 each and rest 4,000 units will be valued @ ₹ 45 each.

This provision of cost or NRV whichever is less, is applicable to only those goods which are ready for sale i.e. finished goods. Since raw materials and work in progress are not available for sale, they don't have any realisable value and therefore NRV can never be estimated. For these goods statement suggests that these should always be valued at cost. Only exception is the case when the net realisable value of the relevant finished goods is lower than cost, in this case, the relevant raw materials and work in progress should be written down to net realisable value. In such circumstances, the replacement cost of the materials may be the best available measure of their net realisable value.

Illustration 4

Particulars		*Kg.*	*₹*
Opening Inventory:	*Finished Goods*	*1,000*	*25,000*
	Raw Materials	*1,100*	*11,000*
Purchases		*10,000*	*1,00,000*
Labour			*76,500*
Overheads (Fixed)			*75,000*
Sales		*10,000*	*2,80,000*
Closing Inventory:	*Raw Materials*	*900*	
	Finished Goods	*1200*	

The expected production for the year was 15,000 kg of the finished product. Due to fall in market demand the sales price for the finished goods was ₹ 20 per kg and the replacement cost for the raw material was ₹ 9.50 per kg on the closing day. You are required to calculate the closing inventory as on that date.

Solution

Calculation of cost for closing inventory

Particulars	*₹*
Cost of Purchase (10,200 x 10)	1,02,000
Direct Labour	76,500
Fixed Overhead $\frac{75{,}000 \times 10{,}200}{15{,}000}$	51,000
Cost of Production	2,29,500

Cost of closing inventory per unit (2,29,500/10,200)	₹ 22.50
Net Realisable Value per unit	₹ 20.00

Since net realisable value is less than cost, closing inventory will be valued at ₹ 20.

As NRV of the finished goods is less than its cost, relevant raw materials will be valued at replacement cost i.e. ₹ 9.50.

Therefore, value of closing inventory: Finished Goods (1,200 x 20)	₹ 24,000
Raw Materials (900 x 9.50)	₹ 8,550
	₹ 32,550

3.6 Disclosures

The financial statements should disclose:

(a) The accounting policies adopted in measuring inventories, including the cost formula used; and

(b) The total carrying amount of inventories together with a classification appropriate to the enterprise.

Information about the carrying amounts held in different classifications of inventories and the extent of the changes in these assets is useful to financial statement users. Common classifications of inventories are

(1) raw materials and components,

(2) work in progress,

(3) finished goods,

(4) Stock-in-trade (in respect of goods acquired for trading),

(5) stores and spares,

(6) loose tools, and

(7) Others (specify nature).

Illustration 5

The closing inventory at cost of a company amounted to ₹ 2,84,700. The following items were included at cost in the total:

(a) 400 coats, which had cost ₹ 80 each and normally sold for ₹ 150 each. Owing to a defect in manufacture, they were all sold after the balance sheet date at 50% of their normal price. Selling expenses amounted to 5% of the proceeds.

(b) 800 skirts, which had cost ₹ 20 each. These too were found to be defective. Remedial work in April cost ₹ 5 per skirt, and selling expenses for the batch totalled ₹ 800. They were sold for ₹ 28 each.

What should the inventory value be according to AS 2 after considering the above items?

Solution

Valuation of Closing Inventory

Particulars	₹	₹
Closing Inventory at cost		2,84,700
Less : Cost of 400 coats (400 x 80)	32,000	
Less: Net Realisable Value [(400 x 75) – (5% of Rs.75) x 400]	(28,500)	(3,500)
Value of Closing Inventory		2,81,200

Note: Since, 800 defective skirts were sold, the reduction in the price of the same had not been adjusted from the value of the closing inventory.

3.7 Illustrations

Illustration 6

State with reference to accounting standard, how will you value the inventories in the following cases:

(i) *Raw material was purchased at ₹ 100 per kilo. Price of raw material is on the decline. The finished goods in which the raw material is incorporated is expected to be sold at below cost. 10,000 kgs. of raw material is on inventory at the year end. Replacement cost is ₹ 80 per kg.*

(ii) *In a production process, normal waste is 5% of input. 5,000 MT of input were put in process resulting in a wastage of 300 MT. Cost per MT of input is ₹ 1,000. The entire quantity of waste is on inventory at the year end.*

(iii) *Per kg. of finished goods consisted of:*

Material cost	*₹ 100 per kg*
Direct labour cost	*₹ 20 per kg.*
Direct variable production overhead	*₹ 10 per kg.*

Fixed production charges for the year on normal capacity of one lakh kgs. is ₹ 10 lakhs. 2,000 kgs. of finished goods are on inventory at the year end.

Solution

(i) As per para 24 of AS 2 (Revised) on 'Valuation of Inventories', materials and other supplies held for use in the production of inventories are not written down below cost if the finished product in which they will be incorporated are expected to be sold at or above cost. However, when there has been a decline in the price of materials and it is estimated that the cost of the finished products will exceed net realisable value, the materials are written down to net realisable value. In such circumstances, the replacement cost of the materials may be the best available measure of their net realisable value.

Hence, in the given case, the inventory of 10,000 kgs of raw material will be valued at ₹ 80 per kg. The finished goods, if on inventory, should be valued at net realisable value since it is expected to be sold below cost.

(ii) As per para 13 of AS 2 (Revised), abnormal amounts of waste materials, labour or other production costs are excluded from cost of inventories and such costs are recognised as expenses in the period in which they are incurred.

In this case, normal waste is 250 MT and abnormal waste is 50 MT.

The cost of 250 MT will be included in determining the cost of inventories (finished goods) at the year end. The cost of abnormal waste amounting to ₹ 52,632 [(50 MT x (₹ 50,00,000 / 4,750 MT)] will be charged in the statement of profit and loss.

(iii) In accordance with paras 8 and 9 of AS 2 (Revised), the costs of conversion include a systematic allocation of fixed and variable production overheads that are incurred in converting materials into finished goods. The allocation of fixed production overheads for the purpose of their inclusion in the costs of conversion is based on the normal capacity of the production facilities.

Thus, cost per kg. of finished goods can be computed as follows:

	₹
Material cost	100
Direct labour cost	20
Direct variable production overhead	10
Fixed production overhead $\left(\frac{₹ 10,00,000}{1,00,000}\right)$	10
	140

Thus, the value of 2,000 kgs of finished goods on inventory at the year-end will be ₹ 2,80,000 (2,000 kgs. x ₹ 140).

Illustration 7

The company deals in three products, A, B and C, which are neither similar nor interchangeable. At the time of closing of its account for the year 2016-17, the historical cost and net realizable value of the items of closing inventory are determined as follows:

Items	*Historical Cost (₹ in lakhs)*	*Net Realisable Value (₹ in lakhs)*
A	*40*	*28*
B	*32*	*32*
C	*16*	*24*

What will be the value of closing inventory?

Solution

As per para 14 of AS 2, the cost of inventories of items that are not ordinarily interchangeable and goods or services produced and segregated for specific projects should be assigned by specific identification of their individual costs. This is an appropriate treatment for items that are segregated for a specific project, regardless of whether they have been purchased or produced.

Further, as per para 5 of AS 2 on 'Valuation of Inventories', inventories should be valued at the lower of cost and net realizable value. Inventories should be written down to net realizable value on an item-by-item basis in the given case.

Items	*Historical Cost (₹ in lakhs)*	*Net Realisable Value (₹ in lakhs)*	*Valuation of closing inventory (₹ in lakhs)*
A	40	28	28
B	32	32	32
C	16	24	16
	88	84	76

Hence, closing inventory will be valued at ₹ 76 lakhs.

Illustration 8

Calculate the value of raw materials and closing stock based on the following information:

Raw material X	
Closing balance	*500 units*
	₹ per unit
Cost price including excise duty	*200*
Excise duty (CENVAT credit is receivable on the excise duty paid)	*10*
Freight inward	*20*
Unloading charges	*10*
Replacement cost	*150*
Finished goods Y	
Closing Balance	*1200 units*
	₹ per unit
Material consumed	*220*
Direct labour	*60*
Direct overhead	*40*

Total fixed overhead for the year was ₹ 2,00,000 on normal capacity of 20,000 units.

Calculate the value of the closing stock, when

(i) Net Realizable Value of the Finished Goods Y is ₹ 400.

(ii) Net Realizable Value of the Finished Goods Y is ₹ 300.

Solution

Statement showing valuation of Raw Material and Finished Goods at cost

Raw Material X	*₹*
Cost Price	200

Less: CENVAT credit	(10)
	190
Add: Freight Inward	20
Unloading charges	10
Cost	220
Finished goods Y	₹
Materials consumed	220
Direct labour	60
Direct overhead	40
Fixed overheads (2,00,000/20,000)	10
Cost	330

(i) When Net Realisable Value (NRV) of the Finished Goods Y is ₹ 400

NRV is greater than the cost of Finished Goods Y i.e. ₹ 330

Hence, Raw Material and Finished Goods will be valued at cost

Accordingly, value of closing stock will be:

	Qty	*Rate*	*Amount (₹)*
Raw Material X	500	220	1,10,000
Finished Goods Y	1,200	330	3,96,000
Total cost of closing stock			5,06,000

(ii) When Net Realisable Value of the Finished Goods Y is ₹ 300

NRV is less than the cost of Finished Goods Y i.e. ₹ 330

Hence, Raw Material is to be valued at replacement cost and Finished Goods are to be valued at NRV.

Accordingly, value of closing stock will be:

	Qty	*Rate*	*Amount (₹)*
Raw Material X	500	150	75,000
Finished Goods Y	1,200	300	3,60,000
Total cost of closing stock			4,35,000

Note: It has been assumed that Raw Material X is used for production of Finished Goods Y.

UNIT 4 : AS 3 : CASH FLOW STATEMENTS

4.1 Introduction

This statement came into effect in respect of accounting periods commenced on or after 1.4.1997. This Standard supersedes Accounting Standard (AS) 3, 'Changes in Financial Position', issued in June 1981. This Standard is mandatory in nature in respect of accounting periods commencing on or after 1.4.2004 for the enterprises, which fall in the category of level I, at the end of the relevant accounting period. For all other enterprises though it is not compulsory but it is encouraged to prepare such statements. Where an enterprise was not covered by this statement during the previous year but qualifies in the current accounting year, they are not supposed to disclose the figures for the corresponding previous years. Whereas, if an enterprises qualifies under this statement to prepare the cash flow statements during the previous year but now disqualified, will continue to prepare cash flow statements for another two consecutive years.

4.2 Objective

Cash flow Statement (CFS) is an additional information provided to the users of accounts in the form of an statement, which reflects the various sources from where cash was generated (inflow of cash) by an enterprise during the relevant accounting year and how these inflows were utilised (outflow of cash) by the enterprise. This helps the users of accounts:

- To identify the historical changes in the flow of cash & cash equivalents.
- To determine the future requirement of cash & cash equivalents.
- To assess the ability to generate cash & cash equivalents.
- To estimate the further requirement of generating cash & cash equivalents.
- To compare the operational efficiency of different enterprises.
- To study the insolvency and liquidity position of an enterprise.
- As an indicator of amount, timing and certainty of future cash flows.
- To check the accuracy of past assessments of future cash flows
- In examining the relationship between profitability and net cash flow and the impact of changing prices.

Cash comprises cash on hand and demand deposits with banks.

Cash equivalents are short term (maximum three months of maturity from the date of acquisition), highly liquid investments that are readily convertible into known amounts of cash and which are subject to an insignificant risk of changes in value.

Example: Share Capital is not considered as cash equivalent even though they are readily convertible into cash because, the amount that will be realized on sale of investment is not determinable unless investment is actually sold. Similarly, fixed deposit for one year is also not considered as cash equivalent because they are not readily convertible into cash, even though the amount is determinable.

One should not be confused with the concept of three months or less. As this standard state very clearly that three months or less from the date of acquisition, any investment which is not classified as cash equivalent cannot be reclassified as cash equivalent, even when the maturity period is less than three months. We should look at the status only on the date of acquisition and not later.

Cash flows are inflows and outflows of cash and cash equivalents.

4.3 Presentation of a Cash Flow Statement

AS 3 'Cash Flow Statements' requires the presentation of information about the historical changes in the cash and cash equivalents of an enterprise in the relevant accounting year by means of a cash flow statement, which classifies cash flows during the period according to operating, investing and financing activities.

4.3.1 Operating Activities

Operating activities are the principal revenue-producing activities of the enterprise and other activities that are not investing or financing activities.

Examples of cash flows from operating activities are:

- cash received in the year from customers (in respect of sale of goods or services rendered either in the year, or in an earlier year, or received in advance in respect of the sale of goods or services to be rendered in a later year);
- cash payments in the year to suppliers (for raw materials or goods for resale whether supplied in the current year, or an earlier year, or to be supplied in a later year);
- the payment of wages and salaries to employees;
- tax and other payments on behalf of employees;
- the payment of rent on property used in the business operations; royalties received in the year;
- cash receipts and cash payments of an insurance enterprise for premiums and claims, annuities and other policy benefits;
- the payment of insurance premiums;
- cash payments or refunds of income taxes that cannot be specifically identified with financing or investing activities
- cash flows arising from futures contracts, forward contracts, option contracts or swap contracts hedging a transaction that is itself classified as operating; and
- cash flows arising from the purchase and sale of securities and loans held for dealing or trading purposes.

4.3.2 Investing Activities

Investing activities are the acquisition and disposal of long-term assets and other investments not included in cash equivalents.

Examples of cash flows arising from investing activities include:

- cash payment to acquire fixed assets (including intangibles). These payments include those relating to capitalised research and development costs and self-constructed fixed assets;
- cash receipts from disposal of fixed assets (including intangibles);
- cash payments to acquire shares, warrants or debt instruments of other enterprises and interests in joint ventures (other than payments for those instruments considered to be cash equivalents and those held for dealing or trading purposes);
- cash receipts from disposal of shares, warrants or debt instruments of other enterprises and interests in joint ventures (other than receipts for those instruments considered to be cash equivalents and those held for dealing or trading purposes);
- cash advances and loans made to third parties (other than advances and loans made by a financial enterprise);
- cash receipts from the repayment of advances and loans made to third parties (other than advances and loans of a financial enterprise);
- cash payments for futures contracts, forward contracts, option contracts and swap contracts except when the contracts are held for dealing or trading purposes, or the payments are classified as financing activities; and
- cash receipts from futures contracts, forward contracts, option contracts and swap contracts, except when the contracts are held for dealing or trading purposes or the receipts are classified as financing activities.

4.3.3 Financing Activities

Financing activities are activities that result in changes in the size and composition of the owners' capital (including preference share capital in the case of a company) and borrowings of the enterprise.

Examples of cash flows arising from financing activities are:

- cash proceeds from issuing shares or other similar instruments;
- cash proceeds from issuing debentures, loans, notes, bonds, and other short or long-term borrowings; and
- cash repayments of amounts borrowed.

So all the transactions should be classified under each of these heads and presented in CFS, this kind of presentation gives a very clear idea to the users regarding the major sources of cash inflows, from where all the activities are financed by the enterprises. Say if net cash flow from operating activities is negative and net cash flow from investing activities is positive, this does not portray a good picture of the functioning of the enterprise. Sometimes, a single transaction may include cash flows that are classified differently. For example, a fixed asset acquired out of loan taken from bank on deferred payment basis includes the loan element which will be classified under financing activities and the asset acquired will be classified under investing activities.

As discussed earlier, operating activities are those activities which determine the profit/loss result of the enterprise, hence this head helps us to determine that whether the concern has sufficient cash inflow from their normal operations to support their operating cash outflow, and also the other cash outflow.

There are few extraordinary items, which are recorded in Profit and Loss Account, but are not to be classified as operating activity, such as, profit/loss on sale of fixed asset. Fixed assets are to be classified as investing activities; therefore any sale proceeds from such items will go to investing activities. If investments are held as inventory in trade, in such a case we will disclose them as operating activities.

Illustration 1

Classify the following activities as (a) Operating Activities, (b) Investing Activities, (c) Financing Activities (d) Cash Equivalents.

a. Purchase of Machinery.

b. Proceeds from issuance of equity share capital

c. Cash Sales.

d. Proceeds from long-term borrowings.

e. Proceeds from Trade receivables.

f. Cash receipts from Trade receivables.

g. Trading Commission received.

h. Purchase of investment.

i. Redemption of Preference Shares.

j. Cash Purchases.

k. Proceeds from sale of investment

l. Purchase of goodwill.

m. Cash paid to suppliers.

n. Interim Dividend paid on equity shares.

o. Wages and salaries paid.

p. Proceed from sale of patents.

q. Interest received on debentures held as investment.

r. Interest paid on Long-term borrowings.

s. *Office and Administration Expenses paid*

t. *Manufacturing Overheads paid.*

u. *Dividend received on shares held as investments.*

v. *Rent Received on property held as investment.*

w. *Selling and distribution expense paid.*

x. *Income tax paid*

y. *Dividend paid on Preference shares.*

z. *Underwritings Commission paid.*

aa. *Rent paid.*

bb. *Brokerage paid on purchase of investments.*

cc. *Bank Overdraft*

dd. *Cash Credit*

ee. *Short-term Deposits*

ff. *Marketable Securities*

gg. *Refund of Income Tax received.*

Solution

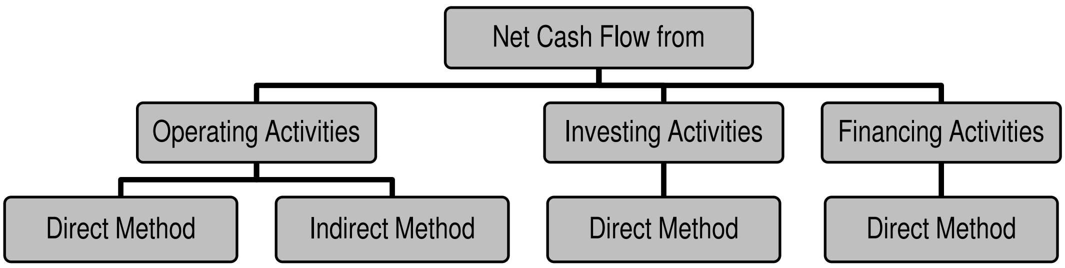
(a) Operating Activities: c, e, f, g, j, m, o, s, t, w, x, aa & gg.

(b) Investing Activities: a, h, k, l, p, q, u, v, bb & ee.

(c) Financing Activities: b, d, i, n, r, y, z, cc & dd.

(d) Cash Equivalent: ff.

Cash Flow during the Year is



4.4 Reporting Cash Flows from Operating Activities

Net cash flow from operating activities can be reported either as direct method or as indirect method.

In 'Direct method' we take the gross receipts from sales, trade receivables and other operating inflows subtracted by gross payments for purchases, creditors and other expenses ignoring all non-cash items like depreciation, provisions. In 'Indirect method' we start from the net profit or loss figure, eliminate the effect of any non-cash items, investing items and financing items from such profit figure i.e. all such expenses like depreciation, provisions, interest paid, loss on sale of assets etc. are added and interest received etc. are deducted. Adjustment for changes in working capital items are also made ignoring cash and cash equivalent to reach to the figure of net cash flow.

Direct method is preferred over indirect because, direct method gives us the clear picture of various sources of cash inflows and outflows which helps in estimating the future cash inflows and outflows.

Below is the format for Cash Flow Statement

Cash Flow Statement of X Ltd. for the year ended March 31, 20XX (Direct Method)

Particulars	₹	₹
Operating Activities:		
Cash received from sale of goods	xxx	
Cash received from Trade receivables	xxx	
Cash received from sale of services	xxx	xxx

The summarised Balance Sheet of New Light Ltd. for the years ended 31st March, 2016 and 2017 are as follows:

Liabilities	31st March 2016 (₹)	31st March 2017 (₹)	Assets	31st March 2016 (₹)	31st March 2017 (₹)
Equity share capital	11,20,000	15,60,000	Fixed Assets	32,00,000	38,00,000
10% Preference share capital	4,00,000	2,80,000	Less: Depreciation	9,20,000	11,60,000
				22,80,000	26,40,000
Capital Reserve	–	40,000	Investment	4,00,000	3,20,000
General Reserve	6,80,000	8,00,000	Cash	10,000	10,000
Profit and Loss A/c	2,40,000	3,00,000	Other current assets	11,10,000	13,10,000
9% Debentures	4,00,000	2,80,000			
Current liabilities	4,80,000	5,36,000			
Dividend	1,20,000	1,44,000			
Provision for Tax	3,60,000	3,40,000			
	38,00,000	42,80,000		38,00,000	42,80,000

Additional information:

(i) *The company sold one fixed asset for ₹ 1,00,000, the cost of which was ₹ 2,00,000 and the depreciation provided on it was ₹ 80,000.*

(ii) *The company also decided to write off another fixed asset costing ₹ 56,000 on which depreciation amounting to ₹ 40,000 has been provided.*

(iii) *Depreciation on fixed assets provided ₹ 3,60,000.*

(iv) *Company sold some investment at a profit of ₹ 40,000, which was credited to capital reserve.*

(v) *Debentures and preference share capital redeemed at 5% premium.*

(vi) *Company decided to value inventory at cost, whereas previously the practice was to value inventory at cost less 10%. The inventory according to books on 31.3.2016 was ₹ 2,16,000. The inventory on 31.3.2017 was correctly valued at ₹ 3,00,000.*

Prepare Cash Flow Statement as per revised AS 3 by indirect method.

Solution

New Light Ltd.

Cash Flow Statement for the year ended 31st March, 2017

		₹	₹
A.	Cash Flow from operating activities		
	Profit after appropriation		
	Increase in profit and loss A/c after inventory adjustment [₹ 3,00,000 – (₹ 2,40,000 + ₹ 24,000)]	36,000	
	Transfer to general reserve	1,20,000	
	Dividend	1,44,000	
	Provision for tax	3,40,000	
	Net profit before taxation and extraordinary item	6,40,000	
	Adjustments for:		
	Depreciation	3,60,000	
	Loss on sale of fixed assets	20,000	
	Decrease in value of fixed assets	16,000	
	Premium on redemption of preference share capital	6,000	
	Premium on redemption of debentures	6,000	
	Operating profit before working capital changes	10,48,000	
	Increase in current liabilities (₹ 5,36,000 –₹ 4,80,000)	56,000	
	Increase in other current assets [₹ 13,10,000 – (₹ 11,10,000 + ₹ 24,000)] (W.N.1)	(1,76,000)	
	Cash generated from operations	9,28,000	
	Income taxes paid	(3,60,000)	
	Net Cash from operating activities		5,68,000
B.	Cash Flow from investing activities		
	Purchase of fixed assets (W.N.3)	(8,56,000)	
	Proceeds from sale of fixed assets	1,00,000	
	Proceeds from sale of investments (W.N.2)	1,20,000	
	Net Cash from investing activities		(6,36,000)
C.	Cash Flow from financing activities		
	Proceeds from issuance of share capital	4,40,000	
	Redemption of preference share capital (₹1,20,000 + ₹ 6,000)	(1,26,000)	
	Redemption of debentures (₹ 1,20,000 + ₹ 6,000)	(1,26,000)	
	Dividend paid	(1,20,000)	

	Net Cash from financing activities		68,000
	Net increase/decrease in cash and cash equivalent during the year		Nil
	Cash and cash equivalent at the beginning of the year		10,000
	Cash and cash equivalent at the end of the year		10,000

Working Notes:

1. Revaluation of inventory will increase opening inventory by ₹ 24,000.

$$\frac{2,16,000}{90} \times 10 = ₹\ 24,000$$

Therefore, opening balance of other current assets would be as follows:

₹ 11,10,000 + ₹ 24,000 = ₹ 11,34,000

Due to under valuation of inventory, the opening balance of profit and loss account be increased by ₹ 24,000.

The opening balance of profit and loss account after revaluation of inventory will be

₹ 2,40,000 + ₹ 24,000 = ₹ 2,64,000.

2. **Investment Account**

	₹		₹
To Balance b/d	4,00,000	By Bank A/c (balancing figure being investment sold)	1,20,000
To Capital reserve A/c (Profit on sale of investment)	40,000	By Balance c/d	3,20,000
	4,40,000		4,40,000

3. **Fixed Assets Account**

	₹		₹	₹
To Balance b/d	32,00,000	By Bank A/c (sale of assets)	1,00,000	
To Bank A/c (balancing figure being assets purchased)	8,56,000	By Accumulated depreciation A/c	80,000	
		By Profit and loss A/c (loss on sale of assets)	20,000	2,00,000
		By Accumulated depreciation A/c	40,000	
		By Profit and loss A/c (assets written off)	16,000	56,000
		By Balance c/d		38,00,000
	40,56,000			40,56,000

4. **Accumulated Depreciation Account**

Cash flows from investing activities		
Proceeds from sale of equipment	11,250	
Dividends received	4,500	
Net Cash from investing activities		15,750
Cash flows from financing activities		
Dividends paid	(18,000)	
Interest paid	(3,000)	
Net Cash used in financing activities		(21,000)
Net increase in cash and cash equivalents		3,000
Cash and cash equivalents at the beginning of the year		1,500
Cash and cash equivalents at the end of the year		4,500

Illustration 7

Money Ltd., a non-financial company has the following entries in its Bank Account. It has sought your advice on the treatment of the same for preparing Cash Flow Statement.

(i) Loans and Advances given to the following and interest earned on them:

(1) to suppliers

(2) to employees

(3) to its subsidiaries companies

(ii) Investment made in subsidiary Smart Ltd. and dividend received

(iii) Dividend paid for the year

(iv) TDS on interest income earned on investments made

(v) TDS on interest earned on advance given to suppliers

(vi) Insurance claim received against loss of fixed asset by fire

Discuss in the context of AS 3 Cash Flow Statement.

Solution

Treatment as per AS 3 'Cash Flow Statement'

(i) Loans and advances given and interest earned

(1)	to suppliers	Cash flows from operating activities
(2)	to employees	Cash flows from operating activities

(3) to its subsidiary companies Cash flows from investing activities

(ii) Investment made in subsidiary company and dividend received

Cash flows from investing activities

(iii) Dividend paid for the year

Cash flows from financing activities

(iv) TDS on interest income earned on investments made

Cash flows from investing activities

(v) TDS on interest earned on advance given to suppliers

Cash flows from operating activities

(vi) Insurance claim received against loss of fixed asset by fire

Extraordinary item to be shown under a separate heading as 'Cash inflow from operating activities'.

4.5 Reporting Cash Flows on Net Basis

Paragraph 21 forbids netting of receipts and payments from investing and financing activities. Thus, cash paid on purchase of fixed assets should not be shown net of cash realised from sale of fixed assets.

Example: If an enterprise pays ₹ 50,000 in acquisition of machinery and realises ₹ 10,000 on disposal of furniture, it is not right to show net cash outflow of ₹40,000. The exceptions to this rule are stated in paragraphs 22 and 24.

As per paragraph 22, cash flows from the following operating, investing or financing activities may be reported on a net basis.

(a) Cash receipts and payments on behalf of customers, e.g. cash received and paid by a bank against acceptances and repayment of demand deposits.

(b) Cash receipts and payments for items in which the turnover is quick, the amounts are large and the maturities are short, e.g. purchase and sale of investments by an investment company.

Paragraph 24 permits financial enterprises to report cash flows on a net basis in the following three circumstances.

(a) Cash flows on acceptance and repayment of fixed deposits

(b) Cash flows on placement and withdrawal deposits from other financial enterprises

(c) Cash flows on advances/loans given to customers and repayments received there from.

Non-Cash transactions (Paragraph 40)

Investing and financing transactions that do not require the use of cash or cash equivalents, e.g. issue of bonus shares, should be excluded from a cash flow statement. Such transactions should be disclosed elsewhere in the financial statements in a way that provides all the relevant information about these investing and financing activities.

Business Purchase

The aggregate cash flows arising from acquisitions and disposals of business units should be presented separately and classified as cash flow from investing activities. (Paragraph 37)

(a) The cash flows from disposal and acquisition should not be netted off. (Paragraph 39)

(b) As per paragraph 38, an enterprise should disclose, in aggregate, in respect of both acquisition and disposal of subsidiaries or other business units during the period each of the following:

    (i) The total purchase or disposal consideration; and

    (ii) The portion of the purchase or disposal consideration discharged by means of cash and cash equivalents.

Treatment of current assets and liabilities taken over on business purchase

Business purchase is not operating activity. Thus, while taking the differences between closing and opening current assets and liabilities for computation of operating cash flows, the closing balances should be reduced by the values of current assets and liabilities taken over. This ensures that the differences reflect the increases/decreases in current assets and liabilities due to operating activities only.

4.6 Foreign Currency Cash Flows and Exchange Gains and Losses

The foreign currency monetary assets (e.g. balance with bank, trade receivables etc.) and liabilities (e.g. trade payables) are initially recognised by translating them into reporting currency by the rate of exchange transaction date. On the balance sheet date, these are restated using the rate of exchange on the balance sheet date. The difference in values is exchange gain/loss. The exchange gains and losses are recognised in the statement of profit and loss (See AS 11 for details).

The exchange gains/losses in respect of cash and cash equivalents in foreign currency (e.g. balance in foreign currency bank account) are recognised by the principle aforesaid, and these balances are restated in the balance sheet in reporting currency at rate of exchange on balance sheet date. The change in cash or cash equivalents due to exchange gains and losses are however not cash flows. This being so, the net increases/decreases in cash or cash equivalents in the cash flow statements are stated excusive of exchange gains and losses. The resultant difference between cash and cash equivalents as per the cash flow statement and that recognised in the balance sheet is reconciled in the note on cash flow statement. (Paragraph 25)

4.7 Disclosures

Paragraph 45 requires an enterprise to disclose the amount of significant cash and cash equivalent balances held by it but not available for its use, together with a commentary by management. This may happen for example, in case of bank balances held in other countries subject to such exchange control or other regulations that the fund is practically of no use.

Paragraph 47 encourages disclosure of additional information, relevant for understanding the financial position and liquidity of the enterprise. Such information may include:

(a) The amount of undrawn borrowing facilities that may be available for future operating activities and to settle capital commitments, indicating any restrictions on the use of these facilities; and

(b) The aggregate amount of cash flows required for maintaining operating capacity, e.g. purchase of machinery to replace the old, separately from cash flows that represent increase in operating capacity, e.g. additional machinery purchased to increase production.

Reference: The students are advised to refer the full text of AS 3 "Cash Flow Statements" (revised 1997).

UNIT 5 : AS 4: CONTINGENCIES AND EVENTS OCCURRING AFTER THE BALANCE SHEET DATE

5.1 Introduction

All paragraphs of this Standard that deal with contingencies are applicable only to the extent not covered by other Accounting Standards prescribed by the Central Government. For example, the impairment of financial assets such as impairment of receivables (commonly known as provision for bad and doubtful debts) is governed by this Standard. Thus, the present standard (AS 4) deals with the treatment and disclosure requirements in the financial statements of events occurring after the balance sheet. Events occurring after the balance sheet date are those significant events (favourable as well unfavourable) that occur between the balance sheet date and the date on which financial statements are approved by the approving authority (i.e. board of directors in case of a company) of any entity.

This revised standard came into effect in respect of accounting periods commenced on or after 1.4.1995 and is mandatory in nature.

5.2 Contingencies

Contingency is a condition or situation, the ultimate outcome of which, gain or loss, will be known or determined only on the occurrence, or non-occurrence, of one or more uncertain future events. *(Refer to unit 28 for discussion on AS 29)*

5.3 Events Occurring after the Balance Sheet Date

Events occurring after the balance sheet date are those significant events, both favourable and unfavourable, that occur between the balance sheet date and the date on which the financial statements are approved by the Board of Directors in the case of a company, and, by the corresponding approving authority in the case of any other entity.

For example, for the year ending on 31st March 2017, financial statement is finalized and approved by the company in its AGM held on 04th September 2017. In this case the events taking place between 01st April 2017 to 04th September 2017 are termed as events occurring after the balance sheet date.

Two types of events can be identified

a. those which provide further evidence of conditions that existed at the balance sheet date. For example a trade receivable declared insolvent and estate unable to pay full amount against whom provision for doubtful debt was created.

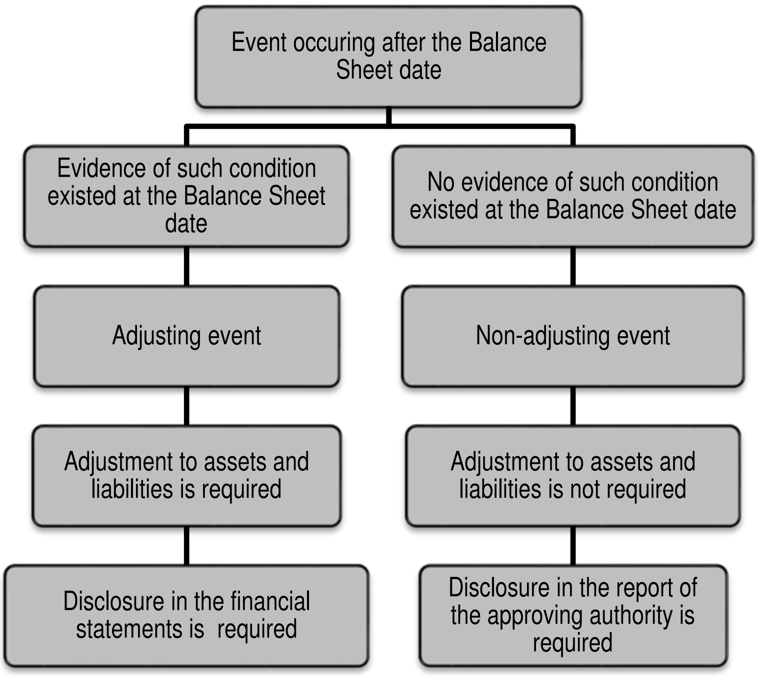
b. those which are indicative of conditions that arose subsequent to the balance sheet date. An event which ceases the enterprise from being going concern.

Adjustments to assets and liabilities are required for events occurring after the balance sheet date that provide additional information materially affecting the determination of the amounts relating to conditions existing at the balance sheet date. For example, an adjustment may be made for a loss on a trade receivable account which is confirmed by the insolvency of a customer which occurs after the balance sheet date.

Adjustments to assets and liabilities are not appropriate for events occurring after the balance sheet date, if such events do not relate to conditions existing at the balance sheet date. An example is the decline in market value of investments between the balance sheet date and the date on which the financial statements are approved. Events occurring after the balance sheet date which do not affect the figures stated in the financial statements would not normally require disclosure in the financial statements although they may be of such significance that they may require a disclosure in the report of the approving authority to enable users of financial statements to make proper evaluations and decisions.

There are events which, although take place after the balance sheet date, are sometimes reflected in the financial statements because of statutory requirements or because of their special nature. ***For example, if dividends are declared after the balance sheet date but before the financial statements are approved for issue, the dividends are not recognised as a liability at the balance sheet date because no obligation exists at that time unless a statute requires otherwise. Such dividends are disclosed in the notes.***

Assets and liabilities should be adjusted for events occurring after the balance sheet date that indicate that the fundamental accounting assumption of going concern (ie existence or substratum of the enterprise) is not appropriate.



5.4 Disclosure

Disclosure of events occurring after the balance sheet date requires the following information should be provided:

(a) The nature of the event;

(b) An estimate of the financial effect, or a statement that such an estimate cannot be made.

5.5 Illustrations

Illustration 1

Pure Oil Ltd. closed the books of accounts on March 31, 2017 for which financial statement was finalized by the Board of Directors on September 04, 2017. During the month of December 2016, company undertook the project of laying a pipeline across the country and during May 2017 engineers realized that due to unexpected heavy rain, the total cost of the project will be inflated by ₹ 50 lakhs. How this should be provided for in the balance sheet of 2016-17 in accordance to AS 4?

Solution

This event occurred after March 31, 2017 but before September 04, 2017 is an event occurring after the balance sheet date. But this event is not affecting financial position on the date of balance sheet therefore it should be disclosed in the directors report.

Illustration 2

In preparing the financial statements of R Ltd. for the year ended 31st March, 2017, you come across the following information. State with reasons, how you would deal with this in the financial statements:

The company invested 100 lakhs in April, 2017 before approval of Financial Statements by the Board of directors in the acquisition of another company doing similar business, the negotiations for which had started during the year.

Solution

Para 3.2 of AS 4 (Revised) defines "Events Occurring after the Balance Sheet Date" as those significant events, both favourable and unfavourable, that occur between the balance sheet date and the date on which the financial statements are approved by the Approving Authority in the case of a company. Accordingly, the acquisition of another company is an event occurring after the balance sheet date. However, no adjustment to assets and liabilities is required as the event does not affect the determination and the condition of the amounts stated in the financial statements for the year ended 31st March, 2017. Applying para 15 which clearly states that/disclosure should be made in the report of the approving authority of those events occurring after the balance sheet date that represent material changes and commitments affecting the financial position of the enterprise, the investment of ₹ 100 lakhs in April, 2017 in the acquisition of another company should be disclosed in the report of the Approving Authority to enable users of financial statements to make proper evaluations and decisions.

Illustration 3

A Limited Company closed its accounting year on 30.6.2017 and the accounts for that period were considered and approved by the board of directors on 20th August, 2017. The company was engaged in laying pipe line for an oil company deep beneath the earth. While doing the boring work on 1.9.2017 it had met a rocky surface for which it was estimated that there would be an extra cost to the tune of ₹ 80 lakhs. You are required to state with reasons, how the event would be dealt with in the financial statements for the year ended 30.6.2017.

Solution

Para 3.2 of AS 4 (Revised) on Contingencies and Events Occurring after the Balance Sheet Date defines 'events occurring after the balance sheet date' as 'significant events, both favourable and unfavourable, that occur between the balance sheet date and the date on which financial statements are approved by the Board of Directors in the case of a company'. The given case is discussed in the light of the above mentioned definition and requirements given in paras 13-15 of the said AS 4 (Revised).

In this case the incidence, which was expected to push up cost, became evident after the date of approval of the accounts. So that was not an 'event occurring after the balance sheet date'. However, this may be mentioned in the Report of Approving Authority.

Illustration 4

While preparing its final accounts for the year ended 31st March, 2017 a company made a provision for bad debts @ 5% of its total trade receivables. In the last week of February, 2017 a trade receivable for ₹ 2 lakhs had suffered heavy loss due to an earthquake; the loss was not covered by any insurance policy. In April, 2017 the trade receivable became a bankrupt. Can the company provide for the full loss arising out of insolvency of the trade receivable in the final accounts for the year ended 31st March, 2017?

Solution

As per paras 8.2 and 13 of Accounting Standard 4 on Contingencies and Events Occurring after the Balance Sheet Date, Assets and Liabilities should be adjusted for events occurring after the balance sheet date that provide additional evidence to assist estimation of amounts relating to conditions existing at the balance sheet date.

So full provision for bad debt amounting to ₹ 2 lakhs should be made to cover the loss arising due to the insolvency in the Final Accounts for the year ended 31st March, 2017. It is because earthquake took place before the balance sheet date.

Had the earthquake taken place after 31st March, 2017, then mere disclosure required as per para 15, would have been sufficient.

Illustration 5

During the year 2015-2016, Raj Ltd. was sued by a competitor for ₹ 15 lakhs for infringement of a trademark. Based on the advice of the company's legal counsel, Raj Ltd. provided for a sum of

₹ 10 lakhs in its financial statements for the year ended 31st March, 2016. On 18th May, 2016, the Court decided in favour of the party alleging infringement of the trademark and ordered Raj Ltd. to pay the aggrieved party a sum of ₹ 14 lakhs. The financial statements were prepared by the company's management on 30th April, 2016, and approved by the board on 30th May, 2016.

Solution

As per para 8 of AS 4 "Contingencies and Events Occurring After the Balance Sheet Date, adjustments to assets and liabilities are required for events occurring after the balance sheet date that provide additional information materially affecting the determination of the amounts relating to conditions existing at the balance sheet date.

In the given case, since Raj Ltd. was sued by a competitor for infringement of a trademark during the year 2015-16 for which the provision was also made by it, the decision of the Court on 18th May, 2016, for payment of the penalty will constitute as an adjusting event because it is an event occurred before approval of the financial statements. Therefore, Raj Ltd. should adjust the provision upward by ₹ 4 lakhs to reflect the award decreed by the Court to be paid by them to its competitor.

Had the judgment of the Court been delivered on 1st June, 2016, it would be considered as post reporting period i.e. event occurred after the approval of the financial statements. In that case, no adjustment in the financial statements of 2015-16 would have been required.

Illustration 6

For seven companies whose financial year ended on 31st March, 2017, the financial statements were approved by their approving authority on 15th June, 2017.

During 2017-18, the following material events took place:

a. *A Ltd. sold a major property which was included in the balance sheet at ₹ 1,00,000 and for which contracts had been exchanged on 15th March, 2017. The sale was completed on 15th May, 2017 at a price of ₹ 2,50,000.*

b. *On 30th April, 2017, a 100% subsidiary of B Ltd. declared a dividend of ₹ 3,00,000 in respect of its own shares for the year ended on 31st March, 2017.*

c. *On 31st May, 2017, the mail order activities of C Ltd. (a retail trading group) were shut down with closure costs amounting to ₹ 2.5 million.*

d. *On 1st July, 2017 the discovery of sand under D Ltd.'s major civil engineering contract site causes the cost of the contract to increase by 25% for which there would be no corresponding recovery from the customer.*

e. *A fire, on 2nd April, 2017, completely destroyed a manufacturing plant of E Ltd. It was expected that the loss of ₹ 10 million would be fully covered by the insurance company.*

f. *A claim for damage amounting to ₹ 8 million for breach of patent had been received by F Ltd. prior to the year-end. It is the director's opinion, backed by legal advice that the claim will ultimately* *prove to be baseless. But it is still estimated that it would involve a considerable expenditure on legal fees.*

g. The change in foreign exchange rate of 8% between 1st April, 2017 and 1st June, 2017 has resulted in G Ltd.'s foreign assets being reduced by ₹ 1.3 million.

You are required to state with reasons, how each of the above items numbered (a) to (g) should be dealt with in the financial statement of the various companies for the year ended 31st March, 2017.

Solution

Treatment as per AS 4 'Contingencies and Events Occurring After the Balance Sheet Date'

(a)	A Ltd.	The sale of property should be treated as an adjusting event since contracts had been exchanged prior to the year-end. The effect of the sale would be reflected in the financial statements ended on 31.3.2017 and the profit on sale of property ₹ 1,50,000 would be treated as an extraordinary item.
(b)	B Ltd.	The declaration of dividend on 30th April, 2017 of ₹ 3,00,000 would be treated as a non-adjusting event in the financial statements of 2016-17. This is because, the dividend has been declared after the balance sheet date and no conditions existed on the balance sheet date for such declaration of dividend. Further as per AS 9, right to receive dividend is established when it is declared and not before that.
(c)	C Ltd.	A closure not anticipated at the year-end would be treated as a non-adjusting event. Memorandum disclosure would be required for closure of mail order activities since non-disclosure would affect user's understanding of the financial statements.
(d)	D Ltd.	The event took place after the financial statements were approved by the approving authority and is thus outside the purview of AS 4. However, in view of its significance of the transaction, the directors may consider publishing a separate financial statement/additional statement for the attention of the members in general meeting.
(e)	E Ltd.	The event is a non-adjusting event since it occurred after the year-end and does not relate to the conditions existing at the year-end. However, it is necessary to consider the validity of the going concern assumption having regard to the extent of insurance cover. Also, since it is said that the loss would be fully recovered by the insurance company, the fact should be disclosed by way of a note to the financial statements.
(f)	F Ltd.	On the basis of evidence provided, the claim against the company will not succeed. Thus, ₹ 8 million should not be provided in the account, but should be disclosed by means of a contingent liability with full details of the facts as per AS 9. Provision should be made for legal fee expected to be incurred to the extent that they are not expected to be recovered.

(g)	G Ltd.	The change in exchange rates is a non-adjusting event since it does not relate to the conditions existing at the balance sheet date. However, they may be of such significance that they may require a disclosure in the report of the approving authority to enable users of financial statements to make proper evaluations and decisions.

Reference: The students are advised to refer the full text of AS 4 "Contingencies* and Events occurring after the Balance Sheet Date".

* Pursuant to AS 29 'Provisions, Contingent Liabilities and Contingent Assets', becoming mandatory in respect of accounting periods commencing on or after 1st April, 2004, all paragraphs of AS 4 dealing with contingencies stand withdrawn except to the extent they deal with impairment of assets not covered by any other AS.

UNIT 6 : AS 5: NET PROFIT OR LOSS FOR THE PERIOD, PRIOR PERIOD ITEMS AND CHANGES IN ACCOUNTING POLICIES

6.1 Introduction

This revised standard AS 5 came into effect in respect of accounting periods commenced on or after 1.4.1996 and is mandatory in nature.

The objective of AS 5 is to prescribe the classification and disclosure of certain items in the statement of profit and loss so that all enterprises prepare and present such a statement on a uniform basis. This enhances the comparability of the financial statements of an enterprise over time and with the financial statements of other enterprises. Accordingly, this Standard requires the classification and disclosure of extraordinary and prior period items, and the disclosure of certain items within profit or loss from ordinary activities. It also specifies the accounting treatment for changes in accounting estimates and the disclosures to be made in the financial statements regarding changes in accounting policies.

This Statement does not deal with the tax implications of extraordinary items, prior period items, changes in accounting estimates, and changes in accounting policies for which appropriate adjustments will have to be made depending on the circumstances.

6.2 Net Profit or Loss for the Period

The net profit or loss for the period comprises the following components, each of which should be disclosed on the face of the statement of profit and loss:

(a) Profit or loss from ordinary activities: Any activities which are undertaken by an enterprise as part of its business and such related activities in which the enterprise engages in furtherance of, incidental to, or arising from, these activities. For example profit on sale of merchandise, loss on sale of unsold inventory at the end of the season.

(b) Extraordinary items: Income or expenses that arise from events or transactions that are clearly distinct from the ordinary activities of the enterprise and, therefore, are not expected to recur frequently or regularly. For example, profit on sale of furniture or heavy loss of goods due to fire.

Extraordinary items should be disclosed in the statement of profit and loss as a part of net profit or loss for the period. The nature and the amount of each extraordinary item should be separately disclosed in the statement of profit and loss in a manner that its impact on current profit or loss can be perceived. Whether an event or transaction is clearly distinct from the ordinary activities of the enterprise is determined by the nature of the event or transaction in relation to the business ordinarily carried on by the enterprise rather than by the frequency with which such events are expected to occur. Therefore, an event or transaction may be extraordinary for one enterprise but not so for another enterprise because of the differences between their respective ordinary activities. For example, losses sustained as a result of an earthquake may qualify as an extraordinary item for many enterprises. However, claims from policyholders arising from an earthquake do not qualify as an extraordinary item for an insurance enterprise that insures against such risks.

When items of income and expense within profit or loss from ordinary activities are of such size, nature or incidence that their disclosure is relevant to explain the performance of the enterprise for the period, the nature and amount of such items should be disclosed separately.

Circumstances which may give rise to the separate disclosure of items of income and expense include:

(a) The write-down of inventories to net realisable value as well as the reversal of such write-downs.

(b) A restructuring of the activities of an enterprise and the reversal of any provisions for the costs of restructuring.

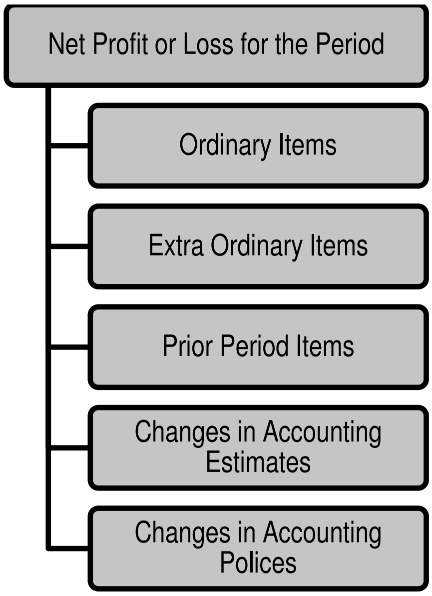
(c) Disposals of items of fixed assets.

(d) Disposals of long-term investments.

(e) Legislative changes having retrospective application.

(f) Litigation settlements.

(g) Other reversals of provisions.



6.3 Prior Period Items

Prior period items are income or expenses which arise in the current period as a result of errors or omissions in the preparation of the financial statements of one or more prior periods. Prior period items are generally infrequent in nature and can be distinguished from changes in accounting estimates.

6.4 Changes in Accounting Estimates

An estimate may have to be revised if changes occur in the circumstances based on which the estimate was made, or as a result of new information, more experience or subsequent developments. The revision of the estimate, by its nature, does not bring the adjustment within the definitions of an extraordinary item or a prior period item.

The effect of a change in an accounting estimate should be included in the determination of net profit or loss in:

(a) The period of the change, if the change affects the period only; or

(b) The period of the change and future periods, if the change affects both.

To ensure the comparability of financial statements of different periods, the effect of a change in an accounting estimate which was previously included in the profit or loss from ordinary activities is included in that component of net profit or loss. The effect of a change in an accounting estimate that was previously included as an extraordinary item is reported as an extraordinary item.

Accounting estimates by their nature are approximations that may need revision as additional information becomes known. For example, income or expense recognised on the outcome of a contingency which previously could not be estimated reliably does not constitute a prior period item.

For example, Sachin purchased a new machine costing ₹ 10 lacs. Useful life was taken to be for 10 years therefore depreciation was charged at 10% on original cost each year. After 5 years when carrying amount was ₹ 5 lacs for the machine, management realizes that machine can work for another 2 years only and they decide to write off ₹ 2.5 lacs each year. This is not an example of prior period item but change in accounting estimate. In the same example management by mistake calculates the depreciation in the fifth year as 10% of ₹ 6,00,000 i.e. ₹ 60,000 instead of ₹ 1,00,000 and in the next year decides to write off ₹ 1,40,000. ₹ 1,00,000 current year's depreciation and ₹ 40,000 as prior period item.

6.5 Changes in Accounting Policies

Accounting policies are the specific accounting principles and the methods of applying those principles adopted by an enterprise in the preparation and presentation of financial statements. A change in an accounting policy should be made only if the adoption of a different accounting policy is required by statute or for compliance with an accounting standard or if it is considered that the change would result in a more appropriate presentation of the financial statements of the enterprise.

The following are not changes in accounting policies:

(a) The adoption of an accounting policy for events or transactions that differ in substance from previously occurring events or transactions, e.g., introduction of a formal retirement gratuity scheme by an employer in place of ad hoc ex-gratia payments to employees on retirement;

(b) The adoption of a new accounting policy for events or transactions which did not occur previously or that were immaterial.

Any change in an accounting policy which has a material effect should be disclosed. The impact of, and the adjustments resulting from, such change, if material, should be shown in the financial statements of the period in which such change is made, to reflect the effect of such change. Where the effect of such change is not ascertainable, wholly or in part, the fact should be indicated. If a change is made in the accounting policies which has no material effect on the financial statements for the current period but which is reasonably expected to have a material effect in later periods, the fact of such change should be appropriately disclosed in the period in which the change is adopted.

Accounting Policies can be changed only:

- when the adoption of a different accounting policy is required by statute; or
- for compliance with an Accounting Standard; or
- when it is considered that the change would result in a more appropriate presentation of the financial statements of the enterprise.

6.6 Miscellaneous Illustrations

Illustration 1

Fuel surcharge is billed by the State Electricity Board at provisional rates. Final bill for fuel surcharge of ₹ 5.30 lakhs for the period October, 2008 to September, 2015 has been received and paid in February, 2016. However, the same was accounted in the year 2016-17. Comment on the accounting treatment done in the said case.

Solution

The final bill having been paid in February, 2016 should have been accounted for in the annual accounts of the company for the year ended 31st March, 2016. However, it seems that as a result of error or omission in the preparation of the financial statements of prior period i.e., for the year ended 31st March 2016, this material charge has arisen in the current period i.e., year ended 31st March, 2017. Therefore it should be treated as 'Prior period item' as per para 16 of AS 5. As per para 19 of AS 5 (Revised), prior period items are normally included in the determination of net profit or loss for the current period. An alternative approach is to show such items in the statement of profit and loss after determination of current net profit or loss. In either case, the objective is to indicate the effect of such items on the current profit or loss.

It may be mentioned that it is an expense arising from the ordinary course of business. Although abnormal in amount or infrequent in occurrence, such an expense does not qualify an extraordinary item as per Para 10 of AS 5 (Revised). For better understanding, the fact that power bill is accounted for at provisional rates billed by the state electricity board and final adjustment thereof is made as and when final bill is received may be mentioned as an accounting policy.

Illustration 2

There was a major theft of stores valued at ₹ 10 lakhs in the preceding year which was detected only *during current financial year (2016-2017). How will you deal with this information in preparing the financial statements of R Ltd. for the year ended 31st March, 2017.*

Solution

Due to major theft of stores in the preceding year (2015-2016) which was detected only during the current financial year (2016–2017), there was overstatement of closing inventory of stores in the preceding year. This must have also resulted in the overstatement of profits of previous year, brought forward to the current year. The adjustments are required to be made in the current year as 'Prior Period Items' as per AS 5 (Revised) on Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies. Accordingly, the adjustments relating to both opening inventory of the current year and profit brought forward from the previous year should be separately disclosed in the statement of profit and loss together with their nature and amount in a manner that their impact on the current profit or loss can be perceived.

Alternatively, it may be assumed that in the preceding year, the value of inventory of stores as found out by physical verification of inventories was considered in the preparation of financial statements of the preceding year. In such a case, only the disclosure as to the theft and the resulting loss is required in the notes to the accounts for the current year i.e, year ended 31st March, 2017.

Illustration 3

(i) During the year 2016-2017, a medium size manufacturing company wrote down its inventories to net realisable value by ₹ 5,00,000. Is a separate disclosure necessary?

(ii) A Limited company has been including interest in the valuation of closing inventory. In 2016-2017 the management of the company decided to follow AS 2 and accordingly interest has been excluded from the valuation of closing inventory. This has resulted in a decrease in profits by ₹ 3,00,000. Is a disclosure necessary? If so, draft the same.

(iii) A company signed an agreement with the Employees Union on 1.9.2016 for revision of wages with retrospective effect from 30.9.2015. This would cost the company an additional liability of ₹ 5,00,000 per annum. Is a disclosure necessary for the amount paid in 2016-17?

Solution

(i) Although the case under consideration does not relate to extraordinary item, but the nature and amount of such item may be relevant to users of financial statements in understanding the financial position and performance of an enterprise and in making projections about financial position and performance. Para 12 of AS 5 (Revised in 1997) on Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies states that:

"When items of income and expense within profit or loss from ordinary activities are of such size, nature or incidence that their disclosure is relevant to explain the performance of the enterprise for the period, the nature and amount of such items should be disclosed separately."

Circumstances which may give to separate disclosure of items of income and expense in accordance with para 12 of AS 5 include the write-down of inventories to net realisable value as well as the reversal of such write-downs.

(ii) As per AS 5 (Revised), change in accounting policy can be made for many reasons; one of these is for compliance with an accounting standard. In the instant case, the company has changed its accounting policy in order to conform to the AS 2 (Revised) on Valuation of Inventories. Therefore, a disclosure is necessary in the following lines by way of notes to the annual accounts for the year 2016-2017.

"To be in conformity with the Accounting Standard on Valuation of Inventories issued by ICAI, interest has been excluded from the valuation of closing stock unlike preceding years. Had the same principle been followed in previous years, profit for the year and its corresponding effect on the year end net assets would have been higher by ₹ 3,00,000."

(iii) It is given that revision of wages took place on 1st September, 2016 with retrospective effect from 30.9.2015. Therefore wages payable for the half year from 1.10.2016 to 31.3.2017 cannot be taken as an error or omission in the preparation of financial statements and hence this expenditure cannot be taken as a prior period item.

Additional wages liability of ₹ 7,50,000 (for 1½ years @ ₹ 5,00,000 per annum) should be included in current year's wages.

It may be mentioned that additional wages is an expense arising from the ordinary activities of the company. Although abnormal in amount, such an expense does not qualify as an extraordinary item. However, as per Para 12 of AS 5 (Revised), when items of income and expense within profit or loss from ordinary activities are of such size, nature or incidence that their disclosure is relevant to explain the performance of the enterprise for the period, the nature and amount of such items should be disclosed separately.

Illustration 4

While preparing its final accounts for the year ended 31st March, 2017 Rainbow Limited created a provision for Bad and Doubtful debts are 2% on trade receivables. A few weeks later the company found that payments from some of the major trade receivables were not forthcoming. Consequently the company decided to increase the provision by 10% on the trade receivables as on 31st March, 2017 as the accounts were still open awaiting approval of the Board of Directors. Is this to be considered as an extra-ordinary item or prior period item? Comment.

Solution

The preparation of financial statements involves making estimates which are based on the circumstances existing at the time when the financial statements are prepared. It may be necessary to revise an estimate in a subsequent period if there is a change in the circumstances on which the estimate was based. Revision of an estimate does not bring the resulting amount within the definition either of prior period item or of an extraordinary item [para 21, AS 5 (Revised)].

In the given case, Rainbow Limited created a provision for bad and doubtful debts at 2% on trade receivables while preparing its final accounts for the year ended 31st March, 2017. Subsequently, the company decided to increase the provision by 10%. As per AS 5 (Revised), this change in estimate is neither a prior period item nor an extraordinary item.

However, as per para 27 of AS 5 (Revised), a change in accounting estimate which has a material effect in the current period should be disclosed and quantified. Any change in an accounting estimate which is expected to have a material effect in later periods should also be disclosed.

Illustration 5

The company finds that the inventory sheets of 31.3.2016 did not include two pages containing details of inventory worth ₹ 14.5 lakhs. State, how you will deal with the following matters in the accounts of Omega Ltd. for the year ended 31st March, 2017.

Solution

Paragraph 4 of Accounting Standard 5 on Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies, defines Prior Period items as "income or expenses which arise in the current period as a result of errors or omissions in the preparation of the financial statements of one or more prior periods".

Rectification of error in inventory valuation is a prior period item vide Para 4 of AS 5. ₹14.5 lakhs must be added to the opening inventory of 1.4.2016. It is also necessary to show ₹ 14.5 lakhs as a prior period adjustment in the Profit and loss Account below the line. Separate disclosure of this item as a prior period item is required as per Para 15 of AS 5.

Illustration 6

Explain whether the following will constitute a change in accounting policy or not as per AS 5.

(i) Introduction of a formal retirement gratuity scheme by an employer in place of ad hoc ex-gratia payments to employees on retirement.

(ii) Management decided to pay pension to those employees who have retired after completing 5 years of service in the organistaion. Such employees will get pension of ₹ 20,000 per month. Earlier there was no such scheme of pension in the organization.

Solution

As per para 31 of AS 5 'Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies', the adoption of an accounting policy for events or transactions that differ in substance from previously occurring events or transactions, will not be considered as a change in accounting policy.

(i) Accordingly, introduction of a formal retirement gratuity scheme by an employer in place of ad hoc ex-gratia payments to employees on retirement is not a change in an accounting policy.

(ii) Similarly, the adoption of a new accounting policy for events or transactions which did not occur previously or that were immaterial will not be treated as a change in an accounting policy.

UNIT 7 : AS 7: CONSTRUCTION CONTRACTS

7.1 Introduction

AS 7, came into effect in respect of all contracts entered into during accounting periods commenced on or after 1-4-2003 and is mandatory in nature. This Standard should be applied in accounting for construction contracts in the financial statements of contractors. The standard prescribes the accounting treatment of revenue and costs associated with construction contracts by laying down the guidelines regarding allocation of contract revenue and contract costs to the accounting periods in which the construction work is performed, since the construction activity is generally contracted and completed in more than one accounting period.

7.2 Definitions of the terms used in the Standard

A construction contract is a contract specifically negotiated for the construction of an asset or a combination of assets that are closely interrelated or interdependent in terms of their design, technology and function or their ultimate purpose or use.

A fixed price contract is a construction contract in which the contractor agrees to a fixed contract price, or a fixed rate per unit of output, which in some cases is subject to cost escalation clauses.

A cost plus contract is a construction contract in which the contractor is reimbursed for allowable or otherwise defined costs, plus percentage of these costs or a fixed fee.

7.3 Combining and Segmenting Construction Contracts

When a contract covers a number of assets, the construction of each asset should be treated as a separate construction contract when:

(a) Separate proposals have been submitted for each asset;

(b) Each asset has been subject to separate negotiation and the contractor and customer have been able to accept or reject that part of the contract relating to each asset; and

(c) The costs and revenues of each asset can be separately identified.

A group of contracts, whether with a single customer or with several customers, should be treated as a single construction contract when:

(a) The group of construction contracts is negotiated as a single package;

(b) The contracts are so closely interrelated that they are, in effect, part of a single project with an overall profit margin; and

(c) The contracts are performed concurrently or in a continuous sequence.

A construction contract may provide for the construction of an additional asset at the option of the customer or may be amended to include the construction of an additional asset. The construction of the additional asset should be treated as a separate construction contract when:

(a) The asset differs significantly in design, technology or function from the asset or assets covered by the original contract; or

(b) The price of the asset is negotiated without regard to the original contract price.

7.4 Contract Revenue

Contract revenue should comprise:

(a) The initial amount of revenue agreed in the construction contract; and

(b) Variations in contract work, claims and incentive payments:

    (i) To the extent that it is probable that they will result in revenue; and

    (ii) They are capable of being reliably measured.

Contract revenue is measured at the consideration received or receivable. The measurement of contract revenue is affected by a variety of uncertainties that depend on the outcome of future events. The estimates often need to be revised as events occur and uncertainties are resolved. Therefore, the amount of contract revenue may increase or decrease from one period to the next. For example:

(a) A contractor and a customer may agree to variations or claims that increase or decrease contract revenue in a period subsequent to that in which the contract was initially agreed;

(b) The amount of revenue agreed in a fixed price contract may increase as a result of cost escalation clauses;

(c) The amount of contract revenue may decrease as a result of penalties arising from delays caused by the contractor in the completion of the contract; or

(d) When a fixed price contract involves a fixed price per unit of output, contract revenue increases/ decreases as the number of units is increased/ decreased.

7.5 Contract Costs

Contract costs should comprise:

(a) Costs that relate directly to the specific contract;

    1. Site labour costs, including site supervision;
    2. Costs of materials used in construction;
    3. Depreciation of plant and equipment used on the contract;
    4. Costs of moving plant, equipment and materials to and from the contract site;
    5. Costs of hiring plant and equipment;
    6. Costs of design and technical assistance that aredirectly related to the contract;
    7. The estimated costs of rectification and guarantee work, including expected warranty costs; and
    8. Claims from third parties.

(b) Costs that are attributable to contract activity in general and can be allocated to the contract; and

   1. Insurance;
   2. Costs of design and technical assistance that are not directly related to a specific contract; and
   3. Construction overheads.
   4. Borrowing costs capitalized under AS 16 "Borrowing Cost"

(c) Such other costs as are specifically chargeable to the customer under the terms of the contract.

Costs that cannot be attributed to contract activity or cannot be allocated to a contract are excluded from the costs of a construction contract. Such costs include:

(a) General administration costs for which reimbursement is not specified in the contract;

(b) Selling costs;

(c) Research and development costs for which reimbursement is not specified in the contract; and

(d) Depreciation of idle plant and equipment that is not used on a particular contract.

7.6 Recognition of Contract Revenue and Expenses

When the outcome of a construction contract can be estimated reliably, contract revenue and contract costs associated with the construction contract should be recognised as revenue and expenses respectively by reference to the stage of completion of the contract activity at the reporting date. An expected loss on the construction contract should be recognised as an expense immediately.

In the case of a fixed price contract, the outcome of a construction contract can be estimated reliably when all the following conditions are satisfied:

(a) Total contract revenue can be measured reliably;

(b) It is probable that the economic benefits associated with the contract will flow to the enterprise;

(c) Both the contract costs to complete the contract and the stage of contract completion at the reporting date can be measured reliably; and

(d) The contract costs attributable to the contract can be clearly identified and measured reliably so that actual contract costs incurred can be compared with prior estimates.

In the case of a cost plus contract, the outcome of a construction contract can be estimated reliably when both the following conditions are satisfied:

(a) It is probable that the economic benefits associated with the contract will flow to the enterprise; and

(b) The contract costs attributable to the contract, whether or not specifically reimbursable, can be clearly identified and measured reliably.

When an uncertainty arises about the collectability of an amount already included in contract revenue, and already recognised in the statement of profit and loss, the uncollectable amount or the amount in respect of which recovery has ceased to be probable is recognised as an expense rather than as an adjustment of the amount of contract revenue. The stage of completion of a contract may be determined in a variety of ways. The enterprise uses the method that measures reliably the work performed. Depending on the nature of the contract, the methods may include:

(a) The proportion that contract costs incurred for work performed upto the reporting date bear to the estimated total contract costs; or

(b) Surveys of work performed; or

(c) Completion of a physical proportion of the contract work.

Progress payments and advances received from customers may not necessarily reflect the work performed.

When the outcome of a construction contract cannot be estimated reliably:

(a) Revenue should be recognised only to the extent of contract costs incurred of which recovery is probable; and

(b) Contract costs should be recognised as an expense in the period in which they are incurred.

An expected loss on the construction contract should be recognised as an expense immediately. During the early stages of a contract it is often the case that the outcome of the contract cannot be estimated reliably. Nevertheless, it may be probable that the enterprise will recover the contract costs incurred. Therefore, contract revenue is recognised only to the extent of costs incurred that are expected to be recovered. As the outcome of the contract cannot be estimated reliably, no profit is recognised. However, even though the outcome of the contract cannot be estimated reliably, it may be probable that total contract costs will exceed total contract revenue. In such cases, any expected excess of total contract costs over total contract revenue for the contract is recognised as an expense immediately.

The percentage of completion method is applied on a cumulative basis in each accounting period to the current estimates of contract revenue and contract costs. Therefore, the effect of a change in the estimate of contract revenue or contract costs, or the effect of a change in the estimate of the outcome of a contract, is accounted for as a change in accounting estimate.

7.7 Disclosure

An enterprise should disclose:

(a) The amount of contract revenue recognised as revenue in the period;

(b) The methods used to determine the contract revenue recognised in the period; and

(c) The methods used to determine the stage of completion of contracts in progress.

An enterprise should disclose the following for contracts in progress at the reporting date:

(a) The aggregate amount of costs incurred and recognised profits (less recognised losses) to date

(b) The amount of advances received; and

(c) The amount of retentions.

Advances are recognized as liabilities until the related revenue is earned.

'Retentions' are amounts of progress billings that are not paid until the satisfaction of conditions specified in the contract for the payment of such amounts or until defects have been rectified. Retentions are recognized as receivables in the balance sheet of the contractor. An enterprise should present:

(a) The gross amount due from customers for contract work as an asset; and

(b) The gross amount due to customers for contract work as a liability.

7.8 Illustrations

Illustration 1

A firm of contractors obtained a contract for construction of bridges across river Revathi. The following details are available in the records kept for the year ended 31st March, 2017.

	(₹ in lakhs)
Total Contract Price	*1,000*
Work Certified	*500*
Work not Certified	*105*
Estimated further Cost to Completion	*495*
Progress Payment Received	*400*
To be Received	*140*

The firm seeks your advice and assistance in the presentation of accounts keeping in view the requirements of AS 7 (Revised) issued by your institute.

Solution

(a)	Amount of foreseeable loss	*(₹ in lakhs)*
	Total cost of construction (500 + 105 + 495)	1,100
	Less: Total contract price	(1,000)
	Total foreseeable loss to be recognized as expense	100

According to para 35 of AS 7 (Revised 2002), when it is probable that total contract costs will exceed total contract revenue, the expected loss should be recognized as an expense immediately.

(b)	Contract work-in-progress i.e. cost incurred to date are ₹ 605 lakhs	*(₹ in lakhs)*
	Work certified	500
	Work not certified	105
		605

This is 55% (605/1,100 × 100) of total costs of construction.

(c) Proportion of total contract value recognised as revenue as per para 21 of AS 7 (Revised).

55% of ₹ 1,000 lakhs = ₹ 550 lakhs

(d) Amount due from/to customers = Contract costs + Recognised profits – Recognised losses – (Progress payments received + Progress payments to be received)

= [605 + Nil – 100 – (400 + 140)] ₹ in lakhs

= [605 – 100 – 540] ₹ in lakhs

Amount due to customers = ₹ 35 lakhs

The amount of ₹ 35 lakhs will be shown in the balance sheet as liability.

(e) The relevant disclosures under AS 7 (Revised) are given below:

	₹ in lakhs
Contract revenue	550
Contract expenses	605
Recognised profits less recognized losses	(100)
Progress billings ₹ (400 + 140)	540
Retentions (billed but not received from contractee)	140
Gross amount due to customers	35

Illustration 2

On 1st December, 2016, Vishwakarma Construction Co. Ltd. undertook a contract to construct a building for ₹ 85 lakhs. On 31st March, 2017, the company found that it had already spent ₹ 64,99,000 on the construction. Prudent estimate of additional cost for completion was ₹ 32,01,000. What amount should be charged to revenue in the final accounts for the year ended 31st March, 2017 as per provisions of Accounting Standard 7 (Revised)?

Solution

	₹
Cost incurred till 31st March, 2017	64,99,000
Prudent estimate of additional cost for completion	32,01,000
Total cost of construction	97,00,000
Less: Contract price	(85,00,000)
Total foreseeable loss	12,00,000

According to para 35 of AS 7 (Revised 2002), the amount of ₹ 12,00,000 is required to be recognized as an expense.

Contract work in progress = $\frac{₹\ 64,99,000 \times 100}{97,00,000}$ = 67%

Proportion of total contract value recognized as turnover as per para 21 of AS 7 (Revised) on Construction Contracts.

= 67% of ₹ 85,00,000 = ₹ 56,95,000.

<u>Reference</u>: The students are advised to refer the full text of AS 7 "Construction Contracts".

UNIT 8 :AS 9: REVENUE RECOGNITION

8.1 Introduction

This standard was issued by ICAI in the year 1985 and in the initial years it was recommendatory for only level I enterprises and but was made mandatory for enterprise from April 01, 1993.

8.2 Revenue

Revenue is the gross inflow of cash, receivables or other consideration arising in the course of the ordinary activities of an enterprise from the sale of goods, from the rendering of services, and from the use by others of enterprise resources yielding interest, royalties and dividends. Revenue is measured by the charges made to customers or clients for goods supplied and services rendered to them and by the charges and rewards arising from the use of resources by them. In an agency relationship, the revenue is the amount of commission and not the gross inflow of cash, receivables or other consideration.

This Statement does not deal with the following aspects of revenue recognition to which special considerations apply:

(i) Revenue arising from construction contracts;

(ii) Revenue arising from hire-purchase, lease agreements;

(iii) Revenue arising from government grants and other similar subsidies;

(iv) Revenue of insurance companies arising from insurance contracts.

Examples of items not included within the definition of “revenue” for the purpose of this Statement are:

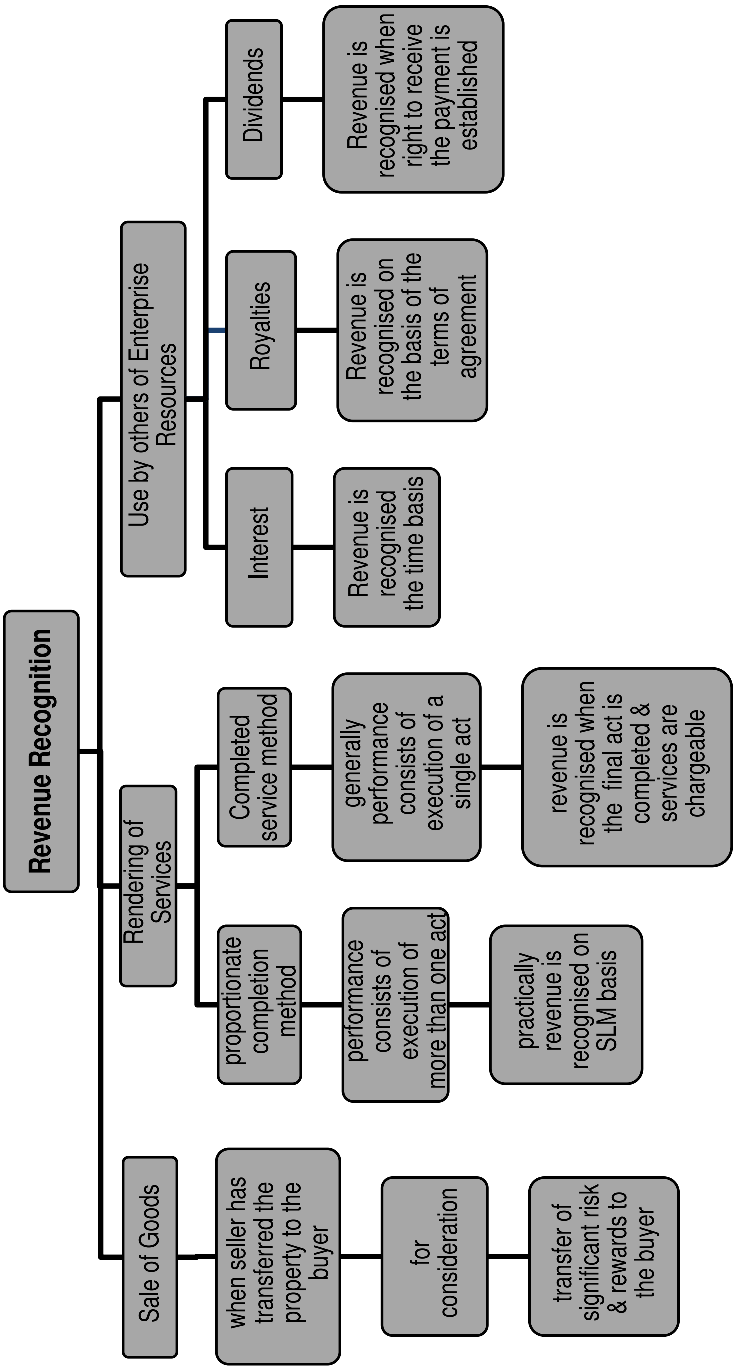
(i) Realised gains resulting from the disposal of, and unrealised gains resulting from the holding of, non-current assets e.g. appreciation in the value of fixed assets;

(ii) Unrealised holding gains resulting from the change in value of current assets, and the natural increases in herds and agricultural and forest products;

(iii) Realised or unrealised gains resulting from changes in foreign exchange rates and adjustments arising on the translation of foreign currency financial statements;

(iv) Realised gains resulting from the discharge of an obligation at less than its carrying amount;

(v) Unrealised gains resulting from the restatement of the carrying amount of an obligation.



Revenue Recognition
Sale of Goods
when seller has transferred the property to the buyer
for consideration
transfer of significant risk & rewards to the buyer
Rendering of Services
proportionate completion method
performance consists of execution of more than one act
practically revenue is recognised on SLM basis
Completed service method
generally performance consists of execution of a single act
revenue is recognised when the final act is completed & services are chargeable
Use by others of Enterprise Resources
Interest
Revenue is recognised the time basis
Royalties
Revenue is recognised on the basis of the terms of agreement
Dividends
Revenue is recognised when right to receive the payment is established

8.3 Sale of Goods

A key criterion for determining when to recognise revenue from a transaction involving the sale of goods is that the seller has transferred the property in the goods to the buyer for a consideration. The transfer of property in goods, in most cases, results in or coincides with the transfer of significant risks and rewards of ownership to the buyer. However, there may be situations where transfer of property in goods does not coincide with the transfer of significant risks and rewards of ownership. Revenue in such situations is recognised at the time of transfer of significant risks and rewards of ownership to the buyer. At certain stages in specific industries, such as when agricultural crops have been harvested or mineral ores have been extracted, performance may be substantially complete prior to the execution of the transaction generating revenue. In such cases when sale is assured under a forward contract or a government guarantee or where market exists and there is a negligible risk of failure to sell, the goods involved are often valued at net realisable value. Such amounts, while not revenue as defined in this Statement, are sometimes recognised in the statement of profit and loss and appropriately described.

8.4 Rendering of Services

Revenue from service transactions is usually recognised as the service is performed, either by the proportionate completion method or by the completed service contract method.

Proportionate completion method is a method of accounting which recognises revenue in the statement of profit and loss proportionately with the degree of completion of services under a contract. Here performance consists of the execution of more than one act. Revenue is recognised proportionately by reference to the performance of each act.

Completed service contract method is a method of accounting which recognises revenue in the statement of profit and loss only when the rendering of services under a contract is completed or substantially completed. In this method performance consists of the execution of a single act. Alternatively, services are performed in more than a single act, and the services yet to be performed are so significant in relation to the transaction taken as a whole that performance cannot be deemed to have been completed until the execution of those acts. The completed service contract method is relevant to these patterns of performance and accordingly revenue is recognised when the sole or final act takes place and the service becomes chargeable

8.5 Interest, Royalties and Dividends

The use by others of such enterprise resources gives rise to:

(i) **Interest**: charges for the use of cash resources or amounts due to the enterprise. Revenue is recognized on a time proportion basis taking into account the amount outstanding and the rate applicable. For example, debenture interest payable on every 30th June and 31st December. On March 31st when books will be closed, though interest has not fallen due but still interest for the period January, February and March will be recognised on time basis.

(ii) **Royalties:** charges for the use of such assets as know-how, patents, trade marks and copyrights. Revenue is recognized on an accrual basis in accordance with the terms of the relevant agreement. If agreement is signed for royalty payable on the basis of the number of copies of the book published, it will be recognised on that basis only.

(iii) **Dividends:** rewards from the holding of investments in shares. Revenue is recognized when the owner's right to receive payment is established. Unless company declare dividend on the shares, it is not certain. Therefore, it is recognised only when directors actually decides to pay dividend to their shareholders.

8.6 Effect of Uncertainties on Revenue Recognition

Where the ability to assess the ultimate collection with reasonable certainty is lacking at the time of raising any claim, revenue recognition is postponed to the extent of uncertainty involved. In such cases:

When the uncertainty relating to collectability arises subsequent to the time of sale or the rendering of the service, it is more appropriate to make a separate provision to reflect the uncertainty rather than to adjust the amount of revenue originally recorded.

An essential criterion for the recognition of revenue is that the consideration receivable for the sale of goods, the rendering of services or from the use by others of enterprise resources is reasonably determinable. When such consideration is not determinable within reasonable limits, the recognition of revenue is postponed.

8.7 Disclosure

An enterprise should disclose the circumstances in which revenue recognition has been postponed pending the resolution of significant uncertainties.

The amount of turnover should be disclosed in the following manner on the face of the statement of profit and loss:

Turnover (Gross)	XXXXX
Less: Excise Duty	XXXXX
Turnover (Net)	XXXXX

The amount of excise duty to be shown as deduction from turnover should be the total excise duty for the year except the excise duty related to the difference between the closing inventory and opening inventory. The excise duty related to the difference between the closing inventory and opening inventory should be recognised separately in the statement of profit and loss, with an explanatory note in the notes to accounts to explain the nature of the two amounts of excise duty.

8.8 Illustrations

Illustration 1

The stages of production and sale of a producer are as follows (all in Rupees):

Stage	Activity	Costs to date	Net Realisable Value
A	Raw Materials	10,000	8,000
B	WIP 1	12,000	13,000
C	WIP 2	15,000	19,000
D	Finished Product	17,000	30,000
E	Ready for Sale	17,000	30,000
F	Sale Agreed	17,000	30,000
G	Delivered	18,000	30,000

State and explain the stage at which you think revenue will be recognized and how much would be gross profit and net profit on a unit of this product?

Solution

According to AS 9, sales will be recognized only following two conditions are satisfied:

(i) The sale value is fixed and determinable.

(ii) Property of the goods is transferred to the customer.

Both these conditions are satisfied only at Stage F when sales are agreed upon at a price and goods allocated for delivery purpose.

Gross Profit will be determined at Stage E, when goods are ready for sale after all necessary process for production is over i.e. ₹ 13,000 (30,000 – 17,000).

Net Profit will be determined at Stage G, when goods are delivered and payment becomes due ₹ 12,000 (30,000 – 18,000).

Illustration 2

A public sector company is trading gold in India for its customers, after purchasing gold the price of gold is fixed within 120 days as per rules and regulations of Indian Bullion Market by the customer. At the close of year, price of some gold was not fixed on March 31, 2017. The details are given below:

Quantity of Gold	=	*10,000 TT Bars*
Gold Rate as on March 31, 2017	=	*₹ 275 per TT Bar*
Gold Rate was fixed on June 26, 2017 before the finalization of accounts of company	=	*₹ 273 per TT Bar*

Calculate the amount of inventory regarding 10,000 TT Bars to be booked in the company's account for the year ended March 31, 2017.

Solution

We need to refer to AS 4 along with AS 9 in this case, since gold is an item which has ready market hence they should be valued at the market price. So, as event occurring after the balance sheet date, the price of gold is fixed at ₹ 273 per TT Bar, gold will be valued at that rate.

Illustration 3

The Board of Directors decided on 31.3.2017 to increase the sale price of certain items retrospectively from 1st January, 2017. In view of this price revision with effect from 1st January 2017, the company has to receive ₹ 15 lakhs from its customers in respect of sales made from 1st January, 2017 to 31st March, 2017. Accountant cannot make up his mind whether to include ₹ 15 lakhs in the sales for 2016-2017.Advise.

Solution

Price revision was effected during the current accounting period 2016-2017. As a result, the company stands to receive ₹ 15 lakhs from its customers in respect of sales made from 1st January, 2017 to 31st March, 2017. If the company is able to assess the ultimate collection with reasonable certainty, then additional revenue arising out of the said price revision may be recognised in 2016-2017 vide para 10 of AS 9.

Illustration 4

Y Ltd., used certain resources of X Ltd. In return X Ltd. received ₹ 10 lakhs and ₹ 15 lakhs as interest and royalties respective from Y Ltd. during the year 2016-17. You are required to state whether and on what basis these revenues can be recognised by X Ltd.

Solution

As per para 13 of AS 9 on Revenue Recognition, revenue arising from the use by others of enterprise resources yielding interest and royalties should only be recognised when no significant uncertainty as to measurability or collectability exists. These revenues are recognised on the following bases:

(i) Interest: on a time proportion basis taking into account the amount outstanding and the rate applicable.

(ii) Royalties: on an accrual basis in accordance with the terms of the relevant agreement.

Illustration 5

A claim lodged with the Railways in March, 2015 for loss of goods of ₹ 2,00,000 had been passed for payment in March, 2017 for ₹ 1,50,000. No entry was passed in the books of the Company, when the claim was lodged. Advise P Co. Ltd. about the treatment of the following in the Final Statement of Accounts for the year ended 31st March, 2017.

Solution

Prudence suggests non-consideration of claim as an asset in anticipation. So receipt of claims is generally recognised on cash basis. Para 9.2 of AS 9 on Revenue Recognition states that where the ability to assess the ultimate collection with reasonable certainty is lacking at the time of raising any claim, revenue recognition is postponed to the extent of uncertainty involved. Para 9.5 of AS 9 states that when recognition of revenue is postponed due to the effect of uncertainties, it is considered as revenue of the period in which it is properly recognised. In this case it may be assumed that collectability of claim was not certain in the earlier periods. This is supposed from the fact that only ₹ 1,50,000 were collected against a claim of ₹ 2,00,000. So this transaction can not be taken as a Prior Period Item.

In the light of revised AS 5, it will not be treated as extraordinary item. However, para 12 of AS 5 (Revised) states that when items of income and expense within profit or loss from ordinary activities are of such size, nature, or incidence that their disclosure is relevant to explain the performance of the enterprise for the period, the nature and amount of such items should be disclosed separately. Accordingly, the nature and amount of this item should be disclosed separately as per para 12 of AS 5 (Revised).

Illustration 6

SCL Ltd., sells agriculture products to dealers. One of the condition of sale is that interest is payable at the rate of 2% p.m., for delayed payments. Percentage of interest recovery is only 10% on such overdue outstanding due to various reasons. During the year 2016-2017 the company wants to recognise the entire interest receivable. Do you agree?

Solution

As per para 9.2 of AS 9 on Revenue Recognition, where the ability to assess the ultimate collection with reasonable certainty is lacking at the time of raising any claim, e.g. for escalation of price, export incentives, interest etc, revenue recognition is postponed to the extent of uncertainty involved. In such cases, it may be appropriate to recognise revenue only when it is reasonably certain that the ultimate collection will be made. Where there is no uncertainty as to ultimate collection, revenue is recognised at the time of sale or rendering of service even though payments are made by instalments.

Thus, SCL Ltd. cannot recognise the interest amount unless the company actually receives it. 10% rate of recovery on overdue outstandings is also an estimate and is not certain. Hence, the company is advised to recognise interest receivable only on receipt basis.

Illustration 7

A Ltd. has sold its building for ₹ 50 lakhs to B Ltd. and has also given the possession to B Ltd. The book value of the building is ₹ 30 lakhs. As on 31st March, 2017, the documentation and legal formalities are pending. The company has not recorded the sale and has shown the amount received as advance. Do you agree with this treatment?

Solution

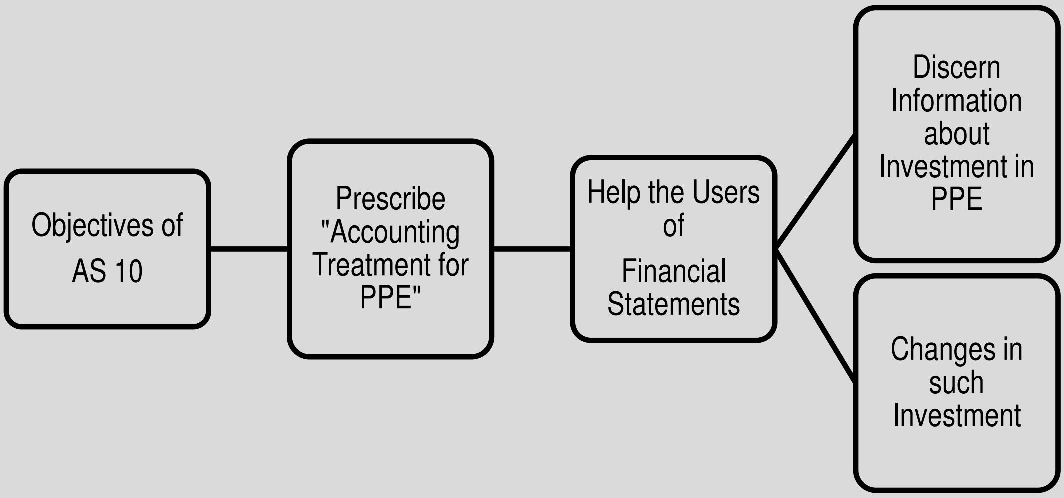
The economic reality and substance of the transaction is that the rights and beneficial interest in the property has been transferred although legal title has not been transferred. A Ltd. should record the sale and recognize the profit of ₹ 20 lakhs in its profit and loss account. The building should be eliminated from the balance sheet.

<u>Reference</u>: The students are advised to refer the full text of AS 9 "Revenue Recognition" (issued 1985).

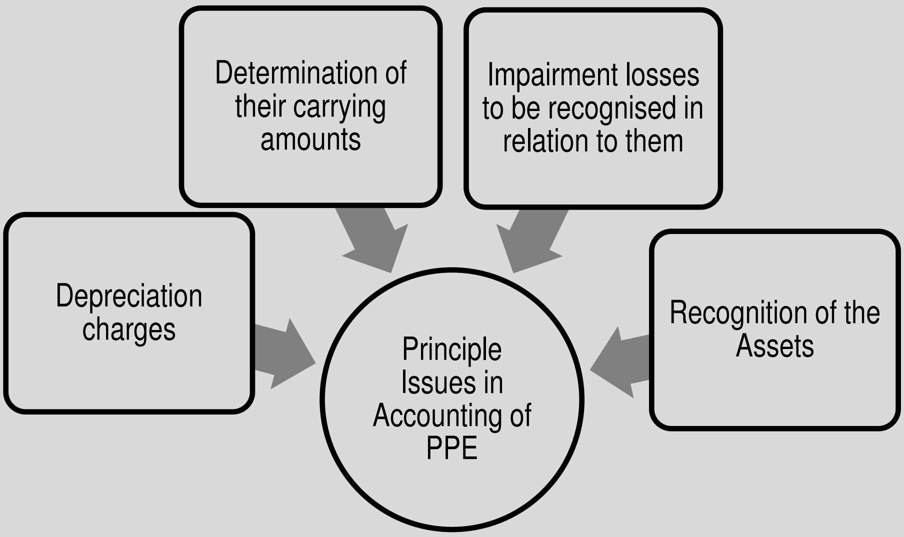
UNIT 9 : AS 10: PROPERTY, PLANT AND EQUIPMENT

9.1 Introduction

The objective of this Standard is to prescribe Accounting treatment for Property, Plant and Equipment (PPE). The principal issues in accounting for property, plant and equipment are the recognition of the assets, the determination of their carrying amounts and the depreciation charges and impairment losses to be recognised in relation to them.



The principal issues in Accounting for PPE are:



9.2 Scope of the Standard

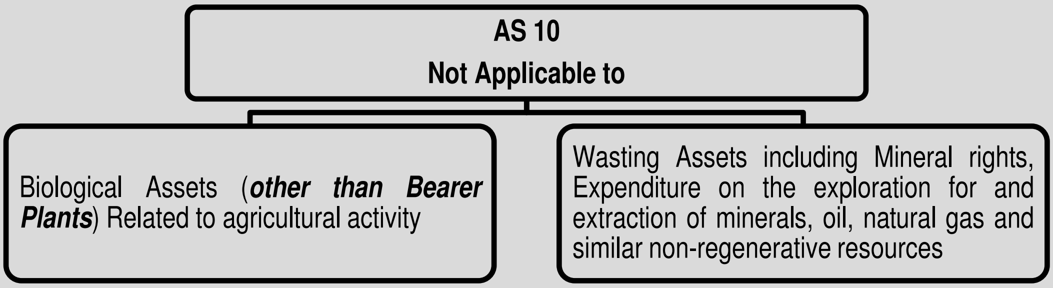
As a general principle, AS 10 should be applied in accounting for PPE.

Exception:

When another Accounting Standard requires or permits a different accounting treatment.

Example: AS 19 on Leases, requires an enterprise to evaluate its recognition of an item of leased PPE on the basis of the transfer of risks and rewards. However, it may be noted that in such cases other aspects of the accounting treatment for these assets, including depreciation, are prescribed by this Standard.

This Standard does not apply to:



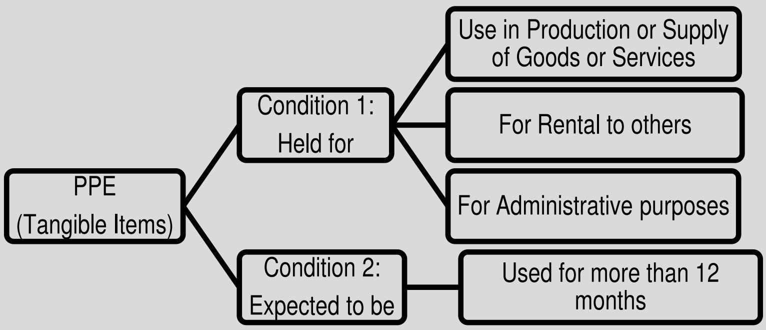
Note: AS 10 applies to Bearer Plants but it does not apply to the produce on Bearer Plants.

Clarifications:

1. AS 10 applies to PPE used to **develop or maintain** the assets described above.
2. Investment property (defined in AS 13), should be accounted for only in accordance with the **Cost model prescribed in this standard.**

9.3 Definition of Property, Plant and Equipment (PPE)

There are 2 conditions to be satisfied for a TANGIBLE item to be called PPE. PPE are ***tangible items*** that:



Note: Intangible items are covered under AS 26.

"Administrative purposes": The term 'Administrative purposes' has been used in **wider sense** to ***include all business purposes.*** **Thus, PPE would include assets used for:**

- Selling and distribution
- Finance and accounting
- Personnel and other functions

of an Enterprise.

Items of PPE may also be acquired for **safety or environmental reasons.**

The acquisition of such PPE, although not directly increasing the future economic benefits of any particular existing item of PPE, may be necessary for an enterprise to obtain the future economic benefits from its other assets.

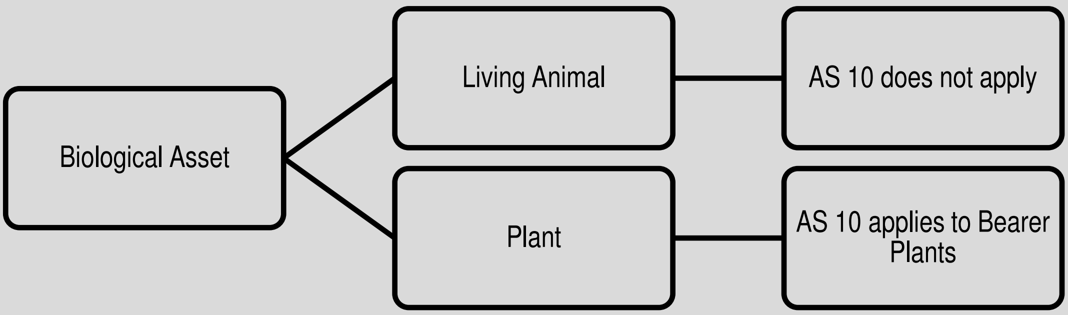
Such items of PPE qualify for recognition as assets because they enable an enterprise to derive future economic benefits from related assets in excess of what could be derived had those items not been acquired.

Example: A chemical manufacturer may install new chemical handling processes to comply with environmental requirements for the production and storage of dangerous chemicals; related plant enhancements are recognised as an asset because without them the enterprise is unable to manufacture and sell chemicals.

The resulting carrying amount of such an asset and related assets is reviewed for impairment in accordance with AS 28 (Impairment of Assets).

9.4 Other Definitions

1. Biological Asset: An Accounting Standard on "Agriculture" is under formulation, which will, inter alia, cover accounting for livestock. Till the time, the Accounting Standard on "Agriculture" is issued, accounting for livestock meeting the definition of PPE, will be covered as per AS 10 (Revised).



2. **Bearer Plant:** Is a plant that **(satisfies all 3 conditions):**

Is used in the production or supply	• Of Agricultural produce
Is expected to bear produce	• For more than a period of 12 months
Has a remote likelihood of being sold as Agricultural produce	• Except for incidental scrap sales

Note: When bearer plants are no longer used to bear produce they might be cut down and sold as scrap. For example - use as firewood. Such incidental scrap sales would not prevent the plant from satisfying the definition of a Bearer Plant.

The following are not Bearer Plants:

(a) Plants cultivated to be ***harvested*** *as* Agricultural produce

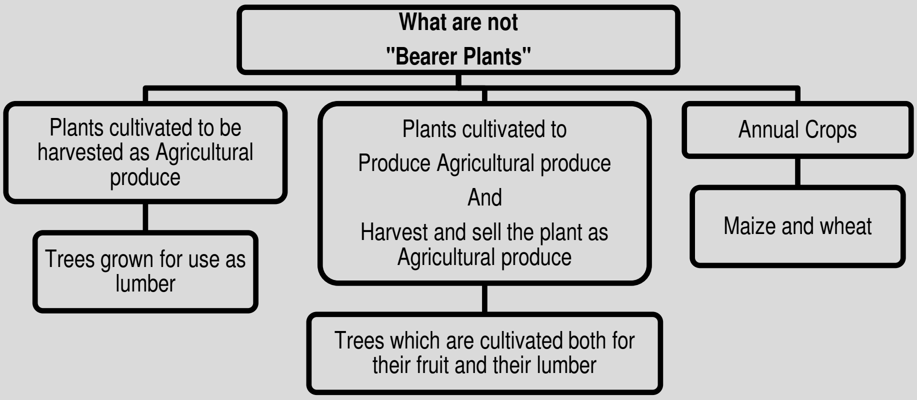
Example: Trees grown for use as lumber

(b) Plants cultivated ***to produce*** Agricultural produce when there is more than a remote likelihood that the entity will ***also harvest and sell*** the plant as agricultural produce, other than as incidental scrap sales

Example: Trees which are cultivated both for their fruit and their lumber

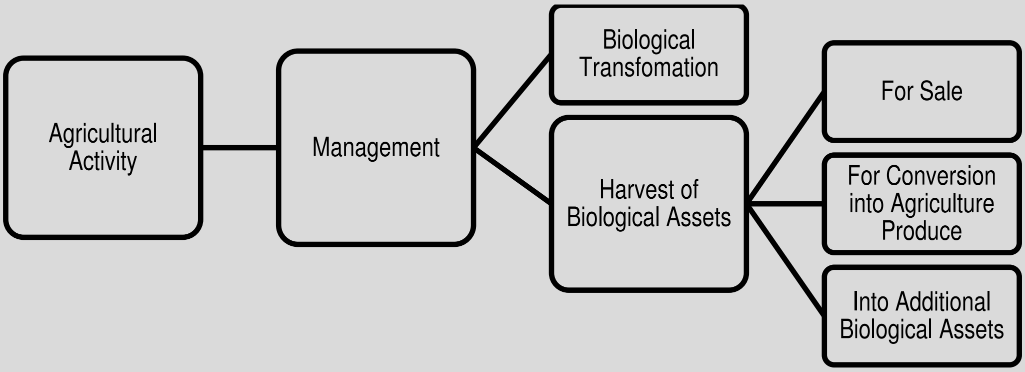
(c) Annual crops

Example: Maize and wheat



Agricultural Produce is the **harvested product** of **Biological Assets** of the enterprise.

3. **Agricultural Activity:** Is the **management** by an Enterprise of:
   - Biological transformation; and
   - Harvest of Biological Assets
- For sale, Or
- For conversion into Agricultural Produce, Or
- Into additional Biological Assets



9.5 Recognition Criteria for PPE

The ***cost of an item of PPE*** should be recognised as an asset ***if, and only if***:

(a) It is probable that future economic benefits associated with the item will flow to the enterprise, and

(b) The cost of the item can be measured reliably.

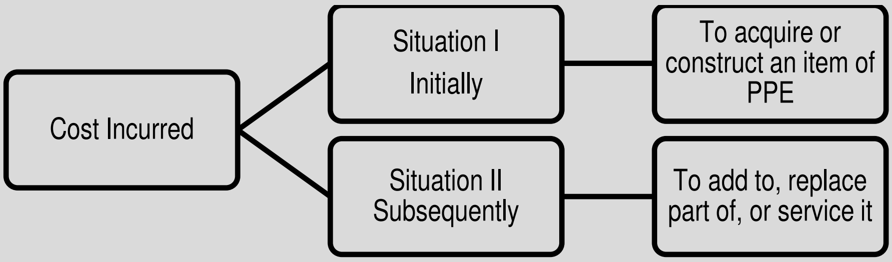
Notes:

1. It may be **appropriate to aggregate individually insignificant items**, such as moulds, tools and dies and to apply the criteria to the aggregate value.
2. An enterprise **may decide to expense an item** which could otherwise have been included as PPE, because the amount of the expenditure is not material.

When do we apply the above criteria for Recognition?

An enterprise evaluates under this recognition principle all its costs on **PPE at the time they are incurred.**

These costs include costs incurred:



9.6 Treatment of Spare Parts, Stand by Equipment and Servicing Equipment

Case I If they meet the definition of PPE as per AS 10:

- Recognised as PPE as per AS 10

Case II If they do not meet the definition of PPE as per AS 10:

- Such items are classified as Inventory as per AS 2

Illustration 1 (Capitalising the cost of "Remodelling" a Supermarket)

Entity A, a supermarket chain, is renovating one of its major stores. The store will have more available space for in store promotion outlets after the renovation and will include a restaurant. Management is preparing the budgets for the year after the store reopens, which include the cost of remodelling and the expectation of a 15% increase in sales resulting from the store renovations, which will attract new customers. State whether the remodeling cost will be capitalized or not.

Solution

The expenditure in remodelling the store will create future economic benefits (in the form of 15% of increase in sales) and the cost of remodelling can be measured reliably, therefore, it should be capitalised.

9.7 Treatment of Subsequent Costs

9.7.1 Cost of day-to-day servicing

Meaning:

Costs of day-to-day servicing are primarily the costs of labour and consumables, and may include the cost of small parts. The purpose of such expenditures is often described as for the **'Repairs and Maintenance'** of the item of PPE.

Accounting Treatment:

An enterprise does not recognise in the carrying amount of an item of PPE the costs of the day-to-day servicing of the item. Rather, these costs are recognised in the Statement of Profit and Loss as incurred.

9.7.2 Replacement of Parts of PPE

Parts of some items of PPE may require replacement at regular intervals.

Examples:

1. A furnace may require relining after a specified number of hours of use.
2. Aircraft interiors such as seats and galleys may require replacement several times during the life of the airframe.

3. Major parts of conveyor system, such as, conveyor belts, wire ropes, etc., may require replacement several times during the life of the conveyor system.
4. Replacing the interior walls of a building, or to make a non-recurring replacement.

Accounting Treatment:

An enterprise recognises in the carrying amount of an item of PPE the cost of replacing part of such an item when that cost is incurred if the recognition criteria are met.

Note: The carrying amount of those parts that are **replaced is derecognised** in accordance with the de-recognition provisions of this Standard.

9.7.3 Regular Major Inspections - Accounting Treatment

When each major inspection is performed, its cost is recognised in the carrying amount of the item of PPE as a replacement, if the recognition criteria are satisfied.

Any remaining carrying amount of the cost of the previous inspection (as distinct from physical parts) is derecognised.

Illustration 2

What happens if the cost of the previous part/inspection was/ was not identified in the transaction in which the item was acquired or constructed? (Related to Issue 2 and 3)

Solution

De-recognition of the carrying amount occurs **regardless** of whether the cost of the previous part/inspection was identified in the transaction in which the item was acquired or constructed.

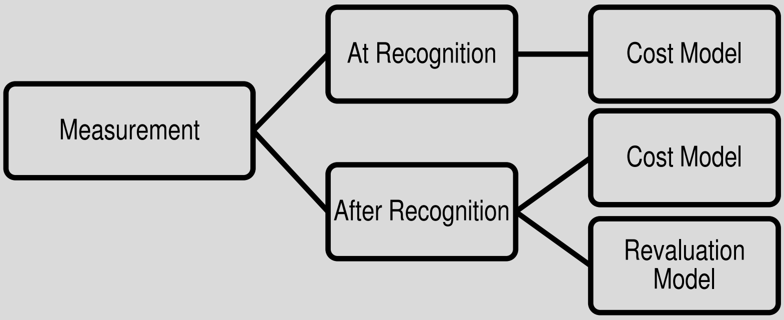
Illustration 3

What will be your answer in the above question, if it is not practicable for an enterprise to determine the carrying amount of the replaced part/inspection?

Solution

It may use the cost of the replacement or the estimated cost of a future similar inspection as an indication of what the cost of the replaced part/existing inspection component was when the item was acquired or constructed.

9.8 Measurement of PPE

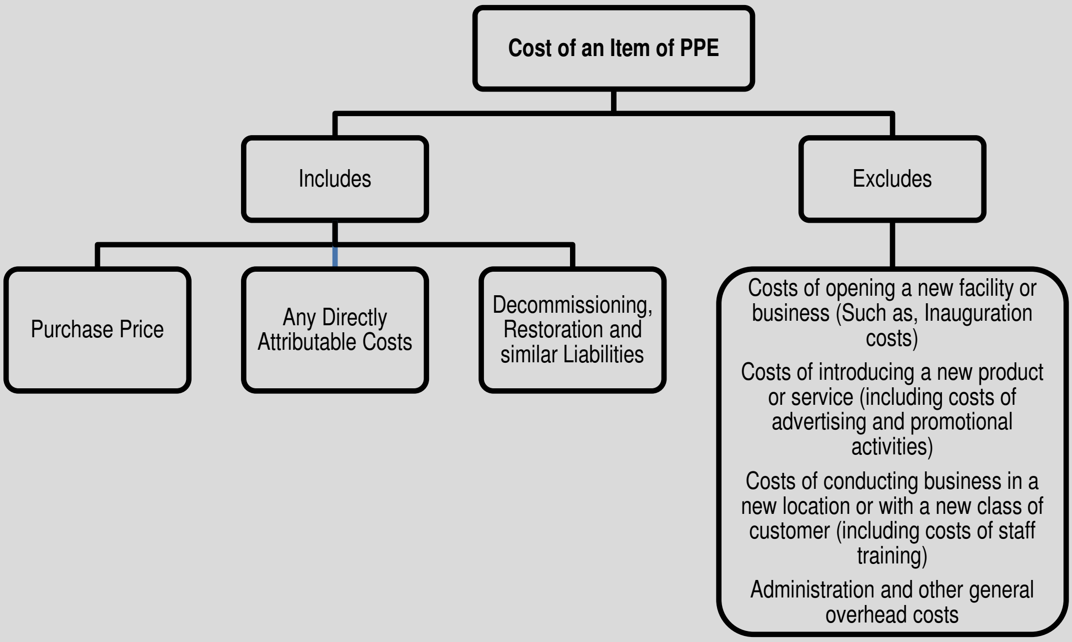


9.9 Measurement at Recognition

An item of PPE that qualifies for recognition as an asset should be measured **at its cost.**

What are the elements of Cost?

Cost of an item of PPE comprises:



Let us understand the above in detail.

A. Purchase Price:

- It includes import duties and non –refundable purchase taxes.
- It requires deduction of Trade discounts and rebates

B. Directly Attributable Costs:

Any costs directly attributable **to bringing** the asset to the '**location and condition'** necessary for it to be capable of operating in the manner intended by management

Recognition of costs in the carrying amount of an item of PPE **ceases** when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management.

Examples of directly attributable costs are:

1. Costs of employee benefits (as defined in AS 15) arising directly from the construction or acquisition of the item of PPE
2. Costs of site preparation
3. Initial delivery and handling costs

4. Installation and assembly costs
5. Costs of testing whether the asset is functioning properly, after deducting the net proceeds from selling any items produced while bringing the asset to that location and condition (such as samples produced when testing equipment)
6. Professional fees

The following costs are not included in the carrying amount of an item of PPE:

1. Costs incurred while an item capable of operating in the manner intended by management has yet to be brought into use or is operated at less than full capacity.
2. Initial operating losses, such as those incurred while demand for the output of an item builds up. And
3. Costs of relocating or reorganising part or all of the operations of an enterprise.

Note: Some operations occur in connection with the construction or development of an item of PPE, but are not necessary to bring the item to the location and condition necessary for it to be capable of operating in the manner intended by management. These incidental operations may occur before or during the construction or development activities.

Example: Income may be earned through using a building site as a car park until construction starts because incidental operations are not necessary to bring an item to the location and condition necessary for it to be capable of operating in the manner intended by management, the income and related expenses of incidental operations are recognised in the Statement of Profit and Loss and included in their respective classifications of income and expense.

Illustration 4

Entity A has an existing freehold factory property, which it intends to knock down and redevelop. During the redevelopment period the company will move its production facilities to another (temporary) site. The following incremental costs will be incurred:

1. *Setup costs of ₹ 5,00,000 to install machinery in the new location.*
2. *Rent of ₹ 15,00,000*
3. *Removal costs of ₹ 3,00,000 to transport the machinery from the old location to the temporary location.*

Can these costs be capitalised into the cost of the new building?

Solution

Constructing or acquiring a new asset may result in incremental costs that would have been avoided if the asset had not been constructed or acquired. These costs are not to be included in the cost of the asset if they are not directly attributable to bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. The costs to be incurred by the company do not meet the requirement of AS 10 and therefore, cannot be capitalised.

Illustration 5 (Capitalisation of directly attributable costs)

Entity A, which operates a major chain of supermarkets, has acquired a new store location. The new location requires significant renovation expenditure. Management expects that the renovations will last for 3 months during which the supermarket will be closed.

Management has prepared the budget for this period including expenditure related to construction and remodelling costs, salaries of staff who will be preparing the store before its opening and related utilities costs. What will be the treatment of such expenditures?

Solution

Management should capitalise the costs of construction and remodelling the supermarket, because they are necessary to bring the store to the condition necessary for it to be capable of operating in the manner intended by management. The supermarket cannot be opened without incurring the remodelling expenditure, and thus the expenditure should be considered part of the asset.

However, the cost of salaries, utilities and storage of goods are operating expenditures that would be incurred if the supermarket was open. These costs are not necessary to bring the store to the condition necessary for it to be capable of operating in the manner intended by management and should be expensed.

Illustration 6 (Operating costs incurred in the start-up period)

An amusement park has a 'soft' opening to the public, to trial run its attractions. Tickets are sold at a 50% discount during this period and the operating capacity is 80%. The official opening day of the amusement park is three months later. Management claim that the soft opening is a trial run necessary for the amusement park to be in the condition capable of operating in the intended manner. Accordingly, the net operating costs incurred should be capitalised. Comment.

Solution

The net operating costs should not be capitalised, but should be recognised in the Statement of Profit and Loss.

Even though it is running at less than full operating capacity (in this case 80% of operating capacity), there is sufficient evidence that the amusement park is capable of operating in the manner intended by management. Therefore, these costs are specific to the start-up and, therefore, should be expensed as incurred.

C. Decommissioning, Restoration and similar Liabilities:

Initial estimate of the costs of dismantling, removing the item and restoring the site on which it is located, referred to as ‘Decommissioning, Restoration and similar Liabilities’, the obligation for which an enterprise incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes **other than** to produce inventories during that period.

Exception: An enterprise applies AS 2 “Valuation of Inventories”, to the costs of obligations for dismantling, removing and restoring the site on which an item is located that are incurred during a particular period as a consequence of having used the item to produce inventories during that period.

Note: The obligations for costs accounted for in accordance with AS 2 or AS 10 are recognised and measured in accordance with AS 29 "Provisions, Contingent Liabilities and Contingent Assets".

9.10 Cost of a Self-constructed Asset

Cost of a self-constructed asset is determined using the same principles as for an acquired asset.

1. If an enterprise makes similar assets for sale in the normal course of business, the cost of the asset is usually the same as the cost of constructing an asset for sale (see AS 2). Therefore, any **internal profits are eliminated** in arriving at such costs.

2. Cost of **abnormal amounts** of wasted material, labour, or other resources incurred in self constructing an asset is **not included** in the cost of the asset.

3. AS 16 on Borrowing Costs, establishes criteria for the **recognition of interest** as a component of the carrying amount of a self-constructed item of PPE.

4. **Bearer plants** are accounted for in the same way as self-constructed items of PPE before they are in the location and condition necessary to be capable of operating in the manner intended by management.

9.11 Measurement of Cost

Cost of an item of PPE is the **cash price equivalent** at the recognition date.

A. If payment is deferred beyond normal credit terms:

Total payment - Cash price equivalent

- Is recognised as Interest over the period of credit
- unless such interest is capitalised in accordance with AS 16

B. PPE acquired in Exchange for a Non-monetary Asset or Assets Or A combination of Monetary and Non-monetary Assets:

Cost of such an item of PPE is **measured at fair value unless:**

(a) Exchange transaction lacks commercial substance; Or

(b) Fair value of neither the asset(s) received nor the asset(s) given up is reliably measurable.

Note:

1. The acquired item(s) is/are measured in this manner even if an enterprise cannot immediately derecognise the asset given up.
2. If the acquired item(s) is/are not measured at fair value, its/their cost is measured at the carrying amount of the asset(s) given up.

Illustration 7 (Consideration received comprising a combination of non-monetary and monetary assets)

Entity A exchanges surplus land with a book value of ₹ 10,00,000 for cash of ₹ 20,00,000 and plant and machinery valued at ₹ 25,00,000. What will be the measurement cost of the assets received?

Solution

Since the transaction has commercial substance. The plant and machinery would be recorded at ₹ 25,00,000, which is equivalent to the fair value of the land of ₹ 45,00,000 less the cash received of ₹ 20,00,000.

Illustration 8 (Exchange of assets that lack commercial substance)

Entity A exchanges car X with a book value of ₹ 13,00,000 and a fair value of ₹ 13,25,000 for cash of ₹ 15,000 and car Y which has a fair value of ₹ 13,10,000. The transaction lacks commercial substance as the company's cash flows are not expected to change as a result of the exchange. It is in the same position as it was before the transaction. What will be the measurement cost of the assets received?

Solution

The entity recognises the assets received at the book value of car X. Therefore, it recognises cash of ₹ 15,000 and car Y as PPE with a carrying value of ₹ 12,85,000.

C. PPE purchased for a Consolidated Price:

Where several items of PPE are purchased for a consolidated price, the consideration is apportioned to the various items on the basis of their respective fair values at the date of acquisition.

Note: In case the fair values of the items acquired cannot be measured reliably, these values are estimated on a fair basis as determined by competent valuers.

D. PPE held by a lessee under a Finance Lease:

The cost of an item of PPE held by a lessee under a finance lease is determined in accordance with AS 19 (Leases).

E. Government Grant related to PPE:

The carrying amount of an item of PPE may be reduced by government grants in accordance with AS 12 (Accounting for Government Grants).

9.12 Measurement after Recognition

An enterprise should choose

- **Either** Cost model,
- **Or** Revaluation model

as its accounting policy and should apply that policy to an entire **class of PPE.**

Class of PPE: A class of PPE is a grouping of assets of a **similar nature and use** in operations of an enterprise.

Examples of separate classes:

(a) Land

(b) Land and Buildings

(c) Machinery

(d) Ships

(e) Aircraft

(f) Motor Vehicles

(g) Furniture and Fixtures

(h) Office Equipment

(i) Bearer plants

9.13 Cost Model

After recognition as an asset, an item of PPE should be carried at:

Cost **-** Any Accumulated Depreciation **-** Any Accumulated Impairment losses

9.14 Revaluation Model

After recognition as an asset, an item of PPE whose fair value can be measured reliably should be carried at a revalued amount.

Fair value at the date of the revaluation	-
Less: Any subsequent accumulated depreciation	(-)
Less: Any subsequent accumulated impairment losses	(-)
Carrying value	=

9.14.1 Revaluation for entire class of PPE

If an item of PPE is revalued, the entire class of PPE to which that asset belongs should be revalued.

Reason:

The items within a class of PPE are revalued simultaneously to avoid selective revaluation of assets and the reporting of amounts in the Financial Statements that are a mixture of costs and values as at different dates.

Illustration 9 (Revaluation on a class by class basis)

Entity A is a large manufacturing group. It owns a number of industrial buildings, such as factories and warehouses and office buildings in several capital cities. The industrial buildings are located in industrial zones, whereas the office buildings are in central business districts of the cities. Entity A's management want to apply the revaluation model as per AS 10 to the subsequent measurement of the office buildings but continue to apply the historical cost model to the industrial buildings.

State whether this is acceptable under AS 10 or not with reasons?

Solution

Entity A's management can apply the revaluation model only to the office buildings. The office buildings can be clearly distinguished from the industrial buildings in terms of their function, their nature and their general location. AS 10 permits assets to be revalued on a class by class basis.

The different characteristics of the buildings enable them to be classified as different PPE classes. The different measurement models can, therefore, be applied to these classes for subsequent measurement.

All properties within the class of office buildings must, therefore, be carried at revalued amount.

9.14.2 Frequency of Revaluations

Revaluations should be made with **sufficient regularity** to ensure that the carrying amount does not differ materially from that which would be determined using Fair value at the Balance Sheet date.

The frequency of revaluations depends upon the changes in fair values of the items of PPE being revalued.

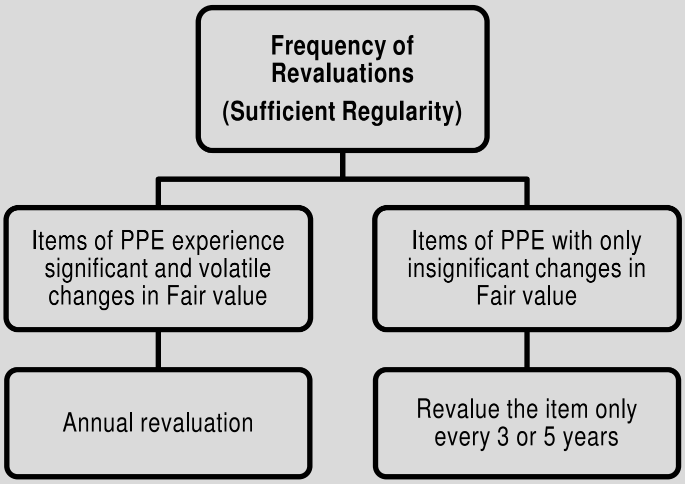
When the fair value of a revalued asset differs materially from its carrying amount, a further revaluation is required.

A. Items of PPE experience significant and volatile changes in Fair value

Annual revaluation shall be done.

B. Items of PPE with only insignificant changes in Fair value

Revaluation shall be done at an interval of 3 or 5 years.



9.14.3 Determination of Fair Value

Fair value of items of PPE is usually determined from **market-based evidence** by appraisal that is normally undertaken by professionally qualified valuers.

If there is **no market-based evidence** of fair value because of the specialised nature of the item of PPE and the item is rarely sold, except as part of a continuing business, an enterprise may need to estimate fair value using an income approach.

Example:

Based on

- Discounted cash flow projections, Or
- A depreciated replacement cost approach

Which aims at making a **realistic estimate of the current cost** of acquiring or constructing an item that has the same service potential as the existing item.

9.14.4 Accounting Treatment of Revaluations

When an item of PPE is revalued, the carrying amount of that asset is adjusted to the revalued amount.

At the date of the revaluation, the asset is treated in one of the following ways:

A. Technique 1: Gross carrying amount is adjusted in a manner that is consistent with the revaluation of the carrying amount of the asset.

Gross carrying amount

- May be restated by reference to observable market data, or
- May be restated proportionately to the change in the carrying amount.

Accumulated depreciation at the date of the revaluation is

- Adjusted to equal the difference between the gross carrying amount and the carrying amount of the asset after taking into account accumulated impairment losses

Case Study on Technique I

PPE is revalued to ₹ 1,500 consisting of ₹ 2,500 Gross cost and ₹ 1,000 Depreciation based on observable market data.

Details of the PPE before and after revaluation are as follows:

Particulars	Cost/Revalued Cost	Accumulated depreciation	Net book value
PPE before revaluation	1,000	400	600
Fair Value			1,500
Revaluation Gain			900
Gain allocated proportionately to cost and depreciation	1,500	600	900
PPE after revaluation	**2,500**	**1,000**	**1,500**

The increase on revaluation is ₹ 900 (i.e., ₹ 1,500 – ₹ 600).

B. Technique 2: Accumulated depreciation Is eliminated against the Gross Carrying amount of the asset

Case Study on Technique II

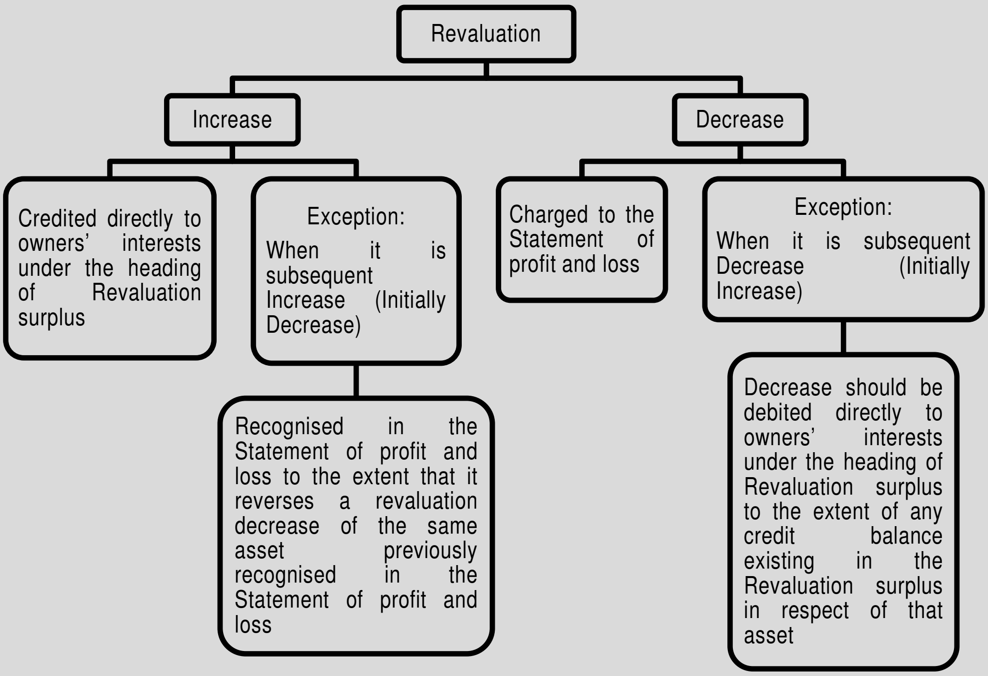
(Taking the information given in the above Example)

Details of the PPE before and after revaluation are as follows:

Particulars	Cost/Revalued Cost	Accumulated depreciation	Net book value
PPE before revaluation	1,000	400	600
PPE after revaluation	**1,500**		**1,500**
Revaluation gain	**500**	**400**	

The increase on revaluation is ₹ 900 (i.e., ₹ 500 + ₹ 400).

9.14.5 Revaluation - Increase or Decrease



9.14.6 Treatment of Revaluation Surplus

The revaluation surplus included in owners' interests in respect of an item of PPE may be transferred to the **Revenue Reserves when the asset is derecognised.**

Case I : When whole surplus is transferred:

When the asset is:

- Retired; Or
- Disposed of

Case II : Some of the surplus may be transferred as the asset is used by an enterprise:

In such a case, the amount of the surplus transferred would be:

Depreciation (based on Revalued Carrying amount) – Depreciation (based on Original Cost)

Transfers from Revaluation Surplus to the Revenue Reserves are **not made** through the Statement of Profit and Loss.

9.15 Depreciation

Component Method of Depreciation:

Each part of an item of PPE with a cost that is **significant in relation to the total cost** of the item should be depreciated separately.

Example: It may be appropriate to depreciate separately the airframe and engines of an aircraft, whether owned or subject to a finance lease.

Is Grouping of Components possible?

Yes.

A significant part of an item of PPE may have a useful life and a depreciation method that are the same as the useful life and the depreciation method of another significant part of that same item. Such parts **may be grouped** in determining the depreciation charge.

Accounting Treatment:

Depreciation charge for each period should be recognised in the Statement of Profit and Loss unless it is included in the carrying amount of another asset.

Examples on Exception:

AS 2: Depreciation of manufacturing plant and equipment is included in the costs of conversion of inventories as per AS 2.

AS 26: Depreciation of PPE used for development activities may be included in the cost of an intangible asset recognised in accordance with AS 26 on Intangible Assets.

9.16 Depreciable Amount and Depreciation Period

9.16.1 What is "Depreciable Amount"?

Depreciable amount is:

Cost of an asset (or other amount substituted for cost i.e. revalued amount) - Residual value

The depreciable amount of an asset should be **allocated on a systematic basis** over its useful life.

Illustration 10

Entity A has a policy of not providing for depreciation on PPE capitalised in the year until the following year, but provides for a full year's depreciation in the year of disposal of an asset. Is this acceptable?

Solution

The depreciable amount of a tangible fixed asset should be allocated on a systematic basis over its useful life. The depreciation method should reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity.

Useful life means the period over which the asset is expected to be available for use by the entity. Depreciation should commence as soon as the asset is acquired and is available for use.

9.16.2 Review of Residual Value and Useful Life of an Asset

Residual value and the useful life of an asset should be reviewed **at least at each financial year-end** and, if expectations differ from previous estimates, the change(s) should be accounted for as a **change in an accounting estimate** in accordance with AS 5 'Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies'.

Illustration 11 (Change in estimate of useful life)

Entity A purchased an asset on 1st January 2013 for ₹ 1,00,000 and the asset had an estimated useful life of 10 years and a residual value of nil.

On 1st January 2017, the directors review the estimated life and decide that the asset will probably be useful for a further 4 years.

Calculate the amount of depreciation for each year, if company charges depreciation on Straight Line basis.

Solution

The entity has charged depreciation using the straight-line method at ₹ 10,000 per annum i.e (1,00,000/10 years).

On 1st January 2017, the asset's net book value is [1,00,000 – (10,000 x 4)] ₹ 60,000.

The remaining useful life is 4 years.

The company should amend the annual provision for depreciation to charge the unamortised cost over the revised remaining life of four years.

Consequently, it should charge depreciation for the next 4 years at ₹ 15,000 per annum i.e. (60,000 / 4 years).

Note: Depreciation is recognised even if the Fair value of the Asset exceeds its Carrying Amount. Repair and maintenance of an asset do not negate the need to depreciate it.

9.16.3 Commencement of period for charging Depreciation

Depreciation of an asset begins when it is **available for use**, i.e., when it is in the location and condition necessary for it to be capable of operating in the manner intended by the management.

Illustration 12

Entity B constructs a machine for its own use. Construction is completed on 1st November 2016 but the company does not begin using the machine until 1st March 2017. Comment

Solution

The entity should begin charging depreciation from the date the machine is ready for use – that is, 1st November 2016. The fact that the machine was not used for a period after it was ready to be used is not relevant in considering when to begin charging depreciation.

9.16.4 Cessesation of Depreciation

I. Depreciation ceases to be charged when asset's residual value exceeds its carrying amount

The residual value of an asset may increase to an amount equal to or greater than its carrying amount. If it does, depreciation charge of the asset is zero **unless and until** its residual value subsequently decreases to an amount below its carrying amount.

Illustration 13 (Depreciation where residual value is the same as or close to Original cost)

A property costing ₹ 10,00,000 is bought in 2016. Its estimated total physical life is 50 years. However, the company considers it likely that it will sell the property after 20 years.

The estimated residual value in 20 years' time, based on 2016 prices, is:

Case (a) ₹ 10,00,000

Case (b) ₹ 9,00,000.

Calculate the amount of depreciation.

Solution

Case (a)

The company considers that the residual value, based on prices prevailing at the balance sheet date, will equal the cost.

There is, therefore, no depreciable amount and depreciation is correctly zero.

Case (b)

The company considers that the residual value, based on prices prevailing at the balance sheet date, will be ₹ 9,00,000 and the depreciable amount is, therefore, ₹ 1,00,000.

Annual depreciation (on a straight line basis) will be ₹ 5,000 [{10,00,000 – 9,00,000} ÷ 20].

II. Depreciation of an asset ceases at the earlier of:

- The date that the asset is retired from active use and is held for disposal, and
- The date that the asset is derecognised

Therefore, depreciation does not cease when the asset becomes idle or is retired from active use (but not held for disposal) unless the asset is fully depreciated.

However, under usage methods of depreciation, the depreciation charge can be zero while there is no production.

9.16.5 Land and Buildings

Land and buildings are separable assets and are accounted for separately, **even when they are acquired together.**

A. Land: Land has an unlimited useful life and therefore is not depreciated.

Exceptions: Quarries and sites used for landfill.

Depreciation on Land:

I. **If land itself has a limited useful life:**

It is depreciated in a manner that reflects the benefits to be derived from it.

II. **If the cost of land includes the costs of site dismantlement, removal and restoration:**

That **portion of the land asset** is depreciated over the period of benefits obtained by incurring those costs.

B. **Buildings:**

Buildings have a limited useful life and therefore are depreciable assets.

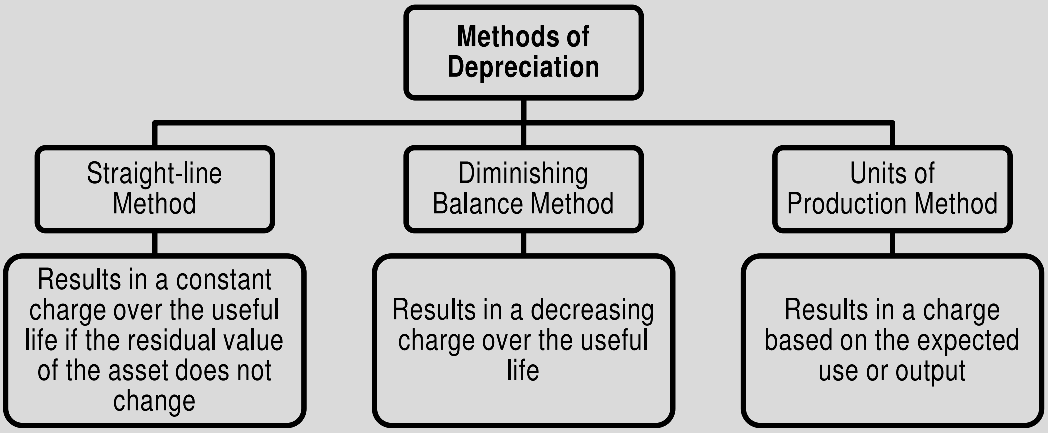
An increase in the value of the land on which a building stands does not affect the determination of the depreciable amount of the building.

9.17 Depreciation Method

The depreciation method used should **reflect the pattern in which the future economic benefits** of the asset are expected to be consumed by the enterprise.

The method selected is applied **consistently from period to period** unless:

- There is a change in the expected pattern of consumption of those future economic benefits; Or
- That the method is changed in accordance with the statute to best reflect the way the asset is consumed.



Review of Depreciation Method:

The depreciation method applied to an asset should be reviewed at **least at each financial year-end** and, if there has been a significant change in the expected pattern of consumption of the future economic benefits embodied in the asset, the method should be changed to reflect the changed pattern.

Such a change should be accounted for as a **change in an accounting estimate** in accordance with AS 5.

Depreciation Method based on Revenue:

A depreciation method that is based on revenue that is generated by an activity that includes the use of an asset is **not appropriate.**

Illustration 14 (Determination of appropriate Depreciation Method)

Entity B manufactures industrial chemicals and uses blending machines in the production process. The output of the blending machines is consistent from year to year and they can be used for different products.

However, maintenance costs increase from year to year and a new generation of machines with significant improvements over existing machines is available every 5 years. Suggest the depreciation method to the management.

Solution

Management should determine the depreciation method based on production output. The straight-line depreciation method should be adopted, because the production output is consistent from year to year.

Factors such as maintenance costs or technical obsolescence should be considered in determining the blending machines' useful life.

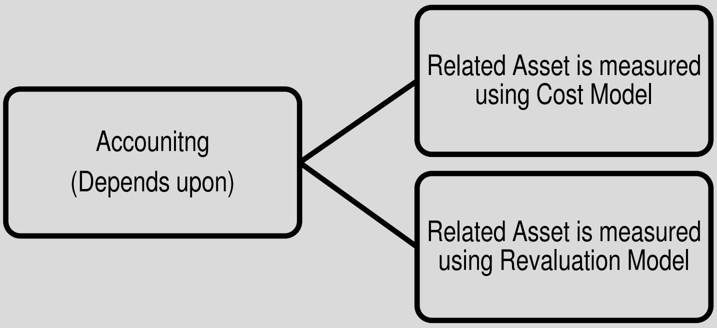
9.18 Changes in Existing Decommissioning, Restoration and other Liabilities

The cost of PPE may undergo changes subsequent to its acquisition or construction on account of:

- Changes in Liabilities
- Price Adjustments
- Changes in Duties
- Changes in initial estimates of amounts provided for Dismantling, Removing, Restoration, and
- Similar factors

The above are **included in the cost of the asset.**

Accounting for the above changes:



A. If the related asset is measured using the Cost model:

Changes in the Liability should be added to, or deducted from, the cost of the related asset in the current period

Note: Amount deducted from the cost of the asset should not exceed its carrying amount. If a decrease in the liability exceeds the carrying amount of the asset, the excess should be recognised immediately in the Statement of Profit and Loss.

If the adjustment results in an addition to the cost of an asset:

- Enterprise should consider whether this is an indication that the new carrying amount of the asset may not be fully recoverable.

Note: If it is such an indication, the enterprise should test the asset for impairment by estimating its recoverable amount, and should account for any impairment loss, in accordance with AS 28.

B. If the related asset is measured using the Revaluation model:

Changes in the liability alter the revaluation surplus or deficit previously recognised on that asset, so that:

(i) Decrease in the liability credited directly to revaluation surplus in the owners' interest

Exception:

- It should be recognised in the Statement of Profit and Loss **to the extent** that it reverses a revaluation deficit on the asset that was previously recognised in the Statement of Profit and Loss

Note: In the event that a decrease in the liability exceeds the carrying amount that would have been recognised had the asset been carried under the cost model, the excess should be recognised immediately in the Statement of Profit and Loss.

(ii) Increase in the liability should be recognised in the Statement of Profit and Loss

Exception:

- It should be debited directly to Revaluation surplus in the owners' interest **to the extent** of any credit balance existing in the Revaluation surplus in respect of that asset

Caution:

A change in the liability is **an indication** that the asset may have to be revalued in order to ensure that the carrying amount does not differ materially from that which would be determined using fair value at the balance sheet date.

What happens if the related asset has reached the end of its useful life?

All subsequent changes in the liability should be recognised in the Statement of Profit and Loss as they occur.

Note: This applies under both the cost model and the revaluation model.

9.19 Impairment

To determine whether an item of PPE is impaired, an enterprise applies AS 28 on Impairment of Assets.

AS 28 explains how an enterprise:

- Reviews the carrying amount of its Assets
- How it determines the Recoverable Amount of an Asset, and
- When it Recognises, or Reverses the recognition of, an Impairment loss

9.20 Compensation for Impairment

Compensation from third parties for items of PPE that were impaired, lost or given up should be included in the Statement of Profit and Loss when the **compensation becomes receivable.**

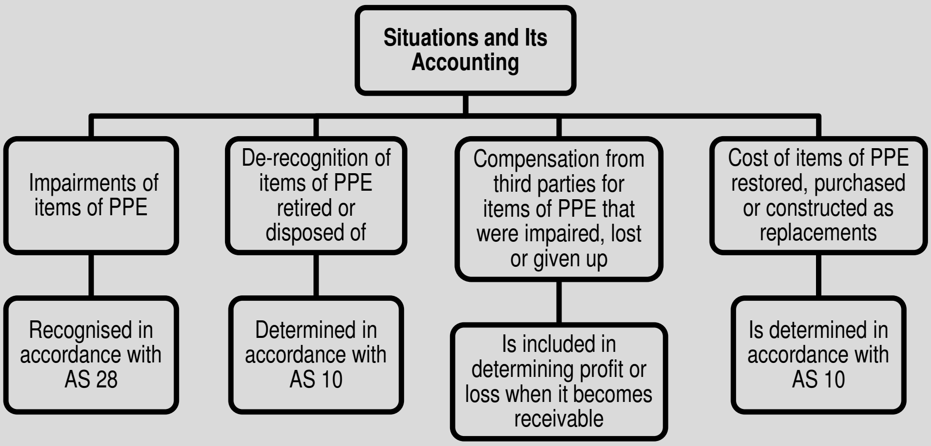


Illustration 15 (Gain on replacement of Insured Assets)

Entity A carried plant and machinery in its books at ₹ 2,00,000. These were destroyed in a fire. The assets were insured 'New for old' and were replaced by the insurance company with new machines that cost ₹ 20,00,000. The machines were acquired by the insurance company and the company did not receive the ₹ 20,00,000 as cash compensation. State, how Entity A should account for the same?

Solution

Entity A should account for a loss in the Statement of Profit and Loss on de-recognition of the carrying value of plant and machinery in accordance with AS 10.

Entity A should separately recognise a receivable and a gain in the income statement resulting from the insurance proceeds under AS 29 once receipt is virtually certain. The receivable should be measured at the fair value of assets that will be provided by the insurer.

9.21 Retirements

Items of PPE retired from active use and held for disposal should be stated at the lower of:

- Carrying Amount, and
- Net Realisable Value

Note: Any write-down in this regard should be recognised immediately in the Statement of Profit and Loss.

9.22 De-recognition

The carrying amount of an item of PPE should be derecognised:

- On disposal
  - By sale
  - By entering into a finance lease, or
  - By donation, Or
- When no future economic benefits are expected from its use or disposal

Accounting Treatment:

Gain or loss arising from de-recognition of an item of PPE should be included in the **Statement of Profit and Loss when the item is derecognized** unless AS 19 on Leases, requires otherwise on a sale and leaseback (AS 19 on Leases, applies to disposal by a sale and leaseback.)

Where,

Gain or loss arising from de-recognition of an item of PPE

= Net disposal proceeds (if any) - Carrying Amount of the item

Note: Gains should **not** be classified as revenue, as defined in AS 9 'Revenue Recognition'.

Exception:

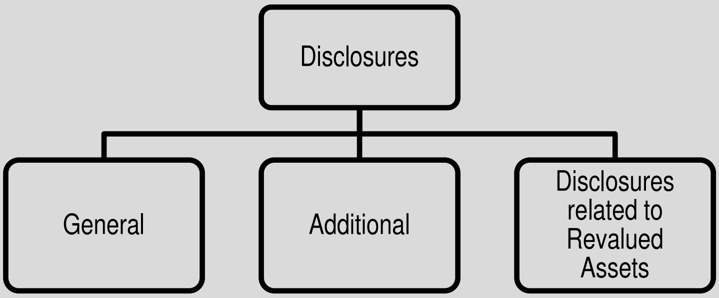
An enterprise that in the course of its ordinary activities, routinely sells items of PPE that it had held for rental to others should transfer such assets to inventories at their carrying amount when they cease to be rented and become held for sale.

The proceeds from the sale of such assets should be recognised in revenue in accordance with AS 9 on Revenue Recognition.

Determining the date of disposal of an item:

An enterprise applies the criteria in AS 9 for recognising revenue from the sale of goods.

9.23 Disclosure



9.23.1 General Disclosures:

The financial statements should disclose, for each class of PPE:

(a) The measurement bases (i.e., cost model or revaluation model) used for determining the gross carrying amount;

(b) The depreciation methods used;

(c) The useful lives or the depreciation rates used.

In case the useful lives or the depreciation rates used are different from those specified in the statute governing the enterprise, it should make a specific mention of that fact;

(d) The gross carrying amount and the accumulated depreciation (aggregated with accumulated impairment losses) at the beginning and end of the period; and

(e) A reconciliation of the carrying amount at the beginning and end of the period showing:

9.23.2 Additional Disclosures:

The financial statements should also disclose:

(a) The existence and amounts of restrictions on title, and property, plant and equipment pledged as security for liabilities;

(b) The amount of expenditure recognised in the carrying amount of an item of property, plant and equipment in the course of its construction;

(c) The amount of contractual commitments for the acquisition of property, plant and equipment;

(d) If it is not disclosed separately on the face of the statement of profit and loss, the amount of compensation from third parties for items of property, plant and equipment that were impaired, lost or given up that is included in the statement of profit and loss; and

(e) The amount of assets retired from active use and held for disposal.

9.23.3 Disclosures related to Revalued Assets:

If items of property, plant and equipment are stated at revalued amounts, the following should be disclosed:

(a) The effective date of the revaluation;

(b) Whether an independent valuer was involved;

(c) The methods and significant assumptions applied in estimating fair values of the items;

(d) The extent to which fair values of the items were determined directly by reference to observable prices in an active market or recent market transactions on arm's length terms or were estimated using other valuation techniques; and

(e) The revaluation surplus, indicating the change for the period and any restrictions on the distribution of the balance to shareholders.

9.24 Transitional Provisions

9.24.1 Previously Recognised Revenue Expenditure

Where an entity has in past recognized an expenditure in the Statement of Profit and Loss which is eligible to be included as a part of the cost of a project for construction of PPE in accordance with the requirements of this standard:

- It may do so **retrospectively** for such a project.

Note: The effect of such retrospective application, should be recognised **net-of-tax in Revenue reserves**.

9.24.2 PPE acquired in Exchange of Assets

The requirements of AS 10 regarding the initial measurement of an item of PPE acquired in an exchange of assets transaction should be **applied prospectively** only to transactions entered into after this Standard becomes mandatory.

9.24.3 Spare parts

On the date of this Standard becoming mandatory, the spare parts, which hitherto were being treated as inventory under AS 2, and are **now required to be capitalised** in accordance with the requirements of this Standard, should be capitalised at their respective carrying amounts.

Note: The spare parts so capitalised should be depreciated over their remaining useful lives prospectively as per the requirements of this Standard.

9.24.4 Revaluations

The requirements of AS 10 regarding the revaluation model should be **applied prospectively.**

In case, on the date of this Standard becoming mandatory, an enterprise **does not adopt** the revaluation model as its accounting policy but the carrying amount of item(s) of PPE reflects any previous revaluation it should adjust the amount outstanding in the Revaluation reserve against the carrying amount of that item.

Note: The carrying amount of that item should never be less than residual value. Any excess of the amount outstanding as Revaluation reserve over the carrying amount of that item **should be adjusted** in Revenue reserves.

Reference: The students are advised to refer the full text of AS 10 "Property, Plant and Equipment" (Revised 2016).

UNIT 10 : AS 11: THE EFFECTS OF CHANGES IN FOREIGN EXCHANGE RATES

10.1 Introduction

AS 11, (revised 2003), came into effect in respect of accounting periods commenced on or after 1-4-2004 and is mandatory in nature from that date. The standard deals with the issues involved in accounting for foreign currency transactions and foreign operations i.e., to decide which exchange rate to use and how to recognize the financial effects of changes in exchange rates in the financial statements. The standard requires the enterprises to disclose

(i) the amount of exchange differences included in the net profit or loss for the period

(ii) the amount of exchange differences adjusted in the carrying amount of fixed assets,

(iii) the amount of exchange differences in respect of forward exchange contracts to be recognized in the profit or loss in one or more subsequent accounting periods (over the life of the contract).

10.2 Scope

This Standard should be applied:

(a) In accounting for transactions in foreign currencies.

(b) In translating the financial statements of foreign operations.

(c) This Statement also deals with accounting for foreign currency transactions in the nature of forward exchange contracts.

This Standard does not:

(a) Specify the currency in which an enterprise presents its financial statements. However, an enterprise normally uses the currency of the country in which it is domiciled. If it uses a different currency, the Standard requires disclosure of the reasons for using that currency. The Standard also requires disclosure of the reason for any change in the reporting currency.

(b) Deal with the presentation in a cash flow statement of cash flows arising from transactions in a foreign currency and the translation of cash flows of a foreign operation, which are addressed in AS 3 'Cash flow statement'.

(c) Deal with exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs.

(d) Deal with the restatement of an enterprise's financial statements from its reporting currency into another currency for the convenience of users accustomed to that currency or for similar purposes.

10.3 Definitions of the terms used in the Standard

A foreign currency transaction is a transaction which is denominated in or requires settlement in a foreign currency, including transactions arising when an enterprise either:

(a) Buys or sells goods or services whose price is denominated in a foreign currency.

(b) Borrows or lends funds when the amounts payable or receivable are denominated in a foreign currency.

(c) Becomes a party to an unperformed forward exchange contract or

(d) Otherwise acquires or disposes of assets, or incurs or settles liabilities, denominated in a foreign currency.

Monetary items are money held and assets and liabilities to be received or paid in fixed or determinable amounts of money. For example, cash, receivables and payables.

Non-monetary items are assets and liabilities other than monetary items. For example, fixed assets, inventories and investments in equity shares.

Foreign operation is a subsidiary, associate, joint venture or branch of the reporting enterprise, the activities of which are based or conducted in a country other than the country of the reporting enterprise.

Integral foreign operation is a foreign operation, the activities of which are an integral part of those of the reporting enterprise. A foreign operation that is integral to the operations of the reporting enterprise carries on its business as if it were an extension of the reporting enterprise's operations.

Non-integral foreign operation is a foreign operation that is not an integral foreign operation. When there is a change in the exchange rate between the reporting currency and the local currency, there is little or no direct effect on the present and future cash flows from operations of either the non-integral foreign operation or the reporting enterprise. The change in the exchange rate affects the reporting enterprise's net investment in the non-integral foreign operation rather than the individual monetary and non-monetary items held by the non-integral foreign operation.

'Net investment in a non-integral foreign operation' is the reporting enterprise's share in the net assets of that operation.

Forward exchange contract means an agreement to exchange different currencies at a forward rate.

Forward rate is the specified exchange rate for exchange of two currencies at a specified future date.

'Foreign currency' is a currency other than the reporting currency of an enterprise

10.4 Initial Recognition

A foreign currency transaction should be recorded, on initial recognition in the reporting currency, by applying to the foreign currency amount the exchange rate between the reporting currency and the foreign currency at the date of the transaction.

A rate that approximates the actual rate at the date of the transaction is often used, for example, an average rate for a week or a month might be used for all transactions in each foreign currency occurring during that period. However, if exchange rates fluctuate significantly, the use of the average rate for a period is unreliable.

10.5 Reporting at each balance sheet date

The treatment of foreign currency items at the balance sheet date depends on whether the item is:

- monetary or non-monetary; and
- carried at historical cost or fair value (for non-monetary items).

(a) Foreign currency monetary items should be reported using the closing rate. However, in certain circumstances, the closing rate may not reflect with reasonable accuracy the amount in reporting currency that is likely to be realised from, or required to disburse, a foreign currency monetary item at the balance sheet date, e.g., where there are restrictions on remittances or where the closing rate is unrealistic and it is not possible to effect an exchange of currencies at that rate at the balance sheet date. In such circumstances, the relevant monetary item should be reported in the reporting currency at the amount which is likely to be realised from or required to disburse, such item at the balance sheet date.

(b) Non-monetary items which are carried in terms of historical cost denominated in a foreign currency should be reported using the exchange rate at the date of the transaction.

(c) Non-monetary items which are carried at fair value or other similar valuation denominated in a foreign currency should be reported using the exchange rates that existed when the values were determined.

(d) The contingent liability denominated in foreign currency at the balance sheet date is disclosed by using the closing rate.

10.6 Recognition of Exchange Differences

Exchange differences arise on:

- the settlement of monetary items at a date subsequent to intial recognition; and
- remeasuring an enterprise's monetary items at rates different from those at which they were either initially recorded (if in the period) or previously recorded (at the previous balance sheet date).

An exchange difference results when there is a change in the exchange rate between the transaction date and the date of settlement of any monetary items arising from a foreign currency transaction. When the transaction is settled within the same accounting period as that in which it occurred, all the exchange difference is recognised in that period. However, when the transaction is settled in a subsequent accounting period, the exchange difference recognised in each intervening period up to the period of settlement is determined by the change in exchange rates during that period.

Exchange differences arising on the settlement of monetary items or on reporting an enterprise's monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial statements, should be recognised as income or as expenses in the period in which they arise.

Note:

Central Government in consultation with National Advisory Committee on Accounting Standards made an amendment to AS 11 "The Effects of Changes in Foreign Exchange Rates" in the form of Companies (Accounting Standards) Amendment Rules, 2009 and 2011.

According to the Notification, exchange differences arising on reporting of long-term foreign currency monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial statements, insofar as they relate to the acquisition of a depreciable capital asset, can be added to or deducted from the cost of the asset and shall be depreciated over the balance life of the asset, and in other cases, can be accumulated in the Foreign Currency Monetary Item Translation Difference (FCMITD) Account and should be written off over the useful life of the assets (amortized over the balance period of such long term assets or liability, by recognition as income or expense in each of such periods) but not beyond 31st March, 2020.

Any difference pertaining to accounting periods which commenced on or after 7th December, 2006, previously, recognised in the profit and loss account before the exercise of the option shall be reversed insofar as it relates to the acquisition of a depreciable capital asset by addition or deduction from the cost of the asset and in other cases by transfer to Foreign Currency Monetary Item Translation Difference (FCMITD) Account, and by debit or credit, as the case may be, to the general reserve.

If the above option is exercised, disclosure shall be made of the fact of such exercise of such option and of the amount remaining to be amortized in the financial statements of the period in which such option is exercised and in every subsequent period so long as any exchange difference remains unamortized.

For the purposes of exercise of this option, an asset or liability shall be designated as a long-term foreign currency monetary item, if the asset or liability is expressed in a foreign currency and has a term of 12 months or more at the date of origination of the asset or liability.

Further in December, 2011, the Ministry of Corporate Affairs inserted para 46A in AS 11 of the Companies (Accounting Standards) Rules, 2006. According to it, in respect of accounting periods commencing on or after the 1st April, 2011, an enterprise which had earlier exercised the option under paragraph 46 and at the option of any other enterprise, the exchange differences arising on reporting of long-term foreign currency monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial statements, in so far as they relate to the acquisition of a depreciable capital assets, can be added to or deducted from the cost of the assets and shall be depreciated **over the balance life of the assets**, and in other cases, can be accumulated in a "Foreign Currency Monetary Item Translation Difference Account" in the enterprise's financial statements and **amortized over the balance period of such long term assets or liability, by recognition as income or expense in each of such periods.**

Such option is irrevocable and should be applied to all such foreign currency monetary items. The enterprise excersing such option shall disclose the fact of such option and of the amount remaining to be amortized in the financial statements of the period in which such option is exercised and in every subsequent period so long as any exchange difference remains unamortized.

10.7 Classification of Foreign Operations as Integral or Non-integral

The method used to translate the financial statements of a foreign operation depends on the way in which it is financed and operates in relation to the reporting enterprise. For this purpose, foreign operations are classified as either 'integral foreign operations' or 'non-integral foreign operations'.

An integral foreign operation carries on its business as if it were an extension of the reporting enterprise's operations. For example, such an operation might only sell goods imported from the reporting enterprise and remits the proceeds to the reporting enterprise. In such cases, a change in the exchange rate between the reporting currency and the currency in the country of foreign operation has an almost immediate effect on the reporting enterprise's cash flow from operations. Therefore, the change in the exchange rate affects the individual monetary items held by the foreign operation rather than the reporting enterprise's net investment in that operation.

In contrast, a non-integral foreign operation accumulates cash and other monetary items, incurs expenses, generates income and perhaps arranges borrowings, all substantially in its local currency. It may also enter into transctions in foreign currencies, including transactions in the reporting currency. When there is a change in the exchange rate between the reporting currency and the local currency, there is little or no direct effect on the present and future cash flows from operations of either the non-integral foreign operation or the reporting enterprise. The change in the exchange rate affects the reporting enterprise's net investment in the non-integral foreign operation rather than the individual monetary and non- monetary items held by the non-integral foreign operation.

10.8 Translation of Foreign Integral Operations

The individual items in the financial statements of the foreign operation are translated as if all its transactions had been entered into by the reporting enterprise itself. The cost and depreciation of tangible fixed assets is translated using the exchange rate at the date of purchase of the asset or, if the asset is carried at fair value or other similar valuation, using the rate that existed on the date of the valuation. The cost of inventories is translated at the exchange rates that existed when those costs were incurred. The recoverable amount or realisable value of an asset is translated using the exchange rate that existed when the recoverable amount or net realisable value was determined. For example, when the net realisable value of an item of inventory is determined in a foreign currency, that value is translated using the exchange rate at the date as at which the net realisable value is determined. The rate used is therefore usually the closing rate.

10.9 Translation of Non-Integral Foreign Operations

The translation of the financial statements of a non-integral foreign operation is done using the 'closing rate method' in which the following procedures are used:

(a) The assets and liabilities, both monetary and non-monetary, of the non-integral foreign operation should be translated at the closing rate;

(b) Income and expense items of the non-integral foreign operation should be translated at exchange rates at the dates of the transactions; and

(c) All resulting exchange differences should be accumulated in a foreign currency translation reserve until the disposal of the net investment.

(d) For practical reasons, a rate that approximates the actual exchange rates, for example an average rate for the period is often used to translate income and expense items of a foreign operation.

(e) Any goodwill or capital reserve arising on the acquisition of a non-integral foreign operation is translated at the closing rate.

(f) A contingent liability disclosed in the financial statements of a non-integral foreign operation is translated at the closing rate for its disclosure in the financial statements of the reporting enterprise.

(g) The incorporation of the financial statements of a non-integral foreign operation in those of the reporting enterprise follows normal consolidation procedures, such as the elimination of intra-group balances and intra-group transactions of a subsidiary (AS 21 and AS 27). However, an exchange difference arising on an intra-group monetary item, whether short-term or long-term, cannot be eliminated against a corresponding amount arising on other intra-group balances because the monetary item represents a commitment to convert one currency into another and exposes the reporting enterprise to a gain or loss through currency fluctuations.

(h) When the financial statements of a non-integral foreign operation are drawn up to a different reporting date from that of the reporting enterprise, the non-integral foreign operation often prepares, for purposes of incorporation in the financial statements of the reporting enterprise, statements as at the same date as the reporting enterprise (AS 21).

(i) The exchange differences are not recognised as income or expenses for the period because the changes in the exchange rates have little or no direct effect on the present and future cash flows from operations of either the non-integral foreign operation or the reporting enterprise. When a non-integral foreign operation is consolidated but is not wholly owned, accumulated exchange differences arising from translation and attributable to minority interests are allocated to, and reported as part of, the minority interest in the consolidated balance sheet.

(j) An enterprise may dispose of its interest in a non-integral foreign operation through sale, liquidation, repayment of share capital, or abandonment of all, or part of, that operation. The payment of a dividend forms part of a disposal only when it constitutes a return of the investment. In the case of a partial disposal, only the proportionate share of the related accumulated exchange differences is included in the gain or loss. A write-down of the carrying amount of a non-integral foreign operation does not constitute a partial disposal. Accordingly, no part of the deferred foreign exchange gain or loss is recognised at the time of a write-down.

The following are indications that a foreign operation is a non-integral foreign operation rather than an integral foreign operation:

(a) While the reporting enterprise may control the foreign operation, the activities of the foreign operation are carried out with a significant degree of autonomy from those of the reporting enterprise.

(b) Transactions with the reporting enterprise are not a high proportion of the foreign operation's activities.

(c) The activities of the foreign operation are financed mainly from its own operations or local borrowings rather than from the reporting enterprise.

(d) Costs of labour, material and other components of the foreign operation's products or services are primarily paid or settled in the local currency rather than in the reporting currency.

(e) The foreign operation's sales are mainly in currencies other than the reporting currency.

(f) Cash flows of the reporting enterprise are insulated from the day-to-day activities of the foreign operation rather than being directly affected by the activities of the foreign operation.

(g) Sales prices for the foreign operation’s products are not primarily responsive on a short-term basis to changes in exchange rates but are determined more by local competition or local government regulation.

(h) There is an active local sales market for the foreign operation’s products, although there also might be significant amounts of exports.

10.10 Change in the Classification of a Foreign Operation

When a foreign operation that is integral to the operations of the reporting enterprise is reclassified as a non-integral foreign operation, exchange differences arising on the translation of non-monetary assets at the date of the reclassification are accumulated in a foreign currency translation reserve.

When a non-integral foreign operation is reclassified as an integral foreign operation, the translated amounts for non-monetary items at the date of the change are treated as the historical cost for those items in the period of change and subsequent periods. Exchange differences which have been deferred are not recognised as income or expenses until the disposal of the operation.

10.11 Tax Effects of Exchange Differences

Gains and losses on foreign currency transactions and exchange differences arising on the translation of the financial statements of foreign operations may have associated tax effects which are accounted for in accordance with AS 22.

10.12 Forward Exchange Contract

An enterprise may enter into a forward exchange contract or another financial instrument that is in substance a forward exchange contract, which is not intended for trading or speculation purposes, to establish the amount of the reporting currency required or available at the settlement date of a transaction. The premium or discount arising at the inception of such a forward exchange contract should be amortised as expense or income over the life of the contract.

Exchange differences on such a contract should be recognised in the statement of profit and loss in the reporting period in which the exchange rates change. Any profit or loss arising on cancellation or renewal of such a forward exchange contract should be recognised as income or as expense for the period.

In recording a forward exchange contract intended for trading or speculation purposes, the premium or discount on the contract is ignored and at each balance sheet date, the value of the contract is marked to its current market value and the gain or loss on the contract is recognised.

Illustration 1

Mr. A bought a forward contract for three months of US$ 1,00,000 on 1st December at 1 US$ = ₹ 47.10 when exchange rate was US$ 1 = ₹ 47.02. On 31st December when he closed his books when exchange rate was US$ 1 = ₹ 47.15. On 31st January, he decided to sell the contract at ₹ 47.18 perdollar. Show how the profits from contract will be recognized in the books.

Solution

It is apparent from the facts given in the question that Mr. A entered into forward exchange contract for speculation purpose*.According to paragraphs 38 and 39 of AS 11(Revised) 'The Effects of Changes in Foreign Exchange Rates', gain or loss on forward exchange contracts intended for trading or speculation purpose should be computed by multiplying the foreign currency amount of the forward exchange contract by the difference between the forward rate available at the reporting date for the remaining maturity of the contract and the contracted forward rate (or the forward rate last used to measure a gain or loss on that contract for an earlier period). The gain or loss so computed should be recognised in the statement of profit and loss for the period and the premium or discount on the forward exchange contract is ignored and not recognised separately. In recording such contract, at each balance sheet date, the value of the contract is marked to its current market value and the gain or loss on the contract is recognised.

Thus, the premium on contract i.e., the difference between the contract rate and the spot rate amounting ₹ 8,000 [US $ 1,00,000 x (₹ 47.10 – ₹ 47.02)] will be ignored and not be recorded in the books. However, the profit on contract i.e. the difference between the sale rate and contract rate amounting ₹8,000 [US$ 1,00,000 x 0.08 (₹ 47.18 – ₹ 47.10)] will be recognized in the books of Mr. A on 31st January.

---

*The forward contract is sold before its due date, hence considered as speculative.

Note: *The current market value of the forward contract on 31st December has not been given in the question. Therefore, no gain or loss can be recognised in the books on 31st December. The profit amounting ₹ 8,000 will be recognised in the year of sale only.

10.13 Disclosure

An enterprise should disclose:

(a) The amount of exchange differences included in the net profit or loss for the period.

(b) Net exchange differences accumulated in foreign currency translation reserve as a separate component of shareholders' funds, and a reconciliation of the amount of such exchange differences at the beginning and end of the period.

When the reporting currency is different from the currency of the country in which the enterprise is domiciled, the reason for using a different currency should be disclosed. The reason for any change in the reporting currency should also be disclosed.

When there is a change in the classification of a significant foreign operation, an enterprise should disclose:

(a) The nature of the change in classification;

(b) The reason for the change;

(c) The impact of the change in classification on shareholders' funds; and

(d) The impact on net profit or loss for each prior period presented had the change in classification occurred at the beginning of the earliest period presented.

10.14 Presentation of Foreign Currency Monetary Item Translation Difference Account(FCMITDA)

In the format of Schedule III to the Companies Act, 2013, no line item has been specified for the presentation of "Foreign Currency Monetary Item Translation Difference Account (FCMITDA)". Since the balance in FCMITDA represents foreign currency translation loss, it does not meet the above definition of 'asset' as it is neither a resource nor any future economic benefit would flow to the entity therefrom. Therefore, such balance cannot be reflected as an asset. Therefore, debit or credit balance in FCMITDA should be shown on the "Equity and Liabilities" side of the balance sheet under the head 'Reserves and Surplus' as a separate line item.

10.15 Miscellaneous Illustrations

Illustration 2

A Ltd. purchased fixed assets costing ₹ 3,000 lakhs on 1.1.2016 and the same was fully financed by foreign currency loan (U.S. Dollars) payable in three annual equal instalments. Exchange rates were 1 Dollar = ₹ 40.00 and ₹ 42.50 as on 1.1.2016 and 31.12.2016 respectively. First instalment was paid on 31.12.2016. The entire difference in foreign exchange has been capitalized.

You are required to state, how these transactions would be accounted for.

Solution

As per para 13 of AS 11 (Revised 2003) 'The Effects of Changes in Foreign Exchange Rates', exchange differences arising on the settlement of monetary items or on reporting an enterprise's monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial statements, should be recognized as income or expenses in the period in which they arise. Thus exchange differences arising on repayment of liabilities incurred for the purpose of acquiring fixed assets are recognized as income or expense.

Calculation of Exchange Difference:

$$\text{Foreign currency loan} = \frac{₹\ 3,000 \text{ lakhs}}{₹\ 40} = 75 \text{ lakhs US Dollars}$$

Exchange difference = 75 lakhs US Dollars $\times$ (42.50 – 40.00) = ₹187.50 lakhs

(including exchange loss on payment of first instalment)

Therefore, entire loss due to exchange differences amounting ₹ 187.50 lakhs should be charged to profit and loss account for the year.

Note: The above answer has been given on the basis that the company has not exercised the option of capitalization available under para 46 of AS 11. However, if the company opts to avail the benefit given in para 46A, then nothing is required to be done since the company has done the correct treatment.

Illustration 3

Assets and liabilities and income and expenditure items in respect of foreign branches are translated into Indian rupees at the prevailing rate of exchange at the end of the year. The resultant exchange differences in the case of profit, is carried to other Liabilities Account and the Loss, if any, is charged to revenue. Comment.

Solution

The financial statements of an integral foreign operation (for example, dependent foreign branches) should be translated using the principles and procedures described in paragraphs 8 to 16 of AS 11 (Revised 2003). The individual items in the financial statements of a foreign operation are translated as if all its transactions had been entered into by the reporting enterprise itself.

Individual items in the financial statements of the foreign operation are translated at the actual rate on the date of transaction. For practical reasons, a rate that approximates the actual rate at the date of transaction is often used, for example, an average rate for a week or a month may be used for all transactions in each foreign currency during the period. The foreign currency monetary items (for example cash, receivables, payables) should be reported using the closing rate at each balance sheet date. Non-monetary items (for example, fixed assets, inventories, investments in equity shares) which are carried in terms of historical cost denominated in a foreign currency should be reported using the exchange date at the date of transaction. Thus the cost and depreciation of the tangible fixed assets is translated using the exchange rate at the date of purchase of the asset if asset is carried at cost. If the fixed asset is carried at fair value, translation should be done using the rate existed on the date of the valuation. The cost of inventories is translated at the exchange rates that existed when the cost of inventory was incurred and realizable value is translated applying exchange rate when realizable value is determined which is generally closing rate.

Exchange difference arising on the translation of the financial statements of integral foreign operation should be charged to profit and loss account. Exchange difference arising on the translation of the financial statement of foreign operation may have tax effect which should be dealt as per AS 22

'Accounting for Taxes on Income'.

Thus, the treatment by the management of translating all assets and liabilities; income and expenditure items in respect of foreign branches at the prevailing rate at the year end and also the treatment of resultant exchange difference is not in consonance with AS 11 (Revised 2003).

Note: The above answer has been given on the basis that the foreign branches referred in the question are integral foreign operations.

Illustration 4

Option Ltd. is engaged in the manufacturing of steel. For its steel plant, it required machineries of latest technology. It usually resorts to Long Term Foreign Currency Borrowings for its fund requirements. On 1st April, 2016, it borrowed US $1 million from International Funding Agency, USA when exchange rate was 1 $ = ₹ 52. The funds were used for acquiring machineries on the same date to be used in three different steel plants. The useful life of the machineries is 10 years and their residual value is ₹ 20,00,000.

Earlier also the company used to purchase machineries out of foreign borrowings. The exchange differences arising on such borrowings were charged to profit and lossaccount andwere notcapitalised even though the company had an option to capitalise it as per notified AS 11 (notification issued by the MCA in 2009).

Now for this new purchase of machinery, Option Ltd, is interested to avail the option of capitalising the same to the cost of asset. Exchange rate on 31st March, 2017 is 1 US $ = ₹ 51. Assume that on 31st March, 2017, Option Ltd. is not having any old Long term foreign currency borrowings except for the amount borrowed for machinery purchased on 1st April, 2016.

Can Option Ltd. capitalise the exchange difference to the cost of asset on 31st March, 2017? If yes, then calculate the depreciation amount on machineries as on 31st March, 2017.

Solution

Ministry of Corporate Affairs of India, inserted paragraph 46A in notified AS 11 by Notification dated 29th December, 2011, which is relevant for companies. It states that in respect of accounting periods commencing on or after 1st April, 2011, for an enterprise which had earlier exercised the option under paragraph 46 or not (such option to be irrevocable and to be applied to all such foreign currency monetary items), the exchange differences arising on reporting of long term foreign currency monetary items at rates different from those at which they were initially recorded during the period, or reported in previous financial statements, in so far as they relate to the acquisition of a depreciable capital asset, can be added to or deducted from the cost of the asset and shall be depreciated over the balance life of the asset.

Accordingly, though Option Ltd. had not earlier exercised the option as given by the notification on AS 11, issued in 2009, yet it can avail the option to capitalise the exchange difference to the cost of machinery by virtue of para 46A inserted in the notified AS 11 in December, 2011.

Exchange difference to be capitalised

Cost of the asset in $		$ 10 lakhs
Exhange rate on 1st April, 2016		₹ 52 = 1$
Cost of the asset in ₹	($ 10 lakhs x ₹ 52)	520 lakhs
Less: Exchange differences as on 31st March, 2017 (52-51) x $ 1 million	(Gain)	(10 lakhs)
		510 lakhs
Less: Depreciation for 2016-17	(510 lakhs - 20 lakhs)/10 years	(49 lakhs)
		461 lakhs

UNIT 11 :AS 12: ACCOUNTING FOR GOVERNMENT GRANTS

11.1 Introduction

The Standard came into effect in respect of accounting periods commenced on or after 1.4.1992 and was recommendatory in nature for an initial period of two years. AS 12 deals with accounting for government grants like subsidies, cash incentives, duty drawbacks, etc. and specifies that the government grants should not be recognized until there is reasonable assurance that the enterprise will comply with the conditions attached to them, and the grant will be received. The standard also describes the treatment of non-monetary government grants; presentation of grants related to specific fixed assets, revenue, promoters' contribution; treatment for refund of government grants etc. The enterprises are required to disclose

(i) theaccounting policy adopted for government grants including the methods of presentation in the financial statements;

(ii) the nature and extent of government grants recognized in the financial statements, including non-monetary grants of assets given either at a concessional rate or free of cost.

This Standard does not deal with:

(i) The special problems arising in accounting for government grants in financial statements reflecting the effects of changing prices or in supplementary information of a similar nature.

(ii) Government assistance other than in the form of government grants.

(iii) Government participation in the ownership of the enterprise.

The receipt of government grants by an enterprise is significant for preparation of the financial statements for two reasons. Firstly, if a government grant has been received, an appropriate method of accounting therefore is necessary. Secondly, it is desirable to give an indication of the extent to which the enterprise has benefited from such grant during the reporting period. This facilitates comparison of an enterprise's financial statements with those of prior periods and with those of other enterprises.

11.2 Accounting Treatment of Government Grants

Two broad approaches may be followed for the accounting treatment of government grants:

- the 'capital approach', under which a grant is treated as part of shareholders' funds, and
- the 'income approach', under which a grant is taken to income over one or more periods.

Those in support of the **'capital approach'** argue as follows:

(i) Many government grants are in the nature of promoters' contribution, i.e., they are given by way of contribution towards its total capital outlay and no repayment is ordinarily expected in the case of such grants.

(ii) They are not earned but represent an incentive provided by government without related costs.

Arguments in support of the **'income approach'** are as follows:

(i) The enterprise earns grants through compliance with their conditions and meeting the envisaged obligations. They should therefore be taken to income and matched with the associated costs which the grant is intended to compensate.

(ii) As income tax and other taxes are charges against income, it is logical to deal also with government grants, which are an extension of fiscal policies, in the profit and loss statement.

(iii) In case grants are credited to shareholders' funds, no correlation is done between the accounting treatment of the grant and the accounting treatment of the expenditure to which the grant relates.

It is generally considered appropriate that accounting for government grant should be based on the nature of the relevant grant. Grants which have the characteristics similar to those of promoters' contribution should be treated as part of shareholders' funds. Income approach may be more appropriate in the case of other grants.

11.3 Recognition of Government Grants

A government grant is not recognised until there is reasonable assurance that:

- the enterprise will comply with the conditions attaching to it; and
- the grant will be received.

Receipt of a grant is not of itself conclusive evidence that the conditions attaching to the grant have been or will be fulfilled.

11.4 Non-monetary Government Grants

Government grants may take the form of non-monetary assets, such as land or other resources, given at concessional rates. In these circumstances, it is usual to account for such assets at their acquisition cost. Non-monetary assets given free of cost are recorded at a nominal value.

11.5 Presentation of Grants Related to Specific Fixed Assets

Two methods of presentation in financial statements of grants related to specific fixed assets are regarded as acceptable alternatives.

Under one method, the grant is shown as a deduction from the gross value of the asset concerned in arriving at its book value. The grant is thus recognised in the profit and loss statement over the useful life of a depreciable asset by way of a reduced depreciation charge. Where the grant equals the whole, or virtually the whole, of the cost of the asset, the asset is shown in the balance sheet at a nominal value.

Under the other method, grants related to depreciable assets are treated as deferred income which is recognised in the profit and loss statement on a systematic and rational basis over the useful life of the asset.

Grants related to non-depreciable assets are credited to capital reserve under this method, as there is usually no charge to income in respect of such assets. However, if a grant related to a non-depreciable asset requires the fulfilment of certain obligations, the grant is credited to income over the same period over which the cost of meeting such obligations is charged to income.

11.6 Presentation of Grants Related to Revenue

AS 12 permits two methods of presentation in the financial statements for grants related to income:

1. directly as a credit to the statement of profit and loss, either separately or under a general heading such as 'other income'; or
2. as a deduction in reporting the related expense.

11.7 Presentation of Grants in the nature of Promoters' contribution

Where the government grants are of the nature of promoters' contribution, the grants are treated as capital reserve which can be neither distributed as dividend nor considered as deferred income.

11.8 Refund of Government Grants

Government grant sometimes become refundable because certain conditions are not fulfilled and is treated as an extraordinary item (AS 5).

The amount refundable in respect of a government grant related to revenue is applied first against any unamortised deferred credit remaining in respect of the grant. To the extent that the amount refundable exceeds any such deferred credit, or where no deferred credit exists, the amount is charged immediately to profit and loss statement.

The amount refundable in respect of a government grant related to a specific fixed asset is recorded by increasing the book value of the asset or by reducing the capital reserve or the deferred income balance, as appropriate, by the amount refundable.

Where a grant which is in the nature of promoters' contribution becomes refundable, in part or in full, to the government on non-fulfillment of some specified conditions, the relevant amount recoverable by the government is reduced from the capital reserve.

11.9 Disclosure

(i) The accounting policy adopted for government grants, including the methods of presentation in the financial statements;

(ii) The nature and extent of government grants recognised in the financial statements, including grants of non-monetary assets given at a concessional rate or free of cost.

11.10 Miscellaneous Illustrations

Illustration 1

Sagar Limited belongs to the engineering industry. The Chief Accountant has prepared the draft accounts for the year ended 31.03.2017. You are required to advise the company on the following item from the viewpoint of finalisation of accounts, taking note of the mandatory accounting standards:

The company purchased on 01.04.2016 special purpose machinery for ₹ 25 lakhs. It received a Central Government Grant for 20% of the price. The machine has an effective life of 10 years.

Solution

AS 12 'Accounting for Government Grants' regards two methods of presentation, of grants related to specific fixed assets, in financial statements as acceptable alternatives. Under the first method, the grant can be shown as a deduction from the gross book value of the machinery in arriving at its book value. The grant is thus recognised in the profit and loss statement over the useful life of a depreciable asset by way of a reduced depreciation charge.

Under the second method, it can be treated as deferred income which should be recognised in the profit and loss statement over the useful life of 10 years in the proportions in which depreciation on machinery will be charged. The deferred income pending its apportionment to profit and loss account should be disclosed in the balance sheet with a suitable description e.g., 'Deferred government grants' to be shown after 'Reserves and Surplus' but before 'Secured Loans'.

The following should also be disclosed:

(i) the accounting policy adopted for government grants, including the methods of presentation in the financial statements;

(ii) the nature and extent of government grants recognised in the financial statement of ₹ 5 lakhs is required to be credited to the profit and loss statement of the current year.

Illustration 2

Top & Top Limited has set up its business in a designated backward area which entitles the company to receive from the Government of India a subsidy of 20% of the cost of investment. Having fulfilled all the conditions under the scheme, the company on its investment of ₹ 50 crore in capital assets received ₹ 10 crore from the Government in January, 2017 (accounting period being 2016-2017). The company wants to treat this receipt as an item of revenue and thereby reduce the losses on profit and loss account for the year ended 31st March, 2017.

Keeping in view the relevant Accounting Standard, discuss whether this action is justified or not.

Solution

As per para 10 of AS 12 'Accounting for Government Grants', where the government grants are of the nature of promoters' contribution, i.e. they are given with reference to the total investment in an undertaking or by way of contribution towards its total capital outlay (for example, central investment subsidy scheme) and no repayment is ordinarily expected in respect thereof, the grants are treated as capital reserve which can be neither distributed as dividend nor considered as deferred income.

In the given case, the subsidy received is neither in relation to specific fixed asset nor in relation to revenue. Thus it is inappropriate to recognise government grants in the profit and loss statement, since they are not earned but represent an incentive provided by government without related costs. The correct treatment is to credit the subsidy to capital reserve. Therefore, the accounting treatment followed by the company is not proper.

Illustration 3

On 1.4.2014, ABC Ltd. received Government grant of ₹ 300 lakhs for acquisition of machinery costing ₹ 1,500 lakhs. The grant was credited to the cost of the asset. The life of the machinery is 5 years. The machinery is depreciated at 20% on WDV basis. The Company had to refund the grant in May 2017 due to non-fulfillment of certain conditions.

How you would deal with the refund of grant in the books of ABC Ltd.?

Solution

According to para 21 of AS 12 on Accounting for Government Grants, the amount refundable in respect of a grant related to a specific fixed asset should be recorded by increasing the book value of the asset or by reducing deferred income balance, as appropriate, by the amount refundable. Where the book value is increased, depreciation on the revised book value should be provided prospectively over the residual useful life of the asset.

		(₹ in lakhs)
1st April, 2014	Acquisition cost of machinery (₹ 1,500 – ₹ 300)	1,200.00
31st March, 2015	*Less*: Depreciation @ 20%	(240.00)
	Book value	960.00
31st March, 2016	*Less*: Depreciation @ 20%	(192.00)
	Book value	768.00
31st March, 2017	*Less*: Depreciation @ 20%	(153.60)
1st April, 2017	Book value	614.40
May, 2017	*Add*: Refund of grant	300.00
	Revised book value	914.40

Depreciation @ 20% on the revised book value amounting ₹ 914.40 lakhs is to be provided prospectively over the residual useful life of the asset i.e. years ended 31st March, 2015 and 31st March, 2016.

Illustration 4

Yogya Ltd. received a specific grant of ₹ 300 lakhs for acquiring the plant of ₹ 1,500 lakhs during 2010-11 having useful life of 10 years. The grant received was credited to deferred income in the balance sheet. During 2016-2017, due to non-compliance of conditions laid down for the grant of ₹ 300 lakhs, the company had to refund the grant to the Government. Balance in the deferred income on that date was ₹ 210 lakhs and written down value of plant was ₹ 1,050 lakhs.

(i) What should be the treatment of the refund of the grant and the effect on cost of the fixed asset and the amount of depreciation to be charged during the year 2016-2017 in the Statement of Profit and Loss?

(ii) What should be the treatment of the refund if grant was deducted from the cost of the plant during 2010-11?

Assume depreciation is charged on assets as per Straight Line Method.

Solution

As per para 21 of AS 12, amount refundable in respect of a grant related to revenue should be applied first against any unamortised deferred credit remaining in respect of the grant. To the extent the amount refundable exceeds any such deferred credit, the amount should be charged to profit and loss statement.

(i) In this case the grant refunded is ₹ 300 lakhs and balance in deferred income is ₹ 210 lakhs, therefore, ₹ 90 lakhs shall be charged to the profit and loss account for the year 2016-2017. There will be no effect on the cost of the fixed asset and depreciation charge will be same as charged in the earlier years.

(ii) As per para 21 of AS 12, the amount refundable in respect of grant which was related to specific fixed assets should be recorded by increasing the book value of the assets by the amount refundable. Where the book value of the asset is increased, depreciation on the revised book value should be provided prospectively over the residual useful life of the asset. Therefore, in this case the book value of the plant shall be increased by ₹ 300 lakhs. The increased cost of ₹ 300 lakhs of the plant should be amortised over 7 years (residual life). Depreciation charged during the year 2016-2017 shall be 1200/10 + 300/7 = ₹ 162.86 lakhs.

Reference: The students are advised to refer the full text of AS 12 "Accounting for Government Grants" (issued 1991).

UNIT 12 : AS:13 ACCOUNTING FOR INVESTMENTS

12.1 Introduction

This Accounting Standard came into effect for financial statements covering periods commenced on or after April 1, 1995. The standard deals with accounting for investments in the financial statements of enterprises and related disclosure requirements. The enterprises are required to disclose the current investments (realizable in nature and intended to be held for not more than one year from the date of its acquisition) and long terms investments (other than current investments) distinctly in their financial statements. An investment property should be accounted for as long-term investments. The cost of investments should include all acquisition costs (including brokerage, fees and duties) and on disposal of an investment, the difference between the carrying amount and net disposal proceeds should be charged or credited to profit and loss statement.

This Standard does not deal with:

a. The basis for recognition of interest, dividends and rentals earned on investments which are covered by AS 9.

b. Operating or finance leases.

c. Investments on retirement benefit plans and life insurance enterprises and

d. Mutual funds and/or the related asset management companies, banks and public financial institutions formed under a Central or State Government Act or so declared under the Companies Act.

12.2 Definition of the terms used in the Standard

Investments are assets held by an enterprise for earning income by way of dividends, interest, and rentals, for capital appreciation, or for other benefits to the investing enterprise. Assets held as inventory-in-trade are not 'investments'

Fair value is the amount for which an asset could be exchanged between a knowledgeable, willing buyer and a knowledgeable, willing seller in an arm's length transaction. Under appropriate circumstances, market value or net realisable value provides an evidence of fair value.

Market value is the amount obtainable from the sale of an investment in an open market, net of expenses necessarily to be incurred on or before disposal.

12.3 Forms of Investments

Enterprises hold investments for diverse reasons. For some enterprises, investment activity is a significant element of operations, and assessment of the performance of the enterprise may largely, or solely, depend on the reported results of this activity. Some investments have no physical existence and are represented merely by certificates or similar documents (e.g., shares) while others exist in a physical form (e.g., buildings). For some investments, an active market exists from which a market value can be established. For other investments, an active market does not exist and other means are used to determine fair value.

12.4 Classification of Investments

A current investment is an investment that is by its nature readily realisable and is intended to be held for not more than one year from the date on which such investment is made. The intention to hold for not more than one year is to be judged at the time of purchase of investment.

A long term investment is an investment other than a current investment.

12.5 Cost of Investments

The cost of an investment includes acquisition charges such as brokerage, fees and duties etc. If an investment is acquired, or partly acquired, by the issue of shares or other securities or another asset, the acquisition cost is the fair value of the securities issued or asset given up. The fair value may not necessarily be equal to the nominal or par value of the securities issued. It may be appropriate to consider the fair value of the investment acquired if it is more clearly evident.

Interest, dividends and rentals receivables in connection with an investment are generally regarded as income, being the return on the investment. However, in some circumstances, such inflows represent a recovery of cost and do not form part of income. If it is difficult to make such an allocation except on an arbitrary basis, the cost of investment is normally reduced by dividends receivable only if they clearly represent a recovery of a part of the cost.

When right shares offered are subscribed for, the cost of the right shares is added to the carrying amount of the original holding. If rights are not subscribed for but are sold in the market, the sale proceeds are taken to the profit and loss statement. However, where the investments are acquired on cum-right basis and the market value of investments immediately after their becoming ex-right is lower than the cost for which they were acquired, it may be appropriate to apply the sale proceeds of rights to reduce the carrying amount of such investments to the market value.

12.6 Carrying Amount of Investments

The carrying amount for current investments is the lower of cost and fair value.

Any reduction in realisable value is debited to profit and loss account, however, if realisable value of investment is increased subsequently, the increase in value of current investment to the level of the cost is credited to the profit and loss account.

Long term investments are usually carried at cost. Where there is a decline, other than temporary, in the carrying amounts of long term valued investments, the resultant reduction in the carrying amount is charged to the profit and loss statement. The reduction in carrying amount is reversed when there is a rise in the value of the investment, or if the reasons for the reduction no longer exist.

12.7 Investment Properties

An **investment property** is an investment in land or buildings that are not intended to be occupied substantially for use by, or in the operations of, the investing enterprise. ***An investment property is accounted for in accordance with cost model as prescribed in AS 10, 'Property, Plant and Equipment'. The cost of any shares in a co-operative society or a company, the holding of which is directly related to the right to hold the investment property, is added to the carrying amount of the investment property.***.

12.8 Disposal of Investments

On disposal of an investment, the difference between the carrying amount and the disposal proceeds, net of expenses, is recognised in the profit and loss statement. When disposing of a part of the holding of an individual investment, the carrying amount to be allocated to that part is to be determined on the basis of the average carrying amount of the total holding of the investment.

12.9 Reclassification of Investments

Where long-term investments are reclassified as current investments, transfers are made at the lower of cost and carrying amount at the date of transfer.

Where investments are reclassified from current to long-term, transfers are made at the lower of cost and fair value at the date of transfer.

12.10 Disclosure

The following disclosures in financial statements in relation to investments are appropriate: -

a. The accounting policies followed for valuation of investments.

b. The amounts included in profit and loss statement for:

   i. Interest, dividends (showing separately dividends from subsidiary companies), and rentals on investments showing separately such income from long term and current investments. Gross income should be stated, the amount of income tax deducted at source being included under Advance Taxes Paid.

   ii. Profits and losses on disposal of current investments and changes in carrying amount of such investments.

   iii. Profits and losses on disposal of long term investments and changes in the carrying amount of such investments.

c. Significant restrictions on the right of ownership, realisability of investments or the remittance of income and proceeds of disposal.

d. The aggregate amount of quoted and unquoted securities separately.

e. Other disclosures as specifically required by the relevant statute governing the enterprise.

Illustration 1

An unquoted long term investment is carried in the books at a cost of ₹ 2 lakhs. The published accounts of the unlisted company received in May, 2017 showed that the company was incurring cash losses with declining market share and the long term investment may not fetch more than ₹ 20,000. How will you deal with this in preparing the financial statements of R Ltd. for the year ended 31st March, 2017?

Solution

As it is stated in the question that financial statements for the year ended 31st March, 2017 are under preparation, the views have been given on the basis that the financial statements are yet to be completed and approved by the Board of Directors.

Investments classified as long term investments should be carried in the financial statements at cost. However, provision for diminution shall be made to recognise a decline, other than temporary, in the value of the investments, such reduction being determined and made for each investment individually. Para 17 of AS 13 'Accounting for Investments' states that indicators of the value of an investment are obtained by reference to its market value, the investee's assets and results and the expected cash flows from the investment. On these bases, the facts of the given case clearly suggest that the provision for diminution should be made to reduce the carrying amount of long term investment to ₹ 20,000 in the financial statements for the year ended 31st March, 2017.

Illustration 2

X Ltd. on 1-1-2017 had made an investment of ₹ 600 lakhs in the equity shares of Y Ltd. of which 50% is made in the long term category and the rest as temporary investment. The realizable value of all such investment on 31-3-2017 became ₹ 200 lakhs as Y Ltd. lost a case of copyright. From the given market conditions, it is apparent that the reduction in the value is permanent in nature. How will you recognize the reduction in financial statements for the year ended on 31-3-2017?

Solution

X Ltd. invested ₹ 600 lakhs in the equity shares of Y Ltd. Out of the same, the company intends to hold 50% shares for long term period i.e. ₹ 300 lakhs and remaining as temporary (current) investment i.e. ₹ 300 lakhs. Irrespective of the fact that investment has been held by X Ltd. only for 3 months (from 1.1.2017 to 31.3.2017), AS 13 lays emphasis on intention of the investor to classify the investment as current or long term even though the long term investment may be readily marketable.

In the given situation, the realizable value of all such investments on 31.3.2017 became ₹ 200 lakhs i.e. ₹ 100 lakhs in respect of current investment and ₹ 100 lakhs in respect of long term investment.

As per AS 13, 'Accounting for Investment', the carrying amount for current investments is the lower of cost and fair value. In respect of current investments for which an active market exists, market value generally provides the best evidence of fair value.

Accordingly, the carrying value of investment held as temporary investment should be shown at realizable value i.e. at ₹ 100 lakhs. The reduction of ₹ 200 lakhs in the carrying value of current investment will be charged to the profit and loss account.

Standard further states that long-term investments are usually carried at cost. However, when there is a decline, other than temporary, in the value of long term investment, the carrying amount is reduced to recognise the decline.

Here, Y Ltd. lost a case of copyright which drastically reduced the realisable value of its shares to one third which is quiet a substantial figure. Losing the case of copyright may affect the business and the performance of the company in long run. Accordingly, it will be appropriate to reduce the carrying amount of long term investment by ₹ 200 lakhs and show the investments at ₹ 100 lakhs, since the downfall in the value of shares is other than temporary. The reduction of ₹ 200 lakhs in the carrying value of long term investment will be charged to the Statement of profit and loss.

Illustration 3

Sabka Bank has classified its total investment on 31-3-2017 into three categories (a) held to maturity (b) available for sale (c) held for trading.

'Held to maturity' investments are carried at acquisition cost less amortised amount. 'Available for sale' investments are carried at marked to market. 'Held for trading' investments are valued at weekly intervals at market rates or as per the prices declared by FIMMDA. Net depreciation, if any, is charged to revenue and net appreciation, if any, is ignored. Comment whether the policy of the bank is in accordance with AS 13?

Solution

As per para 2(d) of AS 13 'Accounting for Investments', the accounting standard is not applicable to Bank, Insurance Company, Mutual Funds. In this case Sabka Bank is a bank, therefore, AS 13 does not apply to it. For banks, the RBI has issued guidelines for classification and valuation of its investment and Sabka Bank should comply with those RBI Guidelines/Norms. Therefore, though Sabka Bank has not followed the provisions of AS 13, yet it would not be said as non-compliance since, it is complying with the norms stipulated by the RBI.

Reference: The students are advised to refer the full text of AS 13 "Accounting for Investments" (issued 1993).

UNIT 13 : AS 14: ACCOUNTING FOR AMALGAMATIONS

13.1 Introduction

This standard has come into effect in respect of accounting periods commenced on or after 1.4.1995 and is mandatory in nature. AS 14 deals with the accounting to be made in the books of Transferee company in the case of amalgamation and the treatment of any resultant goodwill or reserve.

An amalgamation may be either in the nature of merger or purchase. The standard specifies the conditions to be satisfied by an amalgamation to be considered as amalgamation in nature of merger or purchase.

An amalgamation in nature of merger is accounted for as per pooling of interests method and in nature of purchase is dealt under purchase method.

The standard describes the disclosure requirements for both types of amalgamations in the first financial statementsThis statement is directed principally to companies although some of its requirements also apply to financial statements of other enterprises. We will discuss the other amalgamation aspects in detail in the next paragraphs of this unit.

This statement does not deal with cases of acquisitions. The distinguishing feature of an acquisition is that the acquired company is not dissolved and its separate entity continues to exist.

13.2 Definition of the terms used in the Standard

- **Amalgamation** means an amalgamation pursuant to the provisions of the Companies Act, 2013 or any other statute which may be applicable to companies ***and includes 'merger'.***
- **Transferor company** means the company which is amalgamated into another company.
- **Transferee company** means the company into which a transferor company is amalgamated.

13.3 Types of Amalgamations

Amalgamations fall into two broad categories. In the first category are those amalgamations where there is a genuine pooling not merely of the assets and liabilities of the amalgamating companies but also of the shareholders' interests and of the businesses of these companies. These are known as Amalgamation in nature of merger. Other is known as Amalgamation in nature of purchase.

13.4 Amalgamation in the Nature of Merger

Amalgamation in the nature of merger is an amalgamation which satisfies all the following conditions.

(i) All the assets and liabilities of the transferor company become, after amalgamation, the assets and liabilities of the transferee company.

(ii) Shareholders holding not less than 90% of the face value of the equity shares of the transferor company (other than the equity shares already held therein, immediately before the amalgamation, by the transferee company or its subsidiaries or their nominees) become equity shareholders of the transferee company by virtue of the amalgamation.

(iii) The consideration for the amalgamation receivable by those equity shareholders of the transferor company who agree to become equity shareholders of the transferee company is discharged by the transferee company wholly by the issue of equity shares in the transferee company, except that cash may be paid in respect of any fractional shares.

(iv) The business of the transferor company is intended to be carried on, after the amalgamation, by the transferee company.

(v) No adjustment is intended to be made to the book values of the assets and liabilities of the transferor company when they are incorporated in the financial statements of the transferee company except to ensure uniformity of accounting policies.

13.5 Amalgamation in the Nature of Purchase

Amalgamation in the nature of purchase is an amalgamation which does not satisfy any one or more of the conditions specified above.

13.6 Methods of Accounting for Amalgamations

There are two main methods of accounting for amalgamations.

- the pooling of interests method and
- the purchase method.

13.6.1 Pooling of interests Method

Under this method, the assets, liabilities and reserves of the transferor company are recorded by the transferee company at their existing carrying amounts.

If, at the time of the amalgamation, the transferor and the transferee companies have conflicting accounting policies, a uniform set of accounting policies is adopted following the amalgamation. The effects on the financial statements of any changes in accounting policies are reported in accordance with AS 5.

13.6.2 Purchase Method

Under the purchase method, the transferee company accounts for the amalgamation either

- By incorporating the assets and liabilities at their existing carrying amounts or
- By allocating the consideration to individual identifiable assets and liabilities of the transferor company on the basis of their fair values at the date of amalgamation. The

identifiable assets and liabilities may include assets and liabilities not recorded in the financial statements of the transferor company.

Consideration for the amalgamation means the aggregate of the shares and other securities issued and the payment made in the form of cash or other assets by the transferee company to the shareholders of the transferor company.

Many amalgamations recognise that adjustments may have to be made to the consideration in the light of one or more future events. When the additional payment is probable and can reasonably be estimated at the date of amalgamation, it is included in the calculation of the consideration. In all other cases, the adjustment is recognised as soon as the amount is determinable [AS 4].

13.7 Treatment of Reserves of the Transferor Company on Amalgamation

If the amalgamation is an 'amalgamation in the nature of merger', the identity of the reserves is preserved and they appear in the financial statements of the transferee company in the same form in which they appeared in the financial statements of the transferor company. As a result of preserving the identity, reserves which are available for distribution as dividend before the amalgamation would also be available for distribution as dividend after the amalgamation.

Adjustments to reserves - Amalgamation in the Nature of Merger

When an amalgamation is accounted for using the pooling of interests method, the reserves of the transferee company are adjusted to give effect to the following:

- Conflicting accounting policies of the transferor and the transferee. A uniform set of accounting policies should be adopted following the amalgamation and, hence, the policies of the transferor and the transferee are aligned. The effects on the financial statements of this change in the accounting policies is reported in accordance with AS 5 'Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies'
- Difference between the amount recorded as share capital issued (plus any additional consideration in the form of cash or other assets) and the amount of share capital of the transferor company.

Adjustments to reserves - Amalgamation in the Nature of Purchase

If the amalgamation is an 'amalgamation in the nature of purchase', the amount of the consideration is deducted from the value of the net assets of the transferor company acquired by the transferee company. If the result of the computation is negative, the difference is debited to goodwill arising on amalgamation and if the result of the computation is positive, the difference is credited to Capital Reserve.

In the case of an 'amalgamation in the nature of purchase', the balance of the Profit and Loss Account appearing in the financial statements of the transferor company, whether debit or credit, loses its identity.

Though, normally, in an amalgamation in the nature of purchase, the identity of reserves is not preserved, an exception is made in respect of reserves of the aforesaid nature (referred to hereinafter as 'statutory reserves') and such reserves retain their identity in the financial statements of the transferee company in the same form in which they appeared in the financial statements of the transferor company, so long as their identity is required to be maintained to comply with the relevant statute. This exception is made only in those amalgamations where the requirements of the relevant statute for recording the statutory reserves in the books of the transferee company are complied with. In such cases the statutory reserves are recorded in the financial statements of the transferee company by a corresponding debit to a suitable account head (e.g., 'Amalgamation Adjustment Reserve') which is presented as a separate line item. When the identity of the statutory reserves is no longer required to be maintained, both the reserves and the aforesaid account are reversed.

The Standard gives a title, which reads as "Reserve". This gives rise to following requirements.

1. The corresponding debit is "also" to a Reserve Account
2. That Reserve account will show a negative balance
3. But it has to be shown as a separate line item - Which implies, that this debit "cannot be set off against Statutory reserve taken over".

So the presentation will be as follows:

Notes to Accounts for "Reserves and Surplus"

Description	Amount (Current year)	Amount (Previous Year)
Statutory Reserve (taken over from transferor company)		
General Reserve		
Profit and Loss or Retained Earnings		
Amalgamation Adjustment Reserve (negative balance)	(--)	(--)

13.8 Treatment of Goodwill Arising on Amalgamation

Goodwill arising on amalgamation represents a payment made in anticipation of future income and it is appropriate to treat it as an asset to be amortised to income on a systematic basis over its useful life. Due to the nature of goodwill, it is frequently difficult to estimate its useful life with reasonable certainty. Such estimation is, therefore, made on a prudent basis. Accordingly, it is considered appropriate to amortise goodwill over a period not exceeding five years unless a somewhat longer period can be justified.

13.9 Disclosures

For all amalgamations, the following disclosures are considered appropriate in the first financial statements following the amalgamation:

a. Names and general nature of business of the amalgamating companies;

b. Effective date of amalgamation for accounting purposes;

c. The method of accounting used to reflect the amalgamation; and

d. Particulars of the scheme sanctioned under a statute.

For amalgamations accounted for under the pooling of interests method, the following additional disclosures are considered appropriate in the first financial statements following the amalgamation:

a. Description and number of shares issued, together with the percentage of each company's equity shares exchanged to effect the amalgamation;

b. The amount of any difference between the consideration and the value of net identifiable assets acquired, and the treatment thereof.

For amalgamations accounted for under the purchase method, the following additional disclosures are considered appropriate in the first financial statements following the amalgamation:

a. Consideration for the amalgamation and a description of the consideration paid or contingently payable; and

b. The amount of any difference between the consideration and the value of net identifiable assets acquired, and the treatment thereof including the period of amortisation of any goodwill arising on amalgamation.

13.10 Miscellaneous Illustrations

Illustration 1

A Ltd. take over B Ltd. on April 01, 2017 and discharges consideration for the business as follows:

(i) Issued 42,000 fully paid equity shares of ₹ 10 each at par to the equity shareholders of B Ltd.

(ii) Issued fully paid up 15% preference shares of ₹ 100 each to discharge the preference shareholders (₹ 1,70,000) of B Ltd. at a premium of 10%.

(iii) It is agreed that the debentures of B Ltd. (₹ 50,000) will be converted into equal number and amount of 13% debentures of A Ltd.

Solution

Particulars	₹
Equity Shares (42,000 x 10)	4,20,000
Preference Share Capital	1,70,000
Add: Premium on Redemption	17,000
Purchase Consideration	6,07,000

Illustration 2

The following are the summarised Balance Sheets of Big Ltd. and Small Ltd. as at 31.3.2017:

(₹in lakhs)

	Big Ltd. ₹	Small Ltd. ₹		Big Ltd. ₹	Small Ltd. ₹
Share Capital	40.0	15.0	Sundry Assets (including cost of shares)	56.0	20.0
Profit & Loss A/c	7.5	--	Goodwill	4.0	5.0
Trade Payables	12.5	12.5	Profit and Loss A/c	--	2.5
	60.0	27.5		60.0	27.5

Additional Information:

(i) *The two companies agree to amalgamate and form a new company, Medium Ltd.*

(ii) *Big Ltd. holds 10,000 shares in Small Ltd. acquired at a cost of ₹ 2,50,000 and Small Ltd. holds 5,000 shares in Big Ltd. acquired at a cost of ₹ 7,00,000.*

(iii) *The shares of Big Ltd. are of ₹ 100 and are fully paid and the shares of Small Ltd. are of ₹ 50 each on which ₹ 30 has been paid-up.*

(iv) *It is agreed that the goodwill of Big Ltd. would be valued at ₹ 1,50,000 and that of Small Ltd. at ₹ 2,50,000.*

(v) *The shares which each company holds in the other are to be valued at book value having regard to the goodwill valuation decided as given in (iv).*

(vi) *The new shares are to be of a nominal value of ₹ 50 each credited as ₹ 25 paid.*

You are required to:

(i) *Prepare the Balance Sheet of Medium Ltd., as at 31st March, 2017 after giving effect to the above transactions; and*

(ii) *Prepare a statement showing the shareholdings in the new company attributable to the shareholders of the merged companies.*

Solution

(i) Balance Sheet of Medium Ltd. as on 31st March, 2017

Particulars	Note No.	(₹)
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
Share Capital		45,50,000
(2) **Current Liabilities**		
Trade Payable		25,00,000
Total		70,50,000

II. Assets		
(1) **Non-current assets**		
Fixed assets		
Tangible assets	1	66,50,000
Intangible assets	2	4,00,000
Total		70,50,000

Notes to Accounts:

	(₹)
1. Tangible Assets	
Sundry Assets (₹53,50,000 + ₹13,00,000)	66,50,000
2. Intangible Assets	
Goodwill (₹1,50,000 + ₹2,50,000)	4,00,000

(ii) Statement of Shareholding in Medium Ltd.

	Big Ltd. ₹	*Small Ltd.* ₹
Total value of Assets	44,20,513	8,52,564
Less: Pertaining to shares held by the other company	(5,52,564)	(1,70,513)
	38,67,949	6,82,051
Rounded off to	38,67,950	6,82,050
Shares of new company (at ₹ 25 per share)	1,54,718	27,282

Total purchase consideration to be paid to Big Ltd and Small Ltd. (₹ 38,67,950 + ₹ 6,82,050)	₹ 45,50,000
Number of shares in Big Ltd. (40,00,000/100)	40,000 shares
Number of shares in Small Ltd. (15,00,000/30)	50,000 shares
Holding of Small Ltd. in Big Ltd. (5,000/40,000)	1/8
Holding of Big Ltd. in Small Ltd. (10,000/50,000)	1/5
Number of shares held by outsiders in Big Ltd. (40,000 – 5,000) =	35,000
Number of shares held by outsiders in Small Ltd. (50,000 – 10,000)	40,000

Workings Note:

Calculation of Book Value of Shares

	Big Ltd ₹	*Small Ltd.* ₹
Goodwill	1,50,000	2,50,000
Sundry Assets other than shares in other company		

₹ (56,00,000 – 2,50,000)	53,50,000	
₹ (20,00,000 – 7,00,000)		13,00,000
	55,00,000	15,50,000
Less: Trade payables	(12,50,000)	(12,50,000)
	42,50,000	3,00,000

If "x" is the Book Value of Assets of Big Ltd and "y" of Small Ltd.

$$x = 42,50,000 + \frac{1}{5}y$$

$$y = 3,00,000 + \frac{1}{8}x$$

$$x = 42,50,000 + \frac{1}{5}(3,00,000 + \frac{1}{8}x)$$

$$= 42,50,000 + 60,000 + \frac{1}{40}x$$

$$\frac{39}{40}x = 43,10,000$$

$$x = 43,10,000 \times \frac{40}{39}$$

$$x = 44,20,513 \text{ (approx.)}$$

$$y = 3,00,000 + \frac{1}{8}(44,20,513)$$

$$= 3,00,000 + 5,52,564$$

$$= ₹\ 8,52,564 \text{ (approx.)}$$

Book Value of one share of Big Ltd. = $\frac{44,20,513}{40,000}$ = ₹ 110.513 (approx.)

Book Value of one share of Small Ltd. = $\frac{8,52,564}{50,000}$ = ₹ 17.05 (approx.)

Illustration 3

A Ltd. and B Ltd. were amalgamated on and from 1st April, 2017. A new company C Ltd. was formed to take over the business of the existing companies. The summarised Balance Sheets of A Ltd. and B Ltd. as on 31st March, 2017 are given below:

	(₹ in lakhs)			(₹ in lakhs)	
Liabilities	*A Ltd.*	*B Ltd.*	*Assets*	*A Ltd.*	*B Ltd.*
Share Capital			*Fixed Assets*		

Equity Shares of ₹ 100 each	*800*	*750*	*Land and Building*	*550*	*400*
12% Preference shares of ₹ 100 each	*300*	*200*	*Plant and Machinery*	*350*	*250*
Reserves and Surplus			*Investments*	*150*	*50*
Revaluation Reserve	*150*	*100*	*Current Assets, Loans and Advances*		
General Reserve	*170*	*150*			
Investment Allowance Reserve	*50*	*50*	*Inventory*	*350*	*250*
Profit and Loss Account	*50*	*30*	*Trade Receivables*	*300*	*350*
Secured Loans					
10% Debentures (₹ 100 each)	*60*	*30*	*Cash and Bank*	*300*	*200*
Current Liabilities and provisions					
Trade Payables	*420*	*190*			
	2,000	*1,500*		*2,000*	*1,500*

Additional Information:

(1) 10% Debenture holders of A Ltd. and B Ltd. are discharged by C Ltd. issuing such number of its 15% Debentures of ₹ 100 each so as to maintain the same amount of interest.

(2) Preference shareholders of the two companies are issued equivalent number of 15% preference shares of C Ltd. at a price of ₹ 150 per share (face value of ₹ 100).

(3) C Ltd. will issue 5 equity shares for each equity share of A Ltd. and 4 equity shares for each equity share of B Ltd. The shares are to be issued @ ₹ 30 each, having a face value of ₹ 10 per share.

(4) Investment allowance reserve is to be maintained for 4 more years.

Prepare the Balance Sheet of C Ltd. as on 1st April, 2017 after the amalgamation has been carried out on the basis of Amalgamation in the nature of purchase.

Solution

Balance Sheet of C Ltd.
as at 1st April, 2017

Particulars	*Note No.*	*(₹in lakhs)*
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
(a) Share Capital	1	1,200
(b) Reserves and Surplus	2	1,650
(2) **Non-Current Liabilities**

Reference: The students are advised to refer the full text of AS 14 "Accounting for Amalgamations" (issued 1994).

UNIT 14 : AS 15: EMPLOYEE BENEFITS

14.1 Introduction

The revised Accounting Standard 15 - 'Employee Benefits' (AS 15), generally deals with all forms of employee benefits all forms of consideration given by an enterprise in exchange for services rendered by employees (other than inventory compensation for which a separate guidance note is promulgated), many of which were not dealt with by pre-revised AS 15. The Standard addresses only the accounting of employee benefits by employers. The Standard makes four things very clear at the outset:

(i) the Standard is applicable to benefits provided to all types of employees (whether full-time, part-time, or casual staff;

(ii) employee benefits can be paid in cash or in kind;

(iii) employee benefits include benefits provided to employees and their dependents (spouses, children and others); and

(iv) payment can be made directly to employees, their dependent or to any other party (e.g., insurance companies, trust etc.).

Employee benefits include:

(a) Short-term employee benefits (e.g. wages, salaries, paid annual leave and sick leave, profit sharing bonuses etc. (payable within 12 months of the year-end) and non-monetary benefits for current employees;

(b) Post-employment benefits (e.g., gratuity, pension, provident fund, post-employment medical care etc.);

(c) long-term employee benefits (e.g., long-service leave, long-term disability benefits, bonuses not wholly payable within 12 months of the year end etc.); and

(d) termination benefits (e.g. VRS payments)

The Standard lays down recognition and measurement criteria and disclosure requirements for the above four types of employee benefits separately.

14.2 Applicability

The Standard applies from April 1, 2006 in its entirety for all Level 1 enterprises. Certain exemptions are given to other than Level 1 enterprises, depending upon whether they employ 50 or more employees. This standard is applicable predominantly for Level 1 enterprises, and applied to other entities with certain relaxations as mentioned in Appendix III at the end of the Study Material (Volume II).

14.3 Meaning of the term "Employee Benefits"

The term employee is not defined under the standard AS 15 does not define who is an 'employee', but states in that "an employee may provide services to an entity on a full-time, part-time, permanent, casual or temporary basis. For the purpose of this Standard, employees include directors and other management personnel". This suggests that the intention was for the term 'employee' to apply more widely than simply to persons with a contract of employment as 'casual' and 'temporary' staff may frequently not have such contracts.

The following indicators may suggest an employee relationship may be more likely to exist, and may help in making individual judgements:

- A contract of employment exists;
- Individuals are considered employees for legal/tax/social security purposes;
- There is a large amount of oversight and direction by the employer and necessary tools, equipment and materials are provided by the employer;
- Services are performed at a location specified by the employer;

Services provided through an entity are in substance services provided by a specific individual, indications of which could be that the entity:

- Has no other clients;
- Has served the employer for a long period;
- Faces little or no financial risk;
- Requires the explicit permissions of the employer to concurrently undertake additional employment elsewhere.

14.4 Short-term Employee Benefits

Short-term employee benefits (other than termination benefits) are payable within twelve months after the end of the period in which the service is rendered. Accounting for these benefits is generally straightforward because no actuarial assumptions are required to measure the obligation or cost. Short-term employee benefits are broadly classified into four categories:

(i) regular period benefits (e.g., wages, salaries);

(ii) short-term compensated absences (e.g., paid annual leave, maternity leave, sick leave etc.);

(iii) profit sharing and bonuses payable within twelve months after the end of the period in which employee render the related services and

(iv) non-monetary benefits (e.g., medical care, housing, cars etc.)

The Standard lays down some general recognition criteria for all short-term employee benefits. There are further requirements in respect of short-term compensated absences and profit sharing and bonus plans. The general criteria say that an enterprise should recognize as an expense (unless another accounting standard permits a different treatment) the undiscounted amount of all short-term employee benefits attributable to services that been already rendered in the period and any difference between the amount of expenses so recognized and cash payments made during the period should be treated as a liability or prepayment (asset) as appropriate.

The expected cost of accumulating compensated absences should be recognized when employees render the service that increase their entitlement to future compensated absences. 'An enterprise should measure the expected cost of accumulating compensated absences as the *additional amount* that the enterprise expects to pay as a result of the unused entitlement that has accumulated at the balance sheet date'. No distinction should be made between vesting and non-vesting entitlements. However, in measuring non-vesting entitlements, the possibility of employees leaving the enterprise before receiving them should be taken into account.

Non-accumulating compensated absences (e.g., maternity leave) do not carry forward and are not directly linked to the services rendered by employees in the past. Therefore, an enterprise recognizes no liability or expense until the time of the absence. In other words, the cost of non-accumulating absences should be recognized as and when they arise.

Recognition of expenses for profit sharing and bonus plans would depend on fulfillment of conditions mentioned the Standard. The conditions are:

(a) Enterprise has a present obligation to make such payments as a result of past events; and

(b) Reliable estimate of the obligation can be made.

The second condition can be satisfied only when the profit sharing and bonus plans contained a formula for determining the amount of benefit. The enterprise should recognize the expected cost of profit sharing and bonus payments in the financial statements.

14.5 Post Employment Benefits: Defined Contribution vs Defined Benefits

The accounting treatment and disclosures required for a post-employment benefit plan depend upon whether it is a defined contribution or a defined benefit plan. In addition to addressing defined contribution and defined benefit plans generally, the Standard also gives guidance as to how its requirements should be applied to insured benefits, multi-employment benefit plans. **Defined contribution plans** are post-employment benefit plans under which an enterprise pays fixed contributions into a separate fund and will have no obligation to pay further` contributions. Under defined contribution plans, actuarial risk (that benefits will be less than expected) and investment risk (that assets invested will be insufficient to meet expected benefits) fall on the employee. In defined benefits plans, the actuarial and investment risk fall on the employer.

Defined benefit plans are post-employment benefit plans other than defined contribution plans.

In defined contribution plans, the contribution is charged to income statement, whereas in defined benefit plans, detailed actuarial calculation is performed to determine the charge.

14.6 Is the Gratuity Scheme a Defined Contribution or Defined Benefit Scheme?

An enterprise may pay insurance premiums to fund a post-employment benefit plan. The enterprise should treat such a plan as a defined contribution plan unless the enterprise will have an obligation to either:

(a) pay the employee benefits directly when they fall due;

(b) pay further amounts if the insurer does not pay all future employee benefits relating to employee service in the current and prior periods.

On the asset side, a question arises as to whether the funds under the scheme as certified by LIC would be treated as plan assets or reimbursement rights. The distinction is important (though both are measured on fair valuation basis) because plan assets are reduced from the defined benefit obligation and the net amount is disclosed in the balance sheet, whereas, in the case of reimbursement rights, the defined benefit obligation and the reimbursement rights are shown separately as liability and asset on the balance sheet. This would have the impact of making the balance sheet heavy both on the asset side as well as the liabilities side.

14.7 Other Long Term Employee Benefits

Other long-term employee benefits include, for example:

(a) long-term compensated absences such as long-service or sabbatical leave;

(b) jubilee or other long-service benefits;

(c) long-term disability benefits;

(d) profit-sharing and bonuses payable twelve months or more after the end of the period in which the employees render the related services and

(e) deferred compensation paid twelve months or more after the end of the period in which it is earned.

14.8 Termination Benefits

Termination Benefits are employee benefits payable as a result of either an enterprise's decision to terminate an employee's employment before the normal retirement date or an employee's decision to accept voluntary redundancy in exchange for those benefits (e.g., payments under VRS). Termination benefits are recognized by an enterprise as a liability and an expense only when the enterprise has

(i) a detailed formal plan for the termination which is duly approved, and

(ii) a reliable estimate can be made of the amount of the obligation.

Where the termination benefits fall due within twelve months after the balance sheet date, an *undiscounted* amount of such benefits should be recognized as liability in the balance sheet with a corresponding charge to Profit & Loss Account. However, when the termination benefits fall due more than twelve months after the balance sheet date, such benefits should be discounted using an appropriate discount rate. Where an offer has been made to encourage voluntary redundancy, the termination benefits should be measured by reference to the number of employees expected to accept the offer. Where there is uncertainty with regard to the number of employees who will accept an offer of voluntary redundancy, a contingent liability exists and should be so disclosed as per AS 29 'Provisions, Contingent Liabilities and Contingent Assets'.

14.9 Accounting Treatment

In the Balance Sheet of the enterprise, 'the amount recognized as a defined benefit liability should be the net total of the following amounts:

(a) the present value of the defined benefit obligation at the balance sheet date;

(b) *minus* any past service cost not yet recognized;

(c) *minus* the fair value at the balance sheet date of plan assets (if any) out of which the obligations are to be settled directly.'

In case where fair value of plan assets is high, it may so happen that the net amount under defined benefit liability turns negative (giving rise to net assets). AS 15 states that the enterprise, in such a situation, should measure the resulting asset at the lower of:

(i) the amount so determined; and

(ii) the present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan.

The recognition of expenses relating to defined benefits in the Profit and Loss Account is stated in Para 61 of the Standard. The Standard identifies *seven* components of defined employee benefit costs:

(a) current service cost;

(b) interest cost;

(c) the expected return on any plan assets (and any reimbursement rights);

(d) actuarial gains and losses (to the extent they are recognized);

(e) past service cost (to the extent they are recognized);

(f) the effect of any curtailments or settlements; and

(g) the extent to which the negative net amount of defined benefit liability exceeds the amount mentioned in Para 59(ii) of the Standard.

The item (f) above needs explanation. A settlement occurs when an employer enters into a transaction that eliminates all further legal or constructive obligations for part or whole of the benefits provided under a defined benefit plan. For example, the commuted portion of pension. A curtailment occurs when an employer either commits to reduce the number of employees covered by a plan or reduces the benefits under a plan. The gains or losses on the settlement or curtailment of a defined benefit plan should be recognized when the settlement or curtailment occurs.

14.10 Disclosures

Where there is uncertainty about the number of employees who will accept an offer of termination benefits, a contingent liability exists.

As required by AS 29, "Provisions, Contingent Liabilities and Contingent Assets" an enterprise discloses information about the contingent liability unless the possibility of an outflow in settlement is remote.

As required by AS 5, "Net Profit or Loss for the Period, Prior Period items and Changes in Accounting Policies" an enterprise discloses the nature and amount of an expense if it is of such size, nature or incidence that its disclosure is relevant to explain the performance of the enterprise for the period.

Termination benefits may result in an expense needing disclosure in order to comply with this requirement.

Where required by AS 18, "Related Party Disclosures", an enterprise discloses information about termination benefits for key management personnel.

When drafting AS 15 (revised), the standard setters felt that merely on the basis of a detailed formal plan, it would not be appropriate to recognise a provision since a liability cannot be considered to be crystallized at this stage. Revised AS 15 (2005) requires more certainty for recognition of termination cost, for example, if the employee has sign up for the termination scheme.

As per the transitional provision of revised AS 15, as regards VRS as paid upto 31 March, 2009, there is a choice to defer it over pay-back period, subject to prohibition on carry forward to periods commencing on or after 1 April, 2010.

14.11 Actuarial Assumptions

The actuarial assumptions should be unbiased and mutually compatible. They are an enterprise's best estimates of the variables that will determine the ultimate cost of providing post-employment benefits. They should be neither imprudent nor excessively conservative, and should reflect the economic relationships between factors such as inflation, rates of salary increase, return on plan assets and discount rates.

AS 15 explains that actuarial assumptions comprise:

(a) demographic assumptions about the future characteristics of current and former employees (and their dependents) who are eligible for benefits. Demographic assumptions deal with matters such as:

    (i) mortality, both during and after employment;

    (ii) rates of employee turnover, disability and early retirement;

    (iii) the proportion of plan members with dependents who will be eligible for benefits;

    (iv) claim rates under medical plans; and

(b) financial assumptions, dealing with items such as:

  (i) the discount rate

  (ii) future salary and benefit levels

  (iii) in the case of medical benefits, future medical costs, including, where material, the cost of administering claims and benefit payments and

  (iv) the expected rate of return on plan assets.

Financial assumptions: Financial assumptions should be based on market expectation at the balance sheet date for the period over which the post-employment benefit obligations will be settled. Discount rates and other financial assumptions should not be inflation-adjusted unless such measures are more reliable (eg where benefits are index-linked)

14.12 Actuarial Gains and Losses

Actuarial gains and losses comprise:

- experience adjustments (the effects of difference between the previous actuarial assumptions and what has actually occurred); and
- the effects of changes in actuarial assumptions.

Actuarial gains and losses should be recognized immediately in the statement of profit and loss as income or expense. While this is the general principle, as per AS 15, in case an enterprise adopts the option to defer the recognition of any subsequent actuarial gains is limited to excess of cumulative (unrecognized gains) over the unrecognized portion of increase in transitional liability.

Illustration 1

Omega Limited belongs to the engineering industry. The company received an actuarial valuation for the first time for its pension scheme which revealed a surplus of ₹ 6 lakhs. It wants to spread the same over the next 2 years by reducing the annual contribution to ₹ 2 lakhs instead of ₹ 5 lakhs. The average remaining life of the employees is estimated to be 6 years. You are required to advise the company on the following items from the viewpoint of finalisation of accounts, taking note of the mandatory accounting standards.

Solution

According to AS 15 (Revised 2005) 'Employee Benefits', actuarial gains and losses should be recognized immediately in the statement of profit and loss as income or expense. Therefore, surplus amount of ₹ 6 lakhs is required to be credited to the profit and loss statement of the current year.

Illustration 2

As on 1st April, 2016 the fair value of plan assets was ₹ 1,00,000 in respect of a pension plan of Zeleous Ltd. On 30th September, 2016 the plan paid out benefits of ₹ 19,000 and received inward contributions of ₹ 49,000. On 31st March, 2017 the fair value of plan assets was ₹ 1,50,000 and present value of the defined benefit obligation was ₹ 1,47,920. Actuarial losses on the obligations for the year 2016-2017 were ₹ 600.

On 1st April, 2016, the company made the following estimates, based on its market studies, understanding and prevailing prices.

	%
Interest & dividend income, after tax payable by the fund	*9.25*
Realised and unrealised gains on plan assets (after tax)	*2.00*
Fund administrative costs	*(1.00)*
Expected Rate of Return	*10.25*

You are required to find the expected and actual returns on plan assets.

Solution

Computation of Expected and Actual Returns on Plan Assets

		₹
Return on ₹ 1,00,000 held for 12 months at 10.25%		10,250
Return on ₹ 30,000 (49,000-19,000) held for six months at 5% (equivalent to 10.25% annually, compounded every six months)		1,500
Expected return on plan assets for 2016-2017		11,750
Fair value of plan assets as on 31 March, 2017		1,50,000
Less: Fair value of plan assets as on 1 April,2016	1,00,000	
Contributions received	49,000	(1,49,000)
		1,000
Add: Benefits paid		19,000
Actual return on plan assets		20,000

Alternatively, the above question may be solved without giving compound effect torate of return**.**

Illustration 3

Rock Star Ltd. discontinues a business segment. Under the agreement with employee's union, the employees of the discontinued segment will earn no further benefit. This is a curtailment without settlement, because employees will continue to receive benefits for services rendered before discontinuance of the business segment. Curtailment reduces the gross obligation for various reasons including change in actuarial assumptions made before curtailment. If the benefits are determined based on the last pay drawn by employees, the gross obligation reduces after the curtailment because the last pay earlier assumed is no longer valid.

Rock Star Ltd. estimates the share of unamortized service cost that relates to the part of the obligation at ₹ 18 (10% of ₹ 180). Calculate the gain from curtailment and liability after curtailment to be recognised in the balance sheet of Rock Star Ltd. on the basis of given information:

(a) Immediately before the curtailment, gross obligation is estimated at ₹ 6,000 based on current actuarial assumption.

(b) The fair value of plan assets on the date is estimated at ₹ 5,100.

(c) The unamortized past service cost is ₹ 180.

(d) Curtailment reduces the obligation by ₹ 600, which is 10% of the gross obligation.

Solution

Gain from curtailment is estimated as under:

	₹
Reduction in gross obligation	600
Less: Proportion of unamortised past service cost	(18)
Gain from curtailment	582

The liability to be recognised after curtailment in the balance sheet is estimated as under:

	₹
Reduced gross obligation (90% of ₹ 6,000)	5,400
Less: Fair value of plan assets	(5,100)
	300
Less: Unamortised past service cost (90% of ₹ 180)	(162)
Liability to be recognised in the balance sheet	138

Illustration 4

An employee Roshan has joined a company XYZ Ltd. in the year 2016. The annual emoluments of Roshan as decided is ₹ 14,90,210. The company also has a policy of giving a lump sum payment of 25% of the last drawn annual salary of the employee for each completed year of service if the employee retires after completing minimum 5 years of service. The salary of the Roshan is expected to grow @ 10% per annum.

The company has inducted Roshan in the beginning of the year and it is expected that he will complete the minimum five year term before retiring.

What is the amount the company should charge in its Profit and Loss account every year as cost for the Defined Benefit obligation? Also calculate the current service cost and the interest cost to be charged per year assuming a discount rate of 8%.

(P.V factor for 8% - 0.735, 0.794, 0.857, 0.926, 1)

Solution

Calculation of Defined Benefit Obligation

Expected last drawn salary = ₹ 14,90,210 x 110% x 110% x 110% x 110% x 110%

= ₹ 24,00,000

Defined Benefit Obligation (DBO) = ₹ 24,00,000 x 25% x 5 = ₹ 30,00,000

Amount of ₹ 6,00,000 will be charged to Profit and Loss Account of the company every year as cost for Defined Benefit Obligation.

Calculation of Current Service Cost

Year	Equal apportioned amount of DBO [i.e. ₹ 30,00,000/5 years]	Discounting @ 8% PV factor	Current service cost (Present Value)
a	b	c	d = b x c
1	6,00,000	0.735 (4 Years)	4,41,000
2	6,00,000	0.794 (3 Years)	4,76,400
3	6,00,000	0.857 (2 Years)	5,14,200
4	6,00,000	0.926 (1 Year)	5,55,600
5	6,00,000	1 (0 Year)	6,00,000

Calculation of Interest Cost to be charged per year

Year	Opening balance	Interest cost	Current service cost	Closing balance
a	b	c = b x 8%	d	e = b + c + d
1	0	0	4,41,000	4,41,000
2	4,41,000	35,280	4,76,400	9,52,680
3	9,52,680	76,214	5,14,200	15,43,094
4	15,43,094	1,23,447	5,55,600	22,22,141
5	22,22,141	1,77,859*	6,00,000	30,00,000

*Due to approximations used in calculation, this figure is adjusted accordingly.

UNIT15 : AS 16: BORROWING COSTS

15.1 Introduction

The standard prescribes the accounting treatment for borrowing costs (i.e. interest and other costs) incurred by an enterprise in connection with the borrowing of funds. Borrowing costs are required to be capitalized as part of a qualifying asset (an asset that takes a substantial period of time to get ready for its intended use), if it is directly attributable towards its acquisition, construction or production. Upon such capitalization, the carrying amount of assets should be assessed as to whether it is greater than its recoverable amount or net realizable value and adjustments are required to be made in accordance with other standards. The amount of borrowing costs eligible for capitalization should be determined in accordance with AS 16 and other borrowing costs (not eligible for capitalization) should be recognized as expenses in the period in which they are incurred. This Standard came into effect in respect of accounting periods commenced on or after 1-4-2000 and is mandatory in nature. This Standard does not deal with the actual or imputed cost of owners' equity, including preference share capital not classified as a liability.

15.2 Borrowing Costs

Borrowing costs are interest and other costs incurred by an enterprise in connection with the borrowing of funds.

Borrowing costs may include:

a. Interest and commitment charges on bank borrowings and other short-term and long-term borrowings;

b. Amortisation of any discounts or premiums relating to borrowings;

c. Amortisation of ancillary costs incurred in connection with the arrangement of borrowings;

d. Finance charges in respect of assets acquired under finance leases or under other similar arrangements; and

e. Exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs.

An enterprise should not apply AS 16 to borrowing costs directly attributable to the acquisition, construction or production of inventories that are manufactured, or otherwise produced, in large quantities on a repetitive basis over a short period of time, since such inventories are not qualifying assets.

15.3 Qualifying Asset

A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

Borrowing costs are capitalised as part of the cost of a qualifying asset when it is probable that they will result in future economic benefits to the enterprise and the costs can be measured reliably. Other borrowing costs are recognised as an expense in the period in which they are incurred.

15.4 Substantial Period

The issue as to what constitutes a substantial period of time primarily depends on the facts and circumstances of each case. However, ordinarily, a period of twelve months is considered as substantial period of time unless a shorter or longer period can be justified on the basis of facts and circumstances of the case. In estimating the period, time which an asset takes, technologically and commercially, to get it ready for its intended use or sale should be considered.

Depending on the circumstances, any of the following may be qualifying assets.

- inventories that take a substantial amount of time to bring them to a saleable condition For example, liquor is often required to be kept in store for more than twelve months for maturing;
- investments properties;
- manufacturing plants; and
- power generation facilities.

The following are not qualifying assets:

- assets that are ready for their intended use or sale when acquired; and
- inventories that are routinely manufactured, or otherwise produced in large quantities on a repetitive basis, over a short period of time.

15.5 Borrowing Costs Eligible for Capitalisation

The borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are those borrowing costs that would have been avoided if the expenditure on the qualifying asset had not been made.

When an enterprise borrows funds specifically for the purpose of obtaining a particular qualifying asset, the borrowing costs that directly relate to that qualifying asset can be readily identified. It may be difficult to identify a direct relationship between particular borrowings and a qualifying asset and to determine the borrowings that could otherwise have been avoided.To the extent that funds are borrowed generally and used for the purpose of obtaining a qualifying asset, the amount of borrowing costs eligible for capitalisation should be determined by applying a capitalisation rate to the expenditure on that asset. The capitalisation rate should be the weighted average of the borrowing costs applicable to the borrowings of the enterprise that are outstanding during the period, other than borrowings made specifically for the purpose of obtaining a qualifying asset. The amount of borrowing costs capitalised during a period should not exceed the amount of borrowing costs incurred during that period.

The financing arrangements for a qualifying asset may result in an enterprise obtaining borrowed funds and incurring associated borrowing costs before some or all of the funds are used for expenditure on the qualifying asset. In such circumstances, the funds are often temporarily invested pending their expenditure on the qualifying asset. In determining the amount of borrowing costs eligible for capitalisation during a period, any income earned on the temporary investment of those borrowings is deducted from the borrowing costs incurred.

15.6 Exchange Differences on Foreign Currency Borrowings

Exchange differences arising from foreign currency borrowing and considered as borrowing costs are those exchange differences which arise on the amount of principal of the foreign currency borrowings to the extent of the difference between interest on local currency borrowings and interest on foreign currency borrowings. Thus, the amount of exchange difference not exceeding the difference between interest on local currency borrowings and interest on foreign currency borrowings is considered as borrowings cost to be accounted for under this Standard and the remaining exchange difference, if any, is accounted for under AS 11, 'The Effect of Changes in Foreign Exchange Rates'. For this purpose, the interest rate for the local currency borrowings is considered as that rate at which the enterprise would have raised the borrowings locally had the enterprise not decided to raise the foreign currency borrowings.

Example

XYZ Ltd. has taken a loan of USD 10,000 on April 1, 2X16, for a specific project at an interest rate of 5% p.a., payable annually. On April 1, 2X16, the exchange rate between the currencies was ₹ 45 per USD. The exchange rate, as at March 31, 2X17, is ₹ 48 per USD. The corresponding amount could have been borrowed by XYZ Ltd. in local currency at an interest rate of 11 per cent per annum as on April 1, 2X16. Calculate the borrowing cost to be capitalized as per AS 16.

Solution

The following computation would be made to determine the amount of borrowing costs for the purposes of paragraph 4(e) of AS 16:

(i) Interest for the period = USD 10,000 x 5% x ₹ 48/USD = ₹ 24,000

(ii) Increase in the liability towards the principal amount = USD 10,000 x (48-45) = ₹ 30,000

(iii) Interest that would have resulted if the loan was taken in Indian currency

= USD 10,000 x 45 x 11% = ₹ 49,500

(iv) Difference between interest on local currency borrowing and foreign currency borrowing

= ₹ 49,500 – ₹ 24,000 = ₹ 25,500

Therefore, out of ₹ 30,000 increase in the liability towards principal amount, only ₹ 25,500 will be considered as the borrowing cost. Thus, total borrowing cost would be ₹ 49,500 being the aggregate of interest of ₹ 24,000 on foreign currency borrowings (covered by paragraph 4(a) of AS 16) plus the exchange difference to the extent of difference between interest on local currency borrowing and interest on foreign currency borrowing of ₹ 25,500.

Thus, ₹ 49,500 would be considered as the borrowing cost to be accounted for as per AS 16 and the remaining ₹ 4,500 would be considered as the exchange difference to be accounted for as per Accounting Standard (AS) 11, The Effects of Changes in Foreign Exchange Rates.

In the above example, if the interest rate on local currency borrowings is assumed to be 13% instead of 11%, the entire exchange difference of ₹ 30,000 would be considered as borrowing costs, since in that case the difference between the interest on local currency borrowings and foreign currency borrowings (i.e., ₹ 34,500 (₹ 58,500 – ₹ 24,000)) is more than the exchange difference of ₹ 30,000. Therefore, in such a case, the total borrowing cost would be ₹ 54,000 (₹ 24,000 + ₹ 30,000) which would be accounted for under AS 16 and there would be no exchange difference to be accounted for under AS 11'The Effects of Changes in Foreign Exchange Rates'.

15.7 Excess of the Carrying Amount of the Qualifying Asset over Recoverable Amount

When the carrying amount or the expected ultimate cost of the qualifying asset exceeds its recoverable amount or net realisable value, the carrying amount is written down or written off in accordance with the requirements of other Accounting Standards. In certain circumstances, the amount of the write-down or write-off is written back in accordance with those other Accounting Standards.

15.8 Commencement of Capitalisation

The capitalisation of borrowing costs as part of the cost of a qualifying asset should commence when all the following these conditions are satisfied:

a. *Expenditure for the acquisition, construction or production of a qualifying asset is being incurred:* Expenditure on a qualifying asset includes only such expenditure that has resulted in payments of cash, transfers of other assets or the assumption of interest-bearing liabilities. Expenditure is reduced by any progress payments received and grants received in connection with the asset. The average carrying amount of the asset during a period, including borrowing costs previously capitalised, is normally a reasonable approximation of the expenditure to which the capitalisation rate is applied in that period.

b. *Borrowing costs are being incurred.*

c. *Activities that are necessary to prepare the asset for its intended use or sale are in progress:* The activities necessary to prepare the asset for its intended use or sale encompass more than the physical construction of the asset. They include technical and administrative work prior to the commencement of physical construction. However, such activities exclude the holding of an asset when no production or development that changes the asset's condition is taking place.

15.9 Suspension of Capitalisation

Capitalisation of borrowing costs should generally continue as long as the three conditions listed above are met. If, however, the enterprise suspends activities related to development for an extended period, capitalisation of borrowing costs should also cease unit such time as activities are resumed.

However, capitalisation of borrowing costs is not normally suspended during a period when substantial technical and administrative work is being carried out. Capitalisation of borrowing costs is also not suspended when a temporary delay is a necessary part of the process of getting an asset ready for its intended use or sale.

15.10 Cessation of Capitalisation

Capitalisation of borrowing costs should cease when substantially all the activities necessary to prepare the qualifying asset for its intended use or sale are complete.

When the construction of a qualifying asset is completed in parts and a completed part is capable of being used while construction continues for the other parts, capitalisation of borrowing costs in relation to a part should cease when substantially all the activities necessary to prepare that part for its intended use or sale are complete.

15.11 Disclosure

The financial statements should disclose:

a. The accounting policy adopted for borrowing costs; and

b. The amount of borrowing costs capitalised during the period.

15.12 Illustrations

Illustration 1

Particulars	*Amount (₹)*
Expenditure incurred till 31-03-2016	*7,00,000*
Interest cost capitalized for the financial year 2015-2016	*30,000*
Amount borrowed till 31-03-2016 @ 15%	*4,00,000*
Amount transferred to construction during 2016-2017	*2,00,000*
Cash payment during 2016-2017 out of the above	*1,00,000*
Progress payment received	*5,00,000*
New borrowing during 2016-2017 @ 15%	*3,00,000*

Calculate the amount of borrowing to be capitalized.

Solution

Total Borrowing Cost = 7,00,000 X 0.15 = ₹ 1,05,000

Particulars	*Amount (₹)*
Expenditure incurred including previously capitalized borrowing cost	7,30,000
Cash payment during 2016-2017 out of amount transferred	1,00,000
Remaining amount transferred during 2016-2017	1,00,000

	9,30,000
Less: Progress payment received and recognized (certified)	5,00,000
Uncertified construction cost (not yet recognized)	4,30,000

Total Money borrowed including previously capitalized interest cost = ₹ 7,30,000

Borrowing cost to be capitalized = 4,30,000/7,30,000 x 1,05,000 = ₹ 61,849.32

Illustration 2

PRM Ltd. obtained a loan from a bank for ₹ 50 lakhs on 30-04-2016. It was utilized as follows:

Particulars	*Amount (₹ in lakhs)*
Construction of a shed	*50*
Purchase of a machinery	*40*
Working Capital	*20*
Advance for purchase of truck	*10*

Construction of shed was completed in March 2017. The machinery was installed on the same date. Delivery truck was not received. Total interest charged by the bank for the year ending 31-03-2017 was ₹ 18 lakhs. Show the treatment of interest.

Solution

Qualifying Asset as per AS 16 = ₹ 50 lakhs (construction of a shed)

Borrowing cost to be capitalized = 18 x 50/120 =₹ 7.5 lakhs

Interest to be debited to Profit or Loss account = ₹ (18 – 7.5) lakhs

= ₹ 10.5 lakhs

Illustration 3

The company has obtained Institutional Term Loan of ₹ 580 lakhs for modernisation and renovation of its Plant & Machinery. Plant & Machinery acquired under the modernisation scheme and installation completed on 31st March, 2017 amounted to ₹ 406 lakhs, ₹ 58 lakhs has been advanced to suppliers for additional assets and the balance loan of ₹ 116 lakhs has been utilised for working capital purpose. The Accountant is on a dilemma as to how to account for the total interest of ₹ 52.20 lakhs incurred during 2016-2017 on the entire Institutional Term Loan of ₹ 580 lakhs.

Solution

As per para 6 of AS 16 'Borrowing Costs', borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset should be capitalized as part of the cost of that asset. Other borrowing costs should be recognized as an expense in the period in which they are incurred. Borrowing costs should be expensed except where they are directly attributable to acquisition, construction or production of qualifying asset.

A qualifying asset is an asset that necessary takes a substantial period of time* to get ready for its intended use or sale.

The treatment for total interest amount of ₹ 52.20 lakhs can be given as:

Purpose	*Nature*	*Interest to be capitalised*	*Interest to be charged to profit and loss account*
		₹ in lakhs	*₹ in lakhs*
Modernisation and renovation of plant and machinery	Qualifying asset	** $52.20 \times \frac{406}{580} = 36.54$	
Advance to supplies for additional assets	Qualifying asset	** $52.20 \times \frac{58}{580} = 5.22$	
Working Capital	Not a qualifying asset		$52.20 \times \frac{116}{580} = 10.44$
		41.76	10.44

* A substantial period of time primarily depends on the facts and circumstances of each case. However, ordinarily, a period of twelve months is considered as substantial period of time unless a shorter or longer period can be justified on the basis of the facts and circumstances of the case.

** It is assumed in the above solution that the modernization and renovation of plant and machinery will take substantial period of time (i.e. more than twelve months). Regarding purchase of additional assets, the nature of additional assets has also been considered as qualifying assets. Alternatively, the plant and machinery and additional assets may be assumed to be non-qualifying assets on the basis that the renovation and installation of additional assets will not take substantial period of time. In that case, the entire amount of interest, ₹ 52.20 lakhs will be recognized as expense in the profit and loss account for year ended 31st March, 2017.

Illustration 4

The notes to accounts of X Ltd. for the year 2016-2017 include the following:

"Interest on bridge loan from banks and Financial Institutions and on Debentures specifically obtained for the Company's Fertiliser Project amounting to ₹ 1,80,80,000 has been capitalized during the year, which includes approximately ₹ 1,70,33,465 capitalised in respect of the utilization of loan and debenture money for the said purpose." Is the treatment correct? Briefly comment.

Solution

The treatment done by the company is not in accordance with AS 16 'Borrowing Costs'. As per para 10 of AS 16, to the extent that funds are borrowed specifically for the purpose of obtaining a qualifying asset, the amount of borrowing costs eligible for capitalisation on that asset should be determined as the actual borrowing costs incurred on that borrowing during the period. Hence, the capitalisation of borrowing costs should be restricted to the actual amount of interest expenditure i.e. ₹ 1,70,33,465. Thus, there is an excess capitalisation of ₹ 10,46,535. This has resulted in overstatement of profits by ₹ 10,46,535 and amount of fixed assets has also gone up by this amount.

Illustration 5

XYZ Ltd., has undertaken a project for expansion of capacity as per the following details:

	Plan ₹	Actual ₹
April, 2017	*2,00,000*	*2,00,000*
May, 2017	*2,00,000*	*3,00,000*
June, 2017	*10,00,000*	*–*
July, 2017	*1,00,000*	*–*
August, 2017	*2,00,000*	*1,00,000*
September, 2017	*5,00,000*	*7,00,000*

The company pays to its bankers at the rate of 12% p.a., interest being debited on a monthly basis. During the half year company had ₹ 10 lakhs overdraft upto 31st July, surplus cash in August and again overdraft of over ₹ 10 lakhs from 1.9.2017. The company had a strike during June and hence could not continue the work during June. Work was again commenced on 1st July and all the works were completed on 30th September. Assume that expenditure were incurred on 1st day of each month. Calculate:

(i) Interest to be capitalised.

(ii) Give reasons wherever necessary.

Assume:

(a) Overdraft will be less, if there is no capital expenditure.

(b) The Board of Directors based on facts and circumstances of the case has decided that any capital expenditure taking more than 3 months as substantial period of time.

Solution

XYZ Ltd.

Month	*Actual Expenditure*	*Interest Capitalised*	*Cumulative Amount*	
	₹	₹	₹	
April, 2017	2,00,000	2,000	2,02,000	
May, 2017	3,00,000	5,020	5,07,020	
June, 2017	–	5,070	5,12,090	Note 2
July, 2017	–	5,120	5,17,210	
August, 2017	1,00,000	–	6,17,210	Note 3
September, 2017	7,00,000	10,000	13,27,210	Note 4
	13,00,000	27,210	13,27,210	

Note:

1. There would not have been overdraft, if there is no capital expenditure. Hence, it is a case of specific borrowing as per AS 16 on Borrowing Costs.
2. The company had a strike in June and hence could not continue the work during June. As per para 14 (c) of AS 16, the activities that are necessary to prepare the asset for its intended use or sale are in progress. The strike is not during extended period. Thus during strike period, interest need to be capitalised.
3. During August, the company did not incur any interest as there was surplus cash in August. Therefore, no amount should be capitalised during August as per para 14(b) of AS 16.
4. During September, it has been taken that actual overdraft is ₹ 10 lakhs only. Hence, only ₹ 10,000 interest has been capitalised even though actual expenditure exceeds ₹ 10 lakhs.

Alternatively, interest may be charged on total amount of (₹ 6,17,210 + ₹ 7,00,000 = ₹ 13,17,210) for the month of September, 2017 as it is given in the question that overdraft was over ₹ 10 lakhs from 1.9.2017 and not exactly ₹ 10 lakhs. In that case, interest amount ₹ 13,172 will be capitalised for the month of September.

Illustration 6

Take Ltd. has borrowed ₹ 30 lakhs from State Bank of India during the financial year 2016-2017. The borrowings are used to invest in shares of Give Ltd., a subsidiary company of Take Ltd., which is implementing a new project, estimated to cost ₹ 50 lakhs. As on 31st March, 2017, since the said project was not complete, the directors of Take Ltd. resolved to capitalize the interest accruing on borrowings amounting to ₹ 4 lakhs and add it to the cost of investments. Comment.

Solution

As per para 9 of AS 13 "Accounting for Investments", the cost of investment includes acquisition charges such as brokerage, fees and duties. In the present case, Take Ltd. has used borrowed funds for purchasing shares of its subsidiary company Give Ltd. ₹ 4 lakhs interest payable by Take Ltd. to State Bank of India cannot be called as acquisition charges, therefore, cannot be constituted as cost of investment.

Further, as per para 3 of AS 16 "Borrowing Costs", a qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale. Since, shares are ready for its intended use at the time of sale, it cannot be considered as qualifying asset that can enable a company to add the borrowing cost to investments. Therefore, the directors of Take Ltd. cannot capitalise the borrowing cost as part of cost of investment. Rather, it has to be charged to the Statement of Profit and Loss for the year ended 31st March, 2017.

<u>Reference</u>: The students are advised to refer the full text of AS 16 "Borrowing Costs" (issued 2000).

UNIT 16 : AS 17: SEGMENT REPORTING

16.1 Introduction

This Standard came into effect in respect of accounting periods commenced on or after 1.4.2001 and is mandatory in nature, from that date, in respect of the following:

(i) Enterprises whose equity or debt securities are listed on a recognised stock exchange in India, and enterprises that are in the process of issuing equity or debt securities that will be listed on a recognised stock exchange in India as evidenced by the board of directors' resolution in this regard.

(ii) All other commercial, industrial and business reporting enterprises, whose turnover for the accounting period exceeds ₹ 50 crores.

This standard establishes principles for reporting financial information about different types of products and services an enterprise produces and different geographical areas in which it operates. The information is expected to help users of financial statements, to better understand the performance and assess the risks and returns of the enterprise and make more informed judgements about the enterprise as a whole. The standard is more relevant for assessing risks and returns of a diversified or multi-locational enterprise which may not be determinable from the aggregated data.

16.2 Objective

Many enterprises provide groups of products and services or operate in geographical areas that are subject to differing rates of profitability, opportunities for growth, future prospects, and risks. The objective of this Standard is to establish principles for reporting financial information, about the different types of products and services an enterprise produces and the different geographical areas in which it operates. Such information helps users of financial statements:

(a) Better understand the performance of the enterprise;

(b) Better assess the risks and returns of the enterprise; and

(c) Make more informed judgements about the enterprise as a whole.

16.3 Scope

An enterprise should comply with the requirements of this Standard fully and not selectively. If a single financial report contains both consolidated financial statements and the separate financial statements of the parent, segment information need be presented only on the basis of the consolidated financial statements. In the context of reporting of segment information in consolidated financial statements, the references in this Statement to any financial statement items should construed to be the relevant item as appearing in the consolidated financial statements.

16.4 Definition of the terms used in the Accounting Standard

A business segment is a distinguishable component of an enterprise that is engaged in providing an individual product or service or a group of related products or services and that is subject to risks and returns that are different from those of other business segments. Factors that should be considered in determining whether products or services are related include:

a. The nature of the products or services.

b. The nature of the production processes.

c. The type or class of customers for the products or services;.

d. The methods used to distribute the products or provide the services and

e. If applicable, the nature of the regulatory environment, for example, banking, insurance, or public utilities.

A single business segment does not include products and services with significantly differing risks and returns. While there may be dissimilarities with respect to one or several of the factors listed in the definition of business segment, the products and services included in a single business segment are expected to be similar with respect to a majority of the factors.

A geographical segment is a distinguishable component of an enterprise that is engaged in providing products or services within a particular economic environment and that is subject to risks and returns that are different from those of components operating in other economic environments. Factors that should be considered in identifying geographical segments include:

a. Similarity of economic and political conditions.

b. Relationships between operations in different geographical areas.

c. Proximity of operations.

d. Special risks associated with operations in a particular area.

e. Exchange control regulations and

f. The underlying currency risks.

A single geographical segment does not include operations in economic environments with significantly differing risks and returns. A geographical segment may be a single country, a group of two or more countries, or a region within a country.

The risks and returns of an enterprise are influenced both by the geographical location of its operations and also by the location of its customers. The definition allows geographical segments to be based on either:

a. The location of production or service facilities and other assets of an enterprise; or

b. The location of its customers.

A reportable segment is a business segment or a geographical segment identified on the basis of foregoing definitions for which segment information is required to be disclosed by this Statement.

The predominant sources of risks affect how most enterprises are organised and managed. Therefore, the organisational structure of an enterprise and its internal financial reporting system are normally the basis for identifying its segments.

Segment revenue is the aggregate of

(i) The portion of enterprise revenue that is directly attributable to a segment,

(ii) The relevant portion of enterprise revenue that can be allocated on a reasonable basis to a segment, and

(iii) Revenue from transactions with other segments of the enterprise.

Segment revenue does not include:

a. Extraordinary items as defined in AS 5.

b. Interest or dividend income, including interest earned on advances or loans to other segments unless the operations of the segment are primarily of a financial nature; and

c. Gains on sales of investments or on extinguishment of debt unless the operations of the segment are primarily of a financial nature.

Segment expense is the aggregate of

(i) The expense resulting from the operating activities of a segment that is directly attributable to the segment, and

(ii) The relevant portion of enterprise expense that can be allocated on a reasonable basis to the segment,

(iii) Including expense relating to transactions with other segments of the enterprise.

Segment expense does not include:

a. Extraordinary items as defined in AS 5.

b. Interest expense, including interest incurred on advances or loans from other segments, unless the operations of the segment are primarily of a financial nature.

c. Losses on sales of investments or losses on extinguishment of debt unless the operations of the segment are primarily of a financial nature.

d. Income tax expense; and

e. General administrative expenses, head-office expenses, and other expenses that arise at the enterprise level and relate to the enterprise as a whole. However, costs are sometimes incurred at the enterprise level on behalf of a segment. Such costs are part of segment expense if they relate to the operating activities of the segment and if they can be directly attributed or allocated to the segment on a reasonable basis.

Segment assets are those operating assets that are employed by a segment in its operating activities and that either are directly attributable to the segment or can be allocated to the segment on a reasonable basis.

If the segment result of a segment includes interest or dividend income, its segment assets include the related receivables, loans, investments, or other interest or dividend generating assets.

Segment assets do not include:

- income tax assets;
- assets used for general enterprise or head-office purposes.

Segment assets are determined after deducting related allowances/provisions that are reported as direct offsets in the balance sheet of the enterprise.

Segment liabilities are those operating liabilities that result from the operating activities of a segment and that either are directly attributable to the segment or can be allocated to the segment on a reasonable basis.

If the segment result of a segment includes interest expense, its segment liabilities include the related interest-bearing liabilities.

Liabilities that relate jointly to two or more segment should be allocated to segments if, and only if, their related revenues and expenses also are allocated to those segments.

Examples of segment liabilities include trade and other payables, accrued liabilities, customer advances, product warranty provisions, and other claims relating to the provision of goods and services.

Segment liabilities do not include:

- income tax liabilities;
- borrowings and other liabilities that are incurred for financing rather than operating purposes.

16.5 Treatment of Interest for determining Segment Expense

The interest expense relating to overdrafts and other operating liabilities identified to a particular segment should not be included as a part of the segment expense unless the operations of the segment are primarily of a financial nature or unless the interest is included as a part of the cost of inventories as per paragraph below.

In case interest is included as a part of the cost of inventories where it is so required as per AS 16, read with AS 2, Valuation of Inventories, and those inventories are part of segment assets of a particular segment, such interest should be considered as a segment expense. In this case, the amount of such interest and the fact that the segment result has been arrived at after considering such interest should be disclosed by way of a note to the segment result.

16.6 Allocation

An enterprise looks to its internal financial reporting system as the starting point for identifying those items that can be directly attributed, or reasonably allocated, to segments. There is thus a presumption that amounts that have been identified with segments for internal financial reporting purposes are directly attributable or reasonably allocable to segments for the purpose of measuring the segment revenue, segment expense, segment assets, and segment liabilities of reportable segments.

In some cases, however, a revenue, expense, asset or liability may have been allocated to segments for internal financial reporting purposes on a basis that is understood by enterprise management but that could be deemed arbitrary in the perception of external users of financial statements. Conversely, an enterprise may choose not to allocate some item of revenue, expense, asset or liability for internal financial reporting purposes, even though a reasonable basis for doing so exists. Such an item is allocated pursuant to the definitions of segment revenue, segment expense, segment assets, and segment liabilities in this Statement. Segment revenue, segment expense, segment assets and segment liabilities are determined before intra-enterprise balances and intra-enterprise transactions are eliminated as part of the process of preparation of enterprise financial statements, except to the extent that such intra-enterprise balances and transactions are within a single segment. While the accounting policies used in preparing and presenting the financial statements of the enterprise as a whole are also the fundamental segment accounting policies, segment accounting policies include, in addition, policies that relate specifically to segment reporting, such as identification of segments, method of pricing inter-segment transfers, and basis for allocating revenues and expenses to segments.

16.7 Primary and Secondary Segment Reporting Formats

The dominant source and nature of risks and returns of an enterprise should govern whether its primary segment reporting format will be business segments or geographical segments. Internal organisation and management structure of an enterprise and its system of internal financial reporting to the board of directors and the chief executive officer should normally be the basis for identifying the predominant source and nature of risks and differing rates of return facing the enterprise and, therefore, for determining which reporting format is primary and which is secondary, except as provided paragraphs below:

a. If risks and returns of an enterprise are strongly affected both by differences in the products and services it produces and by differences in the geographical areas in which it operates, as evidenced by a 'matrix approach', then the enterprise should use business segments as its primary segment reporting format and geographical segments as its secondary reporting forma; and

b. If internal organisational and management structure of an enterprise are based neither on individual products or services or groups of related products/services nor on geographical areas, it should be determined whether the risks and returns of the enterprise are related more to the products and services it produces or to the geographical areas in which it operates and accordingly, choose segments.

16.8 Matrix Presentation

A 'matrix presentation' both business segments and geographical segments as primary segment reporting formats with full segment disclosures on each basis will often provide useful information if risks and returns of an enterprise are strongly affected both by differences in the products and services it produces and by differences in the geographical areas in which it operates. This Statement does not require, but does not prohibit, a 'matrix presentation'.

16.9 Business and Geographical Segments

Generally Business and Geographical segments are determined on the basis of internal financial reporting to the board of directors and the chief executive officer. But if such segment does not satisfy the definitions given in AS, then following points should be considered for:

a. If one or more of the segments reported internally to the directors and management is a business segment or a geographical segment based on the factors in the definitions but others are not, paragraph below should be applied only to those internal segments that do not meet the definitions.

b. For those segments reported internally to the directors and management that do not satisfy the definitions, management of the enterprise should look to the next lower level of internal segmentation that reports information along product and service lines or geographical lines, as appropriate under the definitions and

c. If such an internally reported lower-level segment meets the definition of business segment or geographical segment, the criteria for identifying reportable segments should be applied to that segment.

16.10 Identifying Reportable Segments (Quantitative Thresholds)

A business segment or geographical segment should be identified as a reportable segment if:

a. Its revenue from sales to external customers and from transactions with other segments is 10 per cent or more of the total revenue, external and internal, of all segments; or

b. Its segment result, whether profit or loss, is 10 per cent or more of –

   (i) The combined result of all segments in profit, or

   (ii) The combined result of all segments in loss,

   (iii) Whichever is greater in absolute amount; or

c. Its segment assets are 10 per cent or more of the total assets of all segments.

A business segment or a geographical segment which is not a reportable segment as per above paragraph, may be designated as a reportable segment despite its size at the discretion of the management of the enterprise. If that segment is not designated as a reportable segment, it should be included as an unallocated reconciling item.

If total external revenue attributable to reportable segments constitutes less than 75 per cent of the total enterprise revenue, additional segments should be identified as reportable segments, even if they do not meet the 10 per cent thresholds, until at least 75 per cent of total enterprise revenue is included in reportable segments.

A segment identified as a reportable segment in the immediately preceding period because it satisfied the relevant 10 per cent thresholds should continue to be a reportable segment for the current period notwithstanding that its revenue, result, and assets all no longer meet the 10 percent thresholds.

If a segment is identified as a reportable segment in the current period because it satisfies the relevant 10 per cent thresholds, preceding-period segment data that is presented for comparative purposes should, unless it is impracticable to do so, be restated to reflect the newly reportable segment as a separate segment, even if that segment did not satisfy the 10 per cent thresholds in the preceding period.

16.11 Segment Accounting Policies

Segment information should be prepared in conformity with the accounting policies adopted for preparing and presenting the financial statements of the enterprise as a whole. This Statement does not prohibit the disclosure of additional segment information that is prepared on a basis other than the accounting policies adopted for the enterprise financial statements provided that (a) the information is reported internally to the board of directors and the chief executive officer for purposes of making decisions about allocating resources to the segment and assessing its performance and (b) the basis of measurement for this additional information is clearly described. Assets and liabilities that relate jointly to two or more segments should be allocated to segments if, and only if, their related revenues and expenses also are allocated to those segments.

16.12 Primary Reporting Format

An enterprise should disclose the following for each reportable segment:

a. Segment revenue, classified into segment revenue from sales to external customers and segment revenue from transactions with other segments;

b. Segment result;

c. Total carrying amount of segment assets;

d. Total amount of segment liabilities;

e. Total cost incurred during the period to acquire segment assets that are expected to be used during more than one period (tangible and intangible fixed assets);

f. Total amount of expense included in the segment result for depreciation and amortisation in respect of segment assets for the period; and

g. Total amount of significant non-cash expenses, other than depreciation and amortisation in respect of segment assets that were included in segment expense and, therefore, deducted in measuring segment result.

An enterprise is encouraged, but not required, to disclose the nature and amount of any items of segment revenue and segment expense that are of such size, nature, or incidence that their disclosure is relevant to explain the performance of the segment for the period. Such disclosure is not intended to change the classification of any such items of revenue or expense from ordinary to extraordinary or to change the measurement of such items. The disclosure, however, does change the level at which the significance of such items is evaluated for disclosure purposes from the enterprise level to the segment level.

AS 3, recommends that an enterprise present a cash flow statement that separately reports cash flows from operating, investing and financing activities. Disclosure of information regarding operating, investing and financing cash flows of each reportable segment is relevant to understanding the enterprise's overall financial position, liquidity, and cash flows. Disclosure of segment cash flow is, therefore, encouraged, though not required. An enterprise that provides segment cash flow disclosures need not disclose depreciation and amortisation expense and non-cash expenses.

An enterprise should present a reconciliation between the information disclosed for reportable segments and the aggregated information in the enterprise financial statements. In presenting the reconciliation, segment revenue should be reconciled to enterprise revenue; segment result should be reconciled to enterprise net profit or loss; segment assets should be reconciled to enterprise assets; and segment liabilities should be reconciled to enterprise liabilities.

16.13 Secondary Segment Information

If primary format of an enterprise for reporting segment information is business segments, it should also report the following information:

a. Segment revenue from external customers by geographical area based on the geographical location of its customers, for each geographical segment whose revenue from sales to external customers is 10 per cent or more of enterprise revenue;

b. The total carrying amount of segment assets by geographical location of assets, for each geographical segment whose segment assets are 10 per cent or more of the total assets of all geographical segments; and

c. The total cost incurred during the period to acquire segment assets that are expected to be used during more than one period (tangible and intangible fixed assets) by geographical location of assets, for each geographical segment whose segment assets are 10 per cent or more of the total assets of all geographical segments.

If primary format of an enterprise for reporting segment information is geographical segments (whether based on location of assets or location of customers), it should also report the following segment information for each business segment whose revenue from sales to external customers is 10 per cent or more of enterprise revenue or whose segment assets are 10 per cent or more of the total assets of all business segments:

a. Segment revenue from external customers;

b. The total carrying amount of segment assets; and

c. The total cost incurred during the period to acquire segment assets that are expected to be used during more than one period (tangible and intangible fixed assets).

If primary format of an enterprise for reporting segment information is geographical segments that are based on location of assets, and if the location of its customers is different from the location of its assets, then the enterprise should also report revenue from sales to external customers for each customer-based geographical segment whose revenue from sales to external customers is 10 per cent or more of enterprise revenue.

If primary format of an enterprise for reporting segment information is geographical segments that are based on location of customers, and if the assets of the enterprise are located in different geographical areas from its customers, then the enterprise should also report the following segment information for each asset-based geographical segment whose revenue from sales to external customers or segment assets are 10 per cent or more of total enterprise amounts:

a. The total carrying amount of segment assets by geographical location of the assets.

b. The total cost incurred during the period to acquire segment assets that are expected to be used during more than one period (tangible and intangible fixed assets) by location of the assets.

16.14 Disclosures

In measuring and reporting segment revenue from transactions with other segments, inter-segment transfers should be measured on the basis that the enterprise actually used to price those transfers. The basis of pricing inter-segment transfers and any change therein should be disclosed in the financial statements.

Changes in accounting policies adopted for segment reporting that have a material effect on segment information should be disclosed in accordance with AS. Such disclosure should include a description of the nature of the change, and the financial effect of the change if it is reasonably determinable.

Some changes in accounting policies may relate specifically to segment reporting.

Example could be:

- changes in identification of segments; and
- changes in the basis for allocating revenues and expenses to segments.

Such changes can have a significant impact on the segment information reported but will not change aggregate financial information reported for the enterprise. To enable users to understand the impact of such changes, this Standard requires the disclosure of the nature of the change and the financial effects of the change, if reasonably determinable.

An enterprise should indicate the types of products and services included in each reported business segment and indicate the composition of each reported geographical segment, both primary and secondary, if not otherwise disclosed in the financial statements.

Microtech Ltd. produces batteries for scooters, cars, trucks, and specialised batteries for invertors and UPS. How many segments should it have and why?

Answer

In case of Microtech Ltd., the basic product is the batteries, but the risks and returns of the batteries for automobiles (scooters, cars and trucks) and batteries for invertors and UPS are affected by different set of factors. In case of automobile batteries, the risks and returns are affected by the Government policy, road conditions, quality of automobiles, etc. whereas in case of batteries for invertors and UPS, the risks and returns are affected by power condition, standard of living, etc. Therefore, it can be said that Microtech Ltd. has two business segments viz-'Automobile batteries' and 'batteries for Invertors and UPS'.

<u>Reference</u>: The students are advised to refer the full text of AS 17 "Segment Reporting".

UNIT 17 : AS 18: RELATED PARTY DISCLOSURES

17.1 Introduction

This Standard came into effect in respect of accounting periods commenced on or after 1-4-2001 and is mandatory in nature. The standard prescribes the requirements for disclosure of related party relationship and transactions between the reporting enterprise and its related parties. The requirements of the standard apply to the financial statements of each reporting enterprise as also to consolidated financial statements presented by a holding company. Since the standard is more subjective, particularly with respect to identification of related parties [though provisions related to related party concept are given under sections 297 / 299 / 301 of the Companies Act, 1956* and Section 40A (2)(b) of the Income Tax Act, 1961], obtaining corroborative evidence becomes very difficult for the auditors. Thus, successful implementation of AS 18 is dependent upon how transparent the management is and how vigilant the auditors are.

17.2 Objective

The objective of this Standard is to establish requirements for disclosure of:

(a) Related party relationships and

(b) Transactions between a reporting enterprise and its related parties.

17.3 Scope

AS 18 should be applied:

- In reporting related party relationships and transactions between a reporting enterprise and its related parties.
- Only to the related party relationships described in (a) to (e) below.
- To the financial statements of each reporting enterprise as also to consolidate financial statements presented by a holding company.

This Standard deals only with related party relationships described in (a) to (e) below:

a. Enterprises that directly, or indirectly through one or more intermediaries, control, or are controlled by, or are under common control with, the reporting enterprise (this includes holding companies, subsidiaries and fellow subsidiaries).

b. Associates and joint ventures of the reporting enterprise and the investing party or venturer in respect of which the reporting enterprise is an associate or a joint venture.

c. Individuals owning, directly or indirectly, an interest in the voting power of the reporting enterprise that gives them control or significant influence over the enterprise, and relatives of any such individual.

* Now sections 188 / 184 / 189 of the Companies Act, 2013 respectively.

d. Key management personnel and relatives of such personnel and

e. Enterprises over which any person described in (c) or (d) is able to exercise significant influence. This includes enterprises owned by directors or major shareholders of the reporting enterprise and enterprises that have a member of key management in common with the reporting enterprise.

17.4 Definitions of the Terms used in the Accounting Standard

In the context of this Statement, the following are deemed not to be related parties:

a. Two companies simply because they have a director in common, notwithstanding paragraph (d) or (e) above (unless the director is able to affect the policies of both companies in their mutual dealings).

b. A single customer, supplier, franchiser, distributor, or general agent with whom an enterprise transacts a significant volume of business merely by virtue of the resulting economic dependence and

c. The parties listed below, in the course of their normal dealings with an enterprise by virtue only of those dealings (although they may circumscribe the freedom of action of the enterprise or participate in its decision-making process):

   (i) Providers of finance.

   (ii) Trade unions.

   (iii) Public utilities.

   (iv) Government departments and government agencies including government sponsored bodies.

Related party disclosure requirements as laid down in this Statement do not apply in circumstances where providing such disclosures would conflict with the reporting enterprise's duties of confidentiality as specifically required in terms of a statute or by any regulator or similar competent authority.

Disclosure of transactions between members of a group is unnecessary in consolidated financial statements because consolidated financial statements present information about the holding and its subsidiaries as a single reporting enterprise. No disclosure is required in the financial statements of state-controlled enterprises as regards related party relationships with other state-controlled enterprises and transactions with such enterprises.

Related party transaction: A transfer of resources or obligations between related parties, regardless of whether or not a price is charged.

Related party: Parties are consider to be related, if at any time during the reporting period one party has the ability to control the other party or exercise significant influence over the other party in making financial and/or operating decisions.

Illustration 1

Identify the related parties in the following cases as per AS 18

A Ltd. holds 51% of B Ltd.

B Ltd holds 51% of O Ltd.

Z Ltd holds 49% of O Ltd.

Solution

A Ltd., B Ltd. & O Ltd. are related to each other. Z Ltd. & O Ltd. are related to each other by virtue of Associate relationship. However, neither A Ltd. nor B Ltd. is related to Z Ltd. and vice versa.

Control: (a) ownership, directly or indirectly, of more than one half of the voting power of an enterprise, or

(b) control of the composition of the board of directors in the case of a company or of the composition of the corresponding governing body in case of any other enterprise, or

(c) a substantial interest in voting power and the power to direct, by statute or agreement, the financial and/or operating policies of the enterprise.

For the purpose of this Statement, an enterprise is considered to **control the composition** of the board of directors of a company or governing body of an enterprise, if it has the power, without the consent or concurrence of any other person, to appoint or remove all or a majority of directors/members of that company/enterprise. An enterprise is deemed to have the power to appoint, if any of the following conditions is satisfied:

(a) A person cannot be appointed as director/member without the exercise in his favour by that enterprise of such a power as aforesaid or

(b) A person's appointment as director/member follows necessarily from his appointment to a position held by him in that enterprise or

(c) The director/member is nominated by that enterprise; in case that enterprise is a company, the director is nominated by that company/subsidiary thereof.

An enterprise/individual is considered to have a **substantial interest** in another enterprise if that enterprise or individual owns, directly or indirectly, 20 per cent or more interest in the voting power of the other enterprise.

An Associate: An enterprise in which an investing reporting party has significant influence and which is neither a subsidiary nor a joint venture of that party.

Significant influence: Participation in the financial and/or operating policy decisions of an enterprise, but not control of those policies.

It may be exercised in several ways, by representation on the board of directors, participation in the policy making process, material inter-company transactions, interchange of managerial personnel or dependence on technical information.

Significant influence may be gained by share ownership, statute or agreement. As regards share ownership, if an investing party holds, directly or indirectly through intermediaries, 20 per cent or more of the voting power of the enterprise, it is presumed that the investing party does have significant influence, unless it can be clearly demonstrated that this is not the case, vice versa. A substantial or majority ownership by another investing party does not necessarily preclude an investing party from having significant influence.

Key management personnel: Those persons who have the authority and responsibility for planning, directing and controlling the activities of the reporting enterprise.

A non-executive director of a company should not be considered as a key management person by virtue of merely his being a director unless he has the authority and responsibility for planning, directing and controlling the activities of the reporting enterprise.

The requirements of this standard should not be applied in respect of a non-executive director even if he participates in the financial and/or operating policy decision of the enterprise, unless he falls in any of the other categories.

Relative: In relation to an individual, means the spouse, son, daughter, brother, sister, father and mother who may be expected to influence, or be influenced by, that individual in his/her dealings with the reporting enterprise.

Joint Venture - a contractual arrangement whereby two or more parties undertake an economic activity which is subject to joint control.

Joint Control– the contractually agreed sharing of power to govern the financial and operating policies of an economic activity so as to obtain benefits from it.

Holding Company– a company having one or more subsidiaries.

Subsidiary - a company:

(a) in which another company (the holding company) holds, either by itself and/or through one or more subsidiaries, more than one-half, in nominal value of its equity share capital; or

(b) of which another company (the holding company) controls, either by itself and/or through one or more subsidiaries, the composition of its board of directors.

Fellow subsidiary– a company is considered to be a fellow subsidiary of another company if both are subsidiaries of the same holding company.

17.5 The Related Party Issue

Without related party disclosures, there is a general presumption that transactions reflected in financial statements are consummated on an arm's-length basis between independent parties. However, that presumption may not be valid when related party relationships exist because related parties may enter into transactions which unrelated parties would not enter into. Also, transactions between related parties may not be effected at the same terms and conditions as between unrelated parties.

The operating results and financial position of an enterprise may be affected by a related party relationship even if related party transactions do not occur. The mere existence of the relationship may be sufficient to affect the transactions of the reporting enterprise with other parties.

In view of the aforesaid, the resulting accounting measures may not represent what they usually would be expected to represent. Thus, a related party relationship could have an effect on the financial position and operating results of the reporting enterprise.

As per the Guidance Note on 'Remuneration paid to Key Management Personnel - Whether a Related Party Transaction', remuneration paid to key management personnel should be considered as a related party transaction requiring disclosures. In case non-executive directors on the Board of Directors are not related parties, remuneration paid to them should not be considered a related party transaction.

17.6 Disclosure

Name of the related party and nature of the related party relationship where control exists should be disclosed irrespective of whether or not there have been transactions between the related parties.

This is to enable users of financial statements to form a view about the effects of related party relationships on the enterprise.

If there have been transactions between related parties, during the existence of a related party relationship, the reporting enterprise should disclose the following:

(i) The name of the transacting related party;

(ii) A description of the relationship between the parties;

(iii) A description of the nature of transactions;

(iv) Volume of the transactions either as an amount or as an appropriate proportion;

(v) Any other elements of the related party transactions necessary for an understanding of the financial statements;

(vi) The amounts or appropriate proportions of outstanding items pertaining to related parties at the balance sheet date and provisions for doubtful debts due from such parties at that date;

(vii) Amounts written off or written back in the period in respect of debts due from or to related parties.

(viii) Items of a similar nature may be disclosed in aggregate by type of related party.

17.7 Miscellaneous Illustrations

Illustration 2

Narmada Ltd. sold goods for ₹ 90 lakhs to Ganga Ltd. during financial year ended 31-3-2017. The Managing Director of Narmada Ltd. own 100% of Ganga Ltd. The sales were made to Ganga Ltd. at normal selling prices followed by Narmada Ltd. The Chief accountant of Narmada Ltd contends that these sales need not require a different treatment from the other sales made by the company and hence no disclosure is necessary as per the accounting standard. Is the Chief Accountant correct?

Solution

As per paragraph 13 of AS 18 'Related Party Disclosures', Enterprises over which a key management personnel is able to exercise significant influence are related parties. This includes enterprises owned by directors or major shareholders of the reporting enterprise and enterprise that have a member of key management in common with the reporting enterprise.

In the given case, Narmada Ltd. and Ganga Ltd are related parties and hence disclosure of transaction between them is required irrespective of whether the transaction was done at normal selling price.

Hence the contention of Chief Accountant of Narmada Ltd is wrong.

Illustration 3

Mr. Raj a relative of key management personnel received remuneration of ₹ 2,50,000 for his services in the company for the period from 1.4.2016 to 30.6.2016. On 1.7.2016, he left the service.

Should the relative be identified as at the closing date i.e. on 31.3.2017 for the purposes of AS 18?

Solution

According to para 10 of AS 18 on Related Party Disclosures, parties are considered to be related if at any time during the reporting period one party has the ability to control the other party or exercise significant influence over the other party in making financial and/or operating decisions. Hence, Mr. Raj, a relative of key management personnel should be identified as relative as at the closing date i.e. on 31.3.2017.

Illustration 4

X Ltd. sold goods to its associate Company for the 1st quarter ending 30.6.2017. After that, the related party relationship ceased to exist. However, goods were supplied as was supplied to any other ordinary customer. Decide whether transactions of the entire year have to be disclosed as related party transaction.

Solution

As per para 23 of AS 18, transactions of X Ltd. with its associate company for the first quarter ending 30.06.2017 only are required to be disclosed as related party transactions. The transactions for the period in which related party relationship did not exist need not be reported.

Reference: The students are advised to refer the full text of AS 18 "Related Party Disclosures".

UNIT 18 : AS 19 : LEASES

18.1 Introduction

This Standard came into effect in respect of all assets leased during accounting periods commenced on or after 1.4.2001 and is mandatory in nature. AS 19 prescribes the accounting and disclosure requirements for both finance leases and operating leases in the books of the lessor and lessee. The classification of leases adopted in this standard is based on the extent to which risks and rewards incident to ownership of a leased asset lie with the lessor and the lessee.

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incident to ownership.

An operating lease is a lease other than finance lease.

At the inception of the lease, assets under finance lease are capitalized in the books of lessee with corresponding liability for lease obligations as against the operating lease, wherein lease payments are recognized as an expense in profit and loss account on a systematic basis (i.e. straight line) over the lease term without capitalizing the asset. The lessor should recognise receivable at an amount equal to net investment in the lease in case of finance lease, whereas under operating lease, the lessor will present the leased asset under fixed assets in his balance sheet besides recognizing the lease income on a systematic basis (i.e. straight line) over the lease term. The person (lessor/lessee) presenting the leased asset in his balance sheet should also consider the additional requirements of AS 10.

18.2 Scope

This Standard is applied in accounting for all leases other than:

a. Lease agreements to explore for or use natural resources, such as oil, gas, timber, metals and other mineral rights and

b. Licensing agreements for items such as motion picture films, video recordings, plays, manuscripts, patents and copyrights and

c. Lease agreements to use lands.

AS 19 applies to contracts that transfer the right to use assets even though substantial services by the lessor may be called for in connection with the operation or maintenance of such assets. Examples include the supply of property, vehicles and computers.

On the other hand, this Standard does not apply to agreements that are contracts for services that do not transfer the right to use assets from one contracting party to the other.

The definition of a lease includes agreements for the hire of an asset which contain a provision giving the hirer an option to acquire title to the asset upon the fulfillment of agreed conditions. These agreements are commonly known as hire purchase agreements. Hire purchase agreements include agreements under which the property in the asset is to pass to the hirer on the payment of the last instalment and the hirer has a right to terminate the agreement at any time before the property so passes.

18.3 Definition of the Terms used under AS 19

A lease is an agreement whereby the lessor conveys to the lessee in return for a payment or series of payments the right to use an asset for an agreed period of time.

A finance lease is a lease that transfers substantially all the risks and rewards incident to ownership of an asset.

An operating lease is a lease other than a finance lease.

A non-cancellable lease is a lease that is cancellable only:

a. Upon the occurrence of some remote contingency or

b. With the permission of the lessor or

c. If the lessee enters into a new lease for the same or an equivalent asset with the same lessor;

d. Upon payment by the lessee of an additional amount such that, at inception, continuation of the lease is reasonably certain.

The inception of the lease is the earlier of the date of the lease agreement and the date of a commitment by the parties to the principal provisions of the lease.

The lease term is the non-cancellable period for which the lessee has agreed to take on lease the asset together with any further periods for which the lessee has the option to continue the lease of the asset, with or without further payment, which option at the inception of the lease it is reasonably certain that the lessee will exercise.

Minimum lease payments are the payments over the lease term that the lessee is, or can be required to make, excluding contingent rent, costs for services and taxes to be paid by and reimbursed to the lessor, together with:

a. In the case of the lessee, any residual value guaranteed by or on behalf of the lessee or

b. In the case of the lessor, any residual value guaranteed to the lessor:

   (i) By or on behalf of the lessee or

   (ii) By an independent third party financially capable of meeting this guarantee.

However, if the lessee has an option to purchase the asset at a price which is expected to be sufficiently lower than the fair value at the date the option becomes exercisable that, at the inception of the lease, is reasonably certain to be exercised, the minimum lease payments comprise minimum payments payable over the lease term and the payment required to exercise this purchase option.

Mr. X took mine on lease from Mr. Y on the terms that he would pay ₹ 10,000 or ₹ 10 per ton extracted during the year, whichever is less. ₹ 10 per ton been contingent cannot be included in minimum lease payment calculation.

Economic life is either:

a. The period over which an asset is expected to be economically usable by one or more users;

b. The number of production or similar units expected to be obtained from the asset by one or more users.

Useful life of a leased asset is either:

a. The period over which the leased asset is expected to be used by the lessee or

b. The number of production or similar units expected to be obtained from the use of the asset by the lessee.

Residual value of a leased asset is the estimated fair value of the asset at the end of the lease term.

Guaranteed residual value is:

a. In the case of the lessee, that part of the residual value which is guaranteed by the lessee or by a party on behalf of the lessee (the amount of the guarantee being the maximum amount that could, in any event, become payable) and

b. In the case of the lessor, that part of the residual value which is guaranteed by or on behalf of the lessee, or by an independent third party who is financially capable of discharging the obligations under the guarantee.

Unguaranteed residual value of a leased asset is the amount by which the residual value of the asset exceeds its guaranteed residual value.

We can say that:

Residual Value of the Assets = Guaranteed Residual Value + Unguaranteed Residual Value

Gross investment in the lease is the aggregate of the minimum lease payments under a finance lease from the standpoint of the lessor and any unguaranteed residual value accruing to the lessor.

Unearned finance income is the difference between:

a. The gross investment in the lease and

b. The present value of

   (i) The minimum lease payments under a finance lease from the standpoint of the lessor and

   (ii) Any unguaranteed residual value accruing to the lessor, at the interest rate implicit in the lease.

Net investment in the lease is the gross investment in the lease less unearned finance income.

The interest rate implicit in the lease is the discount rate that, at the inception of the lease, causes the aggregate present value of

a. The minimum lease payments under a finance lease from the standpoint of the lessor and

b. Any unguaranteed residual value accruing to the lessor, to be equal to the fair value of the leased asset.

The lessee's incremental borrowing rate of interest is the rate of interest the lessee would have to pay on a similar lease or, if that is not determinable, the rate that, at the inception of the lease, the lessee would incur to borrow over a similar term, and with a similar security, the funds necessary to purchase the asset.

Contingent rent is that portion of the lease payments that is not fixed in amount but is based on a factor other than just the passage of time (e.g., percentage of sales, amount of usage, price indices and market rates of interest).

18.4 Classification of Leases

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incident to ownership. Title may or may not eventually be transferred. A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incident to ownership.

Whether a lease is a finance lease or an operating lease depends on the substance of the transaction rather than its form. Examples of situations which individually or in combination would normally lead to a lease being classified as a finance lease are:

a. The lease transfers ownership of the asset to the lessee by the end of the lease term.

b. The lessee has the option to purchase the asset at a price which is expected to be sufficiently lower than the fair value at the date the option becomes exercisable such that, at the inception of the lease, it is reasonably certain that the option will be exercised.

c. The lease term is for the major part of the economic life of the asset even if title is not transferred.

d. At the inception of the lease the present value of the minimum lease payments amounts to at least substantially all of the fair value of the leased asset or

e. The leased asset is of a specialised nature such that only the lessee can use it without major modifications being made.

Other indicators that, individually or in combination, could also lead to a lease being classified as a finance lease are:

a. If the lessee can cancel the lease, the lessor's losses associated with the cancellation are borne by the lessee.

b. Gains or losses from the fluctuation in the fair value of the residual fall to the lessee and

c. The lessee can continue the lease for a secondary period at a rent which is substantially lower than market rent.

Lease classification is made at the inception of the lease. If at any time the lessee and the lessor agree to change the provisions of the lease after inception, other than by renewing the lease, in a manner that would have resulted in a different classification, had the changed terms been in effect at the inception of the lease, the revised agreement is considered as a new agreement over its revised term. Changes in estimates or changes in circumstances, however, do not give rise to a new classification of a lease for accounting purposes.

18.5 Leases in the Financial Statements of Lessees

18.5.1 Finance Leases:

Both the leased asset and the related lease obligation (liability) should be recorded in the balance sheet at the inception of a finance lease.

Such recognition should be at an amount equal to the fair value of the leased asset at the inception of the lease. However, if the fair value of the leased asset exceeds the present value of the minimum lease payments from the standpoint of the lessee, the amount recorded as an asset and a liability should be the present value of the minimum lease payments from the standpoint of the lessee. In calculating the present value of the minimum lease payments the discount rate is the interest rate implicit in the lease, if this is practicable to determine; if not, the lessee's incremental borrowing rate should be used.

In the case of finance leases the substance and financial reality are that the lessee acquires the economic benefits of the use of the leased asset for the major part of its economic life in return for entering into an obligation to pay for that right an amount approximating to the fair value of the asset and the related finance charge.

Initial direct costs are often incurred in connection with specific leasing activities, eg in negotiating and securing leasing arrangements. The costs identified as directly attributable to activities performed by the lessee for a finance lease are included as part of the amount recognised as an asset under the finance lease to the extent that they can be directly attributed to the activities performed by the lessee for a finance lease.

Lease payments should be apportioned between the finance charge and the reduction of the outstanding liability.

The finance charge should be allocated to periods during the lease term so as to produce a constant periodic rate of interest on the remaining balance of the liability for each period.

The depreciable amount of a leased asset is allocated to each accounting period during the period of expected use on a systematic basis consistent with the depreciation policy the lessee adopts for depreciable assets that are owned. If there is reasonable certainty that the lessee will obtain ownership by the end of the lease term, the period of expected use is the useful life of the asset; otherwise the asset is depreciated over the lease term or its useful life, whichever is shorter.

18.5.2 Operating Leases

Rentals payable under an operating lease should be charged as an expense in the statement of profit and loss on a straight-line basis over the lease term, even if the payments are not made on that basis, unless another systematic basis is more representative of the time pattern of the user's benefit. For example, where the rental payments for an asset are based on the actual usage of that asset, or are revised periodically to reflect the efficiency of the asset or current market rates, the rentals actually payable may be an appropriate measure.

18.5.3 Disclosure Requirements

Lessees are required to make the following disclosures for F**inance leases:**

- Assets acquired under finance lease as segregated from assets owned;
- For each class of assets, the net carrying amount at the balance sheet date;
- A reconciliation between the total of future minimum lease payments at the balance sheet date, and their present value; (SMC are exempt from this disclosure requirement)
- The total of future minimum lease payments at the balance sheet date, and their present value, for each of the following periods:
  - Not later than one year;
  - Later than one year and not later than five years; and
  - Later than five years;

  (SMCs are exempt from this disclosure requirement)
- Contingent rents recognized as an expense in the period;
- The total of future minimum sublease payments expected to be received under non-cancellable sub-leases at the balance sheet date (SMCs are exempt from this disclosure requirement); and
- A general description of the lessee's material leasing arrangements including, but not limited to, the following:
  - The basis on which contingent rents are determined;
  - The existence and terms of renewal or purchase options and escalation clauses; and
  - Restrictions imposed by lease arrangements, such as those concerning dividends, additional debt, and further leasing.

(SMCs are exempt from this disclosure requirement)

Note that in addition to the above the disclosure requirements of AS 10 apply equally to assets held under finance leases.

Operating leases:

a. The total of future minimum lease payments under non-cancellable operating leases for each of the following periods:

   (i) Not later than one year;

   (ii) Later than one year and not later than five years;

(iii) Later than five years;

b. The total of future minimum sublease payments expected to be received under non-cancellable subleases at the balance sheet date;

c. Lease payments recognised in the statement of profit and loss for the period, with separate amounts for minimum lease payments and contingent rents;

d. Sub-lease payments received (or receivable) recognised in the statement of profit and loss for the period;

e. A general description of the lessee's significant leasing arrangements including, but not limited to, the following:

   (i) The basis on which contingent rent payments are determined;

   (ii) The existence and terms of renewal or purchase options and escalation clauses; and

   (iii) Restrictions imposed by lease arrangements, such as those concerning dividends, additional debt, and further leasing.

18.6 Leases in the Financial Statements of Lessors

18.6.1 Finance Lease

The lessor should recognise assets given under a finance lease in its balance sheet as a receivable and sales in the statement of profit and loss for the period, in accordance with the policy followed by the enterprise for outright sales. The transaction is recorded at the commencement of a finance lease term by a manufacturer or dealer lessor is the fair value of the asset. However, if the present value of the minimum lease payments accruing to the lessor computed at a commercial rate of interest is lower than the fair value, the amount recorded is the present value so computed. The difference between the sales revenue and the cost of sale is the selling profit, which is recognised in accordance with the policy followed by the enterprise for sales.

Manufacturers or dealers may offer to customers the choice of either buying or leasing an asset. A finance lease of an asset by a manufacturer or dealer lessor gives rise to two types of income:

a. The profit or loss equivalent to the profit or loss resulting from an outright sale of the asset being leased, at normal selling prices, reflecting any applicable volume or trade discounts;

b. The finance income over the lease term.

Lease payments relating to the accounting period, excluding costs for services, are reduced from both the principal and the unearned finance income. Estimated unguaranteed residual values used in computing the lessor's gross investment in a lease are reviewed regularly. If there has been a reduction in the estimated unguaranteed residual value, the income allocation over the remaining lease term is revised and any reduction in respect of amounts already accrued is recognised immediately. An upward adjustment of the estimated residual value is not made.

Manufacturer or dealer lessors sometimes quote artificially low rates of interest in order to attract customers. The use of such a rate would result in an excessive portion of the total income from the transaction being recognised at the time of sale. If artificially low rates of interest are quoted, selling profit would be restricted to that which would apply if a commercial rate of interest were charged and balance will be adjusted with the finance income over the lease term.

Initial direct costs, such as commissions and legal fees, are often incurred by lessors in negotiating and arranging a lease. For finance leases, these initial direct costs are incurred to produce finance income and are either recognised immediately in the statement of profit and loss or allocated against the finance income over the lease term.

18.6.2 Disclosure

The lessor should make the following disclosures for finance leases:

a. Reconciliation between the total gross investment in the lease at the balance sheet date, and the present value of minimum lease payments receivable at the balance sheet date. In addition, an enterprise should disclose the total gross investment in the lease and the present value of minimum lease payments receivable at the balance sheet date, for each of the following periods:
   (i) Not later than one year;
   (ii) Later than one year and not later than five years;
   (iii) Later than five years;
b. Unearned finance income;
c. The unguaranteed residual values accruing to the benefit of the lessor;
d. The accumulated provision for uncollectible minimum lease payments receivable;
e. Contingent rents recognised in the statement of profit and loss for the period;
f. A general description of the significant leasing arrangements of the lessor; and
g. Accounting policy adopted in respect of initial direct costs.

Illustration 1 (finance lease)

'A' leased a machine from 'B' on the following terms:

a. The ownership of the machine will be transferred to 'A' on expiry of the lease period at ₹ 8,900.

b. Installation cost of the machine ₹ 5,000.

c. The cost of the machine is ₹ 1,09,240.

d. Lease agreement is signed for 5 years.

e. Minimum Lease Payment is ₹ 28,000 p.a.

f. First installment is Payable on 01.04.2017.

g. Depreciation is charged @ 25% p.a. on WDV.

You are required to show the complete chart of principle amount and implicit rate of interest for 5 years and also the journal entries in the books of 'A and B' for the period 01.04.2017 to 31.03.2019.

Solution

First calculate the implicit rate of return, i.e. the rate of Present Value at which the PV of Minimum Lease Payment equals to Market Price of the Assets on the date of lease agreement.

Lease Payment	*Present Value Factor @ 12%*	*Present Value of Lease Payment*	*Present Value Factor @ 14%*	*Present Value of Lease Payment*
(a)	*(b)*	*(c= a x b)*	*(d)*	*(e = a x d)*
28,000	1	28,000	1	28,000
28,000	0.893	25,000	0.877	24,561
28,000	0.797	22,321	0.769	21,545
28,000	0.712	19,930	0.675	18,899
28,000	0.636	17,795	0.592	16,578
8,900	0.567	5,050	0.519	4,622
		118,096		114,206

Installment	*Opening Balance*	*Interest Amount*	*Principle Amount*	*Closing Balance*
	(a)			
1	114,240	-	28,000	86,240
2	86,240	12,074	15,926	70,314
3	70,314	9,844	18,156	52,158
4	52,158	7,302	20,698	31,460
5	31,460	4,404	23,596	7,864
	7,864	1,036	7,864	(0)

18.6.3 Operating Leases

The lessor should present an asset given under operating lease in its balance sheet under fixed assets.

Lease income should be recognised in the statement of profit and loss on a straight line basis over the lease term, unless another systematic basis is more representative of the time pattern in which benefit derived from the use of the leased asset is diminished. Costs, including depreciation, incurred in earning the lease income are recognised as an expense. Initial direct costs incurred are either deferred and allocated to income over the lease term in proportion to the recognition of rent income or are recognised as an expense in the statement of profit and loss in the period in which they are incurred. For charging depreciation and impairment of assets, relevant Accounting Standards should be followed.

18.6.4 Disclosures

a. For each class of assets, the gross carrying amount, the accumulated depreciation and accumulated impairment losses at the balance sheet date; and
   (i) The depreciation recognised in the statement of profit and loss for the period;
   (ii) Impairment losses recognised in the statement of profit and loss for the period;
   (iii) Impairment losses reversed in the statement of profit and loss for the period;
b. The future minimum lease payments under non-cancellable operating leases in the aggregate and for each of the following periods:
   (i) Not later than one year;
   (ii) Later than one year and not later than five years;
   (iii) Later than five years;
c. Total contingent rents recognised as income in the statement of profit and loss for the period;
d. A general description of the lessor's significant leasing arrangements; and
e. Accounting policy adopted in respect of initial direct costs.

Illustration 2 (Operating lease)

Geeta purchased a computer for ₹ 44,000 and leased out it to Sita for four years on leases basis, after the lease period, value of the computer was estimated to be ₹ 3,000; which she realised after selling it in the second hand market. Lease amount payable at the beginning of each year is ₹ 22,000; ₹ 13,640; ₹ 6,820 &₹ 3,410. Depreciation was charged @ 40% p.a. You are required to pass the necessary journal entries in the books of both Geeta and Sita.

18.7 Sale and Leaseback Transactions

A sale and leaseback transaction involves the sale of an asset by the vendor and the leasing of the same asset back to the vendor. The lease payments and the sale price are usually interdependent as they are negotiated as a package. The accounting treatment of a sale and leaseback transaction depends upon the type of lease involved. If a sale and leaseback transaction results in a finance lease, any excess or deficiency of sales proceeds over the carrying amount should not be immediately recognised as income or loss in the financial statements of a seller-lessee. Instead, it should be deferred and amortised over the lease term in proportion to the depreciation of the leased asset.

If a sale and leaseback transaction results in an operating lease, and it is clear that the transaction is established at fair value, any profit or loss should be recognised immediately. If the sale price is below fair value, any profit or loss should be recognised immediately except that, if the loss is compensated by future lease payments at below market price, it should be deferred and amortised in proportion to the lease payments over the period for which the asset is expected to be used. If the sale price is above fair value, the excess over fair value should be deferred and amortised over the period for which the asset is expected to be used.

For operating leases, if the fair value at the time of a sale and leaseback transaction is less than the carrying amount of the asset, a loss equal to the amount of the difference between the carrying amount and fair value should be recognised immediately.

Illustration 3

A Ltd. sold machinery having WDV of ₹ 40 lakhs to B Ltd. for ₹ 50 lakhs and the same machinery was leased back by B Ltd. to A Ltd. The lease back is operating lease. Comment if –

(a) Sale price of ₹ 50 lakhs is equal to fair value.

(b) Fair value is ₹ 60 lakhs.

(c) Fair value is ₹ 45 lakhs and sale price is ₹ 38 lakhs.

(d) Fair value is ₹ 40 lakhs and sale price is ₹50 lakhs.

(e) Fair value is ₹46 lakhs and sale price is ₹ 50 lakhs

(f) Fair value is ₹35 lakhs and sale price is ₹39 lakhs.

Solution

Following will be the treatment in the given cases:

(a) When sales price of ₹ 50 lakhs is equal to fair value, A Ltd. should immediately recognize the profit of ₹10 lakhs (i.e. 50 – 40) in its books.

(b) When fair value is ₹ 60 lakhs then also profit of ₹10 lakhs should be immediately recognized by A Ltd.

(c) When fair value of leased machinery is ₹ 45 lakhs & sales price is ₹ 38 lakhs, then loss of ₹ 2 lakhs (40 – 38) to be immediately recognized by A Ltd. in its books provided loss is not compensated by future lease payment.

(d) When fair value is ₹ 40 lakhs & sales price is ₹ 50 lakhs then, profit of ₹ 10 lakhs is to be deferred and amortized over the lease period.

(e) When fair value is ₹ 46 lakhs & sales price is ₹ 50 lakhs, profit of ₹ 6 lakhs (46 - 40) to be immediately recognized in its books and balance profit of ₹4 lakhs (50-46) is to be amortised/deferred over lease period.

(f) When fair value is ₹ 35 lakhs & sales price is ₹ 39 lakhs, then the loss of ₹ 5 lakhs (40-35) to be immediately recognized by A Ltd. in its books and profit of ₹ 4 lakhs (39-35) should be amortised/deferred over lease period

18.8 Miscellaneous Illustrations

Illustration 4

A Ltd. leased a machinery to B Ltd. on the following terms:

	(₹ in lakhs)
Fair value of the machinery	*20.00*
Lease term	*5 years*
Lease Rental per annum	*5.00*
Guaranteed Residual value	*1.00*
Expected Residual value	*2.00*
Internal Rate of Return	*15%*

Depreciation is provided on straight line method @ 10% per annum. Ascertain unearned financial income and necessary entries may be passed in the books of the Lessee in the First year.

Solution

Computation of Unearned Finance Income

As per AS 19 on Leases, ***unearned finance income*** is the difference between (a) the ***gross investment*** in the lease and (b) the present value of minimum lease payments under a finance lease from the standpoint of the lessor; and any unguaranteed residual value accruing to the lessor, at the interest rate implicit in the lease.

where:

(a) ***Gross investment*** in the lease is the aggregate of (i) minimum lease payments from the stand point of the lessor and (ii) any unguaranteed residual value accruing to the lessor.

Gross investment = Minimum lease payments + Unguaranteed residual value

=(Total lease rent + Guaranteed residual value) + Unguaranteed residual value

= [(₹ 5,00,000 × 5 years) + ₹ 1,00,000] + ₹ 1,00,000

= ₹ 27,00,000

(b) Table showing present value of (i) Minimum lease payments (MLP) and (ii) Unguaranteed residual value (URV)

Year	*MLP inclusive of URV*	*Internal rate of return (Discount factor 15%)*	*Present Value*	
	₹		₹	
1	5,00,000	.8696	4,34,800	
2	5,00,000	.7561	3,78,050	
3	5,00,000	.6575	3,28,750	
4	5,00,000	.5718	2,85,900	
5	5,00,000	.4972	2,48,600	
	1,00,000	.4972	49,720	
	(guaranteed residual value)			
			17,25,820	(i)
	1,00,000	.4972	49,720	(ii)
	(unguaranteed residual value)			
		(i) + (ii)	17,75,540	(b)

Unearned Finance Income = (a) – (b)

= ₹ 27,00,000–₹ 17,75,540 = ₹ 9,24,460

Journal Entries in the books of B Ltd.

	₹	₹
At the inception of lease		

Machinery account	Dr.	17,25,820*	
To A Ltd.'s account			17,25,820*
(Being lease of machinery recorded at present value of MLP)			
At the end of the first year of lease			
Finance charges account (Refer Working Note)	Dr.	2,58,873	
To A Ltd.'s account			2,58,873
(Being the finance charges for first year due)			
A Ltd.'s account	Dr.	5,00,000	
To Bank account			5,00,000
(Being the lease rent paid to the lessor which includes outstanding liability of ₹ 2,41,127 and finance charge of ₹ 2,58,873)			
Depreciation account	Dr.	1,72,582	
To Machinery account			1,72,582
(Being the depreciation provided @ 10% p.a. on straight line method)			
Profit and loss account	Dr.	4,31,455	
To Depreciation account			1,72,582
To Finance charges account			2,58,873
(Being the depreciation and finance charges transferred to profit and loss account)			

Working Note:

Table showing apportionment of lease payments by B Ltd. between the finance charges and the reduction of outstanding liability.

Year	*Outstanding liability (opening balance)* ₹	*Lease rent* ₹	*Finance charge* ₹	*Reduction in outstanding liability* ₹	*Outstanding liability (closing balance)* ₹
1	17,25,820	5,00,000	2,58,873	2,41,127	14,84,693

*As per para 11 of AS 19, the lessee should recognise the lease as an asset and a liability at an amount equal to the fair value of the leased asset at the inception of lease. However, if the fair value of the leased asset exceeds the present value of minimum lease payments from the standpoint of lessee, the amount recorded should be the present value of these minimum lease payments. Therefore, in this case, as the fair value of ₹ 20,00,000 is more than the present value amounting ₹ 17,25,820, the machinery has been recorded at ₹ 17,25,820 in the books of B Ltd. (the lessee) at the inception of the lease. According to para 13 of the standard, at the inception of the lease, the asset and liability for the future lease payments are recognised in the balance sheet at the same amounts.

2	14,84,693	5,00,000	2,22,704	2,77,296	12,07,397
3	12,07,397	5,00,000	1,81,110	3,18,890	8,88,507
4	8,88,507	5,00,000	1,33,276	3,66,724	5,21,783
5	5,21,783	5,00,000	78,267	5,21,783	1,00,050*
			8,74,230	17,25,820	

*The difference between this figure and guaranteed residual value (₹ 1,00,000) is due to approximation in computing the interest rate implicit in the lease.

Illustration 5

Global Ltd. has initiated a lease for three years in respect of an equipment costing ₹ 1,50,000 with expected useful life of 4 years. The asset would revert to Global Limited under the lease agreement. The other information available in respect of lease agreement is:

(i) The unguaranteed residual value of the equipment after the expiry of the lease term is estimated at ₹ 20,000.

(ii) The implicit rate of interest is 10%.

(iii) The annual payments have been determined in such a way that the present value of the lease payment plus the residual value is equal to the cost of asset.

Ascertain in the hands of Global Ltd.

(i) The annual lease payment.

(ii) The unearned finance income.

(iii) The segregation of finance income, and also,

(iv) Show how necessary items will appear in its profit and loss account and balance sheet for the various years.

Solution

(i) Calculation of Annual Lease Payment*

	₹
Cost of the equipment	1,50,000
Unguaranteed Residual Value	20,000
PV of residual value for 3 years @ 10% (₹ 20,000 x 0.751)	15,020
Fair value to be recovered from Lease Payment(₹ 1,50,000 – ₹ 15,020)	1,34,980
PV Factor for 3 years @ 10%	2.487
Annual Lease Payment (₹ 1,34,980 / PV Factor for 3 years @ 10% i.e. 2.487)	54,275

*Annual lease payments are considered to be made at the end of each accounting year.

(ii) Unearned Financial Income

Total lease payments [₹ 54,275 x 3]	1,62,825
Add: Residual value	20,000
Gross Investments	1,82,825
Less: Present value of Investments (₹ 1,34,980 + ₹ 15,020)	1,50,000
Unearned Financial Income	32,825

(iii) Segregation of Finance Income

UNIT 19 : AS 20: EARNINGS PER SHARE

19.1 Introduction

AS 20 came into effect in respect of accounting period commenced on or after 1-4-2001 and is mandatory in nature. The objective of this standard is to describe principles for determination and presentation of earnings per share which will improve comparison of performance among different enterprises for the same period and among different accounting periods for the same enterprise.

Earnings per share (EPS) is a financial ratio indicating the amount of profit or loss for the period attributable to each equity share and AS 20 gives computational methodology for determination and presentation of basic and diluted earnings per share.This Statement should be applied by enterprises whose equity shares or potential equity shares are listed on a recognised stock exchange in India. An enterprise which has neither equity shares nor potential equity shares which are so listed but which discloses earnings per share should calculate and disclose earnings per share in accordance with this Statement.

Every company, which is required to give information under Schedule III to the Companies Act, 2013, should calculate and disclose earnings per share in accordance with AS 20, whether or not its equity shares or potential equity shares are listed on a recognised stock exchange in India.

19.2 Definition of the terms used in the Accounting Standard

An equity share is a share other than a preference share.

A preference share is a share carrying preferential rights to dividends and repayment of capital.

A financial instrument is any contract that gives rise to both a financial asset of one enterprise and a financial liability or equity shares of another enterprise.

For this purpose, a financial asset is any asset that is

a. Cash;

b. A contractual right to receive cash or another financial asset from another enterprise;

c. A contractual right to exchange financial instruments with another enterprise under conditions that are potentially favourable; or

d. An equity share of another enterprise.

A financial liability is any liability that is a contractual obligation to deliver cash or another financial asset to another enterprise or to exchange financial instruments with another enterprise under conditions that are potentially unfavourable.

A potential equity share is a financial instrument or other contract that entitles, or may entitle, its holder to equity shares.

Examples of potential equity shares are:

a. Debt instruments or preference shares, that are convertible into equity shares;

b. Share warrants;

c. Options including employee stock option plans under which employees of an enterprise are entitled to receive equity shares as part of their remuneration and other similar plans; and

d. Shares which would be issued upon the satisfaction of certain conditions resulting from contractual arrangements (contingently issuable shares), such as the acquisition of a business or other assets, or shares issuable under a loan contract upon default of payment of principal or interest, if the contract so provides.

Share warrants or options are financial instruments that give the holder the right to acquire equity shares.

19.3 Basic Earnings per Share

Basic earnings per share is calculated as

$$\frac{\text{Net profit (loss) attributable to equity shareholders}}{\text{Weighted average number of equity shares outstanding during the period}}$$

All items of income and expense which are recognised in a period, including tax expense and extraordinary items, are included in the determination of the net profit or loss for the period unless AS 5 requires or permits otherwise.

The amount of preference dividends and any attributable tax thereto for the period is deducted from the net profit for the period (or added to the net loss for the period) in order to calculate the net profit or loss for the period attributable to equity shareholders.

The amount of preference dividends for the period that is deducted from the net profit for the period is:

a. The amount of any preference dividends on non-cumulative preference shares provided for in respect of the period; and

b. The full amount of the required preference dividends for cumulative preference shares for the period, whether or not the dividends have been provided for. The amount of preference dividends for the period does not include the amount of any preference dividends for cumulative preference shares paid or declared during the current period in respect of previous periods.

If an enterprise has more than one class of equity shares, net profit or loss for the period is apportioned over the different classes of shares in accordance with their dividend rights.

The number of shares used in the denominator for basic EPS should be the weighted average number of equity shares outstanding during the period.

The weighted average number of equity shares outstanding during the period is the number of shares outstanding at the beginning of the period, adjusted by the number of equity shares bought back or issued during the period multiplied by a time-weighting factor.

The calculation is based on all shares outstanding during the period. Whether or not a particular class or tranche of shares ranked for dividends in respect of the period is irrelevant (except in the case of partly paid shares).

The time-weighting factor is:

$$\frac{\text{Numbers of days the shares are outstanding}}{\text{Number of days in the period}}$$

Although the Standard defines the time-weighting factor as being determined on a daily basis, it acknowledges that a reasonable approximation of the weighted average is adequate in many circumstances.

Depending on the relative size of share movements, this might, for example, be based on the number of months for which shares were outstanding.

Illustration 1

Date	*Particulars*	*Purchased*	*Sold*	*Balance*
1st January	*Balance at beginning of year*	*1,800*	*-*	*1,800*
31st May	*Issue of shares for cash*	*600*	*-*	*2,400*
1st November	*Buy Back of shares*	*-*	*300*	*2,100*

Calculate Weighted Number of Shares.

Solution

Computation of Weighted Average:

(1,800 x 5/12) + (2,400 x 5/12) + (2,100 x 2/12) = 2,100 shares.

The weighted average number of shares can alternatively be computed as follows:

(1,800 x12/12) + (600 x 7/12) - (300 x 2/12) = 2,100 shares

In most cases, shares are included in the weighted average number of shares from the date the consideration is receivable, for example:

a. Equity shares issued in exchange for cash are included when cash is receivable;

b. Equity shares issued as a result of the conversion of a debt instrument to equity shares are included as of the date of conversion;

c. Equity shares issued in lieu of interest or principal on other financial instruments are included as of the date interest ceases to accrue;

d. Equity shares issued in exchange for the settlement of a liability of the enterprise are included as of the date the settlement becomes effective;

e. Equity shares issued as consideration for the acquisition of an asset other than cash are included as of the date on which the acquisition is recognised; and

f. Equity shares issued for the rendering of services to the enterprise are included as the services are rendered.

In these and other cases, the timing of the inclusion of equity shares is determined by the specific terms and conditions attaching to their issue. Due consideration should be given to the substance of any contract associated with the issue.

Equity shares issued as part of the consideration in an **amalgamation in the nature of purchase** are included in the weighted average number of shares as of the date of the acquisition because the transferee incorporates the results of the operations of the transferor into its statement of profit and loss as from the date of acquisition. Equity shares issued as part of the consideration in an **amalgamation in the nature of merger** are included in the calculation of the weighted average number of shares from the beginning of the reporting period because the financial statements of the combined enterprise for the reporting period are prepared as if the combined entity had existed from the beginning of the reporting period. Therefore, the number of equity shares used for the calculation of basic earnings per share in an amalgamation in the nature of merger is the aggregate of the weighted average number of shares of the combined enterprises, adjusted to equivalent shares of the enterprise whose shares are outstanding after the amalgamation.

Partly paid equity shares are treated as a fraction of an equity share to the extent that they were entitled to participate in dividends relative to a fully paid equity share during the reporting period.

Where an enterprise has equity shares of **different nominal values** but with the same dividend rights, the number of equity shares is calculated by converting all such equity shares into equivalent number of shares of the same nominal value.

Equity shares which are issuable upon the satisfaction of certain conditions resulting from contractual arrangements (contingently issuable shares) are considered outstanding, and included in the computation of basic earnings per share from the date when all necessary conditions under the contract have been satisfied.

Equity shares may be issued, or the number of shares outstanding may be reduced, without a corresponding change in resources. Examples include:

a. A bonus issue;

b. A bonus element in any other issue, for example a bonus element in a rights issue to existing shareholders;

c. A share split; and

d. A reverse share split (consolidation of shares).

In case of a **bonus issue or a share split,** equity shares are issued to existing shareholders for no additional consideration. Therefore, the number of equity shares outstanding is increased without an increase in resources. The number of equity shares outstanding before the event is adjusted for the proportionate change in the number of equity shares outstanding as if the event had occurred at the beginning of the earliest period reported.

Illustration 2

Date	*Particulars*	*No. of Share*	*Face Value*	*Paid up Value*
1st January	*Balance at beginning of year*	*1,800*	*₹ 10*	*₹ 10*
31st October	*Issue of Shares*	*600*	*₹ 10*	*₹ 5*

Calculate Weighted Number of Shares.

Solution

Assuming that partly paid shares are entitled to participate in the dividend to the extent of amount paid, number of partly paid equity shares would be taken as 300 for the purpose of calculation of earnings per share.

Computation of weighted average would be as follows:

(1,800 x 12/12) + (300 x 2/12) = 1,850 shares.

In case of a bonus issue or a share split, equity shares are issued to existing shareholders for no additional consideration. Therefore, the number of equity shares outstanding is increased without an increase in resources. The number of equity shares outstanding before the event is adjusted for the proportionate change in the number of equity shares outstanding as if the event had occurred at the beginning of the earliest period reported.

Illustration 3

Net profit for the year 2016	*₹ 18,00,000*
Net profit for the year 2017	*₹ 60,00,000*
No. of equity shares outstanding until 30th September 2017	*20,00,000*

Bonus issue 1st October 2017 was 2 equity shares for each equity share outstanding at 30th September, 2017

Calculate Basic Earnings Per Share.

Solution

No. of Bonus Issue 20,00,000 x 2 = 40,00,000 shares

Earnings per share for the year 2017 $\frac{₹\ 60,00,000}{(20,00,000 + 40,00,000)} = ₹\ 1.00$

Adjusted earnings per share for the year 2016 $\frac{₹\ 18,00,000}{(20,00,000 + 40,00,000)} = ₹\ 0.30$

Since the bonus issue is an issue without consideration, the issue is treated as if it had occurred prior to the beginning of the year 2016, the earliest period reported.

In a **rights issue**, on the other hand, the exercise price is often less than the fair value of the shares. Therefore, a rights issue usually includes a bonus element. The number of equity shares to be used in calculating basic earnings per share for all periods prior to the rights issue is the number of equity shares outstanding prior to the issue, multiplied by the following adjustment factor:

$$\frac{\text{Fair value per share immediately prior to the exercise of rights}}{\text{Theoretical ex-rights fair value per share}}$$

The theoretical ex-rights fair value per share is calculated by adding the aggregate fair value of the shares immediately prior to the exercise of the rights to the proceeds from the exercise of the rights, and dividing by the number of shares outstanding after the exercise of the rights.

Illustration 4

Net profit for the year 2016	*₹ 11,00,000*
Net profit for the year 2017	*₹ 15,00,000*

No. of shares outstanding prior to rights issue *5,00,000 shares*

Rights issue price *₹ 15.00*

Last date to exercise rights *1st March 2017*

Rights issue is one new share for each five outstanding (i.e. 1,00,000 new shares)

Fair value of one equity share immediately prior to exercise of rights on 1st March 2017 was ₹ 21.00. Compute Basic Earnings Per Share.

Solution

$$\frac{\text{Fair value of shares immediately prior to exercise of rights} + \text{Total amount received from exercise}}{\text{Number of shares outstanding prior to exercise} + \text{Number of shares issued in the exercise}}$$

$$\frac{(₹\ 21.00 \times 5,00,000 \text{ shares}) + (₹\ 15.00 \times 1,00,000 \text{ Shares})}{5,00,000 \text{ Shares} + 1,00,000 \text{ Shares}}$$

Theoretical ex-rights fair value per share = ₹ 20.00

Computation of adjustment factor:

$$\frac{\text{Fair value per share prior to exercise of rights}}{\text{Theoretical ex-rights value per share}} \quad \frac{₹\ (21.00)}{₹\ (20.00)} = 1.05$$

Computation of earnings per share:

EPS for the year 2016 as originally reported: ₹ 11,00,000/5,00,000 shares = ₹ 2.20

EPS for the year 2016 restated for rights issue: ₹ 11,00,000/ (5,00,000 shares x 1.05) = ₹ 2.10

EPS for the year 2017 including effects of rights issue:

(5,00,000 x 1.05 x 2/12) + (6,00,000 x 10/12) = 5,87,500 shares

EPS = 15,00,000/5,87,500 = ₹ 2.55

19.4 Diluted Earnings Per Share

In calculating diluted earnings per share, effect is given to all dilutive potential equity shares that were outstanding during the period, that is:

a. The net profit for the period attributable to equity shares is:

   i. Increased by the amount of dividends recognised in the period in respect of the dilutive potential equity shares as adjusted for any attributable change in tax expense for the period;

   ii. Increased by the amount of interest recognised in the period in respect of the dilutive potential equity shares as adjusted for any attributable change in tax expense for the period; and

   iii. Adjusted for the after-tax amount of any other changes in expenses or income that would result from the conversion of the dilutive potential equity shares.

b. The weighted average number of equity shares outstanding during the period is increased by the weighted average number of additional equity shares which would have been outstanding assuming the conversion of all dilutive potential equity shares.

For the purpose of this Statement, share application money pending allotment or any advance share application money as at the balance sheet date, which is not statutorily required to be kept separately and is being utilised in the business of the enterprise, is treated in the same manner as dilutive potential equity shares for the purpose of calculation of diluted earnings per share.

After the potential equity shares are converted into equity shares, the dividends, interest and other expenses or income associated with those potential equity shares will no longer be incurred (or earned). Instead, the new equity shares will be entitled to participate in the net profit attributable to equity shareholders. Therefore, the net profit for the period attributable to equity shareholders calculated in Basic Earnings Per Share is increased by the amount of dividends, interest and other expenses that will be saved, and reduced by the amount of income that will cease to accrue, on the conversion of the dilutive potential equity shares into equity shares. The amounts of dividends, interest and other expenses or income are adjusted for any attributable taxes.

The number of equity shares which would be issued on the conversion of dilutive potential equity shares is determined from the terms of the potential equity shares. The computation assumes the most advantageous conversion rate or exercise price from the standpoint of the holder of the potential equity shares.

Equity shares which are issuable upon the satisfaction of certain conditions resulting from contractual arrangements (contingently issuable shares) are considered outstanding and included in the computation of both the basic earnings per share and diluted earnings per share from the date when the conditions under a contract are met. If the conditions have not been met, for computing the diluted earnings per share, contingently issuable shares are included as of the beginning of the period (or as of the date of the contingent share agreement, if later). The number of contingently issuable shares included in this case in computing the diluted earnings per share is based on the number of shares that would be issuable if the end of the reporting period was the end of the contingency period. Restatement is not permitted if the conditions are not met when the contingency period actually expires subsequent to the end of the reporting period. The provisions of this paragraph apply equally to potential equity shares that are issuable upon the satisfaction of certain conditions (contingently issuable potential equity shares).

Options and other share purchase arrangements are dilutive when they would result in the issue of equity shares for less than fair value. The amount of the dilution is fair value less the issue price. Therefore, in order to calculate diluted earnings per share, each such arrangement is treated as consisting of:

a. A contract to issue a certain number of equity shares at their average fair value during the period. The shares to be so issued are fairly priced and are assumed to be neither dilutive nor anti-dilutive. They are ignored in the computation of diluted earnings per share; and

b. A contract to issue the remaining equity shares for no consideration. Such equity shares generate no proceeds and have no effect on the net profit attributable to equity shares outstanding. Therefore, such shares are dilutive and are added to the number of equity shares outstanding in the computation of diluted earnings per share.

Potential equity shares are anti-dilutive when their conversion to equity shares would increase earnings per share from continuing ordinary activities or decrease loss per share from continuing ordinary activities. The effects of anti-dilutive potential equity shares are ignored in calculating diluted earnings per share.

In order to maximise the dilution of basic earnings per share, each issue or series of potential equity shares is considered in sequence from the most dilutive to the least dilutive. For the purpose of determining the sequence from most dilutive to least dilutive potential equity shares, the earnings per incremental potential equity share is calculated. Where the earnings per incremental share is the least, the potential equity share is considered most dilutive and vice-versa.

Illustration 5

Net profit for the current year	*₹ 1,00,00,000*
No. of equity shares outstanding	*50,00,000*
Basic earnings per share	*₹ 2.00*
No. of 12% convertible debentures of ₹ 100 each	*1,00,000*
Each debenture is convertible into 10 equity shares	
Interest expense for the current year	*₹ 12,00,000*
Tax relating to interest expense (30%)	*₹ 3,60,000*

Compute Diluted Earnings Per Share.

Solution

Adjusted net profit for the current year (1,00,00,000 + 12,00,000 – 3,60,000) = ₹ 1,08,40,000

No. of equity shares resulting from conversion of debentures: 10,00,000 Shares

No. of equity shares used to compute diluted EPS: (50,00,000 + 10,00,000) = 60,00,000 Shares

Diluted earnings per share: (1,08,40,000/60,00,000) = ₹ 1.81

19.5 Restatement

If the number of equity or potential equity shares outstanding increases as a result of a bonus issue or share split or decreases as a result of a reverse share split (consolidation of shares), the calculation of basic and diluted earnings per share should be adjusted for all the periods presented. If these changes occur after the balance sheet date but before the date on which the financial statements are approved by the board of directors, the per share calculations for those financial statements and any prior period financial statements presented should be based on the new number of shares. When per share calculations reflect such changes in the number of shares, that fact should be disclosed.

19.6 Presentation

An enterprise should present basic and diluted earnings per share on the face of the statement of profit and loss for each class of equity shares that has a different right to share in the net profit for the period. An enterprise should present basic and diluted earnings per share with equal prominence for all periods presented.

AS 20 requires an enterprise to present basic and diluted earnings per share, even if the amounts disclosed are negative (a loss per share).

19.7 Disclosure

An enterprise should disclose the following:

a. Where the statement of profit and loss includes extraordinary items (as defined is AS 5), basic and diluted EPS computed on the basis of earnings excluding extraordinary items (net of tax expense);

b. The amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to the net profit or loss for the period;

c. The weighted average number of equity shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other; and

d. The nominal value of shares along with the earnings per share figures.

If an enterprise discloses, in addition to basic and diluted earnings per share, per share amounts using a reported component of net profit other than net profit or loss for the period attributable to equity shareholders, such amounts should be calculated using the weighted average number of equity shares determined in accordance with this Statement. If a component of net profit is used which is not reported as a line item in the statement of profit and loss, a reconciliation should be provided between the component used and a line item which is reported in the statement of profit and loss. Basic and diluted per share amounts should be disclosed with equal prominence.

Illustration 6

Net profit for the year 2017	*₹ 12,00,000*
Weighted average number of equity shares outstanding during the year 2017	*5,00,000 shares*
Average fair value of one equity share during the year 2017	*₹ 20.00*
Weighted average number of shares under option during the year 2017	*1,00,000 shares*
Exercise price for shares under option during the year 2017	*₹ 15.00*

Compute Basic and Diluted Earnings Per Share.

Solution

Computation of earnings per share

	Earnings ₹	*Shares*	*Earnings/ Share* ₹
Net profit for the year 2017	12,00,000		
Weighted average no. of shares during year 2017		5,00,000	
Basic earnings per share			2.40
Number of shares under option		1,00,000	
Number of shares that would have been issued at fair value (100,000 x 15.00)/20.00	____	(75,000)	
Diluted earnings per share	12,00,000	5,25,000	2.29

Illustration 7

From the Books of Bharti Ltd., following information are available as on 1.4.2015 and 1.4.2016:

(1)	*Equity Shares of ₹ 10 each*	*1,00,000*
(2)	*Partly paid Equity Shares of ₹ 10 each ₹ 5 paid*	*1,00,000*
(3)	*Options outstanding at an exercise price of ₹ 60 for one equity share ₹ 10 each. Average Fair Value of equity share during both years ₹ 75*	*10,000*
(4)	*10% convertible preference shares of ₹ 100 each. Conversion ratio 2 equity shares for each preference share*	*80,000*
(5)	*12% convertible debentures of ₹ 100. Conversion ratio 4 equity shares for each debenture*	*10,000*
(6)	*10% dividend tax is payable for the years ending 31.3.2017 and 31.3.2016.*	
(7)	*On 1.10.2016 the partly paid shares were fully paid up*	
(8)	*On 1.1.2017 the company issued 1 bonus share for 8 shares held on that date.*	

Net profit attributable to the equity shareholders for the years ending 31.3.2017 and 31.3.2016 were ₹ 10,00,000. Assume Tax rate at 30% for both the years.

Calculate:

(i) *Earnings per share for years ending 31.3.2017 and 31.3.2016.*

(ii) *Diluted earnings per share for years ending 31.3.2017 and 31.3.2016.*

(iii) *Adjusted earnings per share and diluted EPS for the year ending 31.3.2016, assuming the same information for previous year, also assume that partly paid shares are eligible for proportionate dividend only.*

Solution

(i) **Earnings per share**

	Year ended 31.3.2017	*Year ended 31.3.2016*
Net profit attributable to equity shareholders	₹ 10,00,000	₹ 10,00,000
Weighted average number of equity shares [(W.N. 1) – without considering bonus issue for the year ended 31.3.2017]	2,00,000	1,50,000
Earnings per share	₹ 5	₹ 6.667

(ii) **Diluted earnings per share**

Options are most dilutive as their earnings per incremental share is nil. Hence, for the purpose of computation of diluted earnings per share, options will be considered first. 12% convertible debentures being second most dilutive will be considered next and thereafter convertible preference shares will be considered (as per W.N. 2).

Year ended 31.3.2017 *Year ended 31.3.2016*

	Net profit attributable to equity shareholders ₹	*No. of equity shares*	*Net Profit attributable per share ₹*	No. of equity shares *(without considering bonus issue)*	*Net Profit attributable per share ₹*
As reported (for years ended 31.3.2017 and 31.3.2016)	10,00,000	2,00,000	5	1,50,000	6.667
Options		2,000		2,000	
	10,00,000	2,02,000	4.95 Dilutive	1,52,000	6.579 Dilutive
12% Convertible debentures	84,000	40,000		40,000	
	10,84,000	2,42,000	4.48 Dilutive	1,92,000	5.646 Dilutive
10% Convertible Preference Shares	8,80,000	1,60,000		1,60,000	
	19,64,000	4,02,000	4.886 Anti-Dilutive	3,52,000	5.58 Dilutive

Since diluted earnings per share is increased when taking the convertible preference shares into account (₹ 4.48 to ₹ 4.886), the convertible preference shares are anti-dilutive and are ignored in the calculation of diluted earnings per share for the year ended 31.3.2017. Therefore, diluted earnings per share for the year ended 31st March, 2017 is ₹ 4.48.

For the year ended 31st March, 2016, Options, 12% Convertible debentures and Convertible preference shares will be considered dilutive and diluted earnings per share will be taken as ₹ 5.58.

	Year ended 31.3.2017	*Year ended 31.3.2016*
Diluted earnings per Share	4.48	5.58

(iii) **Adjusted earnings per share and diluted earnings per share for the year ending 31.3.2016**.

Net profit attributable to equity shareholders	₹ 10,00,000
Weighted average number of equity shares [(W.N. 1) – considering bonus issue]	1,75,000
Adjusted earnings per share	₹ 5.714

Calculation of adjusted diluted earnings per share

	Net profit attributable to equity shareholders ₹	*No. of equity shares (after considering bonus issue)*	*Net profit attributable per share* ₹
As reported	10,00,000	1,75,000	5.714
Options		2,000	
	10,00,000	1,77,000	5.65 Dilutive
12% Convertible Debentures	84,000	40,000	
	10,84,000	2,17,000	4.995 Dilutive
10% Convertible Preference Shares	8,80,000	1,60,000	
	19,64,000	3,77,000	5.21 Anti –Dilutive

Since diluted earnings per share is increased when taking the convertible preference shares into account (from ₹ 4.995 to ₹ 5.21), the convertible preference shares are anti-dilutive and are ignored in the calculation of diluted earnings per share. Therefore, adjusted diluted earnings per share for year ended 31.3.2016 is ₹ 4.995.

Adjusted diluted earnings per share ₹ 4.995

Working Notes:

1. **Weighted average number of equity shares**

		31.3.2017 No. of Shares	*31.3.2016 No. of Shares*
(a)	Fully paid equity shares	1,00,000	1,00,000
(b)	Partly paid equity shares*		50,000
	Partly paid equity shares	25,000	
	Fully paid equity shares	50,000	
	(Partly paid shares converted into fully paid up on 1.10.2016)		

(c)	Bonus Shares**	25,000	
	Weighted average number of equity shares	2,00,000	1,50,000
	(without considering bonus issue for year ended 31.3.2016)		
	Bonus Shares		25,000
	Weighted average number of equity shares (after considering bonus issue for year ended 31.3.2016)		1,75,000

*Since partly paid equity shares are entitled to participate in dividend to the extent of amount paid, 1,00,000 equity shares of ₹ 10 each, ₹ 5 paid up will be considered as 50,000 equity shares for the year ended 31st March, 2016.

On 1st October, 2016 the partly paid shares were converted into fully paid up. Thus, the weighted average equity shares (for six months ended 30th September, 2016) will be calculated as

$$50,000 \times \frac{6}{12} = 25,000 \text{ shares}$$

Weighted average shares (for six months ended 31st March, 2017) will be calculated as

$$1,00,000 \times \frac{6}{12} = 50,000 \text{ shares}$$

**Total number of fully paid shares on 1st January, 2017

Fully paid shares on 1st April, 2016	1,00,000
Partly paid shares being made fully paid up on 1st October, 2016	1,00,000
	2,00,000

The company issued 1 bonus share for 8 shares held on 1st January, 2017.

Thus, 2,00,000/8 = 25,000 bonus shares will be issued.

Bonus is an issue without consideration, thus it will be treated as if it had occurred prior to the beginning of 1st April, 2015, the earliest period reported.

2. Increase in earnings attributable to equity shareholders on conversion of potential equity shares

	Increase in earnings *(1)*	*Increase in number of equity shares* *(2)*	*Earnings per incremental share* *(3) = (1) ÷ (2)*
	₹		₹
Options			
Increase in earnings	Nil		
No. of incremental shares issued for no consideration			
[10,000 × (75 – 60)/75]		2,000	Nil
Convertible Preference Shares			

Increase in net profit attributable to equity shareholders as adjusted by attributable dividend tax [(₹ 10 × 80,000) + 10% (₹ 10 × 80,000)]	8,80,000		
No. of incremental shares (2 × 80,000)		1,60,000	5.50
12% Convertible Debentures			
Increase in net profit [(₹ 10,00,000 × 0.12 × (1 – 0.30)]	84,000		
No. of incremental shares (10,000 × 4)		40,000	2.10

Note: Grossing up of preference share dividend has been ignored here.

Illustration 8

X Ltd. supplied the following information. You are required to compute the basic earnings per share:

(Accounting year 1.1.2016– 31.12.2016)		
Net Profit	*:*	*Year 2016: ₹ 20,00,000*
	:	*Year 2017 : ₹ 30,00,000*
No. of shares outstanding prior to Right Issue	*:*	*10,00,000 shares*
Right Issue	*:*	*One new share for each four outstanding i.e., 2,50,000 shares.*
		Right Issue price – ₹ 20
		Last date of exercise rights – 31.3.2017.
Fair rate of one Equity share immediately prior to exercise of rights on 31.3.2017	*:*	*₹ 25*

Solution

Computation of Basic Earnings Per Share
(as per paragraphs 10 and 26 of AS 20 on Earnings Per Share)

	Year 2016 ₹	*Year 2017 ₹*
EPS for the year 2016 as originally reported $\frac{\text{Net profit of the year attributable to equity shareholders}}{\text{Weighted average number of equity shares outstanding during the year}}$ = (₹ 20,00,000 / 10,00,000 shares)	2.00	

EPS for the year 2016 restated for rights issue = [₹ 20,00,000 / (10,00,000 shares × 1.04*)]	1.92 (approx.)	
EPS for the year 2017 including effects of rights issue $\frac{₹\ 30,00,000}{(10,00,000 \text{ shares} \times 1.04 \times 3/12) + (12,50,000 \text{ shares} \times 9/12)}$ $\frac{₹\ 30,00,000}{11,97,500 \text{ shares}}$		2.51 (approx.)

Working Notes:

1. Computation of theoretical ex-rights fair value per share

$$\frac{\text{Fair value of all outstanding shares immediately prior to exercise of rights} + \text{Total amount received from exercise}}{\text{Number of shares outstanding prior to exercise} + \text{Number of shares issued in the excercise}}$$

$$= \frac{(₹\ 25 \times 10,00,000 \text{ shares}) + (₹\ 20 \times 2,50,000 \text{ shares})}{10,00,000 \text{ shares} + 2,50,000 \text{ shares}} = \frac{₹\ 3,00,00,000}{12,50,000 \text{ shares}} = ₹\ 24$$

2. Computation of adjustment factor

$$= \frac{\text{Fair value per share prior to exercise of rights}}{\text{Theoretical ex-rights value per share}} = \frac{₹\ 25}{₹\ 24 \text{ (Refer Working Note 1)}} = 1.04 \text{ (approx.)}$$

UNIT 20: AS 21: CONSOLIDATED FINANCIAL STATEMENTS

20.1 Introduction

This Standard came into effect in respect of accounting periods commenced on or after 1-4-2001. AS 21 lays down principles and procedures for preparation and presentation of consolidated financial statements. Consolidated financial statements are presented by a parent (holding company) to provide financial information about the economic activities of the group as a single economic entity. A parent who presents consolidated financial statements should present their statements in accordance with this standard but in its separate financial statements, investments in subsidiaries should be accounted as per AS 13.

20.2 Objective

The objective of this Standard is to lay down principles and procedures for preparation and presentation of consolidated financial statements. Consolidated Financial Statement is prepared by the holding/parent company to provide financial information regarding the economic resources controlled by its group and results achieved with these resources. This consolidated financial statement is prepared by the parent company in addition to the financial statement prepared by the parent company for only its own affairs. Hence parent company prepares two financial statements, one for only its own affairs and one for taking the whole group as one unit in the form of consolidated financial statement. Consolidated financial statements usually comprise the following:

- Consolidated Balance Sheet
- Consolidated Profit & Loss Statement
- Notes to Accounts, other statements and explanatory material
- Consolidated Cash Flow Statement, if parent company presents its own cash flow statement.

While preparing the consolidated financial statement, all other ASs and Accounting Policies will be applicable as they are applied in parent company's own financial statement.

A parent which presents consolidated financial statements should consolidate all subsidiaries, domestic as well as foreign. Where an enterprise does not have a subsidiary but has an associate and/or a joint venture such an enterprise should also prepare consolidated financial statements in accordance with Accounting Standard (AS) 23, Accounting for Associates in Consolidated Financial Statements, and Accounting Standard (AS) 27, Financial Reporting of Interests in Joint Ventures respectively.

20.3 Scope

This standard applies to the financial statement prepared by the parent company including the financial information of all its subsidiaries taken as one single financial unit. One should refer to this AS for the investment in subsidiaries to be disclosed in the financial statement prepared by the parent company separately. But this standard does not deal with:

a. Methods of accounting for amalgamations and their effects on consolidation, including goodwill arising on amalgamation (AS 14).

b. Accounting for investments in associates (AS 13) and

c. Accounting for investments in joint ventures (AS 13).

20.4 Definitions of the Terms used in the Accounting Standard

A **subsidiary** is an enterprise that is controlled by another enterprise (known as the parent). A **parent** is an enterprise that has one or more subsidiaries.

A **group** is a parent and all its subsidiaries.

Equity is the residual interest in the assets of an enterprise after deducting all its liabilities. **Minority interest** is that part of the net results of operations and of the net assets of a subsidiary attributable to interests which are not owned, directly or indirectly through subsidiary(ies), by the parent.

Consolidated financial statements are the financial statements of a group presented as those of a single enterprise.

20.5 Circumstances under which Consolidated Financial Statements are Prepared

AS 21 should be applied in the preparation and presentation of consolidated financial statements for a group of enterprises under the control of a parent.

Consolidated financial statements are the financial statements of a group presented as those of a single enterprise.

AS 21 does not mandate which enterprises are required to prepare consolidated financial statements – but specifies the rules to be followed where such financial statements are prepared.

Consolidated Financial Statement will be prepared by the parent company for all the companies that are controlled by the parent company either directly or indirectly, situated in India or abroad except in the following cases:

a. Control is intended to be temporary because the subsidiary is acquired and held exclusively with a view to its subsequent disposal in the near future.

   In view of the above, merely holding all the shares as 'inventory-in-trade', is not sufficient to be considered as temporary control. It is only when all the shares held as 'inventory-in-trade' are acquired and held exclusively with a view to their subsequent disposal in the near future, that control would be considered to be temporary within the meaning of the paragraph.

The term 'Near Future' is a period not exceeding 12 months in normal case. For the above purpose, one should note the intention at the time of making the investment, if the intention is to continue with the equity for longer period then even though it is disposed off within 12 months, investee company would still be considered as subsidiary. On the other hand, if intention at the time of purchase is dispose it in near future, but the parent company was not able to dispose of the shares even after the end of 12 months, shares will continue to be considered as inventory.

b. Or subsidiary company operates under severe long-term restrictions, which significantly impair its ability to transfer funds to the parent.

When the parent company has some restrictions on bringing the resources of the subsidiary company to its main resources then consolidated financial statement is not required, as the control is not resulting in extra cash flow to parent company other than as mere investment in share of any other company i.e. dividend, bonus shares.

Therefore, in both the above cases, investment of parent company in the share of its subsidiary company is treated as investment according to AS 13.

Exclusion of subsidiary company will be only for any of the above reasons but a company cannot be treated as outside the group just because the main business of the subsidiary company is not in line with the business of parent company.

20.6 Subsidiaries with Dissimilar Activities

AS 21 states that it is inappropriate to exclude subsidiaries from consolidation on the ground that their business activities are substantially different from those of the parent and/or the rest of the group. As long as the parent retains control over such subsidiaries, they are required to be consolidated. Information regarding the different nature of the activities of a subsidiary can be appropriately disclosed by listed companies in accordance with AS 17 Segment Reporting.

20.7 Loss of Control

When a parent loses control, the investee no longer meets the definition of subsidiary, and so it is no longer consolidated.

Where a parent loses control over a subsidiary, the investment will be accounted for under AS 13 Accounting for Investments from the date of loss of control, provided that the investor does not retain significant influence (in which case the investment will be accounted for under AS 23)

20.8 Existence of Control

Control Exists when Parent Company has either:

a. The ownership, directly or indirectly through subsidiary(ies), of more than one-half of the voting power of an enterprise.

For example, A Ltd. holds 75% shares in B Ltd., then B Ltd. is subsidiary of A Ltd., in other words A Ltd. is the parent company.

If A Ltd. is holding 25% shares in C Ltd., then there is no holding-subsidiary relationship between them. But if along with A Ltd., B Ltd. also holds 30% shares in C Ltd., then A Ltd. holding in C Ltd. is 55%, though indirectly, and A Ltd. is parent company of both B Ltd. and C Ltd.

b. Or control of the composition of the board of directors in the case of a company or of the composition of the corresponding governing body in case of any other enterprise so as to obtain economic benefits from subsidiary company's activities.

Point to be noted here is that, the control over composition of board or governing body is for economic benefit. If any company is controlling the composition of governing body of gratuity trust, provident fund trust etc., since the objective is not the economic benefit and therefore it will not be included in consolidated financial statement.

An enterprise is considered to control the composition of the board of directors or governing body of a company, if it has the power, without the consent or concurrence of any other person, to appoint or remove all or a majority of directors of that company or members of the body.

An enterprise is deemed to have the power to appoint a director/member, if any of the following conditions is satisfied:

(i) A person cannot be appointed as director/member without the exercise in his favour by that enterprise of such a power as aforesaid; or

(ii) A person's appointment as director/member follows necessarily from his appointment to a position held by him in that enterprise; or

(iii) The director/member is nominated by that enterprise or a subsidiary thereof.

If A Ltd. is proved to be a subsidiary company of B Ltd. by virtue of point (a) and also a subsidiary of C Ltd. as per point (b), then the problem arises that which company is liable to prepare Consolidated Financial Statement taking A Ltd. as its subsidiary. For this purpose, both B Ltd. and C Ltd. will prepare such Consolidated Financial Statement, group being constituted of themselves and A Ltd.

In addition to the above points, one should also consider the following points:

Determination of control in any company or organization, does not depend only on the share in capital, many a times even when the share in capital is less than 50% but still we consider the parent-subsidiary relationship as the voting power granted under special circumstances is more than 50%.

For example, ICICI Bank advanced loan of ₹ 40 crores to A Ltd., whose share capital is ₹ 10 crores only. As per the loan agreement, in case company defaults to repay the principal or to pay the interest on due date three times, ICICI Bank will have right to participate in the decision making of the company and this right will come to an end with the repayment of the loan amount with all its interest. On happening of the event, ICICI Bank got the voting right in the company meetings (Board and AGM) and as its advances to company is 80% of shares plus advances, bank carry 80% voting right and we can say that there exists a parent-subsidiary relationship, where A Ltd. is subsidiary of ICICI Bank.

Control is said to come into existence from the date when the conditions of such control are satisfied. If company does have control over the function of another company but consolidated financial statement is not prepared for the reason that there is restriction of impairing the resources then later, on removal of such restriction control will be said to come into existence but not from the date of such removal but from the date when such investments led to control.

20.9 Consolidation Procedures

In preparing consolidated financial statements, the financial statements of the parent and its subsidiaries should be combined on a line-by-line basis by adding together like items of assets, liabilities, income and expenses and then certain adjustments are made.

The consolidation adjustments required will vary depending on the circumstances. The adjustments include (but are not restricted to);

- The elimination of the cost of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary;
- recognition of goodwill or capital reserve, depending on whether the cost of the parent's investment in each subsidiary is greater than or less than the parent's portion of equity of each subsidiary at the date on which investment in the subsidiary is made;
- the identification of the minority interest in the profit or loss of consolidated subsidiaries for the reporting period;
- the identification of the minority interest in the net assets of consolidated subsidiaries for the reporting period;
- the elimination of all intra-group balances and intra-group transactions, and the resulting unrealised profits and losses;
- adjustment of the consolidated results for dividends related to outstanding cumulative preference shares of a subsidiary that are held by minority interests regardless of whether the dividends have been declared.

20.10 Cost of Control

- ♦ The cost of investment of the parent in each of its subsidiaries and the parent's share in equity of each subsidiary should be eliminated. For the purpose equity and investment as on the date of each investment is taken.

- On the date of investment if the cost of investment to the parent is more than share of equity in that particular subsidiary, the difference is taken as Goodwill in the consolidated statement.
- On the date of investment if the cost of investment to the parent is less than share of equity in that particular subsidiary, the difference is taken as Capital Reserve in the consolidated statement.

20.11 Illustrations

Illustration 1

A Ltd. acquired 60% shares of B Ltd. @ ₹ 20 per share. Following are the extract of Balance Sheet of B Ltd.:

	₹
10,00,000 Equity Shares of ₹ 10 each	*1,00,00,000*
10% Debentures	*10,00,000*
Trade payables	*55,00,000*
Fixed Assets	*70,00,000*
Investments	*45,00,000*
Current Assets	*68,00,000*
Loans & Advances	*22,00,000*

On the same day B Ltd. declared dividend at 20% and as agreed between both the companies fixed assets were to be depreciated @ 10% and investment to be taken at market value of ₹ 60,00,000. Calculate the Goodwill or Capital Reserve to be recorded in Consolidated Financial Statement.

Solution

Calculation of Goodwill/Capital Reserve

Particulars	₹	₹
Fixed Assets	70,00,000	
Less: Value written off (70,00,000 x 10%)	(7,00,000)	63,00,000
Investments at Market value		60,00,000
Current Assets		68,00,000
Loans & Advances		22,00,000
Total Assets		2,13,00,000
Less: Total Liabilities: Trade payables	55,00,000	
10% Debentures	10,00,000	(65,00,000)
Equity		1,48,00,000
Majority Share in Equity (1,48,00,000 x 60%)		88,80,000

Less: Cost of Investment (10,00,000 x 60%) x 20	1,20,00,000	
Less: Dividend Received (6,00,000 x 2)	(12,00,000)	(1,08,00,000)
Goodwill		19,20,000

- Where the carrying amount of the investment in the subsidiary is different from its cost, the carrying amount is considered for the purpose of above computations.
- Goodwill and capital reserve of different subsidiaries can be adjusted to a net figure by the parent in consolidated financial statement.
- Goodwill of consolidated financial statement need not be written off to consolidated profit and loss account but test of impairment (Refer to AS 28) is made each time a consolidated financial statement is prepared.
- When share application money and allotment money is paid separately on different dates, then as per AS 21, date on which investment led to acquisition to control of subsidiary should be taken as date of investment, i.e., date of allotment.
- On the basis of above discussion, if control is gained in the subsidiary by a series of investments, then the date of the investment which led to holding-subsidiary relationship is taken into consideration and step by step calculations are made for each following investments.

Illustration 2

A Ltd. purchased 40% stake of B Ltd. for ₹ 12 per share. After two years A Ltd. decided to purchase another 40% share in B Ltd. B Ltd. has 1,00,00,000 equity shares of ₹ 10 each as fully paid up shares. The purchase deal was finalised on the following terms:

- *Purchase price per share to be calculated on the basis of average profit of last three years capitalised at 7.5%. Profits for last three years are ₹ 35 lacs, ₹ 65 lacs and ₹ 89 lacs.*
- *Total assets of B Ltd. of ₹ 11,50,00,000. Assets to be appreciated by ₹ 40,00,000.*
- *Of the External Trade payables for ₹ 2,50,00,000 one trade payable to whom ₹ 10,00,000 was due has expired and nothing is to be paid to settle this liability.*
- *B Ltd. will declare dividend @ 15%.*

Calculate the Goodwill or Capital Reserve for A Ltd. in Consolidated Financial Statement.

Solution

Calculation of Purchase Consideration

Particulars	₹
Profits for Last 3 years: First	89,00,000
Second	65,00,000
Third	35,00,000
Total profits for last 3 years	1,89,00,000
Average Profits (1,89,00,000/3)	63,00,000

Total value of B Ltd. (63,00,000/7.5%)	8,40,00,000
Number of Shares in B Ltd.	1,00,00,000
Value per Share	8.40
Purchase Consideration (1,00,00,000 x 40%) x 8.4	3,36,00,000

Calculation of Goodwill/Capital Reserve

Particulars	₹	₹
Fixed Assets	11,50,00,000	
Add: Appreciation in value of the asset	4,0,00,000	11,90,00,000
Less: Trade payables	2,50,00,000	
Less: Amount to be written off	(10,00,000)	(2,40,00,000)
Net Asset		9,50,00,000
Share in Net Asset (9,50,00,000 x 80%)		7,60,00,000
Less: Cost of Investment: Purchase Consideration	3,36,00,000	
Less: Dividend Received (10,00,00,000 x 40% x 15%)	(60,00,000)	
	2,76,00,000	
Add: Investment (1,00,00,000 x 40% x 12)	4,80,00,000	(7,56,00,000)
Capital Reserve		4,00,000

20.12 Minority Interest

- From the net income of the subsidiary, amount proportionate to minority interest is calculated and adjusted with the group income i.e. it is deducted from the profit & loss account balance and added to minority interest, so that the income of the group belonging to the parent is identified separately.
- Care should be taken to adjust for the cumulative preference dividend and profits belonging to the preference shares (if any) in the minority interest for the preference shares not held by the consolidated group. This adjustment should be made irrespective of whether or not dividends have been declared.
- Minority interests in the net assets of consolidated subsidiaries should be identified and presented in the consolidated balance sheet separately from liabilities and the equity of the parent's shareholders. Minority interests in the net assets consist of:
  (i) The amount of equity attributable to minorities at the date on which investment in a subsidiary is made and
  (ii) The minorities' share of movements in equity since the date the parent-subsidiary relationship came in existence.
- If carrying amount and cost of investment are different, carrying amount is considered for the purpose.

Illustration 3

Following are the Balance Sheet of A Ltd. and B Ltd.

	₹ '000			₹ '000	
Liabilities	*A Ltd.*	*B Ltd.*	*Assets*	*A Ltd.*	*B Ltd.*
Equity Shares	*6,000*	*5,000*	*Goodwill*	*100*	*20*
6% Preference shares	*-*	*1,000*	*Fixed Assets*	*3,850*	*2,750*
General Reserve	*1,200*	*800*	*Investment*	*1,620*	*1,100*
Profit & Loss Account	*1,020*	*1,790*	*Inventory*	*1,900*	*4,150*
Trade payables	*3,850*	*3,410*	*Trade receivables*	*4,600*	*4,080*
Dividend payable	*600*	*500*	*Cash & Bank*	*600*	*400*
	12,670	*12,500*		*12,670*	*12,500*

A Ltd. purchased 3/4th interest in B Ltd. at the beginning of the year at the premium of 25%. Following are the other information available:

a. *Profit & Loss Account of B Ltd. includes ₹ 1,000 thousands bought forward from the previous year.*

b. *The directors of both the companies have declared a dividend of 10% on equity share capital for the previous and current year.*

From the above information calculate Pre and Post Acquisition Profits, Minority Interest and Cost of Control.

Solution

Calculation of Pre and Post Acquisition Profits

Particulars	*Pre-acquisition Profits*	(₹) *Post-acquisition Profits*
Profit & Loss Account	10,00,000	7,90,000
General Reserve	800,000	-
	18,00,000	7,90,000
Less: Minority Interest (1800/4)	(4,50,000)	
(790/4)		(1,97,500)
Consolidated Balance Sheet	13,50,000	5,92,500

Calculation of Minority Interest

Particulars	₹
Paid up Equity Share Capital (50,00,000/4)	12,50,000
Paid up Preference Share Capital	10,00,000

Pre-acquisition Profits	4,50,000
Post-acquisition Profits	1,97,500
Minority Interest	28,97,500

Calculation of Goodwill/Capital Reserve

Particulars	₹	₹
Cost of Investment in Subsidiary (50,00,000 x 75% x 125%)	46,87,500	
Less: Dividend Received (50,00,000 x 75% x 10%)	(3,75,000)	43,12,500
Less: Paid up Capital	37,50,000	
Pre-acquisition Profits	13,50,000	(51,00,000)
Capital Reserve		7,87,500

- The losses applicable to the minority are deducted from the minority interest unless minority interest is nil. Any further loss is adjusted with the consolidated group interest except to the extent that the minority has a binding obligation to, and can make the losses good. Subsequently, when the subsidiary makes profits, minority share in profits is added to majority share to the extent minority interest losses were absorbed by majority share.

  For example, 25% minority interest has the share in net equity ₹ 40 lacs and company made cumulative losses since the date of investment ₹ 200 lacs. 25% of ₹ 200 lacs i.e., ₹ 50 lacs is minority share in losses. Losses upto ₹ 40 lacs will be adjusted with the minority interest and further loss of ₹ 10 lacs will be adjusted with the majority interest. Hence in the Consolidated Balance Sheet for the relevant year, minority interest on the liabilities side will be NIL.

  In the next year, if subsidiary company makes a profit say, ₹ 60 lacs. Minority interest comes to ₹ 15 lacs, out of these 15 lacs, first ₹ 10 lacs will be added to majority interest as recovery of losses absorbed in past and balance ₹ 5 lacs will appear in Consolidated Balance Sheet as part of the Minority Interest.

20.13 Other Points

General rules: In order to present financial statements for the group in a consolidated format, the effect of transactions between group enterprises should be eliminated. AS 21 requires that intra-group transactions (including sales, expenses and dividends) and the resulting unrealised profits and losses be eliminated in full.

Liabilities due to one group enterprise by another will be set off against the corresponding asset in the other group enterprise's financial statements; sales made by one group enterprise to another should be excluded both from turnover and from cost of sales or the appropriate expense heading in the consolidated statement of profit and loss.

To the extent that the buying enterprise has further sold the goods in question to a third party, the eliminations to sales and cost of sales are all that is required, and no adjustments to consolidated profit or loss for the period, or to net assets, are needed. However, to the extent that the goods in question are still on hand at year end, they may be carried at an amount that is in excess of cost to the group and the amount of the intra-group profit must be eliminated, and assets reduced to cost to the group.

For transactions between group enterprises, unrealised profits resulting from intra-group transactions that are included in the carrying amount of assets, such as inventories and tangible fixed assets, are eliminated in full. The requirement to eliminate such profits in full applies to the transactions of all subsidiaries that are consolidated – even those in which the group's interest is less than 100%.

Unrealised profit in inventories: Where a group enterprise sells goods to another, the selling enterprise, as a separate legal enterprise, records profits made on those sales. If these goods are still held in inventory by the buying enterprise at the year end, however, the profit recorded by the selling enterprise, when viewed from the standpoint of the group as a whole, has not yet been earned, and will not be earned until the goods are eventually sold outside the group. On consolidation, the unrealised profit on closing inventories will be eliminated from the group's profit, and the closing inventories of the group will be recorded at cost to the group.

When the goods are sold by a parent to a subsidiary (downstream transaction), all of the profit on the transaction is eliminated, irrespective of the percentage of the shares held by the parent. In other words, the group is not permitted to take credit for the share of profit that is attributable to any minority.

Where the goods are sold by a subsidiary, in which there is a minority interest, to another group enterprise (upstream transaction), the whole of the unrealised profit should also be eliminated.

Unrealised profit on transfer or non-current assets

- Similar to the treatment described above for unrealised profits in inventories, unrealised inter-company profits arising from intra-group transfers of fixed assets are also eliminated from the consolidated financial statements. **Intra Group Transactions:** The effect of any unrealised profits from intra-group transactions should be eliminated from consolidated financial statement. Effect of losses from intra-group transactions need not be eliminated only when the cost is not recoverable.

  For example, A Ltd. sold goods for ₹ 1,25,000 to B Ltd., another subsidiary under same group at the gross profit of 20% on sales. On the date of consolidated balance sheet, B Ltd. has goods worth ₹ 25,000 as inventory from the same consignment. The unrealised profits of ₹ 5,000 (25,0000 x 20%) will be deducted from the closing inventory and it will be valued as ₹ 20,000 i.e. at cost to A Ltd. for the purpose of Consolidated Financial Statement.

- **Reporting Date:** For the purposes of preparing consolidated financial statements, the financial statements of all subsidiaries should, wherever practicable, be prepared:
  - To the same reporting date; and
  - For the same reporting period as of the parent.

- If practically it is not possible to draw up the financial statements of one or more subsidiaries to such date and, accordingly, those financial statements are drawn up to reporting dates different from the reporting date of the parent, adjustments should be made for the effects of significant transactions or other events that occur between those dates and the date of the parent's financial statements. In any case, the difference between reporting dates should not be more than six months.
- **Accounting Policies:** Accounting policies followed in the preparation of the financial statements of the parent, subsidiaries and consolidated financial statement should be uniform for like transactions and other events in similar circumstances.

  If accounting policies followed by different companies in the group are not uniform, then adjustments should be made in the items of the subsidiaries to bring them in line with the accounting policy of the parent. Here we will not disturb the figures or policies in respective books, but while including the items in consolidated financial statement, adequate adjustments will be made.

  For example, parent company A Ltd. is valuing the inventory on weighted average basis and its inventory is valued as ₹ 100 lacs but its subsidiary B Ltd. is following FIFO method and its inventory is valued at ₹ 20 Lacs. Inventory of B Ltd. will be valued under weighted average method say, ₹ 25 lacs. Now for the purpose of consolidated financial statement, inventory of B Ltd. will be taken as ₹ 25 lacs and the inventory disclosed in consolidated trading account on credit side and in consolidated balance sheet assets side will be ₹ 125 lacs. Hence adequate adjustments are made for this ₹ 5 lac in consolidated financial statement.

  If it is not practical to make such adjustments for uniform accounting policies in preparing the consolidated financial statements, then the fact should be disclosed together with the amounts of each items in the consolidated financial statement to which the different accounting policies have been applied.

  Let us take above example, in case it is not possible practically to adjust ₹ 5 lacs in the inventory of B Ltd. for the purpose of consolidated financial statement, then item will be disclosed in Consolidated Trading Account (Credit Side) and Consolidated Balance Sheet (Asset Side) as follow:

Closing Inventory of A Ltd. (Weighted Average Method)	100 lacs	
Closing Inventory of B Ltd. (FIFO Method)	20 lacs	120 lacs

20.14 Disposal of Holding

The results of operations of a subsidiary are included in the consolidated financial statement as from the date on which parent-subsidiary relationship comes into existence and are included in the consolidated statement of profit and loss until the date of cessation of the relationship. On disposal of the investment, consolidated profit and loss account will include the transactions till the date the parent-subsidiary relationship ceases to exist. The difference between the proceeds from the disposal of investment and the parent's share in the net asset of the subsidiary on the basis of the carrying amount, on the date of disposal is recorded in the consolidated profit and loss account. While calculating the share of parent in the net asset of the subsidiary on the date of disposal, adjustment is made for the minority interest calculated as above.

In order to ensure the comparability of the financial statements from one accounting period to the next, supplementary information is often provided about the effect of the acquisition and disposal of subsidiaries on the financial position at the reporting date and the results for the reporting period and on the corresponding amounts for the preceding period. The carrying amount of the investment at the date that it ceases to be a subsidiary is regarded as cost thereafter.

Investment in the subsidiary, in the separate financial statement of the parent is recorded according to the provisions of AS 13.

Illustration 4

A Ltd. had acquired 80% share in the B Ltd. for ₹ 25 lacs. The net assets of B Ltd. on the day are ₹ 22 lacs. During the year A Ltd. sold the investment for ₹ 30 lacs and net assets of B Ltd. on the date of disposal was ₹ 35 lacs. Calculate the profit or loss on disposal of this investment to be recognised in consolidated financial statement.

Solution

Calculation of Profit/Loss on disposal of investment in subsidiary

Particulars	₹	₹
Net Assets of B Ltd. on the date of disposal		35,00,000
Less: Minority Interest (35 lacs x 20%)		(7,00,000)
A Ltd.'s Share in Net Assets		28,00,000
Proceeds from the sale of Investment		30,00,000
Less: A Ltd.'s share in net assets		(28,00,000)
		2,00,000
Less: Goodwill in the Consolidated Financial Statement		
Cost of investment	25,00,000	
Less: A Ltd.'s Share in net asset on the date (22 lacs x 80%)	(17,60,000)	(7,40,000)
Loss on sale of investment		5,40,000

Illustration 5

A Ltd. had acquired 80% share in the B Ltd. for ₹ 15 lacs. The net assets of B Ltd. on the day are ₹ 22 lacs. During the year A Ltd. sold the investment for ₹ 30 lacs and net assets of B Ltd. on the date of disposal was ₹ 35 lacs. Calculate the profit or loss on disposal of this investment to be recognised in consolidated financial statement.

Solution

Calculation of Profit/Loss on disposal of investment in subsidiary

Particulars	₹	₹
Net Assets of B Ltd. on the date of disposal		35,00,000
Less: Minority Interest (35 lacs x 20%)		(7,00,000)
A Ltd.'s Share in Net Assets		28,00,000
Proceeds from the sale of Investment		30,00,000
Less: A Ltd.'s share in net assets		28,00,000
		2,00,000
Add:: Capital Reserve in the Consolidated Financial Statement		
A Ltd.'s Share in net asset on the date (22 lacs x 80%)	17,60,000	
Less: Cost of investment	(15,00,000)	2,60,000
Profit on sale of investment		4,60,000

20.15 Disclosure

In addition to disclosures required by paragraph 11 and 20, following disclosures should be made:

a. In the consolidated financial statement, a list of all subsidiaries including the name, country of incorporation or residence, proportion of ownership interest and, if different, proportion of voting power held;

b. In consolidated financial statements, where applicable:

   (i) The nature of the relationship between the parent and a subsidiary, if the parent does not own, directly or indirectly through subsidiaries, more than one-half of the voting power of the subsidiary;

   (ii) The effect of the acquisition and disposal of subsidiaries on the financial position at the reporting date, the results for the reporting period and on the corresponding amounts for the preceding period; and

   (iii) The names of the subsidiary(ies) of which reporting date(s) is/are different from that of the parent and the difference in reporting dates.

20.16 Transitional Provisions

On the first occasion that consolidated financial statements are presented, comparative figures for the previous period need not be presented. In all subsequent years full comparative figures for the previous period should be presented in the consolidated financial statements.

20.17 Accounting for Taxes on Income in the Consolidated Financial Statements

While preparing consolidated financial statements, the tax expense to be shown in the consolidated financial statements should be the aggregate of the amounts of tax expense appearing in the separate financial statements of the parent and its subsidiaries.

The amounts of tax expense appearing in the separate financial statements of a parent and its subsidiaries do not require any adjustment for the purpose of consolidated financial statements. In view of this, while preparing consolidated financial statements, the tax expense to be shown in the consolidated financial statements is the aggregate of the amounts of tax expense appearing in the separate financial statements of the parent and its subsidiaries.

Reference: The students are advised to refer the full text of AS 21 "Consolidated Financial Statements" (issued 2001).

UNIT 21 : AS 22: ACCOUNTING FOR TAXES ON INCOME

21.1 Introduction

AS 22 was issued in 2001 and is mandatory in nature for:

a. All the accounting periods commenced on or after 01.04.2001, in respect of the following:

   (i) Enterprises whose equity or debt securities are listed on a recognised stock exchange in India and enterprises that are in the process of issuing equity or debt securities that will be listed on a recognised stock exchange in India as evidenced by the board of directors' resolution in this regard.

   (ii) All the enterprises of a group, if the parent presents consolidated financial statements and the Accounting Standard is mandatory in nature in respect of any of the enterprises of that group in terms of (i) above.

b. All the accounting periods commenced on or after 01.04.2002, in respect of companies not covered by (a) above.

c. All the accounting periods commenced on or after 01.04.2003, in respect of all other enterprises.

This standard prescribes the accounting treatment of taxes on income and follows the concept of matching expenses against revenue for the period. The concept of matching is more peculiar in cases of income taxes since in a number of cases, the taxable income may be significantly different from the income reported in the financial statements due to the difference in treatment of certain items under taxation laws and the way it is reflected in accounts.

21.2 Need

Matching of such taxes against revenue for a period poses special problems arising from the fact that in a number of cases, taxable income may be significantly different from the accounting income. This divergence between taxable income and accounting income arises due to two main reasons.

Firstly, there are differences between items of revenue and expenses as appearing in the statement of profit and loss and the items which are considered as revenue, expenses or deductions for tax purposes, known as Permanent Difference.

Secondly, there are differences between the amount in respect of a particular item of revenue or expense as recognised in the statement of profit and loss and the corresponding amount which is recognised for the computation of taxable income, known as Time Difference.

21.3 Definitions

Accounting income (loss) is the net profit or loss for a period, as reported in the statement of profit and loss, before deducting income-tax expense or adding income tax saving.

Taxable income (tax loss) is the amount of the income (loss) for a period, determined in accordance with the tax laws, based upon which income-tax payable (recoverable) is determined.

Tax expense (tax saving) is the aggregate of current tax and deferred tax charged or credited to the statement of profit and loss for the period.

Current tax is the amount of income tax determined to be payable (recoverable) in respect of the taxable income (tax loss) for a period.

Deferred tax is the tax effect of timing differences.

The differences between taxable income and accounting income can be classified into permanent differences and timing differences.

Timing differences are the differences between taxable income and accounting income for a period that originate in one period and are capable of reversal in one or more subsequent periods.

Permanent differences are the differences between taxable income and accounting income for a period that originate in one period and do not reverse subsequently.

21.4 Recognition

Tax expense for the period, comprising current tax and deferred tax, should be included in the determination of the net profit or loss for the period.

Permanent differences do not result in deferred tax assets or deferred tax liabilities. Taxes on income are considered to be an expense incurred by the enterprise in earning income and are accrued in the same period as the revenue and expenses to which they relate. Such matching may result into timing differences. The tax effects of timing differences are included in the tax expense in the statement of profit and loss and as deferred tax assets or as deferred tax liabilities, in the balance sheet.

While recognising the tax effect of timing differences, consideration of prudence cannot be ignored. Therefore, deferred tax assets are recognised and carried forward only to the extent that there is a reasonable certainty of their realisation. This reasonable level of certainty would normally be achieved by examining the past record of the enterprise and by making realistic estimates of profits for the future. Where an enterprise has unabsorbed depreciation or carry forward of losses under tax laws, deferred tax assets should be recognised only to the extent that there is virtual certainty supported by convincing evidence that sufficient future taxable income will be available against which such deferred tax assets can be realised.

21.5 Re-assessment of Unrecognised Deferred Tax Assets

At each balance sheet date, an enterprise re-assesses unrecognised deferred tax assets. The enterprise recognises previously unrecognised deferred tax assets to the extent that it has become reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which such deferred tax assets can be realised.

21.6 Measurement

Current tax should be measured at the amount expected to be paid to (recovered from) the taxation authorities, using the applicable tax rates and tax laws. Deferred tax assets and liabilities are usually measured using the tax rates and tax laws that have been enacted. However, certain announcements of tax rates and tax laws by the government may have the substantive effect of actual enactment. In these circumstances, deferred tax assets and liabilities are measured using such announced tax rate and tax laws. Deferred tax assets and liabilities should not be discounted to their present value.

21.7 Review of Deferred Tax Assets

The carrying amount of deferred tax assets should be reviewed at each balance sheet date. An enterprise should write-down the carrying amount of a deferred tax asset to the extent that it is no longer reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available against which deferred tax asset can be realised. Any such write-down may be reversed to the extent that it becomes reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available.

21.8 Disclosure

Statement of profit and loss

Under AS 22, there is no specific requirement to disclose current tax and deferred tax in the statement of profit and loss. However, under company law requirements, the amount of Indian income tax and other Indian taxation on profits, including, wherever practicable, with Indian income tax any taxation imposed elsewhere to the extent of the relief, if any, from Indian income tax and distinguishing, wherever practicable, between income tax and other taxation should be disclosed.

AS 22 does not require any reconciliation between accounting profit and the tax expense.

Balance sheet

The break-up of deferred tax assets and deferred tax liabilities into major components of the respective balance should be disclosed in the notes to accounts.

Deferred tax assets and liabilities should be distinguished from assets and liabilities representing current tax for the period. Deferred tax assets and liabilities should be disclosed under a separate heading in the balance sheet of the enterprise, separately from current assets and current liabilities. The break-up of deferred tax assets and deferred tax liabilities into major components of the respective balances should be disclosed in the notes to accounts.

The nature of the evidence supporting the recognition of deferred tax assets should be disclosed, if an enterprise has unabsorbed depreciation or carry forward of losses under tax laws.

An enterprise should offset assets and liabilities representing current tax if the enterprise:

a. Has a legally enforceable right to set off the recognised amounts and

b. Intends to settle the asset and the liability on a net basis.

An enterprise should offset deferred tax assets and deferred tax liabilities if:

a. The enterprise has a legally enforceable right to set off assets against liabilities representing current tax; and

b. The deferred tax assets and the deferred tax liabilities relate to taxes on income levied by the same governing taxation laws.

21.9 Transitional Provision

On the first occasion that the taxes on income are accounted for in accordance with this Statement, the enterprise should recognise, in the financial statements, the deferred tax balance that has accumulated prior to the adoption of this Statement as deferred tax asset/liability with a corresponding credit/charge to the revenue reserves, subject to the consideration of prudence in case of deferred tax assets (see paragraphs 15-18). The amount so credited/charged to the revenue reserves should be the same as that which would have resulted if this Statement had been in effect from the beginning.

The Background material on AS 22 further clarifies that in case an enterprise does not have adequate revenue reserves to adjust the accumulated balance of deferred tax liability, it should be adjusted to the extent not adjusted against revenue reserves, against opening balance of profit and loss account. Where the opening balance of profit and loss is also inadequate, it should be shown, to the extent not adjusted, as 'Debit balance in Profit and Loss Account' on the asset side of the balance sheet. The accumulated deferred tax liability cannot be adjusted against securities premium.

21.10 Relevant Explanations to AS 22

Accounting for Taxes on Income in the situations of Tax Holiday under sections 80-IA and 80-IB of the Income Tax Act, 1961

The deferred tax in respect of timing differences which reverse during the tax holiday period should not be recognised to the extent the enterprise's gross total income is subject to the deduction during the tax holiday period as per the requirements of the Act. Deferred tax in respect of timing differences which reverse after the tax holiday period should be recognised in the year in which the timing differences originate. However, recognition of deferred tax assets should be subject to the consideration of prudence as laid down in AS 22.

For the above purposes, the timing differences which originate first should be considered to reverse first.

Accounting for Taxes on Income in the situations of Tax Holiday under sections 10A and 10B of the Income Tax Act, 1961

The deferred tax in respect of timing differences which originate during the tax holiday period and reverse during the tax holiday period, should not be recognised to the extent deduction from the total income of an enterprise is allowed during the tax holiday period as per the provisions of sections 10A and 10B of the Act. Deferred tax in respect of timing differences which originate during the tax holiday period but reverse after the tax holiday period should be recognised in the year in which the timing differences originate. However, recognition of deferred tax assets should be subject to the consideration of prudence as laid down in AS 22.

For the above purposes, the timing differences which originate first should be considered to reverse first.

Accounting for Taxes on Income in the context of section 115JB of the Income Tax Act, 1961

The payment of tax under section 115JB of the Act is a current tax for the period. In a period in which a company pays tax under section 115JB of the Act, the deferred tax assets and liabilities in respect of timing differences arising during the period, tax effect of which is required to be recognised under AS 22, should be measured using the regular tax rates and not the tax rate under section 115JB of the Act. In case an enterprise expects that the timing differences arising in the current period would reverse in a period in which it may pay tax under section 115JB of the Act, the deferred tax assets and liabilities in respect of timing differences arising during the current period, tax effect of which is required to be recognised under AS 22, should be measured using the regular tax rates and not the tax rate under section 115JB of the Act.

Virtual certainty supported by convincing evidence

Determination of virtual certainty that sufficient future taxable income will be available is a matter of judgement and will have to be evaluated on a case to case basis. Virtual certainty refers to the extent of certainty, which, for all practical purposes, can be considered certain. Virtual certainty cannot be based merely on forecasts of performance such as business plans. Virtual certainty is not a matter of perception and it should be supported by convincing evidence. Evidence is a matter of fact. To be convincing, the evidence should be available at the reporting date in a concrete form, for example, a profitable binding export order, cancellation of which will result in payment of heavy damages by the defaulting party. On the other hand, a projection of the future profits made by an enterprise based on the future capital expenditures or future restructuring etc., submitted even to an outside agency, e.g., to a credit agency for obtaining loans and accepted by that agency cannot, in isolation, be considered as convincing evidence.

21.11 Miscellaneous Illustrations

Illustration 1

From the following details of A Ltd. for the year ended 31-03-2017, calculate the deferred tax asset/ liability as per AS 22 and amount of tax to be debited to the Profit and Loss Account for the year.

Particulars	*₹*
Accounting Profit	*6,00,000*
Book Profit as per MAT	*3,50,000*

Profit as per Income Tax Act	*60,000*
Tax rate	*20%*
MAT rate	*7.50%*

Solution

Tax as per accounting profit 6,00,000×20%= ₹ 1,20,000

Tax as per Income-tax Profit 60,000×20% =₹ 12,000

Tax as per MAT 3,50,000×7.50%= ₹ 26,250

Tax expense= Current Tax +Deferred Tax

₹ 1,20,000 = ₹ 12,000+ Deferred tax

Therefore, Deferred Tax liability as on 31-03-201

= ₹ 1,20,000 – ₹ 12,000 = ₹ 1,08,000

Amount of tax to be debited in Profit and Loss account for the year 31-03-2017

Current Tax + Deferred Tax liability + Excess of MAT over current tax

= ₹ 12,000 + ₹ 1,08,000 + ₹ 14,250

= ₹ 1,34,250

Illustration 2

Ultra Ltd. has provided the following information.

Depreciation as per accounting records =₹ 2,00,000

Depreciation as per tax records =₹ 5,00,000

Unamortised preliminary expenses as per tax record = ₹ 30,000

There is adequate evidence of future profit sufficiency. How much deferred tax asset/liability should be recognized as transition adjustment when the tax rate is 50%?

Solution

Calculation of difference between taxable income and accounting income

Particulars	*Amount (₹)*
Excess depreciation as per tax ₹ (5,00,000 – 2,00,000)	3,00,000
Less: Expenses provided in taxable income	(30,000)
Timing difference	2,70,000

Tax expense is more than the current tax due to timing difference.

Therefore deferred tax liability = 50% x 2,70,000 = ₹ 1,35,000

Illustration 3

XYZ is an export oriented unit and was enjoying tax holiday upto 31.3.2016. No provision for deferred tax liability was made in accounts for the year ended 31.3.2016. While finalising the accounts for the year ended 31.3.2017, the Accountant says that the entire deferred tax liability upto 31.3.2016 and *current year deferred tax liability should be routed through Profit and Loss Account as the relevant Accounting Standard has already become mandatory from 1.4.2001. Do you agree?*

Solution

Paragraph 33 of AS 22 on "Accounting for Taxes on Income" relates to the transitional provisions. It says, "On the first occasion that the taxes on income are accounted for in accordance with this statement, the enterprise should recognise, in the financial statements, the deferred tax balance that has accumulated prior to the adoption of this statement as deferred tax asset/liability with a corresponding credit/charge to the revenue reserves, subject to the consideration of prudence in case of deferred tax assets.

Further Paragraph 34 lays down, "For the purpose of determining accumulated deferred tax in the period in which this statement is applied for the first time, the opening balances of assets and liabilities for accounting purposes and for tax purposes are compared and the differences, if any, are determined. The tax effects of these differences, if any, should be recognised as deferred tax assets or liabilities, if these differences are timing differences."

Therefore, in the case of XYZ, even though AS 22 has come into effect from 1.4.2001, the transitional provisions permit adjustment of deferred tax liability/asset upto the previous year to be adjusted from opening reserve. In other words, the deferred taxes not provided for alone can be adjusted against opening reserves.

Provision for deferred tax asset/liability for the current year should be routed through profit and loss account like normal provision.

Illustration 4

PQR Ltd.'s accounting year ends on 31st March. The company made a loss of ₹ 2,00,000 for the year ending 31.3.2015. For the years ending 31.3.2016 and 31.3.2017, it made profits of ₹ 1,00,000 and ₹ 1,20,000 respectively. It is assumed that the loss of a year can be carried forward for eight years and tax rate is 40%. By the end of 31.3.2015, the company feels that there will be sufficient taxable income in the future years against which carry forward loss can be set off. There is no difference between taxable income and accounting income except that the carry forward loss is allowed in the years ending 2016 and 2017 for tax purposes. Prepare a statement of Profit and Loss for the years ending 2015, 2016 and 2017.

Solution

Statement of Profit and Loss

	31.3.2015 ₹	*31.3.2016* ₹	*31.3.2017* ₹
Profit (Loss)	(2,00,000)	1,00,000	1,20,000
Less: Current tax			(8,000)
Deferred tax:			
Tax effect of timing differences originating during the year	80,000		
Tax effect of timing differences reversed/adjusted during the year		(40,000)	(40,000)
Profit (Loss) After Tax Effect	(1,20,000)	60,000	72,000

Illustration 5

The following particulars are stated in the Balance Sheet of M/s Exe Ltd. as on 31.03.2016:

	(₹ in lakhs)
Deferred Tax Liability (Cr.)	*20.00*
Deferred Tax Assets (Dr.)	*10.00*

The following transactions were reported during the year 2016-2017:

(i)	*Tax Rate*	*50%*
(ii)	*Depreciation – as per Books*	*50.00*
	Depreciation – for Tax purposes	*30.00*
	There were no additions to Fixed Assets during the year.	
(iii)	*Items disallowed in 2015-2016 and allowed for Tax purposes in 2016-2017*	*10.00*
(iv)	*Interest to Financial Institutions accounted in the Books on accrual basis, but actual payment was made on 30.09.2017*	*20.00*
(v)	*Donations to Private Trusts made in 2016-2017*	*10.00*
(vi)	*Share issue expenses allowed under 35(D) of the I.T. Act, 1961 for the year 2016-2017 (1/10th of ₹ 50.00 lakhs incurred in 2015-2016)*	*5.00*
(vii)	*Repairs to Plant and Machinery ₹ 100.00 lakhs was spread over the period 2016-2017 and 2017-2018 equally in the books. However, the entire expenditure was allowed for Income-tax purposes.*	

Indicate clearly the impact of above items in terms of Deferred Tax liability/Deferred Tax Assets and the balances of Deferred Tax Liability/Deferred Tax Asset as on 31.03.2017.

Solution

Impact of various items in terms of deferred tax liability/deferred tax asset

Transactions	*Analysis*	*Nature of difference*	*Effect*	*Amount*
Difference in depreciation	Generally, written down value method of depreciation is adopted under IT Act which leads to higher depreciation in earlier years of useful life of the asset in comparison to later years.	Responding timing difference	Reversal of DTL	₹ 20 lakhs × 50% = ₹ 10 lakhs
Disallowances, as per IT Act, of earlier years	Tax payable for the earlier year was higher on this account.	Responding timing difference	Reversal of DTA	₹ 10 lakhs × 50% = ₹ 5 lakhs

Interest to financial institutions	It is allowed as deduction under section 43B of the IT Act, if the payment is made before the due date of filing the return of income (i.e. 31st October, 2017).	No timing difference	Not applicable	Not applicable
Donation to private trusts	Not an allowable expenditure under IT Act.	Permanent difference	Not applicable	Not applicable
Share issue expenses	Due to disallowance of full expenditure under IT Act, tax payable in the earlier years was higher.	Responding timing difference	Reversal of DTA	₹ 5 lakhs × 50% = ₹ 2.5 lakhs
Repairs to plant and machinery	Due to allowance of full expenditure under IT Act, tax payable of the current year will be less.	Originating timing difference	Increase in DTL	₹ 50 lakhs × 50% = ₹ 25 lakhs

Deferred Tax Liability Account

			₹ *in lakhs*				₹ *in lakhs*
31.3.2017	To	Profit and Loss account (Depreciation)	10.00	1.4.2016	By	Balance b/d	20.00
	To	Balance c/d	35.00		By	Profit and Loss Account (Repairs to plant)	25.00
			45.00				45.00
				1.4.2017	By	Balance b/d	35.00

Deferred Tax Asset Account

			₹ *in lakhs*				₹ *in lakhs*
1.4.2016	To	Balance b/d	10.00	31.3.2017	By	Profit and Loss Account: Items disallowed in 2015-2016 and allowed as per I.T. Act in 2016-2017	5.00
					By	Share issue expenses	2.50
					By	Balance c/d	2.50
			10.00				10.00
1.4.2017	To	Balance b/d	2.50				

Reference: The students are advised to refer the full text of AS 22 "Accounting for Taxes on Income" (issued 2001).

UNIT 22 : AS 23: ACCOUNTING FOR INVESTMENTS IN ASSOCIATES IN CONSOLIDATED FINANCIAL STATEMENTS

22.1 Introduction

AS 23, came into effect in respect of accounting periods commenced on or after 1-4-2002. AS 23 describes the principles and procedures for recognizing investments in associates (in which the investor has significant influence, but not a subsidiary or joint venture of investor) in the consolidated financial statements of the investor. An investor which presents consolidated financial statements should account for investments in associates as per equity method in accordance with this standard but in its separate financial statements, AS 13 will be applicable.

22.2 Objective

The objective of this Standard is to lay down principles and procedures for recognizing the investments in associates and its effect on the financial operations of the group in the consolidated financial statement. Reference to AS 23 is compulsory for the companies following AS 21 and preparing consolidated financial statement for their group. For disclosing investment in associates in the separate financial statement of the investor itself, one should follow AS 13.

22.3 Definitions of the terms used in the Accounting Standard

A **subsidiary** is an enterprise that is controlled by another enterprise (known as the parent). A **parent** is an enterprise that has one or more subsidiaries.

A **group** is a parent and all its subsidiaries.

Equity is the residual interest in the assets of an enterprise after deducting all its liabilities. **Consolidated financial statements** are the financial statements of a group presented as those of a single enterprise.

An associate is an enterprise in which the investor has significant influence and which is neither a subsidiary nor a joint venture of the investor.

Significant influence is the power to participate in the financial and/or operating policy decisions of the investee but not control over those policies. This definition excludes the subsidiaries or joint venture from the scope of an associate but apart from these any other enterprises, which are significantly influenced by the investor, is an associate for the purpose of this standard. Any enterprise having 20% or more control over voting power or any interest directly or indirectly in any other enterprise will be assumed to have significantly influencing the other enterprise unless proved otherwise. Similarly any enterprise that does not have 20% or more control then it is assumed not having significant influence on the enterprise unless proved otherwise.

An enterprise can influence the significant economic decision making by many ways like:

- ♦ Having some voting power.

- Representation on the board of directors or governing body of the investee.
- Participation in policy-making processes.
- Interchange of managerial personnel.
- Provision of essential technical information.
- Influencing inter-company transactions i.e. sale of goods and services, sharing technical knowledge etc.

As a general rule, significant influence is presumed to exist when an investor holds, directly or indirectly through subsidiaries, 20% or more of the voting power of the investee.

As with the classification of any investment, the substance of the arrangement in each case should be considered. If it can be clearly demonstrated that an investor holding 20% or more of the voting power of the investee does not have significant influence, the investment will not be accounted for as an associate.

A substantial or majority ownership by another investor does not necessarily preclude an investor from having significant influence.

If the investor holds, directly or indirectly through subsidiaries, less than 20% of the voting power of the investee, it is presumed that the investor does not have significant influence, unless such influence can be clearly demonstrated. The presence of one or more of the indicators as above may indicate that an investor has significant influence over a less than 20% owned corporate investee.

Control exists when parent company has either:

a. The ownership, directly or indirectly through subsidiary(ies), of more than one-half of the voting power of an enterprise.

b. Or control of the composition of the board of directors in the case of a company or of the composition of the corresponding governing body in case of any other enterprise so as to obtain economic benefits from subsidiary company's activities.

   If any company is controlling the composition of governing body of gratuity trust, provident fund trust etc., since the objective is not the economic benefit and therefore it will not be included in consolidated financial statement.

   An enterprise is considered to control the composition of the board of directors of a company or governing body in case of an enterprise other than a company, if it has the power, without the consent or concurrence of any other person, to appoint or remove all or a majority of directors of that company or members of the body. An enterprise is deemed to have the power to appoint a director/member, if any of the following conditions is satisfied:

   (i) A person cannot be appointed as director/member without the exercise in his favour by that enterprise of such a power as aforesaid; or

(ii) A person's appointment as director/member follows necessarily from his appointment to a position held by him in that enterprise; or

(iii) The director/member is nominated by that enterprise or a subsidiary thereof.

To understand the above definitions let us take few examples:

Example1: A Ltd. has 70% holding in C Ltd. and B Ltd. also has 28% holding in the same company. So, A Ltd. with the majority holding i.e. more than 50% is the parent company i.e. a holding company and B Ltd. with more than 20% share though minor is a business associate.

Example 2: A Ltd. holding 90% share in B Ltd. and 10% in C Ltd., and also B Ltd. holding 11% shares in C Ltd. In this case, A Ltd. is parent of B Ltd. but due to total of direct and indirect holding of (10 + 11) 21% in C Ltd., C Ltd. is an associate of A Ltd. Though for consolidated financial statement purpose, these holding will be 19.9% (10% + 90% of 11%), as rest 1.1% belongs to minority interest.

22.4 Associates Accounted for using the Equity method

The equity method is a method of accounting whereby the investment is initially recorded at cost, identifying any goodwill/capital reserve arising at the time of acquisition. The carrying amount of the investment is adjusted thereafter for the post acquisition change in the investor's share of net assets of the investee. The consolidated statement of profit and loss reflects the investor's share of the results of operations of the investee.

From the definition, following broad conclusions can be drawn:

a. In CFS, investment is to be recorded at cost.

b. Any surplus or deficit in cost and net asset to be recorded as goodwill or capital reserve.

c. Distributions received from an investee reduce the carrying amount of the investment.

d. Any subsequent change in share in net asset is adjusted in cost of investment and goodwill/capital reserve.

e. Consolidated Profit & Loss shows the investor's share in the results of operations of the investee.

Illustration 1

A Ltd. acquire 45% of B Ltd. shares on April 01, 2016, the price paid was ₹ 15,00,000. Following are the extract of balance sheet of B Ltd.:

Paid up Equity Share Capital	*₹ 10,00,000*
Securities Premium	*₹ 1,00,000*
Reserve & Surplus	*₹ 5,00,000*

B Ltd. has reported net profits of ₹ 3,00,000 and paid dividends of ₹ 1,00,000. Calculate the amount at which the investment in B Ltd. should be shown in the consolidated balance sheet of A Ltd. as on March 31, 2017.

Solution

Calculation of the carrying amount of Investment as per equity method

Particulars	₹	₹
Equity Shares	10,00,000	
Security Premium	1,00,000	
Reserves & Surplus	5,00,000	
Net Assets	16,00,000	
45% of Net Asset	7,20,000	
Add: 45% of Profits for the year	1,35,000	
	8,55,000	
Less: Dividend Received	45,000	8,10,000
Less: Cost of Investment		(15,00,000)
Goodwill		6,90,000

Consolidated Balance Sheet (Extract)

Assets	₹	₹
Investment in B Ltd.	810,000	
Add: Goodwill	690,000	1,500,000

22.5 Circumstances under which Equity Method is followed

Equity method of accounting is to be followed by all the enterprises having significant influence on their associates except in the following cases:

a. Control is intended to be temporary because the investment is acquired and held exclusively with a view to its subsequent disposal in the near future.

b. The term 'Near Future' is explained with AS 21.

   Or it operates under severe long-term restrictions, which significantly impair its ability to transfer funds to the investor.

   In both the above cases, investment of investor in the share of the investee is treated as investment according to AS 13.

An investor should discontinue the use of the equity method from the date that:

a. It ceases to have significant influence in an associate but retains, either in whole or in part, its investment.

b. The use of the equity method is no longer appropriate because the associate operates under severe long-term restrictions that significantly impair its ability to transfer funds to the investor.

From the date of discontinuing the use of the equity method, investments in such associates should be accounted for in accordance with AS 13, Accounting for Investments. For this purpose, the carrying amount of the investment at that date should be regarded as cost thereafter.

22.6 Application of the Equity Method

- Many of the rules followed under equity method for an associate is similar to consolidated financial statement rules as in case of subsidiary i.e. AS 21.
- Investment in an associate should be recorded as equity from the date when such relation comes in effect.
- Investment in the associate is recorded at cost and any difference in the cost and investor's share in equity on the date of acquisition is shown as goodwill or capital reserve.

  Case 1: A Ltd. holds 22% share of B Ltd. on 1st April of the year and following are the relevant information as available on the date are Cost of Investment ₹ 33,000 and Total Equity on the date of acquisition ₹ 2,00,000.

A Ltd.'s share in equity (2,00,000 x 22%)	₹ 44,000
Less: Cost of Investment	₹ (33,000)
Capital Reserve	₹ 11,000

Extract of Balance Sheet

Assets	₹	₹
Investment in B Ltd.	44,000	
Less: Capital reserve	(11,000)	33,000

  Case 2: A Ltd. holds 22% share of B Ltd. on 1st April of the year and following are the relevant information as available on the date are Cost of Investment ₹ 55,000 and Total Equity on the date of acquisition ₹ 2,00,000.

Cost of Investment	₹ 55,000
Less: A Ltd.'s share in equity (2,00,000 x 22%)	₹ 44,000
Goodwill	₹ 11,000

Extract of Balance Sheet

Assets	₹	₹
Investment in B Ltd.	44,000	
Add: Goodwill	11,000	55,000

- An enterprise having share of profits of more than 50% in other company, they are said to be in Parent-Subsidiary relationship. However, if the share in profits is more than 20% but upto 50% then this relationship is termed as associate relationship. This stake of 20% can be acquired either in one go or in more than one transaction. This share of stake can be increased further say from 25% to 30%. Adjustment should be made with each transaction.

Case 1: A Ltd. acquired 10% stake of B Ltd. on April 01 and further 15% on October 01 during the same year. Other information is as follow:

Cost of Investment for 10% ₹ 1,00,000 and for 15% ₹ 1,45,000

Net asset on April 01st₹ 8,50,000 and on October 01 ₹ 10,00,000.

Calculations for April 01:

Cost of investment	₹ 1,00,000
10% share in net asset	₹ 85,000
Goodwill	₹ 15,000

Calculations for October 01:

15% share in net asset	₹ 1,50,000
Cost of investment	₹ 1,45,000
Capital Reserve	₹ 5,000
Total goodwill (15,000 – 5,000)	₹ 10,000

Case 2: A Ltd. acquired 10% stake of B Ltd. on April 01 and further 15% on October 01 of the same year. Other information is as follow:

Cost of Investment for 10% ₹ 1,00,000 and for 15% ₹ 1,55,000

Net asset on April 01st₹ 8,50,000 and on October 01st₹ 10,00,000.

Calculations for April 01:

Cost of investment	₹ 1,00,000
10% share in net asset	₹ 85,000
Goodwill	₹ 15,000

Calculations for October 01:

Cost of investment	₹ 1,55,000
15% share in net asset	₹ 1,50,000
Goodwill	₹ 5,000
Total goodwill (15,000 + 5,000)	₹ 20,000

Case 3: A Ltd. acquired 25% stake of B Ltd. on April 01 and further 5% on October 01 of the same year. Other information is as follow:

Cost of Investment for 25% ₹ 1,50,000 and for 5% ₹ 20,000

Net asset on April 01st₹ 5,00,000.

Profit for the year ₹ 90,000 earned in the ratio 2:1 respectively.

Calculations for April 01:

Cost of investment	₹ 1,50,000
25% share in net asset	₹ 1,25,000
Goodwill	₹ 25,000

Calculations for October 01:

Profits for the first half (90,000/3) x 2	₹ 60,000
Additional share of A Ltd.	5%
Pre-acquisition profits i.e. capital reserve (60,000 x 5%)	₹ 3,000
5% share in net asset	₹ 25,000
Cost of investment	₹ 20,000
Capital Reserve	₹ 5,000
Cost of Investment on April 01st	₹ 1,50,000
Less: Goodwill	₹ 25,000
Carrying Amount on April 01st	₹ 1,25,000
Add: Additional Share in Net Asset on October 01st	₹ 25,000
Add: Capital share of Profits for first half	₹ 3,000
Add: Revenue shares of Profits for first half (60,000 x 25%)	₹ 15,000
Add: Revenue shares of Profits for second half (30,000 x 30%)	₹ 9,000
Total Carrying Amount on March 31st	₹ 1,77,000

- If there is any transaction between the Investor Company and investee concern then the unrealised profits on such goods to the extent of investor's share should be eliminated from consolidated financial statement. As in the above example, the profits calculated on the goods lying with the buyer on the date of statement, will be eliminated to the extent of investor's share i.e. 22%.
- Any loss on such transactions are not eliminated to the extent that such loss is not recoverable. Otherwise such losses are written off from consolidated financial statement fully.

Illustration 2

A Ltd. acquired 40% share in B Ltd. on April 01, 2014 for ₹ 10 lacs. On that date B Ltd. had 1,00,000 equity shares of ₹ 10 each fully paid and accumulated profits of ₹ 2,00,000. During the year 2014-2015, B Ltd. suffered a loss of ₹ 10,00,000; during 2015-2016 loss of ₹ 12,50,000 and during 2016-2017 again a loss of ₹ 5,00,000. Show the extract of consolidated balance sheet of A Ltd. on all the four dates recording the above events.

Solution

Calculation of Goodwill/Capital Reserve under Equity Method

Particulars	₹
Equity Shares	10,00,000
Reserves & Surplus	2,00,000
Net Assets	12,00,000
40% of Net Asset	4,80,000
Less: Cost of Investment	(10,00,000)
Goodwill	5,20,000

Consolidated Balance Sheet (Extract) as on April 01, 2014

Assets	₹	₹
Investment in B Ltd.	4,80,000	
Add: Goodwill	5,20,000	10,00,000

Calculation of Carrying Amount of Investment in the year ended on 2014-2015

Consolidated Balance Sheet (Extract) as on March 31, 2017

Assets	₹	₹
Investment in B Ltd.		-

- As far as possible the reporting date of the financial statements should be same for consolidated financial statement. If practically it is not possible to draw up the financial statements of one or more enterprise to such date and, accordingly, those financial statements are drawn up to reporting dates different from the reporting date of the investor, adjustments should be made for the effects of significant transactions or other events that occur between those dates and the date of the consolidated financial statements. In any case, the difference between reporting dates of the concern and consolidated financial statement should not be more than six months.
- Accounting policies followed in the preparation of the financial statements of the investor, investee and consolidated financial statement should be uniform for like transactions and other events in similar circumstances.

  If accounting policies followed by different enterprises in the group are not uniform, then adjustments should be made in the items of the individual financial statements to bring it in line with the accounting policy of the consolidated statement.

The carrying amount of investment in an associate should be reduced to recognise a decline, other than temporary, in the value of the investment, such reduction being determined and made for each investment individually.

22.7 Contingencies

In accordance with AS 4, the investor discloses in the consolidated financial statements:

a. Its share of the contingencies and capital commitments of an associate for which it is also contingently liable; and

b. Those contingencies that arise because the investor is severally liable for the liabilities of the associate.

22.8 Disclosure

- In addition to the disclosures required above, an appropriate listing and description of associates including the proportion of ownership interest and, if different, the proportion of voting power held should be disclosed in the consolidated financial statements.

- Investments in associates accounted for using the equity method should be classified as long-term investments and disclosed separately in the consolidated balance sheet. The investor’s share of the profits or losses of such investments should be disclosed separately in the consolidated statement of profit and loss. The investor’s share of any extraordinary or prior period items should also be separately disclosed.
- The name(s) of the associate(s) of which reporting date(s) is/are different from that of the financial statements of an investor and the differences in reporting dates should be disclosed in the consolidated financial statements.
- In case an associate uses accounting policies other than those adopted for the consolidated financial statements for like transactions and events in similar circumstances and it is not practicable to make appropriate adjustments to the associate’s financial statements, the fact should be disclosed along with a brief description of the differences in the accounting policies.
- If an associate is not accounted for using the equity method the reasons for not doing the same.
- Goodwill/capital reserve arising on the acquisition of an associate by an investor should be disclosed separately though it is included in the carrying amount of the investment.

22.9 Transitional Provisions

On the first occasion when investment in an associate is accounted for in consolidated financial statements in accordance with this Statement, the carrying amount of investment in the associate should be brought to the amount that would have resulted had the equity method of accounting been followed as per this Statement since the acquisition of the associate. The corresponding adjustment in this regard should be made in the retained earnings in the consolidated financial statements.

22.10 Relevant Explanations to AS 23

Treatment of Proposed Dividend in Associates in Consolidated Financial Statements:

In case an associate has made a provision for proposed dividend in its financial statements, the investor's share of the results of operations of the associate should be computed without taking into consideration the proposed dividend.

Consideration of Potential Equity Shares for Determining whether an Investee is an Associate, Accounting for Investments in Associates in Consolidated Financial Statements:

The potential equity shares of the investee held by the investor should not be taken into account for determining the voting power of the investor.

Reference: The students are advised to refer the full text of AS 23 “Accounting for Investments in Associates in Consolidated Financial Statements” (issued 2001).

UNIT 23 : AS 24: DISCONTINUING OPERATIONS

23.1 Introduction

AS 24, is mandatory in nature in respect of accounting periods commenced on or after 1-4-2004 for the following:

(i) Enterprises whose equity or debt securities are listed on a recognised stock exchange in India, and enterprises that are in the process of issuing equity or debt securities that will be listed on a recognised stock exchange in India as evidenced by the board of directors' resolution in this regard.

(ii) All other commercial, industrial and business reporting enterprises, whose turnover for the accounting period exceeds ₹ 50 crores.

In respect of all other enterprises, the Accounting Standard would be mandatory in nature in respect of accounting periods commenced on or after 1-4-2005. Earlier application of the accounting standard would be encouraged.

This standard is applicable to all discontinuing operations, representing separate major line of business or geographical area of operations of an enterprise.

23.2 Objective

The objective of this Statement is to establish principles for reporting information about discontinuing operations, thereby enhancing the ability of users of financial statements to make projections of an enterprise's cash flows, earnings-generating capacity, and financial position by segregating information about discontinuing operations from information about continuing operations.

23.3 Discontinuing Operation

A discontinuing operation is a component of an enterprise:

a. That the enterprise, pursuant to a single plan, is:

   (i) Disposing of substantially in its entirety, such as by selling the component in a single transaction or by demerger or spin-off of ownership of the component to the enterprise's shareholders or

   (ii) Disposing of piecemeal, such as by selling off the component's assets and settling its liabilities individually or

   (iii) Terminating through abandonment and

b. That represents a separate major line of business or geographical area of operations.

c. That can be distinguished operationally and for financial reporting purposes.

A reportable business segment or geographical segment as defined in AS 17 'Segment

Reporting', would normally satisfy criterion (b) of the above definition, that is, it would represent a separate major line of business or geographical area of operations. A part or such a segment may also satisfy criterion (b) of the above definition. For an enterprise that operates in a single business or geographical segment and, therefore, does not report segment information, a major product or service line may also satisfy the criteria of the definition.

The sales of assets and settlements of liabilities may occur over a period of months or perhaps even longer. Thus, disposal of a component may be in progress at the end of a financial reporting period. To qualify as a discontinuing operation, the disposal must be pursuant to a single coordinated plan.

An enterprise may terminate an operation by abandonment without substantial sales of assets. An abandoned operation would be a discontinuing operation if it satisfies the criteria in the definition. However, changing the scope of an operation or the manner in which it is conducted is not abandonment because that operation, although changed, is continuing.

Examples of activities that do not necessarily satisfy criterion of the definition, but that might do so in combination with other circumstances, include:

a. Gradual or evolutionary phasing out of a product line or class of service.

b. Discontinuing, even if relatively abruptly, several products within an ongoing line of business.

c. Shifting of some production or marketing activities for a particular line of business from one location to another and

d. Closing of a facility to achieve productivity improvements or other cost savings.

An example in relation to consolidated financial statements is selling a subsidiary whose activities are similar to those of the parent or other subsidiaries.

A component can be distinguished operationally and for financial reporting purposes - criterion (c) of the definition of a discontinuing operation - if all the following conditions are met:

a. The operating assets and liabilities of the component can be directly attributed to it.

b. Its revenue can be directly attributed to it.

c. At least a majority of its operating expenses can be directly attributed to it.

Assets, liabilities, revenue, and expenses are directly attributable to a component if they would be eliminated when the component is sold, abandoned or otherwise disposed of. If debt is attributable to a component, the related interest and other financing costs are similarly attributed to it. Discontinuing operations are infrequent events, but this does not mean that all infrequent events are discontinuing operations.

23.4 Initial Disclosure Event

With respect to a discontinuing operation, the initial disclosure event is the occurrence of one of the following, whichever occurs earlier:

a. The enterprise has entered into a binding sale agreement for substantially all of the assets attributable to the discontinuing operation or

b. The enterprise's board of directors or similar governing body has both

   (i) approved a detailed, formal plan for the discontinuance and

   (ii) made an announcement of the plan.

a detailed, formal plan for the discontinuance normally includes:

- identification of the major assets to be disposed of;
- the expected method of disposal;
- the period expected to be required for completion of the disposal;
- the principal locations affected;
- the location, function, and approximate number or employees who will be compensated for terminating their services; and
- the estimated proceeds or salvage to be realised by disposal.

An enterprise's board of directors or similar governing body is considered to have made the announcement of a detailed, formal plan for discontinuance, if it has announced the main features of the plan to those affected by it, such as, lenders, stock exchanges, trade payables, trade unions, etc. in a sufficiently specific manner so as to make the enterprise demonstrably committed to the discontinuance.

23.5 Recognition and Measurement

For recognizing and measuring the effect of discontinuing operations, this AS does not provide any guidelines, but for the purpose the relevant Accounting Standards should be referred.

23.6 Presentation and Disclosure

23.6.1 Initial Disclosure

An enterprise should include the following information relating to a discontinuing operation in its financial statements beginning with the financial statements for the period in which the initial disclosure event occurs:

a. A description of the discontinuing operation(s).

b. The business or geographical segment(s) in which it is reported as per AS 17.

c. The date and nature of the initial disclosure event.

d. The date or period in which the discontinuance is expected to be completed if known or determinable.

e. The carrying amounts, as of the balance sheet date, of the total assets to be disposed of and the total liabilities to be settled.

f. The amounts of revenue and expenses in respect of the ordinary activities attributable to the discontinuing operation during the current financial reporting period.

g. The amount of pre-tax profit or loss from ordinary activities attributable to the discontinuing operation during the current financial reporting period, and the income tax expense related thereto and

h. The amounts of net cash flows attributable to the operating, investing, and financing activities of the discontinuing operation during the current financial reporting period.

23.6.2 Disclosures other than Initial Disclosures Note

All the disclosures above should be presented in the notes to the financial statements except for amounts pertaining to pre-tax profit/loss of the discontinuing operation and the income tax expense thereon (second last bullet above) which should be shown on the face of the statement of profit and loss.

Disclosures as required by AS 4 'Contingencies and Events Occurring After the Balance Sheet Date', are made if an initial disclosure event occurs between the balance sheet date and the date on which the financial statements for that period are approved by the board of directors in the case of a company or by the corresponding approving authority in the case of any other enterprise.

When an enterprise disposes of assets or settles liabilities attributable to a discontinuing operation or enters into binding agreements for the sale of such assets or the settlement of such liabilities, it should include, in its financial statements, the following information when the events occur:

a. For any gain or loss that is recognised on the disposal of assets or settlement of liabilities attributable to the discontinuing operation, (i) the amount of the pre-tax gain or loss and (ii) income tax expense relating to the gain or loss and

b. The net selling price or range of prices (which is after deducting expected disposal costs) of those net assets for which the enterprise has entered into one or more binding sale agreements, the expected timing of receipt of those cash flows and the carrying amount of those net assets on the balance sheet date.

In addition to these disclosures, an enterprise should include, in its financial statements, for periods subsequent to the one in which the initial disclosure event occurs, a description of any significant changes in the amount or timing of cash flows relating to the assets to be disposed or liabilities to be settled and the events causing those changes. The disclosures should continue in financial statements for periods up to and including the period in which the discontinuance is completed. Discontinuance is completed when the plan is substantially completed or abandoned, though full payments from the buyer(s) may not yet have been received. If an enterprise abandons or withdraws from a plan that was previously reported as a discontinuing operation, that fact, reasons therefore and its effect should be disclosed. Any disclosures required by this Statement should be presented separately for each discontinuing operation.

The disclosures should be presented in the notes to the financial statements except the following which should be shown on the face of the statement of profit and loss:

a. The amount of pre-tax profit or loss from ordinary activities attributable to the discontinuing operation during the current financial reporting period, and the income tax expense related thereto and

b. The amount of the pre-tax gain or loss recognised on the disposal of assets or settlement of liabilities attributable to the discontinuing operation.

Comparative information for prior periods that is presented in financial statements prepared after the initial disclosure event should be restated to segregate assets, liabilities, revenue, expenses, and cash flows of continuing and discontinuing operations in a manner similar to that mentioned above.

Disclosures in an interim financial report in respect of a discontinuing operation should be made in accordance with AS 25, 'Interim Financial Reporting', including:

a. Any significant activities or events since the end of the most recent annual reporting period relating to a discontinuing operation and

b. Any significant changes in the amount or timing of cash flows relating to the assets to be disposed or liabilities to be settled.

Reference: The students are advised to refer the full text of AS 24 "Discontinuing Operations"

UNIT 24 : AS 25: INTERIM FINANCIAL REPORTING

24.1 Introduction

AS 25 does not mandate which enterprises should be required to present interim financial reports, how frequently, or how soon after the end of an interim period. If an enterprise is required or elects to prepare and present an interim financial report, it should comply with this Standard. The standard prescribes the minimum contents of an interim financial report and requires that an enterprise which elects to prepare and present an interim financial report, should comply with this standard. It also lays down the principles for recognition and measurement in a complete or condensed financial statements for an interim period. Timely and reliable interim financial reporting improves the ability of investors, trade payables and others to understand an enterprise's capacity to generate earnings and cash flows, its financial condition and liquidity.

A statute governing an enterprise or a regulator may also require an enterprise to prepare and present certain information at an interim date which may be different in form and/or content as required by this Standard. In such a case, the recognition and measurement principles as laid down in this Standard are applied in respect of such information, unless otherwise specified in the statute or by the regulator.

24.2 Definitions of the terms used under the Accounting Standard

Interim period is a financial reporting period shorter than a full financial year.

Interim financial report means a financial report containing either a complete set of financial statements or a set of condensed financial statements for an interim period.

During the first year of operations of an enterprise, its annual financial reporting period may be shorter than a financial year. In such a case, that shorter period is not considered as an interim period.

24.3 Content of an Interim Financial Report

A complete set of financial statements normally includes Balance sheet, Statement of Profit & Loss, Cash flow statement and Notes including those relating to accounting policies and other statements and explanatory material that are an integral part of the financial statements.

The benefit of timeliness of presentation may be partially offset by a reduction in detail in the information provided. Therefore, this Standard requires preparation and presentation of an interim financial report containing, as a minimum, a set of condensed financial statements. Accordingly, it focuses on new activities, events, and circumstances and does not duplicate information previously reported. AS 25 does not prohibit or discourage an enterprise from presenting a complete set of financial statements in its interim financial report, rather than a set of condensed financial statements. The recognition and measurement principles set out in this Standard apply also to complete financial statements for an interim period, and such statements would include all disclosures required by this Standard as well as those required by other Accounting Standards. Minimum components of an Interim Financial Report includes condensed Financial Statement.

24.4 Form and Content of Interim Financial Statements

If an enterprise prepares and presents a complete set of financial statements in its interim financial report, the form and content of those statements should conform to the requirements as applicable to annual complete set of financial statements.

If an enterprise prepares and presents a set of condensed financial statements in its interim financial report, those condensed statements should include, at a minimum, each of the headings and sub-headings that were included in its most recent annual financial statements and the selected explanatory notes as required by this Statement.

Additional line items or notes should be included if their omission would make the condensed interim financial statements misleading.

If an enterprise presents basic and diluted earnings per share in its annual financial statements in accordance with AS 20 then it has to present basic and diluted earnings per share as per AS 20 on the face of Statement of Profit and Loss complete or condenses for an interim period also.

24.5 Selected Explanatory Notes

An enterprise should include the following information, as a minimum, in the notes to its interim financial statements, if material and if not disclosed elsewhere in the interim financial report:

a. A statement that the same accounting policies are followed in the interim financial statements as those followed in the most recent annual financial statements or, if those policies have been changed, a description of the nature and effect of the change.

b. Explanatory comments about the seasonality of interim operations.

c. The nature and amount of items affecting assets, liabilities, equity, net income, or cash flows that is unusual because of their nature, size, or incidence as per AS 5.

d. The nature and amount of changes in estimates of amounts reported in prior interim periods of the current financial year or changes in estimates of amounts reported in prior financial years, if those changes have a material effect in the current interim period.

e. Issuances, buy-backs, repayments and restructuring of debt, equity and potential equity shares.

f. Dividends, aggregate or per share (in absolute or percentage terms), separately for equity shares and other shares.

g. Segment revenue, segment capital employed (segment assets minus segment liabilities) and segment result for business segments or geographical segments, whichever is the enterprise's primary basis of segment reporting (disclosure of segment information is required in an enterprise's interim financial report only if the enterprise is required, in terms of AS 17, Segment Reporting, to disclose segment information in its annual financial statements).

h. The effect of changes in the composition of the enterprise during the interim period, such as amalgamations, acquisition or disposal of subsidiaries and long-term investments, restructurings, and discontinuing operations and

i. Material changes in contingent liabilities since the last annual balance sheet date.

The above information should normally be reported on a financial year-to-date basis. However, the enterprise should also disclose any events or transactions that are material to an understanding of the current interim period.

24.6 Periods for which Interim Financial Statements are required to be presented

Interim reports should include interim financial statements (whether condensed or complete) for the periods listed in the following table:

Statement	*Current*	*Comparative*
Balance sheet	End of current interim period	End of immediately preceding financial year
Statement of profit and loss	Current interim period and cumulatively for the year-to-date	Comparable interim period and year-to-date of immediately preceding financial year
Cash flow statement	Cumulatively for the current financial year-to-date	Comparable year-to-date of immediately preceding financial year

24.7 Materiality

In deciding how to recognise, measure, classify, or disclose an item for interim financial reporting purposes, materiality should be assessed in relation to the interim period financial data. In making assessments of materiality, it should be recognised that interim measurements may rely on estimates to a greater extent than measurements of annual financial data. For reasons of understandability of the interim figures, materiality for making recognition and disclosure decision is assessed in relation to the interim period financial data. Thus, for example, unusual or extraordinary items, changes in accounting policies or estimates, and prior period items are recognised and disclosed based on materiality in relation to interim period data.

Illustration 1

Sincere Corporation is dealing in seasonal product sales pattern of the product, quarter wise is as follows:

1st quarter 30th June	*10%*
2nd quarter 30th September	*10%*

3rd quarter 31st December	*60%*
4th quarter 31st March	*20%*

Information regarding the 1st quarter ending on 30th June, 2017 is as follows:

Sales	*80 crores*
Salary and other expenses	*60 crores*
Advertisement expenses (routine)	*4 crores*
Administrative and selling expenses	*8 crores*

While preparing interim financial report for first quarter Sincere Corporation wants to defer ₹ 10 crores expenditure to third quarter on the argument that third quarter is having more sales therefore third quarter should be debited by more expenditure. Considering the seasonal nature of business and the expenditures are uniform throughout all quarters, calculate the result of the first quarter as per AS 25. Also give a comment on the company's view.

Solution

Particulars	*(₹ In crores)*	
Result of first quarter ending 30th June, 2017		
Turnover	80	
Other Income	Nil	
Total (a)		80
Less: Changes in inventories		Nil
Salaries and other cost		60
Administrative and selling Expenses (4+8)		12
Total (b)		72
Profit (a)-(b)		8

According to AS 25 the Income and Expense should be recognized when they are earned and incurred respectively. Therefore seasonal incomes will be recognized when they occur. Thus the company's view is not as per AS 25.

Illustration 2

The accounting year of X Ltd. ends on 30th September, 2017 and it makes its reports quarterly. However for the purpose of tax, year ends on 31st March every year. For the Accounting year beginning on 1-10-2016 and ends on 30-9-2017, the quarterly income is as under:-

1st quarter ending on 31-12-2016	*₹ 200 crores*
2nd quarter ending on 31-3-2017	*₹ 200 crores*
3rd quarter ending on 30-6-2017	*₹ 200 crores*
4th quarter ending on 30-9-2017	*₹ 200 crores*
Total	*₹ 800 crores*

Average actual tax rate for the financial year ending on 31-3-2017 is 20% and for financial year ending 31-3-2017 is 30%. Calculate tax expense for each quarter.

Solution

Calculation of tax expense

1st quarter ending on 31-12-2016	200 ×20%	₹ 40 lakhs
2nd quarter ending on 31-3-2016	200 ×20%	₹ 40 lakhs
3rd quarter ending on 30-6-2016	200 ×30%	₹ 60 lakhs
4th quarter ending on 30-9-2016	200 ×30%	₹ 60 lakhs

24.8 Disclosure in Annual Financial Statements

AS 5, requires disclosure, in financial statements, of the nature and (if practicable) the amount of a change in an accounting estimate which has a material effect in the current period, or which is expected to have a material effect in subsequent periods. Similarly, if an estimate of an amount reported in an interim period is changed significantly during the final interim period of the financial year but a separate financial report is not prepared and presented for that final interim period, the nature and amount of that change in estimate should be disclosed in a note to the annual financial statements for that financial year.

24.9 Accounting Policies

24.9.1 Same Accounting Policies as annual financial statements

An enterprise should apply the same accounting policies in its interim financial statements as are applied in its annual financial statements, except for accounting policy changes made after the date of the most recent annual financial statements that are to be reflected in the next annual financial statements. However, the frequency of an enterprise's reporting (annual, half-yearly, or quarterly) should not affect the measurement of its annual results. To achieve that objective, measurements for interim reporting purposes should be made on a year-to-date basis.

To illustrate:

a. The principles for recognising and measuring losses from inventory write-downs, restructurings, or impairments in an interim period are the same as those that an enterprise would follow if it prepared only annual financial statements. However, if such items are recognised and measured in one interim period and the estimate changes in a subsequent interim period of that financial year, the original estimate is changed in the subsequent interim period either by accrual of an additional amount of loss or by reversal of the previously recognised amount;

b. A cost that does not meet the definition of an asset at the end of an interim period is not deferred on the balance sheet date either to await future information as to whether it has met the definition of an asset or to smooth earnings over interim periods within a financial year; and

c. Income tax expense is recognised in each interim period based on the best estimate of the weighted average annual effective income tax rate expected for the full financial year. Amounts accrued for income tax expense in one interim period may have to be adjusted in a subsequent interim period of that financial year if the estimate of the annual effective income tax rate changes.

Income is recognised in the statement of profit and loss when an increase in future economic benefits related to an increase in an asset or a decrease of a liability has arisen that can be measured reliably. Expenses are recognised in the statement of profit and loss when a decrease in future economic benefits related to a decrease in an asset or an increase of a liability has arisen that can be measured reliably. The recognition of items in the balance sheet which do not meet the definition of assets or liabilities is not allowed.

An enterprise that reports more frequently than half-yearly, measures income and expenses on a year-to-date basis for each interim period using information available when each set of financial statements is being prepared. Amounts of income and expenses reported in the current interim period will reflect any changes in estimates of amounts reported in prior interim periods of the financial year. The amounts reported in prior interim periods are not retrospectively adjusted. Paragraphs 16(d) and 25 require, however, that the nature and amount of any significant changes in estimates be disclosed.

24.9.2 Changes in Accounting Policies

Preparers of interim reports in compliance with AS 25 are required to consider any changes in accounting policies that will be applied for the next annual financial statements, and to implement the changes for interim reporting purposes.

If there has been any change in accounting policy since the most recent annual financial statements, the interim report is required to include a description of the nature and effect of the change.

24.10 Revenue Received Seasonally or Occasionally

Revenues that are received seasonally or occasionally within a financial year should not be anticipated or deferred as of an interim date if anticipation or deferral would not be appropriate at the end of the enterprise's financial year.

24.11 Cost Incurred Unevenly During the Financial Year

Costs that are incurred unevenly during an enterprise's financial year should be anticipated or deferred for interim reporting purposes if, and only if, it is also appropriate to anticipate or defer that type of cost at the end of the financial year.

A cost that does not meet the definition of an asset at the end of an interim period is not deferred in the interim balance sheet either to await future information as to whether it has met the definition of an asset, or to smooth earnings over interim periods within a financial year. Thus, when preparing interim financial statements, the enterprise's usual recognition and measurement practices are followed. The only costs that are capitalized are those incurred after the specific point in time at which the criteria for recognition of the particular class of asset are met. Deferral of costs as assets in an interim balance sheet in the hope that the criteria will be met before the year-end is prohibited.

24.12 Use of Estimates

The measurement procedures to be followed in an interim financial report should be designed to ensure that the resulting information is reliable and that all material financial information that is relevant to an understanding of the financial position or performance of the enterprise is appropriately disclosed.

24.13 Restatement of Previously Reported Interim Periods

One objective of the preceding principle is to ensure that a single accounting policy is applied to a particular class of transactions throughout an entire financial year. The effect of the principle requires that within the current financial year any change in accounting policy be applied retrospectively to the beginning of the financial year.

24.14 Transitional Provision

On the first occasion that an interim financial report is presented in accordance with this Statement, the following need not be presented in respect of all the interim periods of the current financial year:

a. Comparative statements of profit and loss for the comparable interim periods (current and year-to-date) of the immediately preceding financial year; and

b. Comparative cash flow statement for the comparable year-to-date period of the immediately preceding financial year.

24.15 Applicability of AS 25 to Interim Financial Results

The presentation and disclosure requirements contained in AS 25 should be applied only if an enterprise prepares and presents an 'interim financial report' as defined in AS 25. Accordingly, presentation and disclosure requirements contained in AS 25 are not required to be applied in respect of interim financial results (which do not meet the definition of 'interim financial report' as per AS 25) presented by an enterprise. For example, quarterly financial results presented under Clause 41 of the Listing Agreement entered into between Stock Exchanges and the listed enterprises do not meet the definition of 'interim financial report' as per AS 25. However, the recognition and measurement principles laid down in AS 25 should be applied for recognition and measurement of items contained in such interim financial results.

24.16 Miscellaneous Illustrations

Illustration 3

Accountants of Poornima Ltd. show a net profit of ₹ 7,20,000 for the third quarter of 2016 after incorporating the following:

(i) Bad debts of ₹ 40,000 incurred during the quarter. 50% of the bad debts have been deferred to the next quarter.

(ii) Extra ordinary loss of ₹ 35,000 incurred during the quarter has been fully recognized in this quarter.

(iii) Additional depreciation of ₹ 45,000 resulting from the change in the method of charge of depreciation assuming that ₹ 45,000 is the charge for the 3rd quarter only.

Ascertain the correct quarterly income.

Solution

In the above case, the quarterly income has not been correctly stated. As per AS 25 "Interim Financial Reporting", the quarterly income should be adjusted and restated as follows:

Bad debts of ₹ 40,000 have been incurred during current quarter. Out of this, the company has deferred 50% (i.e.) ₹ 20,000 to the next quarter. Therefore, ₹ 20,000 should be deducted from ₹ 7,20,000. The treatment of extra-ordinary loss of ₹ 35,000 being recognized in the same quarter is correct.

Recognising additional depreciation of ₹ 45,000 in the same quarter is in tune with AS 25. Hence, no adjustments are required for these two items.

Poornima Ltd should report quarterly income as ₹ 7,00,000 (₹ 7,20,000 – ₹ 20,000).

Illustration 4

Intelligent Corporation (I–Corp.) is dealing in seasonal products. The quarterly sales pattern of the product is given below:

Quarter I	II	III	IV
Ending 31st March 15%	30th June 15%	30th September 50%	31st December 25%

For the First quarter ending 31st March, 2016, I–Corp. gives you the following information:

	₹ crores
Sales	50
Salary and other expenses	30
Advertisement expenses (routine)	02
Administrative and selling expenses	08

While preparing interim financial report for the first quarter, 'I–Corp.' wants to defer ₹ 21 crores expenditure to third quarter on the argument that third quarter is having more sales, therefore third quarter should be debited by higher expenditure, considering the seasonal nature of business. The expenditures are uniform throughout all quarters.

Calculate the result of first quarter as per AS 25 and comment on the company's view.

Solution

Result of the first quarter ended 31st March, 2016

		(₹ in crores)
Turnover		50
Add: Other Income		Nil
Total		50
Less: Change in inventories	Nil	
Salaries and other cost	30	
Administrative and selling expenses (8 + 2)	10	40
Profit		10

As per AS 25 on Interim Financial Reporting, the income and expense should be recognised when they are earned and incurred respectively. As per para 38 of AS 25, the costs should be anticipated or deferred only when

(i) it is appropriate to anticipate that type of cost at the end of the financial year, and

(ii) costs are incurred unevenly during the financial year of an enterprise.

Therefore, the argument given by I-Corp relating to deferment of ₹ 21 crores is not tenable as expenditures are uniform throughout all quarters.

Reference: The students are advised to refer the full text of AS 25 "Interim Financial Reporting": (issued 2002).

UNIT 25 : AS 26: INTANGIBLE ASSETS

25.1 Introduction

AS 26, came into effect in respect of expenditure incurred on intangible items during accounting periods commenced on or after 1-4-2003 and is mandatory in nature from that date for the following:

(i) Enterprises whose equity or debt securities are listed on a recognised stock exchange in India, and enterprises that are in the process of issuing equity or debt securities that will be listed on a recognised stock exchange in India as evidenced by the board of directors' resolution in this regard.

(ii) All other commercial, industrial and business reporting enterprises, whose turnover for the accounting period exceeds ₹ 50 crores.

In respect of all other enterprises, the Accounting Standard comes into effect in respect of expenditure incurred on intangible items during accounting periods commencing on or after 1-4-2004 and is mandatory in nature from that date. From the date of this Standard becoming mandatory for the concerned enterprises, AS 8; AS 6 & AS 10 stand withdrawn for the aspects relating to Intangible Assets. Infact, AS 8 and AS 6 has been completely withdrawn by the issuing authority and AS 10 has been fully revised in 2016 as standard on 'Property, Plant and Equipment'.

The standard prescribes the accounting treatment for intangible assets that are not dealt with specifically under other accounting standards, and requires an enterprise to recognise an intangible asset if, and only if, certain criteria are met. The standard specifies how to measure the carrying amount of intangible assets and requires certain disclosures about intangible assets.

25.2 Scope

This standard should be applied by all enterprises in accounting intangible assets, except

(a) intangible assets that are covered by another AS,

(b) financial assets,

(c) rights and expenditure on the exploration for or development of minerals, oil, natural gas and similar non-regenerative resources,

(d) intangible assets arising in insurance enterprise from contracts with policy holders,

(e) expenditure in respect of termination benefits.

Exclusions from the scope of an Accounting Standard may occur if certain activities or transactions are so specialised that they give rise to accounting issues that may need to be dealt with in a different way. However, this Statement applies to other intangible assets used (such as computer software), and other expenditure (such as start-up costs), in extractive industries or by insurance enterprises. This Statement also applies to rights under licensing agreements for items such as motion picture films, video recordings, plays, manuscripts, patents and copyrights. These items are excluded from the scope of AS 19.

25.3 Definitions

An asset is a resource:

a. Controlled by an enterprise as a result of past events and

b. From which future economic benefits are expected to flow to the enterprise.

Monetary assets are money held and assets to be received in fixed or determinable amounts of money.

Amortisation is the systematic allocation of the depreciable amount of an intangible asset over its useful life.

An active market is a market where all the following conditions exist:

a. The items traded within the market are homogeneous.

b. Willing buyers and sellers can normally be found at any time and

c. Prices are available to the public.

An impairment loss is the amount by which the carrying amount of an asset exceeds its recoverable amount.

A financial asset is any asset that is:

a. Cash,

b. A contractual right to receive cash or another financial asset from another enterprise,

c. A contractual right to exchange financial instruments with another enterprise under conditions that are potentially favourable or

d. An ownership interest in another enterprise.

25.4 Intangible Assets

An intangible asset is an identifiable non-monetary asset, without physical substance, held for use in the production or supply of goods or services, for rental to others, or for administrative purposes.

The key components of the definition are:

- Identifiability; and
- Asset (the definition of which encompasses control).

Enterprises frequently expend resources, or incur liabilities, on the acquisition, development, maintenance or enhancement of intangible resources such as scientific or technical knowledge, design and implementation of new processes or systems, licences, intellectual property, market knowledge and trademarks. Not all the items described above will meet the definition of an intangible asset, that is, identifiability, control over a resource and expectation of future economic benefits flowing to the enterprise. If an item covered by this Statement does not meet the definition of an intangible asset, expenditure to acquire it or generate it internally is recognised as an expense when it is incurred. In some cases, an asset may incorporate both intangible and tangible elements that are, in practice, inseparable. Judgement is required to assess as to which element is predominant. If use of physical assets is possible only with the intangible part of it, we treat them as Fixed Assets like Operating system for computers. If physical element is just to support intangible part of it, we treat them as intangible assets.

25.5 Identifiability

The definition of an intangible asset requires that an intangible asset be identifiable. To be identifiable, it is necessary that the intangible asset is clearly distinguished from goodwill. An intangible asset can be clearly distinguished from goodwill if the asset is separable. An asset is separable if the enterprise could rent, sell, exchange or distribute the specific future economic benefits attributable to the asset without also disposing of future economic benefits that flow from other assets used in the same revenue earning activity, though 'separability' is not a necessary condition for identifiability. If an asset generates future economic benefits only in combination with other assets, the asset is identifiable if the enterprise can identify the future economic benefits that will flow from the asset.

25.6 Control

An enterprise controls an asset if the enterprise has the power to obtain the future economic benefits flowing from the underlying resource and also can restrict the access of others to those benefits. The capacity of an enterprise to control the future economic benefits from an intangible asset would normally stem from legal rights that are enforceable in a court of law. However, legal enforceability of a right is not a necessary condition for control since an enterprise may be able to control the future economic benefits in some other way.

Market and technical knowledge may give rise to future economic benefits. An enterprise controls those benefits if, for example, the knowledge is protected by legal rights such as copyrights, a restraint of trade agreement or by a legal duty on employees to maintain confidentiality. Future economic benefit is also flown from the skill of labour and customer loyalty but usually this flow of benefits cannot be controlled by the enterprise. As employees may quit the concern anytime or even loyal customers may decide to purchase goods and services from other suppliers. Moreover these items don't even qualify as intangible asset as per the definition given in this AS.

25.7 Future Economic Benefits

The future economic benefits flowing from an intangible asset may include revenue from the sale of products or services, cost savings, or other benefits resulting from the use of the asset by the enterprise.

25.8 Recognition and Initial Measurement of an Intangible Asset

The recognition of an item as an intangible asset requires an enterprise to demonstrate that the item meets the definition of an intangible asset and recognition criteria set out as below:

a. It is probable that the future economic benefits that are attributable to the asset will flow to the enterprise. An enterprise uses judgement to assess the degree of certainty attached to the flow of future economic benefits that are attributable to the use of the asset on the basis of the evidence available at the time of initial recognition, giving greater weight to external evidence and

b. The cost of the asset can be measured reliably.

These recognition criteria apply to both costs incurred to acquire an intangible asset and those incurred to generate an asset internally. However, the standard also imposes certain additional criteria for the recognition of internally-generated intangible assets.

When assessing the probability of expected future economic benefits, reasonable and supportable assumptions should be used, representing management's best estimate of the set of economic conditions that will exist over the useful life of the asset.

An intangible asset should be measured initially at cost.

25.9 Separate Acquisition

If an intangible asset is acquired separately, the cost of the intangible asset can usually be measured reliably. This is particularly so when the purchase consideration is in the form of cash or other monetary assets.

25.10 Acquisition as Part of an Amalgamation

An intangible asset acquired in an amalgamation in the nature of purchase is accounted for in accordance with AS 14. In accordance with this Standard:

a. A transferee recognises an intangible asset that meets the recognition criteria, even if that intangible asset had not been recognised in the financial statements of the transferor and

b. If the cost (i.e. fair value) of an intangible asset acquired as part of an amalgamation in the nature of purchase cannot be measured reliably, that asset is not recognised as a separate intangible asset but is included in goodwill.

Hence, judgement is required to determine whether the cost (i.e. fair value) of an intangible asset acquired in an amalgamation can be measured with sufficient reliability for the purpose of separate recognition. Quoted market prices in an active market provide the most reliable measurement of fair value. The appropriate market price is usually the current bid price. If current bid prices are unavailable, the price of the most recent similar transaction may provide a basis from which to estimate fair value, provided that there has not been a significant change in economic circumstances between the transaction date and the date at which the asset's fair value is estimated.

If no active market exists for an asset, its cost reflects the amount that the enterprise would have paid, at the date of the acquisition, for the asset in an arm's length transaction between knowledgeable and willing parties, based on the best information available. The cost initially recognised for the intangible asset in this case is restricted to an amount that does not create or increase any capital reserve arising at the date of the amalgamation. Certain enterprises that are regularly involved in the purchase and sale of unique intangible assets have developed techniques for estimating their fair values indirectly. These techniques include, where appropriate, applying multiples reflecting current market transactions to certain indicators driving the profitability of the asset (such as revenue, market shares, operating profit, etc.) or discounting estimated future net cash flows from the asset.

25.11 Acquisition by way of a Government Grant

In some cases, an intangible asset may be acquired free of charge, or for nominal consideration, by way of a government grant.

This may occur when a government transfers or allocates to an enterprise intangible assets such as airport landing rights, licences to operate radio or television stations, import licences or quotas or rights to access other restricted resources.

AS 12, requires that government grants in the form of non-monetary assets, given at a concessional rate should be accounted for on the basis of their acquisition cost. Accordingly, intangible asset acquired free of charge, or for nominal consideration, by way of government grant is recognised at a nominal value or at the acquisition cost, as appropriate; any expenditure that is directly attributable to making the asset ready for its intended use is also included in the cost of the asset.

25.12 Internally Generated Intangible Assets

To assess whether an internally generated intangible asset meets the criteria for recognition, an enterprise classifies the generation of the asset into **Research Phase & Development Phase.** If an enterprise cannot distinguish the research phase from the development phase of an internal project to create an intangible asset, the enterprise treats the expenditure on that project as if it were incurred in the research phase only.

Internally generated goodwill is not recognised as an asset because it is not an identifiable resource controlled by the enterprise that can be measured reliably at cost.

25.13 Research Phase

Research is original and planned investigation undertaken with the prospect of gaining new scientific or technical knowledge and understanding. No intangible asset arising from research or from the research phase should be recognised. Expenditure on research or on the research phase should be recognised as an expense when it is incurred.

Examples of research activities are:

a. Activities aimed at obtaining new knowledge.

b. The search for, evaluation and final selection of, applications of research findings or other knowledge.

c. The search for alternatives for materials, devices, products, processes, systems or services;

d. The formulation, design, evaluation and final selection of possible alternatives for new or improved materials, devices, products, processes, systems or services.

25.14 Development Phase

Development is the application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, devices, products, processes, systems or services prior to the commencement of commercial production or use.

An intangible asset arising from development or from the development phase should be recognised if, and only if, an enterprise can demonstrate all of the following:

a. The technical feasibility of completing the intangible asset so that it will be available for use or sale.

b. Its intention to complete the intangible asset and use or sell it.

c. Its ability to use or sell the intangible asset.

d. How the intangible asset will generate probable future economic benefits. Among other things, the enterprise should demonstrate the existence of a market for the output of the intangible asset or the intangible asset itself or, if it is to be used internally, the usefulness of the intangible asset.

e. The availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset and

f. Its ability to measure the expenditure attributable to the intangible asset during its development reliably.

Examples of development activities are:

a. The design, construction and testing of pre-production or pre-use prototypes and models.

b. The design of tools, jigs, moulds and dies involving new technology.

c. The design, construction and operation of a pilot plant that is not of a scale economically feasible for commercial production and

d. The design, construction and testing of a chosen alternative for new or improved materials, devices, products, processes, systems or services.

An enterprise assesses the future economic benefits to be received from the asset using the principles in Accounting Standard on Impairment of Assets.

An enterprise's costing systems can often measure reliably the cost of generating an intangible asset internally, such as salary and other expenditure incurred in securing copyrights or licences or developing computer software.

This Statement takes the view that expenditure on internally generated brands, mastheads, publishing titles, customer lists and items similar in substance cannot be distinguished from the cost of developing the business as a whole. Therefore, such items are not recognised as intangible assets.

25.15 Cost of an Internally Generated Intangible Asset

The cost of an internally generated intangible asset comprises all expenditure that can be directly attributed, or allocated on a reasonable and consistent basis, to creating, producing and making the asset ready for its intended use from the time when the intangible asset first meets the recognition criteria. The cost includes, if applicable:

a. Expenditure on materials and services used or consumed in generating the intangible asset.

b. The salaries, wages and other employment related costs of personnel directly engaged in generating the asset.

c. Any expenditure that is directly attributable to generating the asset, such as fees to register a legal right and the amortisation of patents and licences that are used to generate the asset and

d. Overheads that are necessary to generate the asset and that can be allocated on a reasonable and consistent basis to the asset. Allocations of overheads are made on bases similar to those discussed in AS 2 & AS 16.

The following are not components of the cost of an internally generated intangible asset:

a. Selling, administrative and other general overhead expenditure unless this expenditure can be directly attributed to making the asset ready for use.

b. Clearly identified inefficiencies and initial operating losses incurred before an asset achieves planned performance and

c. Expenditure on training the staff to operate the asset.

25.16 Items to be Recognised as an Expense

Expenditure on an intangible item should be recognised as an expense when it is incurred unless:

a. It forms part of the cost of an intangible asset that meets the recognition criteria or

b. The item is acquired in an amalgamation in the nature of purchase and cannot be recognised as an intangible asset. It forms part of the amount attributed to goodwill (capital reserve) at the date of acquisition.

AS 26 states that the following types of expenditure which should always be recognised as an expense when it is incurred:

- Research;
- Start-up activities (start-up costs), unless the expenditure qualifies to be included in the cost of a tangible fixed asset. Start-up costs include:
- Preliminary expenses incurred in establishment of a legal entity; such as legal and secretarial costs;
- Expenditure to open a new facility or business (ie pre-opening costs); and
- Expenditure prior to starting new operations or launching new products or processes (ie pre-operating costs);
- Training activities;
- Advertising and promotional activities; and
- Relocating or re-organising part or all of an enterprise.

It does not apply to payments for the delivery of goods or services made in advance of the delivery of goods or the rendering of services. Such prepayments are recognised as assets.

Expenses recognized as expenses cannot be reclassified as cost of intangible asset in later years.

25.17 Subsequent Expenditure

Subsequent expenditure on an intangible asset after its purchase or its completion should be recognised as an expense when it is incurred unless:

a. It is probable that the expenditure will enable the asset to generate future economic benefits in excess of its originally assessed standard of performance and

b. The expenditure can be measured and attributed to the asset reliably.

If these conditions are met, the subsequent expenditure should be added to the cost of the intangible asset.

Subsequent expenditure on brands, mastheads, publishing titles, customer lists and items similar in substance is always recognised as an expense to avoid the recognition of internally generated goodwill. After initial recognition, an intangible asset should be carried at its cost less any accumulated amortisation and any accumulated impairment losses.

25.18 Amortisation Period

The depreciable amount of an intangible asset should be allocated on a systematic basis over the best estimate of its useful life. Amortisation should commence when the asset is available for use. Estimates of the useful life of an intangible asset generally become less reliable as the length of the useful life increases. This Statement adopts a presumption that the useful life of intangible assets is unlikely to exceed ten years.

In some cases, there may be persuasive evidence that the useful life of an intangible asset will be a specific period longer than ten years. In these cases, the presumption that the useful life generally does not exceed ten years is rebutted and the enterprise:

a. Amortises the intangible asset over the best estimate of its useful life.

b. Estimates the recoverable amount of the intangible asset at least annually in order to identify any impairment loss and

c. Discloses the reasons why the presumption is rebutted and the factor(s) that played a significant role in determining the useful life of the asset.

If control over the future economic benefits from an intangible asset is achieved through legal rights that have been granted for a finite period, the useful life of the intangible asset should not exceed the period of the legal rights unless the legal rights are renewable and renewal is virtually certain. There may be both economic and legal factors influencing the useful life of an intangible asset: economic factors determine the period over which future economic benefits will be generated; legal factors may restrict the period over which the enterprise controls access to these benefits. The useful life is the shorter of the periods determined by these factors.

25.19 Amortisation Method

A variety of amortisation methods can be used to allocate the depreciable amount of an asset on a systematic basis over its useful life. These methods include the straight-line method, the diminishing balance method and the unit of production method. The method used for an asset is selected based on the expected pattern of consumption of economic benefits and is consistently applied from period to period, unless there is a change in the expected pattern of consumption of economic benefits to be derived from that asset. There will rarely, if ever, be persuasive evidence to support an amortisation method for intangible assets that results in a lower amount of accumulated amortisation than under the straight-line method.

The amortisation charge for each period should be recognised as an expense unless another Accounting Standard permits or requires it to be included in the carrying amount of another asset.

25.20 Residual Value

The residual value of an intangible asset should be assumed to be zero unless:

a. There is a commitment by a third party to purchase the asset at the end of its useful life or

b. There is an active market for the asset and:

   (i) Residual value can be determined by reference to that market and

   (ii) It is probable that such a market will exist at the end of the asset's useful life.

25.21 Review of Amortisation Period and Amortisation Method

During the life of an intangible asset, it may become apparent that the estimate of its useful life is inappropriate. Over time, the pattern of future economic benefits expected to flow to an enterprise from an intangible asset may change. Therefore, the amortisation period and the amortisation method should be reviewed at least at each financial year end. If the expected useful life of the asset is significantly different from previous estimates, the amortisation period should be changed accordingly. If there has been a significant change in the expected pattern of economic benefits from the asset, the amortisation method should be changed to reflect the changed pattern. Such changes should be accounted for in accordance with AS 5.

25.22 Recoverability of the Carrying Amount-Impairment Losses

Impairment losses of intangible assets are calculated on the basis of AS 28, which will be discussed in the later units of this chapter. If an impairment loss occurs before the end of the first annual accounting period commencing after acquisition for an intangible asset acquired in an amalgamation in the nature of purchase, the impairment loss is recognised as an adjustment to both the amount assigned to the intangible asset and the goodwill (capital reserve) recognised at the date of the amalgamation. However, if the impairment loss relates to specific events or changes in circumstances occurring after the date of acquisition, the impairment loss is recognised under AS 28 and not as an adjustment to the amount assigned to the goodwill (capital reserve) recognised at the date of acquisition. In addition to the requirements of AS 28, an enterprise should estimate the recoverable amount of the following intangible assets at least at each financial year end even if there is no indication that the asset is impaired:

a. An intangible asset that is not yet available for use and

b. An intangible asset that is amortised over a period exceeding ten years from the date when the asset is available for use.

The recoverable amount should be determined under AS 28 and impairment losses recognised accordingly.

If the useful life of an intangible asset was estimated to be less than ten years at initial recognition, but the useful life is extended by subsequent expenditure to exceed ten years from when the asset became available for use, an enterprise performs the required impairment test and makes the disclosure required.

25.23 Retirements and Disposals

An intangible asset should be derecognised (eliminated from the balance sheet) on disposal or when no future economic benefits are expected from its use and subsequent disposal.

Gains or losses arising from the retirement or disposal of an intangible asset should be determined as the difference between the net disposal proceeds and the carrying amount of the asset and should be recognised as income or expense in the statement of profit and loss.

25.24 Disclosure

The financial statements should disclose the following for each class of intangible assets, distinguishing between internally generated intangible assets and other intangible assets:

a. The useful lives or the amortisation rates used.

b. The amortisation methods used.

c. The gross carrying amount and the accumulated amortisation (aggregated with accumulated impairment losses) at the beginning and end of the period.

d. A reconciliation of the carrying amount at the beginning and end of the period showing:

   i. Additions, indicating separately those from internal development and through amalgamation.

   ii. Retirements and disposals.

   iii. Impairment losses recognised in the statement of profit and loss during the period.

   iv. Impairment losses reversed in the statement of profit and loss during the period.

   v. Amortisation recognised during the period and

   vi. Other changes in the carrying amount during the period.

The financial statements should also disclose:

a. If an intangible asset is amortised over more than ten years, the reasons why it is presumed that the useful life of an intangible asset will exceed ten years from the date when the asset is available for use. In giving these reasons, the enterprise should describe the factor(s) that played a significant role in determining the useful life of the asset.

b. A description, the carrying amount and remaining amortisation period of any individual intangible asset that is material to the financial statements of the enterprise as a whole.

c. The existence and carrying amounts of intangible assets whose title is restricted and the carrying amounts of intangible assets pledged as security for liabilities and

d. The amount of commitments for the acquisition of intangible assets.

The financial statements should disclose the aggregate amount of research and development expenditure recognised as an expense during the period.

25.25 Transitional Provisions

Where, on the date of this Statement coming into effect, an enterprise is following an accounting policy of not amortising an intangible item or amortising an intangible item over a period longer than the period determined under this Statement and the period determined has expired on the date of this Statement coming into effect, the carrying amount appearing in the balance sheet in respect of that item should be eliminated with a corresponding adjustment to the opening balance of revenue reserves.

In the event the period determined has not expired on the date of this Statement coming into effect and:

a. If the enterprise is following an accounting policy of not amortising an intangible item, the carrying amount of the intangible item should be restated, as if the accumulated amortisation had always been determined under this Statement, with the corresponding adjustment to the opening balance of revenue reserves. The restated carrying amount should be amortised over the balance of the period.

b. If the remaining period as per the accounting policy followed by the enterprise:

   (i) Is shorter as compared to the balance of the period determined, the carrying amount of the intangible item should be amortised over the remaining period as per the accounting policy followed by the enterprise,

   (ii) Is longer as compared to the balance of the period determined, the carrying amount of the intangible item should be restated, as if the accumulated amortisation had always been determined under this Statement, with the corresponding adjustment to the opening balance of revenue reserves. The restated carrying amount should be amortised over the balance of the period.

25.26 Illustrations

Illustration 1

Dell International Ltd. is developing a new production process. During the financial year 31st March, 2016, the total expenditure incurred on this process was ₹ 40 lakhs. The production process met the criteria for recognition as an intangible asset on 1st December, 2015. Expenditure incurred till this date was ₹ 16 lakhs.

Further expenditure incurred on the process for the financial year ending 31st March 2017, was ₹ 70 lakhs. As at 31-3-2017, the recoverable amount of know-how embodied in the process is estimated to be ₹ 62 lakhs. This includes estimates of future cash outflows as well as inflows.

You are required to work out:

(a) What is the expenditure to be charged to the profit and loss account for the financial year ended 31st March 2016? (Ignore depreciation for this purpose)

(b) What is the carrying amount of the intangible asset as at 31st March 2016?

(c) What is the expenditure to be charged to the profit and loss account for the financial year ended 31st March 2017? (Ignore depreciation for this purpose)

(d) What is the carrying amount of the intangible asset as at 31st March 2017?

Solution

(a) ₹ 16 lakhs

(b) Carrying amount as on 31-3-2016 will be the expenditure incurred after 1-12-2015 = ₹ 24 lakhs

(c) Book cost of intangible asset as on 31-3-2017 is as follows

Total Book cost = ₹ (70 + 24) lakhs = ₹ 94 lakhs

Recoverable amount as estimated = ₹ 62 lakhs

Difference to be charged to Profit and Loss account = ₹ 32 lakhs

(d) ₹ 62 lakhs.

Illustration 2

A Pharma Company spent ₹ 33 lakhs during the accounting year ended 31st March, 2017 on a research project to develop a drug to treat "AIDS". Experts are of the view that it may take four years to establish whether the drug will be effective or not and even if found effective it may take two to three more years to produce the medicine, which can be marketed. The company wants to treat the expenditure as deferred revenue expenditure. Comment.

Solution

As per para 41 of AS 26 'Intangible Assets', no intangible asset arising from research (or from the research phase of an internal project) should be recognized. Expenditure on research (or on the research phase of an internal project) should be recognized as an expense when it is incurred. Thus the company cannot treat the expenditure as deferred revenue expenditure. The entire amount of ₹ 33 lakhs spent on research project should be charged as an expense in the year ended 31st March, 2017.

Illustration 3

Swift Ltd. acquired a patent at a cost of ₹ 80,00,000 for a period of 5 years and the product life-cycle is also 5 years. The company capitalized the cost and started amortizing the asset at ₹ 10,00,000 per annum. After two years it was found that the product life-cycle may continue for another 5 years from then. The net cash flows from the product during these 5 years were expected to be ₹ 36,00,000, ₹ 46,00,000, ₹ 44,00,000, ₹ 40,00,000 and ₹ 34,00,000. Find out the amortization cost of the patent for each of the years.

Solution

Swift Limited amortised ₹ 10,00,000 per annum for the first two years i.e. ₹ 20,00,000. The remaining carrying cost can be amortized during next 5 years on the basis of net cash flows arising from the sale of the product. The amortisation may be found as follows:

Year	*Net cash flows* ₹	*Amortization Ratio*	*Amortization Amount* ₹
I	-	0.125	10,00,000[1]
II	-	0.125	10,00,000
III	36,00,000	0.180	10,80,000
IV	46,00,000	0.230	13,80,000
V	44,00,000	0.220	13,20,000
VI	40,00,000	0.200	12,00,000

[1] It has been assumed that the company had amortized the patent at ₹ 10,00,000 per annum in the first two years on the basis of economic benefits derived from the product manufactured under the patent.

VII	34,00,000	0.170	10,20,000
Total	2,00,00,000	1.000	80,00,000

It may be seen from above that from third year onwards, the balance of carrying amount i.e., ₹ 60,00,000 has been amortized in the ratio of net cash flows arising from the product of Swift Ltd.

Note: The answer has been given on the basis that the patent is renewable and Swift Ltd. got it renewed after expiry of five years.

Illustration 4

During 2016-2017, an enterprise incurred costs to develop and produce a routine, low risk computer software product, as follows:

	Amount (₹)
Completion of detailed programme and design	*25,000*
Coding and Testing	*20,000*
Other coding costs	*42,000*
Testing costs	*12,000*
Product masters for training materials	*13,000*
Duplication of computer software and training materials, from product masters (2,000 units)	*40,000*
Packing the product (1,000 units)	*11,000*

What amount should be capitalized as software costs in the books of the company, on Balance Sheet date?

Solution

As per para 44 of AS 26, costs incurred in creating a computer software product should be charged to research and development expense when incurred until technological feasibility/asset recognition criteria has been established for the product. Technological feasibility/asset recognition criteria have been established upon completion of detailed programme design or working model. In this case, ₹ 45,000 would be recorded as an expense (₹ 25,000 for completion of detailed program design and ₹ 20,000 for coding and testing to establish technological feasibility/asset recognition criteria). Cost incurred from the point of technological feasibility/asset recognition criteria until the time when products costs are incurred are capitalized as software cost (₹ 42,000 + ₹ 12,000 + ₹ 13,000) ₹ 67,000.

Reference: The students are advised to refer the full text of AS 26 "Intangible Assets" (issued 2002).

UNIT 26 : AS 27: FINANCIAL REPORTING OF INTERESTS IN JOINT VENTURES

26.1 Introduction

AS 27, came into effect in respect of accounting periods commenced on or after 01.04.2002. This standardset out principles and procedures for accounting of interests in joint venture and reporting of joint venture assets, liabilities, income and expenses in the financial statements of venturers and investors regardless of the structures or forms under which the joint venture activities take place. The standard deals with three broad types of joint ventures – jointly controlled operations, jointly controlled assets and jointly controlled entities. The requirements relating to accounting for joint ventures in consolidated financial statements according to proportionate consolidation method, as contained in AS 27, apply only when consolidated financial statements are prepared by venturer. Otherwise, AS 13 will be applicable in venturer's separate financial statements. An investor in joint venture, which does not have joint control, should report its interest in a joint venture in its consolidated financial statements in accordance with AS 13, AS 21 and AS 23.

26.2 Scope

This Standard should be applied in accounting for interests in joint ventures and the reporting of joint venture assets, liabilities, income and expenses in the financial statements of venturers and investors, regardless of the structures or forms under which the joint venture activities take place.

The provisions of this AS need to be referred to for consolidated financial statement only when CFS is prepared and presented by the venturer.

26.3 Definitions

A joint venture is a contractual arrangement whereby two or more parties undertake an economic activity, which is subject to joint control.

From the above definition we conclude that the essential conditions for any business relation to qualify as joint venture are:

- **Two or more parties coming together:** Parties can be an individual or any form of business organization say, BOI, AOP, Company, firm.
- **Venturers undertake some economic activity:** Economic activity means activities with the profit-making motive. Joint venture is separate from the regular identity of the venturers, it may be in the form of independent and separate legal organization other than regular concern of the venturer engaged in the economic activity.

- **Venturers have joint control on the economic activity:** The operating and financial decisions are influenced by the venturers and they also share the results of the economic activity.
- **There exists a contractual agreement:** The relationship between venturers is governed by the contractual agreement. This agreement can be in the form of written and signed agreement or as minutes of venturer meeting or in any other written form.

Joint control is the contractually agreed sharing of control over an economic activity.

Control is the power to govern the financial and operating policies of an economic activity so as to obtain benefits from it.

A **venturer** is a party to a joint venture and has joint control over that joint venture.

An **investor** in a joint venture is a party to a joint venture and does not have joint control over that joint venture.

26.4 Contractual Arrangement

The joint venture covered under this statement is governed on the basis of contractual agreement. Non-existence of contractual agreement will disqualify an organization to be covered in AS 27. Joint ventures with contractual agreement will be excluded from the scope of AS 23 only if the investment qualifies as subsidiary under AS 21, in this case, it will be covered by AS 21. Contractual agreement can be in the form of written contract, minutes of discussion between parties (venturers), articles of the concern or by-laws of the relevant joint venture.

Irrespective of the form of the contract, the content of the contract ideally should include the following points:

- The activity, duration and reporting obligations of the joint venture.
- The appointment of the board of directors or equivalent governing body of the joint venture and the voting rights of the venturers.
- Capital contributions by the venturers.
- The sharing by the venturers of the output, income, expenses or results of the joint venture.

The main object of contractual agreement is to distribute the economic control among the venturers, it ensures that no venturer should have unilateral control. If contractual agreement is signed by a party to safeguard its right, such agreement will not make the party a venturer. For example, IDBI gave loan to the joint venture entity of L&T and Tantia Construction, they signed an agreement according to which IDBI will be informed for all important decisions of the joint venture entity. This agreement is to protect the right of the IDBI, hence just signing the contractual agreement will not make investor a venturer. Similarly, just because contractual agreement has assigned the role of a manager to any of the venturer will not disqualify him as venturer. For example, Mr. A, M/s. B & Co. and C Ltd. entered into a joint venture, where according to the agreement, all the policies making decisions on financial and operating activities will be taken in a regular meeting attended by them or their representatives.

Implementation and execution of these policies will be the responsibility of Mr. A. Here Mr. A is acting as venturer as well as manager of the concern.

26.5 Forms of Joint Ventures

Joint ventures may take many forms and structures, this Statement identifies them in three broad types - **Jointly Controlled Operations (JCO), Jointly Controlled Assets (JCA) and Jointly Controlled Entities (JCE).** Any structure which satisfies the following characteristics can be classified as joint ventures: (a) Two or more venturers are bound by a contractual arrangement and (b) The contractual arrangement establishes joint control.

26.6 Jointly Controlled Operations (JCO)

Under this set up, venturers do not create a separate entity for their joint venture business but they use their own resources for the purpose. They raise any funds required for joint venture on their own, they incur any expenses and sales are also realised individually. They use same set of fixed and employees for joint venture business and their own business. Since there is no separate legal entity and venturers don't recognize the transactions separately, they do not maintain a separate set of books for joint venture. All the transactions of joint venture are recorded in their books only. Following are the key features of JCO:

a. Each venturer has his own separate business.

b. There is no separate entity for joint venture business.

c. All venturers are creating their own assets and maintain them.

d. Each venturer record only his own transactions without any separately set of books maintained for the joint venture business.

e. There is a common agreement between all of them.

f. Venturers use their assets for the joint venture business.

g. Venturers met the liabilities created by them for the joint venture business.

h. Venturers met the expenses of the joint venture business from their funds.

i. Any revenue generated or income earned from the joint venture is shared by the venturers as per the contract.

Since the jointly controlled operation is not purchasing assets or raising finance in its own right, the assets and liabilities used in the activities of the joint venture are those of the ventures. As such, they are accounted for in the financial statements of the venture to which they belong. The only accounting issue that arises is that the output from the project is to be shared among the venturers and, therefore, there must be some mechanism for specifying the allocation of the proceeds and the sharing of any joint expenses.

Mr. A (dealer in tiles and marbles), Mr. B (dealer in various building materials) and Mr. C (Promoter) enters into a joint venture business, where any contract for construction received will be completed jointly, say, Mr. A will supply all tiles and marbles, Mr. B will supply other materials from his godown and Mr. C will look after the completion of construction. As per the contractual agreement, they will share any profit/loss in a predetermined ratio. None of them are using separate staff or other resources for the joint venture business and neither do they maintain a separate account. Everything is recorded in their personal business only. Venturer doesn't maintain a separate set of books but they record only their own transactions of the joint venture business in their books. Any transaction of joint venture recorded separately is only for internal reporting purpose. Once all transactions recorded in venturer financial statement, they don't need to be adjusted for in consolidated financial adjustment.

Illustration 1

Mr. A, Mr. B and Mr. C entered into a joint venture to purchase a land, construct and sell flats. Mr. A purchased a land for ₹ 60,00,000 on 01.01.2016 and for the purpose he took loan from a bank for ₹ 50,00,000 @ 8% interest p.a. He also paid registering fees ₹ 60,000 on the same day. Mr. B supplied the materials for ₹ 4,50,000 from his godown and further he purchased the materials for ₹ 5,00,000 for the joint venture. Mr. C met all other expenses of advertising, labour and other incidental expenses which turnout to be ₹ 9,00,000. On 30.06.2016 each of the venturer agreed to take away one flat each to be valued at ₹ 10,00,000 each flat and rest were sold by them as follow: Mr. A for ₹ 40,00,000; Mr. B for ₹ 20,00,000 and Mr. C for ₹ 10,00,000. Loan was repaid on the same day by Mr. A alongwith the interest and net proceeds were shared by the partners equally.

You are required to prepare the draft Consolidated Profit & Loss Account and Joint Venture Account in the books of each venturer.

26.7 Jointly Controlled Assets (JCA)

Separate legal entity is not created in this form of joint venture but venturer owns the assets jointly, which are used by them for the purpose of generating economic benefit to each of them. They take up any expenses and liabilities related to the joint assets as per the contract. We can conclude the following points:

- There is no separate legal identity.
- There is a common control over the joint assets.
- Venturers use this asset to derive some economic benefit to themselves.
- Each venturer incurs separate expenses for their transactions.

- Expenses on jointly held assets are shared by the venturers as per the contract.
- In their financial statement, venturer shows only their share of the asset and total income earned by them along with total expenses incurred by them.
- Because the assets, liabilities, income and expenses are already recognised in the separate financial statements of the venturer, and consequently in its consolidated financial statements, no adjustments or other consolidation procedures are required in respect of these items when the venturer presents consolidated financial statements.
- Financial statements may not be prepared for the joint venture, although the venturers may prepare accounts for internal management reporting purposes so that they may assess the performance of the joint venture.

For example, ABC Ltd., BP Ltd. and HP Ltd. having the same point of oil refinery and same place of customers agreed to spread a pipeline from their unit to customers place jointly. They agreed to share the expenditure on the pipeline construction and maintenance in the ratio 3:3:4 respectively and the time allotted to use the pipeline was in the ratio 4:3:3 respectively.

For the joint venture, each venturer will record his share of joint assets as ***classified according to the nature of the assets rather than as an investment,*** and any expenditure incurred or revenue generated will be recorded with other items similar to JCO. Following are the few differences between JCO and JCA for better understanding:

- In JCO venturers uses their own assets for joint venture business but in JCA they jointly owns the assets to be used in joint venture.
- JCO is an agreement to joint carry on the operations to earn income whereas, JCA is an agreement to jointly construct and maintain an asset to generate revenue to each venturer.
- Under JCO all expenses and revenues are shared at an agreed ratio, in JCA only expenses on joint assets are shared at the agreed ratio.

Illustration 2

A Ltd., B Ltd. and C Ltd. decided to jointly construct a pipeline to transport the gas from one place to another that was manufactured by them. For the purpose following expenditure was incurred by them: Buildings ₹ 12,00,000 to be depreciated @ 5% p.a., Pipeline for ₹ 60,00,000 to be depreciated @ 15% p.a., computers and other electronics for ₹ 3,00,000 to be depreciated @ 40% p.a. and various vehicles of ₹ 9,00,000 to be depreciated @ 20% p.a.

They also decided to equally bear the total expenditure incurred on the maintenance of the pipeline that comes to ₹ 6,00,000 each year.

You are required to show the consolidated financial balance sheet and the extract of draft Profit & Loss Account and Balance Sheet for each venturer.

26.8 Jointly Controlled Entities (JCE)

This is the format where venturer creates a new entity for their joint venture business. All the venturers pool their resources under new banner and this entity purchases its own assets, create its own liabilities, expenses are incurred by the entity itself and sales are also made by this entity. The net result of the entity is shared by the venturers in the ratio agreed upon in the contractual agreement. This contractual agreement also determines the joint control of the venturer.

Being a separate entity, separate set of books is maintained for the joint venture and in the individual books of venturers the investment in joint venture is recorded as investment (AS 13). Joint venture can be a foreign company operating in India through an Indian concern say Gremo Insurance of Germany contributes 49% of the assets in joint venture in India with Indo Bank Ltd. of India. They agreed to share the net results in 1:1 ratio. The main objective of the joint venture is to exploits the technical expertise of Gremo Insurance and Goodwill of Indo Bank Ltd. It can also be two or more local concerns opening an organization or firm or company contributing their assets to this new joint venture concern and share the profits of the operation in the agreed ratio.

Illustration 3

A Ltd. a UK based company entered into a joint venture with B Ltd. in India, wherein B Ltd. will sell import the goods manufactured by A Ltd. on account of joint venture and sell them in India. A Ltd. and B Ltd. agreed to share the expenses & revenues in the ratio of 5:4 respectively whereas profits are distributed equally. A Ltd. invested 49% of total capital but has equal share in all the assets and is equally liable for all the liabilities of the joint venture. Following is the trail balance of the joint venture at the end of the first year:

Particulars	*Dr. (₹)*	*Cr.(₹)*
Purchases	*9,00,000*	
Other Expenses	*3,06,000*	
Sales		*13,05,000*

	B Ltd.	1,00,000	2,00,000

26.9 Consolidated Financial Statements of a Venturer

Proportionate consolidation is a method of accounting and reporting whereby a venturer's share of each of the assets, liabilities, income and expenses of a jointly controlled entity is reported as separate line items in the venturer's financial statements.

Proportionate consolidation method of accounting is to be followed except in the following cases:

a. Investment is intended to be temporary because the investment is acquired and held exclusively with a view to its subsequent disposal in the near future.

b. The term 'Near Future' is explained with AS 21.

   Or joint venture operates under severe long-term restrictions, which significantly impair its ability to transfer funds to the venturers.

   In both the above cases, investment of venturer in the share of the investee is treated as investment according to AS 13.

A venturer should discontinue the use of the proportionate consolidation method from the date that:

a. It ceases to have joint control in the joint venture but retains, either in whole or in part, its investment.

b. The use of the proportionate consolidation method is no longer appropriate because the joint venture operates under severe long-term restrictions that significantly impair its ability to transfer funds to the venturers.

From the date of discontinuing the use of the proportionate consolidation method,

a. If interest in entity is more than 50%, investments in such joint ventures should be accounted for in accordance with AS 21, Consolidated Financial Statement.

b. If interest is 20% or more but upto 50%, investments are to be accounted for in accordance with AS 23, Accounting for Investment in Associates in Consolidated Financial Statement.

c. For all other cases investment in joint venture is treated as per AS 13, Accounting for Investment.

d. For this purpose, the carrying amount of the investment at the date on which joint venture relationship ceases to exist should be regarded as cost thereafter.

Following are the features of Proportionate Consolidation Method:

a. Stress is given on substance over form i.e., more importance is given to the share of venturers in the profit or loss of the venture from the share of assets and liabilities rather than the nature and form of the joint venture.

b. Venturer's share of joint assets, liabilities, expenses and income are shown on the separate lines in the consolidated financial statement.

For example, Mr. A enters into a joint venture with Mr. B and has contributed 33% of the total fixed assets and has share of 40% in current assets and current liabilities. Its share in net result is 50%. Consolidated Balance Sheet will be prepared by Mr. A as follow:

Consolidated Balance Sheet

		Note No.	*(₹)*
I	Equity and liabilities		
	1. Shareholders' funds:		
	Share Capital	1	1,00,000
	2. Current Liabilities	2	50,000
			1,50,000
II	Assets		
	Non-current Assets		
	Fixed assets	3	75,000
	Current Assets	4	75,000
			1,50,000

Notes to Accounts

1.	Share Capital:		
	A	33,000	
	B	67,000	1,00,000
2.	Current Liabilities:		
	A	20,000	
	B	30,000	50,000
3.	Fixed Assets:		
	A	25,000	
	B	50,000	75,000
4.	Current Assets:		
	A	30,000	
	B	45,000	75,000

Similar to above all the items of expenses and income will also be classified line by line for each item. The whole basis of this provision is to bring transparency in the books of account. If there is any special clause for sharing of expenses, income or any other item that should be clearly disclosed in the consolidated financial statement.

c. Most of the provisions of Proportionate Consolidation Method are similar to the provisions of AS 21.

d. As far as possible the reporting date of the financial statements of jointly controlled entity and venturers should be same. If practically it is not possible to draw up the financial statements to such date and, accordingly, those financial statements are drawn up to different reporting dates, adjustments should be made in joint venturer's books for the effects of significant transactions or other events that occur between the jointly controlled entity's date and the date of the venturer's financial statements. In any case, the difference between reporting dates should not be more than six months.

e. Accounting policies followed in the preparation of the financial statements of the jointly controlled entity and venturer should be uniform for like transactions and other events in similar circumstances.

   If accounting policies followed by venturer and jointly controlled entity are not uniform, then adjustments should be made in the items of the venturer to bring it in line with the accounting policy of the joint venture.

f. Any asset or liability should not be adjusted by another liability or asset. Similarly any income or expense cannot be adjusted with another expense or income. Such adjustment can be made only when legally it is allowed to adjust them and such items does lead to settlement of obligation or writing off of assets.

g. On the date when interest in joint entity is acquired, if the interest of venturer in net assets of the entity is less than the cost of investment in joint entity, the difference will be recognized as goodwill in the consolidated financial statement and if net asset is more than cost of investment, then the difference is recognized as capital reserve.

   In case the carrying amount of investment is different than cost of investment, we take carrying amount for the purpose of the above calculation.

h. An investor who don't have joint control in the entity is like associate as discussed in AS 23, therefore the treatment of losses will be similar to AS 23. If investor's share in loss of the joint entity is in excess of his interest in net asset, this excess loss will be recognized by the venturers. In future when entity starts reporting profits, investor's share of profits will be provided to venturer till total amount is equivalent to absorbed losses.

Illustration 4

A Ltd. entered into a joint venture with B Ltd. on 1:1 basis and a new company C Ltd. was formed for the same purpose and following is the balance sheet of all the three companies:

Particulars	*A Ltd.*	*B Ltd.*	*C Ltd.*
Share Capital	*1,000,000*	*750,000*	*500,000*
Reserve & Surplus	*1,800,000*	*1,600,000*	*1,200,000*
Loans	*300,000*	*400,000*	*200,000*
Current Liabilities	*400,000*	*250,000*	*100,000*
Fixed Assets	*3,050,000*	*2,625,000*	*1,950,000*

Investment in JV	*250,000*	*250,000*	*-*
Current Assets	*200,000*	*125,000*	*50,000*

Prepare the balance sheet of A Ltd. and B Ltd. under proportionate consolidation method.

Solution

Balance Sheet of A Ltd.

		Note No.	(₹)

	C Ltd.	25,000	1,50,000

26.10 Transactions between a Venturer and Joint Venture

When venturer transfers or sells assets to Joint Venture, the venturer should recognise only that portion of the gain or loss which is attributable to the interests of the other venturers. The venturer should recognise the full amount of any loss only when the contribution or sale provides evidence of a reduction in the net realisable value of current assets or an impairment loss.

When the venturer from the joint venture purchases the assets, venturer will not recognized his share of profits in the joint venture of such transaction unless he disposes off the assets. A venturer should recognise his share of the losses resulting from these transactions in the same way as profits except that losses will be recognised in full immediately only when they represent a reduction in the net realisable value of current assets or an impairment loss.

In case the joint venture is in the form of separate entity then provisions of above the Para will be followed only for consolidated financial statement and not for venturer's own financial statement. In the books of venturer, profit or loss from such transactions are recognised in full.

26.11 Reporting Interests in Joint Ventures in the Financial Statements of an Investor

The investors who don't have joint control over the entity recognized his share of net results and his investments in joint venture as per AS 13. In the consolidated financial statement it is recognized as per AS 13, AS 21 or AS 23 as appropriate.

26.12 Operators of Joint Ventures

Payment to operators is recognized as expense in CFS and in the books of the operators as per AS 9, Revenue Recognition. The operator may any of the venturer, in this case any amount received by him, as management fees for the service will be recognized as stated above in this Para.

26.13 Disclosures

A venturer should disclose the aggregate amount of the following contingent liabilities, unless the probability of loss is remote, separately from the amount of other contingent liabilities:

a. Any contingent liabilities that the venturer has incurred in relation to its interests in joint ventures and its share in each of the contingent liabilities which have been incurred jointly with other venturers;

b. Its share of the contingent liabilities of the joint ventures themselves for which it is contingently liable; and

c. Those contingent liabilities that arise because the venturer is contingently liable for the liabilities of the other venturers of a joint venture.

A venturer should disclose the aggregate amount of the following commitments in respect of its interests in joint ventures separately from other commitments:

a. Any capital commitments of the venturer in relation to its interests in joint ventures and its share in the capital commitments that have been incurred jointly with other venturers; and

b. Its share of the capital commitments of the joint ventures themselves.

A venturer should disclose a list of all joint ventures and description of interests in significant joint ventures. In respect of jointly controlled entities, the venturer should also disclose the proportion of ownership interest, name and country of incorporation or residence. A venturer should disclose, in its separate financial statements, the aggregate amounts of each of the assets, liabilities, income and expenses related to its interests in the jointly controlled entities.

Reference: The students are advised to refer the full text of AS 27 "Financial Reporting of Interests in Joint Ventures" (issued 2002).

UNIT 27: AS 28: IMPAIRMENT OF ASSETS

27.1 Introduction

AS 28 came into effect in respect of accounting period commenced on or after 1-4-2004 and is mandatory in nature from that date for the following:

(i) Enterprises whose equity or debt securities are listed on a recognised stock exchange in India, and enterprises that are in the process of issuing equity or debt securities that will be listed on a recognised stock exchange in India as evidenced by the board of directors' resolution in this regard.

(ii) All other commercial, industrial and business reporting enterprises, whose turnover for the accounting period exceeds ₹ 50 crores.

In respect of all other enterprises, the Accounting Standard came into effect in respect of accounting periods commenced on or after 1-4-2005 and is mandatory in nature from that date.

This standard prescribes the procedures to be applied to ensure that the assets of an enterprise are carried at an amount not exceeding their recoverable amount (amount to be recovered through use or sale of the asset). The standard also lays down principles for reversal of impairment losses and prescribes certain disclosures in respect of impaired assets. An enterprise is required to assess at each balance sheet date whether there is an indication that an enterprise may be impaired. If such an indication exists, the enterprise is required to estimate the recoverable amount and the impairment loss, if any, should be recognised in the profit and loss account.

27.2 Scope

The standard should be applied in accounting for impairment of all assets except

1. inventories (AS 2),
2. assets arising under construction contracts (AS 7),
3. financial assets including investments covered under AS 13, and deferred tax assets (AS 22).

There are chances that the provision on account of impairment losses may increase sickness of companies and potentially sick companies may actually become sick.

Therefore, AS 28 applies to (among other assets):

- Land and buildings;
- Plant and machinery;
- Investment property;
- Intangible assets;
- Goodwill;
- Assets carried at revalued amounts under AS 10.

27.3 Assessment

An enterprise should assess at each balance sheet date whether there is any indication that an asset may be impaired. If any such indication exists, the enterprise should estimate the recoverable amount of the asset. An asset is impaired when the carrying amount of the asset exceeds its recoverable amount. In assessing whether there is any indication that an asset may be impaired, an enterprise should consider, as a minimum, the following indications:

External sources of information

a. During the period, an asset's market value has declined significantly more than would be expected as a result of the passage of time or normal use.

b. Significant changes with an adverse effect on the enterprise have taken place during the period, or will take place in the near future, in the technological, market, economic or legal environment in which the enterprise operates or in the market to which an asset is dedicated.

c. Market interest rates or other market rates of return on investments have increased during the period, and those increases are likely to affect the discount rate used in calculating an asset's value in use and decrease the asset's recoverable amount materially.

d. The carrying amount of the net assets of the reporting enterprise is more than its market capitalization.

Internal sources of information

a. Evidence is available of obsolescence or physical damage of an asset.

b. Significant changes with an adverse effect on the enterprise have taken place during the period, or are expected to take place in the near future, in the extent to which, or manner in which, an asset is used or is expected to be used. These changes include plans to discontinue or restructure the operation to which an asset belongs or to dispose of an asset before the previously expected date and

c. Evidence is available from internal reporting that indicates that the economic performance of an asset is, or will be, worse than expected.

The concept of materiality applies in identifying whether the recoverable amount of an asset needs to be estimated.

If there is an indication that an asset may be impaired, this may indicate that the remaining useful life, the depreciation method or the residual value for the asset need to be reviewed and adjusted under the Accounting Standard 6, even if no impairment loss is recognised for the asset.

27.4 Measurement of Recoverable Amount

Recoverable amount for an asset is defined by the statement as the higher of net selling price or value of use. If there is no reason to believe that an asset's value in use materially exceeds its net selling price, the asset's recoverable amount may be taken to be its net selling price. This will often be the case for an asset that is held for disposal. Otherwise, if it is not possible to determine the selling price we take value in use of assets as it's recoverable amount.

Recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows from continuing use that are largely independent of those from other assets or groups of assets. If this is the case, recoverable amount is determined for the cash-generating unit to which the asset belongs, unless either:

a. The asset's net selling price is higher than its carrying amount; or

b. The asset's value in use can be estimated to be close to its net selling price and net selling price can be determined.

Net selling price is the amount obtainable from the sale of an asset in an arm's length transaction between knowledgeable, willing parties, less the costs of disposal.

Costs of disposal are incremental costs directly attributable to the disposal of an asset, excluding finance costs and income tax expense.

The best evidence for net selling price is a price in the bidding sales agreement for the disposal of the assets or similar assets. In the absence of this net selling price is estimated from the transactions for the assets in active market, if the asset has the active market. If there is no binding sale agreement or active market for an asset, net selling price is based on the best information available to reflect the amount that an enterprise could obtain, at the balance sheet date, for the disposal of the asset in an arm's length transaction between knowledgeable, willing parties, after deducting the costs of disposal.

Value in Use is the present value of estimated future cash flows expected to arise from the continuing use of an asset and from its disposal at the end of its useful life.

Estimating the value in use of an asset involves the following steps:

a. Estimating the future cash inflows and outflows arising from continuing use of the asset and from its ultimate disposal; and

b. Applying the appropriate discount rate to these future cash flows.

An impairment loss is the amount by which the carrying amount of an asset exceeds its recoverable amount

Carrying amount is the amount at which an asset is recognised in the balance sheet after deducting any accumulated depreciation (amortisation) and accumulated impairment losses thereon.

Depreciation **(Amortisation**) is a systematic allocation of the depreciable amount of an asset over its useful life.

Depreciable amount is the cost of an asset, or other amount substituted for cost in the financial statements, less its residual value.

Useful life is either:

- The period of time over which an asset is expected to be used by the enterprise; or
- The number of production or similar units expected to be obtained from the asset by the enterprise.

27.5 Basis for Estimates of Future Cash Flows

Cash flow projections should be based on the most recent budgets/forecasts for a maximum of five years. Financial budgets/forecasts over a period longer than five years may be used if management is confident that these projections are reliable and it can demonstrate its ability, based on past experience, to forecast cash flows accurately over that longer period.

Cash flow projections until the end of an asset's useful life are estimated by extrapolating the cash flow projections based on the financial budgets/forecasts using a growth rate for subsequent years. This rate is steady or declining. This growth rate should not exceed the long-term average growth rate for the products, industries, or country or countries in which the enterprise operates, or for the market in which the asset is used, unless a higher rate can be justified.

Cash flow projections should be based on reasonable and supportable assumptions that represent management's best estimate of the set of economic conditions that will exist over the remaining useful life of the asset. Greater weight should be given to external evidence.

27.6 Composition of Estimates of Future Cash Flows

Estimates of future cash flows should include (i) Projections of net cash inflows from the continuing use of the asset and (ii) Net cash flows, if any, to be received (or paid) for the disposal of the asset at the end of its useful life.

Care should be taken for the following points:

a. When the carrying amount of an asset does not yet include all the cash outflows to be incurred before it is ready for use or sale, estimate of any further cash outflow that is expected to be incurred before the asset is ready for use or sale should be included.

b. Cash inflows from assets that generate cash inflows from continuing use that are largely independent of the cash inflows from the asset under review should not be included.

c. Cash outflows that relate to obligations that have already been recognised as liabilities to be excluded.

d. Future cash outflows or inflows expected to arise because of restructuring of the organization should be not considered.

e. Any future capital expenditure enhancing the capacity of the assets should be excluded.

f. Any increase in expected cash inflow from the above expenditure should also be excluded.

g. Estimates of future cash flows should not include cash inflows or outflows from financing activities and also income tax receipts or payments.

Foreign Currency Future Cash Flows are estimated in the currency it will be generated and after they are discounted for the time value of money, we convert them in the reporting currency on the basis of AS 11.

Discount Rate

The discount rate(s) should be a pre-tax rate(s) that reflect(s) current market assessments of the time value of money and the risks specific to the asset. The discount rate(s) should not reflect risks for which future cash flow estimates have been adjusted. A rate that reflects current market assessments of the time value of money and the risks specific to the asset is the return that investors would require if they were to choose an investment that would generate cash flows of amounts, timing and risk profile equivalent to those that the enterprise expects to derive from the asset.

27.7 Recognition and Measurement of an Impairment Loss

If recoverable amount of assets more than carrying amount, we ignore the difference and asset is carried on at the same book value. But when this recoverable amount is less than the carrying amount, this difference termed as Impairment Loss should be written off immediately as expenses to Profit & Loss Account. If assets are carried out at revalued figures then the impairment loss equivalent to revalued surplus is adjusted with it and the balance (if any) is charged to Profit & Loss Account. Depreciation for the coming years on the assets are recalculated on the basis of the new carrying amount, residual value and remaining useful life of the asset, according to AS 10.

27.8 Identification of the Cash-Generating Unit to which an Asset Belongs

A *cash generating unit* is the smallest identifiable group of assets that generates cash inflows from continuing use that are largely independent of the cash inflows from other assets or groups of assets.

If there is any indication that an asset may be impaired, the recoverable amount should be estimated for the individual asset, if it is not possible to estimate the recoverable amount of the individual asset because the value in use of the asset cannot be determined and it is probably different from scrap value. Therefore, the enterprise estimates the recoverable amount of the cash-generating unit to which the asset belongs.

If recoverable amount cannot be determined for an individual asset, an enterprise identifies the lowest aggregation of assets that generate largely independent cash inflows from continuing use. Even if part or all of the output produced by an asset or a group of assets is used by other units of the reporting enterprise, this asset or group of assets forms a separate cash-generating unit if the enterprise could sell this output in an active market. This is because this asset or group of assets could generate cash inflows from continuing use that would be largely independent of the cash inflows from other assets or groups of assets. In using information based on financial budgets/forecasts that relates to such a cash-generating unit, an enterprise adjusts this information if internal transfer prices do not reflect management's best estimate of future market prices for the cash-generating unit's output. Cash-generating units should be identified consistently from period to period for the same asset or types of assets, unless a change is justified.

27.9 Recoverable Amount and Carrying Amount of a Cash-Generating Unit

The carrying amount of a cash-generating unit should be determined consistently with the way the recoverable amount of the cash-generating unit is determined i.e. carrying amount is the summation of the carrying amount of all the assets grouped under one cash-generating unit. This also includes the liability only if that liability is necessary to be considered to determine the recovery amount. This may occur if the disposal of a cash-generating unit would require the buyer to take over a liability. In this case, the net selling price of the cash-generating unit is the estimated selling price for the assets of the cash-generating unit and the liability together, less the costs of disposal. In order to perform a meaningful comparison between the carrying amount of the cash-generating unit and its recoverable amount, the carrying amount of the liability is deducted in determining both the cash-generating unit's value in use and its carrying amount. For practical reasons, the recoverable amount of a cash-generating unit is sometimes determined after consideration of assets that are not part of the cash-generating unit or liabilities that have already been recognised in the financial statements. In such cases, the carrying amount of the cash-generating unit is increased by the carrying amount of those assets and decreased by the carrying amount of those liabilities.

27.10 Goodwill

Goodwill does not generate cash flows independently from other assets or groups of assets and, therefore, the recoverable amount of goodwill as an individual asset cannot be determined. As a consequence, if there is an indication that goodwill may be impaired, recoverable amount is determined for the cash-generating unit to which goodwill belongs. This amount is then compared to the carrying amount of this cash-generating unit and any impairment loss is recognized. If goodwill can be allocated on a reasonable and consistent basis, an enterprise applies the 'bottom-up' test only. If it is not possible to allocate goodwill on a reasonable and consistent basis, an enterprise applies both the 'bottom-up' test and 'top-down' test

27.11 Corporate Assets

Key characteristics of corporate assets are that they do not generate cash inflows independently from other assets or groups of assets and their carrying amount cannot be fully attributed to the cash-generating unit under review.

In testing a cash-generating unit for impairment, an enterprise should identify all the corporate assets that relate to the cash-generating unit under review. For each identified corporate asset:

a. If the carrying amount of the corporate asset can be allocated on a reasonable and consistent basis to the cash-generating unit under review, an enterprise should apply the 'bottom-up' test only; and

b. If the carrying amount of the corporate asset cannot be allocated on a reasonable and consistent basis to the cash-generating unit under review, an enterprise should apply both the 'bottom-up' and 'top-down' tests.

27.12 Impairment Loss for a Cash-Generating Unit

The impairment loss should be allocated to reduce the carrying amount of the assets of the unit in the following order:

a. First, to goodwill allocated to the cash-generating unit (if any); and

b. Then, to the other assets of the unit on a pro-rata basis based on the carrying amount of each asset in the unit.

These reductions in carrying amounts should be treated as impairment losses on individual assets

The carrying amount of an asset should not be reduced below the highest of:

a. Its net selling price (if determinable);

b. Its value in use (if determinable); and

c. Zero.

The amount of the impairment loss that would otherwise have been allocated to the asset should be allocated to the other assets of the unit on a pro-rata basis.

27.13 Reversal of an Impairment Loss

An enterprise should assess at each balance sheet date whether there is any indication that an impairment loss recognised for an asset in prior accounting periods may no longer exist or may have decreased. If any such indication exists, the enterprise should estimate the recoverable amount of that asset. An impairment loss recognised for an asset in prior accounting periods should be reversed if there has been a change in the estimates of cash inflows, cash outflows or discount rates used to determine the asset's recoverable amount since the last impairment loss was recognised. If this is the case, the carrying amount of the asset should be increased to its recoverable amount. That increase is a reversal of an impairment loss. Indications of a potential decrease in an impairment loss are mainly mirror the indications of a potential impairment loss discussed above as external and internal indicators. The concept of materiality applies in identifying whether an impairment loss recognised for an asset in prior accounting periods may need to be reversed and the recoverable amount of the asset determined.

27.14 Reversal of an Impairment Loss for an Individual Asset

If impairment loss was written off to profit and loss account, then the reversal of impairment loss should be recognized as income in the financial statement immediately. If impairment loss was adjusted with the Revaluation Reserve; then reversal of impairment loss will be written back to the reserve account to the extent it was adjusted, any surplus will be recognised as revenue. But in any case the increased carrying amount of an asset due to a reversal of an impairment loss should not exceed the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior accounting periods. This is mainly because any further increase in value of asset is revaluation, which is governed by AS 10.

After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the asset should be adjusted in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

27.15 Reversal of an Impairment Loss for a Cash-Generating Unit

A reversal of an impairment loss for a cash-generating unit should be allocated to increase the carrying amount of the assets of the unit in the following order:

a. First, assets other than goodwill on a pro-rata basis based on the carrying amount of each asset in the unit; and

b. Then, to goodwill allocated to the cash-generating unit (if any),

27.16 Reversal of an Impairment Loss for Goodwill

This Statement does not permit an impairment loss to be reversed for goodwill because of a change in estimates, an impairment loss recognised for goodwill should not be reversed in a subsequent period unless:

a. The impairment loss was caused by a specific external event of an exceptional nature that is not expected to recur; and

b. Subsequent external events have occurred that reverse the effect of that event.

27.17 Impairment in case of Discontinuing Operations

In applying this Statement to a discontinuing operation, an enterprise determines whether the recoverable amount of an asset of a discontinuing operation is assessed for the individual asset or for the asset's cash-generating unit. For example:

a. If the enterprise sells the discontinuing operation substantially in its entirety, none of the assets of the discontinuing operation generate cash inflows independently from other assets within the discontinuing operation. Therefore, recoverable amount is determined for the discontinuing operation as a whole and an impairment loss, if any, is allocated among the assets of the discontinuing operation in accordance with this Statement;

b. If the enterprise disposes of the discontinuing operation in other ways such as piecemeal sales, the recoverable amount is determined for individual assets, unless the assets are sold in groups; and

c. If the enterprise abandons the discontinuing operation, the recoverable amount is determined for individual assets as set out in this Statement.

27.18 Disclosure

For each class of assets, the financial statements should disclose:

a. The amount of impairment losses recognised in the statement of profit and loss during the period and the line item(s) of the statement of profit and loss in which those impairment losses are included;

b. The amount of reversals of impairment losses recognised in the statement of profit and loss during the period and the line item(s) of the statement of profit and loss in which those impairment losses are reversed;

c. The amount of impairment losses recognised directly against revaluation surplus during the period; and

d. The amount of reversals of impairment losses recognised directly in revaluation surplus during the period.

An enterprise that applies AS 17, Segment Reporting, should disclose the following for each reportable segment based on an enterprise's primary format (as defined in AS 17):

a. The amount of impairment losses recognised in the statement of profit and loss and directly against revaluation surplus during the period; and

b. The amount of reversals of impairment losses recognised in the statement of profit and loss and directly in revaluation surplus during the period.

If an impairment loss for an individual asset or a cash-generating unit is recognised or reversed during the period and is material to the financial statements of the reporting enterprise as a whole, an enterprise should disclose:

a. The events and circumstances that led to the recognition or reversal of the impairment loss;

b. The amount of the impairment loss recognised or reversed;

c. For an individual asset:

   (i) The nature of the asset; and

   (ii) The reportable segment to which the asset belongs, based on the enterprise's primary format (as defined in AS 17, Segment Reporting);

d. For a cash-generating unit:

   (i) A description of the cash-generating unit (such as whether it is a product line, a plant, a business operation, a geographical area, a reportable segment as defined in AS 17 or other);

(ii) The amount of the impairment loss recognised or reversed by class of assets and by reportable segment based on the enterprise's primary format (as defined in AS 17); and

(iii) If the aggregation of assets for identifying the cash-generating unit has changed since the previous estimate of the cash-generating unit's recoverable amount (if any), the enterprise should describe the current and former way of aggregating assets and the reasons for changing the way the cash-generating unit is identified;

e. Whether the recoverable amount of the asset (cash-generating unit) is its net selling price or its value in use;

f. If recoverable amount is net selling price, the basis used to determine net selling price (such as whether selling price was determined by reference to an active market or in some other way); and

g. If recoverable amount is value in use, the discount rate(s) used in the current estimate and previous estimate (if any) of value in use.

If impairment losses recognised (reversed) during the period are material in aggregate to the financial statements of the reporting enterprise as a whole, an enterprise should disclose a brief description of the following:

a. The main classes of assets affected by impairment losses (reversals of impairment losses);

b. The main events and circumstances that led to the recognition (reversal) of these impairment losses.

27.19 Transitional Provisions

On the date of this Statement becoming mandatory, an enterprise should assess whether there is any indication that an asset may be impaired (see paragraphs 5-13). If any such indication exists, the enterprise should determine impairment loss, if any, in accordance with this Statement. The impairment loss, so determined, should be adjusted against opening balance of revenue reserves being the accumulated impairment loss relating to periods prior to this Statement becoming mandatory unless the impairment loss is on a revalued asset. An impairment loss on a revalued asset should be recognised directly against any revaluation surplus for the asset to the extent that the impairment loss does not exceed the amount held in the revaluation surplus for that same asset. If the impairment loss exceeds the amount held in the revaluation surplus for that same asset, the excess should be adjusted against opening balance of revenue reserves. Any impairment loss arising after the date of this Statement becoming mandatory should be recognised in accordance with this Statement (i.e., in the statement of profit and loss unless an asset is carried at revalued amount. An impairment loss on a revalued asset should be treated as a revaluation decrease).

27.20 Illustrations

Illustration 1

Ergo Industries Ltd. gives the following estimates of cash flows relating to fixed asset on 31-12-2016. The discount rate is 15%.

Year	*Cash Flow (₹ in lakhs)*
2017	*4000*
2018	*6000*
2019	*6000*
2020	*8000*
2021	*4000*

Residual value at the end of 2021	=	*₹ 1000 lakhs*
Fixed Asset purchased on 1-1-2017	=	*₹ 40,000 lakhs*
Useful life	=	*8 years*
Net selling price on 31-12-2016	=	*₹ 20,000 lakhs*

Calculate on 31-12-2016:

(a) Carrying amount at the end of 2016

(b) Value in use on 31-12-2016

(c) Recoverable amount on 31-12-2016

(d) Impairment loss to be recognized for the year ended 31-12-2016

(e) Revised carrying amount

(f) Depreciation charge for 2017

Solution

Calculation of value in use

Year	*Cash Flow*	*Discount as per 15%*	*Discounted cash flow*
2017	4,000	0.870	3,480
2018	6,000	0.756	4,536
2019	6,000	0.658	3,948
2020	8,000	0.572	4,576
2021	4,000	0.497	1,988
2021	(residual) 1,000	0.497	497
			19,025

(a) **Calculation of carrying amount:**

Original cost = ₹ 40,000 lakhs

Depreciation for 3 years = [(40,000-1000)×3/8] = ₹ 14,625 lakhs

Carrying amount on 31-12-2016 = [40,000-14,625] = ₹ 25,375 lakhs

(b) **Value in use = ₹ 19,025 lakhs**

Net Selling Price = ₹ 20,000 lakhs

Recoverable amount = higher of value in use and net selling price i.e. ₹ 20,000 lakhs.

(c) **Recoverable amount** = ₹ 20,000 lakhs

(d) **Impairment Loss** = ₹ (25,375-20,000) = ₹ 5,375 lakhs

(e) **Revised carrying amount** = ₹ (25,375-5,375) = ₹ 20,000 lakhs

(f) **Depreciation charge for 2017** = (20,000-1000)/5 = ₹ 3,800 lakhs

Illustration 2

X Ltd. is having a plant (asset) carrying amount of which is ₹ 100 lakhs on 31.3.2017. Its balance useful life is 5 years and residual value at the end of 5 years is ₹ 5 lakhs. Estimated future cash flow from using the plant in next 5 years are:

For the year ended on	*Estimated cash flow (₹ in lakhs)*
31.3.2018	50
31.3.2019	30
31.3.2020	30
31.3.2021	20
31.3.2022	20

Calculate "value in use" for plant if the discount rate is 10% and also calculate the recoverable amount if net selling price of plant on 31.3.2017 is ₹ 60 lakhs.

Solution

Present value of future cash flow

Year ended	*Future Cash Flow*	*Discount @ 10% Rate*	*Discounted cash flow*
31.3.2018	50	0.909	45.45
31.3.2019	30	0.826	24.78
31.3.2020	30	0.751	22.53
31.3.2021	20	0.683	13.66
31.3.2022	20	0.620	12.40
			118.82
Present value of residual price on 31.3.2022 = 5 × 0.620			3.10
Present value of estimated cash flow by use of an asset and residual value, which is called "value in use".			121.92

If net selling price of plant on 31.3.2017 is ₹ 60 lakhs, the recoverable amount will be higher of ₹ 121.92 lakhs (value in use) and ₹ 60 lakhs (net selling price), hence recoverable amount is ₹ 121.92 lakhs.

UNIT 28 : AS 29 : PROVISIONS, CONTINGENT LIABILITIES AND CONTINGENT ASSETS

28.1 Introduction

AS 29 came into effect in respect of accounting periods commenced on or after 1-4-2004. The objective of AS 29 is to ensure that appropriate recognition criteria and measurement bases are applied to provisions and contingent liabilities and sufficient information is disclosed in the notes to the financial statements to enable users to understand their nature, timing and amount. This standard applies in accounting for provisions and contingent liabilities and contingent assets resulting from financial instruments (not carried at fair value) and insurance enterprises (other than those arising from contracts with policyholders).

The standard will not apply to provisions/liabilities resulting from executor contracts and those covered under any other accounting standard.

This Standard is mandatory in nature from that date:

a. In its entirety, for the enterprises which fall in any one or more of the following categories, at any time during the accounting period:

   i. Enterprises whose equity or debt securities are listed whether in India or outside India.

   ii. Enterprises which are in the process of listing their equity or debt securities as evidenced by the board of directors' resolution in this regard.

   iii. Banks including co-operative banks.

   iv. Financial institutions.

   v. Enterprises carrying on insurance business.

   vi. All commercial, industrial and business reporting enterprises, whose turnover for the immediately preceding accounting period on the basis of audited financial statements exceeds ₹ 50 crore. Turnover does not include 'other income'.

   vii. All commercial, industrial and business reporting enterprises having borrowings, including public deposits, in excess of ₹ 10 crore at any time during the accounting period.

   viii. Holding and subsidiary enterprises of any one of the above at any time during the accounting period.

b. In its entirety, except paragraph 67, for the enterprises which do not fall in any of the categories in (a) above but fall in any one or more of the following categories:

   i. All commercial, industrial and business reporting enterprises, whose turnover for the immediately preceding accounting period on the basis of audited financial statements exceeds ₹ 40 lakhs but does not exceed ₹ 50 crore. Turnover does not include 'other income'.

ii. All commercial, industrial and business reporting enterprises having borrowings, including public deposits, in excess of ₹ 1 crore but not in excess of ₹ 10 crore at any time during the accounting period.

iii. Holding and subsidiary enterprises of any one of the above at any time during the accounting period.

c. In its entirety, except paragraphs 66 and 67, for the enterprises, which do not fall in any of the categories in (a) and (b) above.

Where an enterprise has been covered in any one or more of the categories in (a) above and subsequently, ceases to be so covered, the enterprise will not qualify for exemption from paragraph 67 of this Standard, until the enterprise ceases to be covered in any of the categories in (a) above for two consecutive years.

Where an enterprise has been covered in any one or more of the categories in (a) or (b) above and subsequently, ceases to be covered in any of the categories in (a) and (b) above, the enterprise will not qualify for exemption from paragraphs 66 and 67 of this Standard, until the enterprise ceases to be covered in any of the categories in (a) and (b) above for two consecutive years.

Where an enterprise has previously qualified for exemption from paragraph 67 or paragraphs 66 and 67, as the case may be, but no longer qualifies for exemption from paragraph 67 or paragraphs 66 and 67, as the case may be, in the current accounting period, this Standard becomes applicable, in its entirety or, in its entirety except paragraph 67, as the case may be, from the current period. However, the relevant corresponding previous period figures need not be disclosed.

An enterprise, which, pursuant to the above provisions, does not disclose the information required by paragraph 67 or paragraphs 66 and 67, as the case may be, should disclose the fact.

28.2 Scope

This Standard should be applied in accounting for provisions and contingent liabilities and in dealing with contingent assets, other than

a. Those resulting from financial instruments that are carried at fair value;

b. Those resulting from executory contracts;

c. Those arising in insurance enterprises from contracts with policy-holders; and

d. Those covered by another Accounting Standard.

Where another Accounting Standard like 7; 9; 15; 19; 22 & 24 deals with a specific type of provision, contingent liability or contingent asset, an enterprise applies that Standard instead of this Standard.

28.3 Definitions

Executory contracts are contracts under which neither party has performed any of its obligations or both parties have partially performed their obligations to an equal extent.

Examples of executory contracts include:

- Employee contracts in respect of continuing employment;
- Contracts for future delivery of services such as gas and electricity;
- Obligations to pay local authority charges and similar levies; and
- Most purchase orders.

A **Provision** is a liability which can be measured only by using a substantial degree of estimation.

A **Liability** is a present obligation of the enterprise arising from past events, the settlement of which is expected to result in an outflow from the enterprise of resources embodying economic benefits.

An **Obligating event** is an event that creates an obligation that results in an enterprise having no realistic alternative to settling that obligation.

A Contingent liability is:

(a) A possible obligation that arises from past events and the existence of which will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the enterprise; or

(b) A present obligation that arises from past events but is not recognised because:

  (i) It is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or

  (ii) A reliable estimate of the amount of the obligation cannot be made.

A **Contingent asset** is a possible asset that arises from past events the existence of which will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the enterprise.

Present obligation - an obligation is a present obligation if, based on the evidence available, its existence at the balance sheet date is considered probable, i.e., more likely than not.

Possible obligation - an obligation is a possible obligation if, based on the evidence available, its existence at the balance sheet date is considered not probable.

A **Restructuring** is a programme that is planned and controlled by management, and materially changes either:

(a) The scope of a business undertaken by an enterprise; or

(b) The manner in which that business is conducted.

28.4 Provisions

A provision should be recognised when:

(a) An enterprise has a present obligation as a result of a past event;

(b) It is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and

(c) A reliable estimate can be made of the amount of the obligation.

If these conditions are not met, no provision should be recognised.

28.5 Present Obligation

An enterprise determines whether a present obligation exists at the balance sheet date by taking account of all available evidence. On the basis of such evidence:

(a) Where it is more likely than not that a present obligation exists at the balance sheet date, the enterprise recognises a provision (if the recognition criteria are met); and

(b) Where it is more likely that no present obligation exists at the balance sheet date, the enterprise discloses a contingent liability, unless the possibility of an outflow of resources embodying economic benefits is remote.

28.6 Past Event

A past event that leads to a present obligation is called an obligating event. For an event to be an obligating event, it is necessary that the enterprise has no realistic alternative to settling the obligation created by the event.

Financial statements deal with the financial position of an enterprise at the end of its reporting period and not its possible position in the future. Therefore, no provision is recognised for costs that need to be incurred to operate in the future. The only liabilities recognised in an enterprise's balance sheet are those that exist at the balance sheet date. It is only those obligations arising from past events existing independently of an enterprise's future actions (i.e. the future conduct of its business) that are recognised as provisions.

An event that does not give rise to an obligation immediately may do so at a later date, because of changes in the law. For example, when environmental damage is caused there may be no obligation to remedy the consequences. However, the causing of the damage will become an obligating event when a new law requires the existing damage to be rectified. Where details of a proposed new law have yet to be finalised, an obligation arises only when the legislation is virtually certain to be enacted.

28.7 Probable Outflow of Resources Embodying Economic Benefits

For a liability to qualify for recognition there must be not only a present obligation but also the probability of an outflow of resources embodying economic benefits to settle that obligation.

For the purpose of this Statement, an outflow of resources or other event is regarded as probable if the probability that the event will occur is greater than the probability that it will not. Where it is not probable that a present obligation exists, an enterprise discloses a contingent liability, unless the possibility of an outflow of resources embodying economic benefits is remote.

28.8 Reliable Estimate of the Obligation

The use of estimates is an inherent part of preparing financial statements. Provisions require a greater degree of estimation than most other items, but AS 29 emphasises that it should not be impossible to determine a range of possible outcomes and, from this range, to reach an appropriate conclusion that is sufficiently reliable for the provision to be recognised. AS 29 concludes that the circumstances in which it will not be possible to reach a reliable estimate, will be extremely rare.

In the extremely rare case where no reliable estimate can be made, a liability exists that cannot be recognised. That liability will, instead, be disclosed as a contingent liability.

28.9 Contingent Liabilities

An enterprise should not recognise a contingent liability but should be disclosed. A contingent liability is disclosed, unless the possibility of an outflow of resources embodying economic benefits is remote. Contingent liabilities may develop in a way not initially expected. Therefore, they are assessed continually to determine whether an outflow of resources embodying economic benefits has become probable. If it becomes probable that an outflow of future economic benefits will be required for an item previously dealt with as a contingent liability, a provision is recognised in the financial statements of the period in which the change in probability occurs. Where an enterprise is jointly and severally liable for an obligation, the part of the obligation that is expected to be met by other parties is treated as a contingent liability.

28.10 Contingent Assets

Contingent assets usually arise from unplanned or other unexpected events that give rise to the possibility of an inflow of economic benefits to the enterprise.

An enterprise should not recognise a contingent asset, since this may result in the recognition of income that may never be realised. However, when the realisation of income is virtually certain, then the related asset is not a contingent asset and its recognition is appropriate. A contingent asset is not disclosed in the financial statements. It is usually disclosed in the report of the approving authority.

28.11 Measurement -Best Estimate

The estimates of outcome and financial effect are determined by the judgment of the management of the **enterprise, supplemented by experience** of similar transactions and, in some cases, reports from independent experts. The amount of a provision should not be discounted to its present value ***except in case of decommissioning, restoration and similar liabilities that are recognised as cost of Property, Plant and Equipment. The discount rate (or rates) should be a pre-tax rate (or rates) that reflect(s) current market assessments of the time value of money and the risks specific to the liability. The discount rate(s) should not reflect risks for which future cash flow estimates have been adjusted. Periodic unwinding of discount should be recognised in the statement of profit and loss.*** The provision is measured before tax; the tax consequences of the provision, and changes in it, are dealt with under AS 22. The risks and uncertainties that inevitably surround many events and circumstances should be taken into account in reaching the best estimate of a provision.

28.12 Future Events

It is only those obligations arising from past events that exist independently of the enterprise's future actions (ie the future conduct of its business) that are recognised as provisions. For example, an enterprise may believe that the cost of cleaning up a site at the end of its life will be reduced by future changes in technology. The amount recognised reflects a reasonable expectation of technically qualified, objective observers, taking account of all available evidence as to the technology that will be available at the time of the clean-up. Thus, it is appropriate to include, for example, expected cost reductions associated with increased experience in applying existing technology or the expected cost of applying existing technology to a larger or more complex clean-up operation than has previously been carried out. However, an enterprise does not anticipate the development of a completely new technology for cleaning up unless it is supported by sufficient objective evidence.

28.13 Expected Disposal of Assets

Gains on the expected disposal of assets are not taken into account in measuring a provision, even if the expected disposal is closely linked to the event giving rise to the provision. Instead, an enterprise recognises gains on expected disposals of assets at the time specified by the Accounting Standard dealing with the assets concerned.

28.14 Reimbursements

An, enterprise with a present obligation may be able to seek reimbursement of part or all of the expenditure from another party, for example via:

- An insurance contract arranged to cover a risk;
- An indemnity clause in a contract; or
- A warranty provided by a supplier.

The basis underlying the recognition of a reimbursement is that any asset arising is separate from the related obligation. Consequently, such a reimbursement should be recognised only when it is virtually certain that it will be received consequent upon the settlement of the obligation.

In most cases, the enterprise will remain liable for the whole of the amount in question so that the enterprise would have to settle the full amount if the third party failed to pay for any reason. In this situation, a provision is recognised for the full amount of the liability, and a separate asset for the expected reimbursement is recognised when it is virtually certain that reimbursement will be received if the enterprise settles the liability.

In some cases, the enterprise will not be liable for the costs in question if the third party fails to pay. In such a case, the enterprise has no liability for those costs and they are not included in the provision.

28.15 Changes in Provisions

Provisions should be reviewed at each balance sheet date and adjusted to reflect the current best estimate. If it is no longer probable that an outflow of resources embodying economic benefits will be required to settle the obligation, the provision should be reversed.

28.16 Use of Provisions

Only expenditures that relate to the original provision are adjusted against it. Adjusting expenditures against a provision that was originally recognised for another purpose would conceal the impact of two different events.

28.17 Application of the Recognition and Measurement Rules

28.17.1 Future Operating Losses

Future operating losses do not meet the definition of a liability and the general recognition criteria, therefore provisions should not be recognised for future operating losses.

28.17.2 Restructuring

The following are examples of events that may fall under the definition of restructuring:

(a) Sale or termination of a line of business;

(b) The closure of business locations in a country or region or the relocation of business activities from one country or region to another;

(c) Changes in management structure, for example, eliminating a layer of management; and

(d) Fundamental re-organisations that have a material effect on the nature and focus of the enterprise's operations.

A provision for restructuring costs is recognised only when the recognition criteria for provisions. No obligation arises for the sale of an operation until the enterprise is committed to the sale, i.e., there is a binding sale agreement. Until there is a binding sale agreement, the enterprise will be able to change its mind and indeed will have to take another course of action if a purchaser cannot be found on acceptable terms.

A restructuring provision should include only the direct expenditures arising from the restructuring, which are those that are both:

(a) Necessarily entailed by the restructuring; and

(b) Not associated with the ongoing activities of the enterprise.

A restructuring provision does not include such costs as:

(a) Retraining or relocating continuing staff;

(b) Marketing; or

(c) Investment in new systems and distribution networks.

These expenditures relate to the future conduct of the business and are not liabilities for restructuring at the balance sheet date. Such expenditures are recognised on the same basis as if they arose independently of a restructuring.

Identifiable future operating losses up to the date of a restructuring are not included in a provision.

As required by paragraph 44, gains on the expected disposal of assets are not taken into account in measuring a restructuring provision, even if the sale of assets is envisaged as part of the restructuring.

28.18 Disclosure

For each class of provision, an enterprise should disclose:

(a) The carrying amount at the beginning and end of the period;

(b) Additional provisions made in the period, including increases to existing provisions;

(c) Amounts used (i.e. incurred and charged against the provision) during the period; and

(d) Unused amounts reversed during the period.

SMCs are exempt from the disclosure requirements of AS 29

An enterprise should disclose the following for each class of provision:

(a) A brief description of the nature of the obligation and the expected timing of any resulting outflows of economic benefits;

(b) An indication of the uncertainties about those outflows. Where necessary to provide adequate information, an enterprise should disclose the major assumptions made concerning future events, and

(c) The amount of any expected reimbursement, stating the amount of any asset that has been recognised for that expected reimbursement.

SMCs are exempt from the disclosure requirements of AS 29

Unless the possibility of any outflow in settlement is remote, an enterprise should disclose for each class of contingent liability at the balance sheet date a brief description of the nature of the contingent liability and, where practicable:

(a) An estimate of its financial effect,

(b) An indication of the uncertainties relating to any outflow; and

(c) The possibility of any reimbursement.

28.19 Transitional Provisions

As per the amendment made in AS 29 in the year, 2016 all the existing provisions for decommissioning, restoration and similar liabilities should be discounted prospectively, with the corresponding effect to the related item of property, plant and equipment.

28.20 Miscellaneous Illustrations

Illustration 1

At the end of the financial year ending on 31st December, 2017, a company finds that there are twenty law suits outstanding which have not been settled till the date of approval of accounts by the Board of Directors. The possible outcome as estimated by the Board is as follows:

	Probability	*Loss (₹)*
In respect of five cases (Win)	*100%*	–
Next ten cases (Win)	*60%*	–
Lose (Low damages)	*30%*	*1,20,000*
Lose (High damages)	*10%*	*2,00,000*
Remaining five cases		
Win	*50%*	–
Lose (Low damages)	*30%*	*1,00,000*
Lose (High damages)	*20%*	*2,10,000*

Outcome of each case is to be taken as a separate entity. Ascertain the amount of contingent loss and the accounting treatment in respect thereof.

Solution

According to AS 29 'Provisions, Contingent Liabilities and Contingent Assets', contingent liability should be disclosed in the financial statements if following conditions are satisfied:

(i) There is a present obligation arising out of past events but not recognized as provision.

(ii) It is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation.

(iii) The possibility of an outflow of resources embodying economic benefits is also remote.

(iv) The amount of the obligation cannot be measured with sufficient reliability to be recognized as provision.

In this case, the probability of winning of first five cases is 100% and hence, question of providing for contingent loss does not arise. The probability of winning of next ten cases is 60% and for remaining five cases is 50%. As per AS 29, we make a provision if the loss is probable. As the loss does not appear to be probable and the possibility of an outflow of resources embodying economic benefits is remote, therefore disclosure by way of note should be made. For the purpose of the disclosure of contingent liability by way of note, amount may be calculated as under:

Expected loss in next ten cases = 30% of ₹ 1,20,000 + 10% of ₹ 2,00,000

= ₹ 36,000 + ₹ 20,000

= ₹ 56,000

Expected loss in remaining five cases = 30% of ₹ 1,00,000 + 20% of ₹ 2,10,000

= ₹ 30,000 + ₹ 42,000

= ₹ 72,000

To disclose contingent liability on the basis of maximum loss will be highly unrealistic. Therefore, the better approach will be to disclose the overall expected loss of ₹ 9,20,000 (₹ 56,000 × 10 + ₹ 72,000 × 5) as contingent liability.

UNIT 29 : GUIDANCE NOTES

29.1 Introduction

Guidance Notes are primarily designed to provide guidance to members of ICAI on matters which may arise in the course of their professional work and on which they may desire assistance in resolving issues which may pose difficulty. In recent years several Guidance Notes on accounting aspects have been issued promptly responding to the need for accounting guidance on contemporary issues, which arise due to amendments in laws and other developments related to economic reforms in the country. These Guidance Notes are issued by the Council of the ICAI from time to time.

Guidance Notes are recommendatory in nature. A member should ordinarily follow recommendations in a guidance note relating to an auditing matter except where he is satisfied that in the circumstances of the case, it may not be necessary to do so. Similarly, while discharging his attest function, a member should examine whether the recommendations in a guidance note relating to an accounting matter have been followed or not. If the same have not been followed, the member should consider whether keeping in view the circumstances of the case, a disclosure in his report is necessary.

29.2 Status of Guidance Notes

In a situation where certain matters are covered both by an Accounting Standard and a Guidance Note, issued by the Institute of Chartered Accountants of India, the Guidance Note or the relevant portion thereof will be considered as superseded from the date of the relevant Accounting Standard coming into effect, unless otherwise specified in the Accounting Standard.

Similarly, in a situation where certain matters are covered by a recommendatory Accounting Standard and subsequently, an Accounting Standard is issued which also covers those matters, the recommendatory Accounting Standard or the relevant portion thereof will be considered as superseded from the date of the new Accounting Standard coming into effect, unless otherwise specified in the new Accounting Standard.

In a situation where certain matters are covered by a mandatory Accounting Standard and subsequently, an Accounting Standard is issued which also covers those matters, the earlier Accounting Standard or the relevant portion thereof will be considered as superseded from the date of the new Accounting Standard becoming mandatory, unless otherwise specified in the new Accounting Standard.

29.3 Guidance Notes on Accounting Aspects

The following is the list of applicable guidance notes on accounting aspects:

1. GN(A) 5 (Issued 1983) Guidance Note on Terms Used in Financial Statements.
2. GN(A) 6 (Issued 1988) Guidance Note on Accrual Basis of Accounting.

3. GN(A) 11 (Issued 1997) Guidance Note on Accounting for Corporate Dividend Tax.
4. GN(A) 12 (Revised 2000) Guidance Note on Accounting Treatment for Excise Duty.
5. Guidance Note on Accounting Treatment for MODVAT/ CENVAT.
6. GN(A) 18 (Issued 2005) Guidance Note on Accounting for Employee Share-base Payments.
7. GN(A) 22 (Issued 2006) Guidance Note on Accounting for Credit Available in Respect of Minimum Alternative Tax under the Income-tax Act, 1961.
8. GN(A) 24 (Issued 2006) Guidance Note on Measurement of Income Tax Expense for Interim Financial Reporting in the Context of AS 25.
9. Guidance Note on Applicability of AS 25 to Interim Financial Results.
10. Guidance Note on Turnover in case of Contractors.
11. Guidance Note on Schedule III to the Companies Act, 2013.
12. ***Guidance Note on Accounting for Expenditure on Corporate Social Responsibility Activities.***
13. ***Guidance Note on Accounting for Derivative Contracts.***
14. ***Guidance Note on Accounting for Depreciation in Companies in the context of Schedule II to the Companies Act, 2013.***

The students are advised to go through the full text of all the Guidance Notes from the Accounting Pronouncements given along with this Study Material. Students may also check the following link for the full text of the Guidance Notes on our Institute's website:

http://www.icai.org/post.html?post_id=1399

29.4 An Overview of Guidance Notes

GN(A) 5 (Issued 1983) Guidance Note on Terms Used in Financial Statements

The objective of this guidance note is to facilitate a broad and basic understanding of the various terms as well as to promote consistency and uniformity in their usage. The terms have been defined in this guidance note, keeping in view their usage in the preparation and presentation of the financial statements. Some of these terms may have different meanings when used in the context of certain special enactments. The definitions of the terms in this guidance note do not spell out the accounting procedure and are not prescriptive of a course of action.

GN(A) 6 (Issued 1988) Guidance Note on Accrual Basis of Accounting

This guidance note is issued by the Research Committee of the ICAI providing guidance in respect of maintenance of accounts on the accrual basis of accounting. The Guidance Note explains the concept of accrual as a basis of accounting, particularly, in comparison with the cash basis of accounting. It also deals generally with the matters of recognition of revenue and expenses, assets and liabilities. A section of the Guidance Note is devoted to the concept of materiality *vis-a-vis* accrual basis of accounting. It also provides guidance to the auditor in case a company has not maintained its accounts on accrual basis. Illustrations highlighting application of the principles explained in the Guidance Note to certain important commercial situations have also been given in the Guidance Note.

Certain fundamental accounting assumptions underlie the preparation and presentation of financial statements. "Accrual" is one of the fundamental accounting assumptions. Para 27 of the Accounting Standard on Disclosure of Accounting Policies (AS 1), issued by the Institute of Chartered Accountants of India (ICAI), provides that if fundamental accounting assumptions, viz., going concern, consistency and accrual are not followed, the fact should be disclosed.

GN(A) 11 (Issued 1997) Guidance Note on Accounting for Corporate Dividend Tax

Corporate Dividend Tax (CDT) is in addition to the income-tax chargeable in respect of the total income of a domestic company and was introduced under The Finance Act, 1997. The Guidance Note on Accounting for Corporate Dividend Tax explains the salient features of Corporate Dividend tax (CDT). As per the Guidance Note, CDT on dividend, being directly linked to the amount of the dividend concerned, should also be reflected in the accounts of the same financial year even though the actual tax liability in respect thereof may arise in a different year. The liability in respect of CDT arises only if the profits are distributed as dividends whereas the normal income-tax liability arises on the earning of the taxable profits. Since the CDT liability relates to distribution of profits as dividends which are disclosed 'below the line', it is appropriate that the liability in respect of CDT should also be disclosed 'below the line' as a separate item. It is felt that such a disclosure would give a proper picture regarding payments involved with reference to dividends.

GN(A) 12 (Revised 2000) Guidance Note on Accounting Treatment for Excise Duty

Excise duty is a duty on manufacture or production of excisable goods in India. Section 3 of the Central Excise Act, 1944, deals with charge of Excise Duty. This Section provides that a duty of excise on excisable goods which are produced or manufactured in India shall be levied and collected in such manner as may be prescribed. The subject of accounting of excise duty has, so far, beset with certain controversies, yet, the ICAI with the issuance of this Guidance Note, has recommended practices which are broadly in accordance with the generally accepted accounting principles would be well established. Subsequent to the issuance of that Guidance Note, the nature of excise duty has been further clarified by some Supreme Court decisions. Further, the principles to be followed for the valuation of inventories have been explained in the Accounting Standard (AS) 2 on 'Valuation of Inventories' issued by the Institute of Chartered Accountants of India. This Guidance Note recommends accounting treatment for Excise Duty in respect of excisable goods produced or manufactured by an enterprise. A separate Guidance Note on Accounting Treatment for MODVAT sets out principles for accounting for MODVAT (now renamed as 'CENVAT'). In considering the appropriate treatment of excise duty for the purpose of determination of cost for inventory valuation, it is necessary to consider whether excise duty should be considered differently from other expenses. As per the recommendations given in the Guidance Note, Excise duty should be considered as a manufacturing expense and like other manufacturing expenses be considered as an element of cost for inventory valuation. Where excise duty is paid on excisable goods and such goods are subsequently utilised in the manufacturing process, the duty paid on such goods, if the same is not recoverable from taxing authorities, becomes a manufacturing cost and must be included in the valuation of work-in-progress or finished goods arising from the subsequent processing of such goods. Where the liability for excise duty has been incurred but its collection is deferred, provision for the unpaid liability should be made. Excise duty cannot be treated as a period cost and if the method of accounting for excise duty is not in accordance with the principles explained in this Guidance Note, the auditor should qualify his report.

GN(A) 25 Guidance Note on Accounting Treatment for MODVAT/CENVAT

The objective of this Guidance Note is to provide guidance in respect of accounting for MODVAT/CENVAT credit. Salient features of MODVAT and CENVAT are also explained in the guidance note. For accounting treatment of excise duty with regard to valuation of inventories, reference may be made to the Guidance Note on Accounting Treatment for Excise Duty, issued by the Institute of Chartered Accountants of India.

GN(A) 18 (Issued 2005) Guidance Note on Accounting for Employee Share-based Payments

This Guidance Note establishes financial accounting and reporting principles for employee share-based payment plans, viz., employee stock option plans, employee stock purchase plans and stock appreciation rights. For the purposes of this Guidance Note, the term 'employee' includes a director of the enterprise, whether whole time or not.

For accounting purposes, employee share-based payment plans are classified into the following categories:

- Equity-settled: Under these plans, the employees receive shares.
- Cash-settled: Under these plans, the employees receive cash based on the price (or value) of the enterprise's shares.
- Employee share-based payment plans with cash alternatives: Under these plans, either the enterprise or the employee has a choice of whether the enterprise settles the payment in cash or by issue of shares.

An employee share-based payment plan falling in the above categories can be accounted for by adopting the fair value method or the intrinsic value method. The accounting treatment recommended here in below is based on the fair value method.

An enterprise should recognise as an expense (except where service received qualifies to be included as a part of the cost of an asset) the services received in an equity-settled employee share-based payment plan when it receives the services, with a corresponding credit to an appropriate equity account, say, 'Stock Options Outstanding Account'. This account is transitional in nature as it gets ultimately transferred to another equity account such as share capital, securities premium account and/or general reserve as recommended in this Guidance Note. If the shares or stock options granted vest immediately, the employee is not required to complete a specified period of service before becoming unconditionally entitled to those instruments. In the absence of evidence to the contrary, the enterprise should presume that services rendered by the employee as consideration for the instruments have been received. In this case, on the grant date, the enterprise should recognise services received in full with a corresponding credit to the equity account. If the shares or stock options granted do not vest until the employee completes a specified period of service, the enterprise should presume that the services to be rendered by the employee as consideration for those instruments will be received in the future, during the vesting period. The enterprise should account for those services as they are rendered by the employee during the vesting period, on a time proportion basis, with a corresponding credit to the equity account.

An enterprise should measure the fair value of shares or stock options granted at the grant date, based on market prices if available, taking into account the terms and conditions upon which those shares or stock options were granted (subject to the requirements of paragraphs 9 to 11). If market prices are not available, the enterprise should estimate the fair value of the instruments granted using a valuation technique to estimate what the price of those instruments would have been on the grant date in an arm's length transaction between knowledgeable, willing parties. The valuation technique should be consistent with generally accepted valuation methodologies for pricing financial instruments (e.g., use of an option pricing model for valuing stock options) and should incorporate all factors and assumptions that knowledgeable, willing market participants would consider in setting the price. Vesting conditions, other than market conditions, should not be taken into account when estimating the fair value of the shares or stock options at the grant date. Instead, vesting conditions should be taken into account by adjusting the number of shares or stock options included in the measurement of the transaction amount so that, ultimately, the amount recognised for employee services received as consideration for the shares or stock options granted is based on the number of shares or stock options that eventually vest. Hence, on a cumulative basis, no amount is recognised for employee services received if the shares or stock options granted do not vest because of failure to satisfy a vesting condition (i.e., these are forfeited), e.g., the employee fails to complete a specified service period, or a performance condition is not satisfied.

To apply the requirements of the Guidance Note, the enterprise should recognise an amount for the employee services received during the vesting period based on the best available estimate of the number of shares or stock options expected to vest and should revise that estimate, if necessary, if subsequent information indicates that the number of shares or stock options expected to vest differs from previous estimates. On vesting date, the enterprise should revise the estimate to equal the number of shares or stock options that ultimately vest. Market conditions, such as a target share price upon which vesting (or exercisability) is conditioned, should be taken into account when estimating the fair value of the shares or stock options granted. On exercise of the right to obtain shares or stock options, the enterprise issues shares on receipt of the exercise price. The shares so issued should be considered to have been issued at the consideration comprising the exercise price and the corresponding amount standing to the credit of the relevant equity account (e.g., Stock Options Outstanding Account). In a situation where the right to obtain shares or stock option expires unexercised, the balance standing to the credit of the relevant equity account should be transferred to general reserve.

For cash-settled employee share-based payment plans, the enterprise should measure the services received and the liability incurred at the fair value of the liability. Until the liability is settled, the enterprise is required to re-measure the fair value of the liability at each reporting date and at the date of settlement, with any changes in value recognised in profit or loss for the period.

For employee share-based payment plans in which the terms of the arrangement provide either the enterprise or the employee with a choice of whether the enterprise settles the transaction in cash or by issuing shares, the enterprise is required to account for that transaction, or the components of that transaction, as a cash-settled share-based payment plan if, and to the extent that, the enterprise has incurred a liability to settle in cash (or other assets), or as an equity-settled share-based payment plan if, and to the extent that, no such liability has been incurred.

Accounting for employee share-based payment plans is based on the fair value method. There is another method known as the 'Intrinsic Value Method' for valuation of employee share-based payment plans. Intrinsic value, in the case of a listed company, is the amount by which the quoted market price of the underlying share exceeds the exercise price of an option. In the case of a non-listed company, since the shares are not quoted on a stock exchange, value of its shares is determined on the basis of a valuation report from an independent valuer. For accounting for employee share-based payment plans, the intrinsic value may be used, mutatis mutandis, in place of the fair value as described in paragraphs 5 to 14.

Apart from the above, the Guidance Note also deals with various other significant aspects of the employee share-based payment plans including those related to performance conditions, modifications to the terms and conditions of the grant of shares or stock options, reload feature, graded vesting, earnings-per-share implications, accounting for employee share-based payments administered through a trust, etc. The Guidance Note also recommends detailed disclosure requirements. The appendices to the Guidance Note provide detailed guidance on measurement of fair value of shares and stock options, including determination of various inputs to the option-pricing models and examples to illustrate application of various principles recommended in the Guidance Note.

GN(A) 22 (Issued 2006) Guidance Note on Accounting for Credit Available in Respect of Minimum Alternative Tax under the Income-tax Act, 1961

The Finance Act, 2005, inserted sub-section (1A) to section 115JAA, to grant tax credit in respect of MAT paid under section 115JB of the Act with effect from assessment year 2006-07. This Guidance Note deals with various aspects of accounting and presentation of MAT paid and the credit available in this regard. The Guidance Note describes the salient features of MAT credit and its accounting treatment. MAT credit should be recognised as an asset only when and to the extent there is convincing evidence that the company will pay normal income tax during the specified period. MAT credit is a deferred tax asset for the purposes of AS 22. A company should write down the carrying amount of the MAT credit asset to the extent there is no longer a convincing evidence to the effect that the company will pay normal income tax during the specified period. Where a company recognises MAT credit as an asset on the basis of the considerations specified in the guidance note, the same should be presented under the head 'Loans and Advances' since, there being a convincing evidence of realisation of the asset, it is of the nature of a pre-paid tax which would be adjusted against the normal income tax during the specified period. The asset may be reflected as 'MAT credit entitlement'. In the year of set-off of credit, the amount of credit availed should be shown as a deduction from the 'Provision for Taxation' on the liabilities side of the balance sheet. The unavailed amount of MAT credit entitlement, if any, should continue to be presented under the head 'Loans and Advances' if it continues to meet the considerations stated in paragraph the guidance note. According to paragraph 6 of Accounting Standards Interpretation (ASI) 6*, 'Accounting for Taxes on Income in the context of Section 115JB of the Income-tax Act, 1961', issued by the Institute of Chartered Accountants of India, MAT is the current tax. Accordingly, the tax expense arising on account of payment of MAT should be charged at the gross amount, in the normal way, to the profit and loss account in the year of payment of MAT. In the year in which the MAT credit becomes eligible to be recognised as an asset in accordance with the recommendations contained in this Guidance Note, the said asset should be created by way of a credit to the profit and loss account and presented as a separate line item therein.

GN(A) 24 (Issued 2006) Guidance Note on Measurement of Income Tax Expense for Interim Financial Reporting in the Context of AS 25

Accounting Standard (AS) 25, 'Interim Financial Reporting', issued by the Council of the Institute of Chartered Accountants of India (ICAI), prescribes the minimum content of an interim financial report and the principles for recognition and measurement in complete or condensed financial statements for an interim period. AS 25 became mandatory in respect of accounting periods commencing on or after 1st April, 2002. In accordance with the Accounting Standards Interpretation (ASI) 27, 'Applicability of AS 25 to Interim Financial Results', the recognition and measurement principles laid down in AS 25 should be applied for recognition and measurement of items contained in the interim financial results presented under Clause 41 of the Listing Agreement entered into between stock exchanges and the listed enterprises. This Guidance Note deals with the measurement of income tax expense for the purpose of inclusion in the interim financial reports. Accounting for interim period income-tax expense is based on the approach prescribed in AS 25 that the interim period is part of the whole accounting year (often referred to as the 'integral approach') and, therefore, the said expense should be worked out on the basis of the estimated weighted average annual effective income-tax rate. According to this approach, the said rate is determined on the basis of the taxable income for the whole year, and applied to the accounting income for the interim period in order to determine the amount of tax expense for that interim period. This is in contrast to accounting for certain other expenses such as depreciation which is based on the approach prescribed in AS 25 that the interim period should be considered on stand-alone basis (often referred to as the 'discrete approach') because expenses such as depreciation are worked out on the basis of the period for which a fixed asset was available for use. The aforesaid treatments are, however, consistent with the requirement contained in paragraph 27 of AS 25

* Now Explanation to AS 22.

that an enterprise should apply the same accounting policies in its interim financial statements as are applied in its annual financial statements.

GN(A) 28 Guidance Note on Applicability of AS 25 to Interim Financial Results

This Guidance Note deals with the issue whether Accounting Standard (AS) 25, Interim Financial Reporting, is applicable to interim financial results presented by an enterprise pursuant to the requirements of a statute/regulator, for example, quarterly financial results presented under Clause 41 of the Listing Agreement entered into between Stock Exchanges and the listed enterprises.

The presentation and disclosure requirements contained in AS 25 should be applied only if an enterprise prepares and presents an 'interim financial report' as defined in AS 25. Accordingly, presentation and disclosure requirements contained in AS 25 are not required to be applied in respect of interim financial results (which do not meet the definition of 'interim financial report' as per AS 25) presented by an enterprise. For example, quarterly financial results presented under Clause 41 of the Listing Agreement entered into between Stock Exchanges and the listed enterprises do not meet the definition of 'interim financial report' as per AS 25. However, the recognition and measurement principles laid down in AS 25 should be applied for recognition and measurement of items contained in such interim financial results.

GN(A) 29 Guidance Note on Turnover in Case of Contractors

This Guidance Note deals with the issue whether the revenue recognised in the financial statements of contractors as per the requirements of Accounting Standard (AS) 7, Construction Contracts (revised 2002), can be considered as 'turnover'.

The amount of contract revenue recognised as revenue in the statement of profit and loss as per the requirements of AS 7 (revised 2002), should be considered as 'turnover'.

Guidance Note on Schedule III to the Companies Act, 2013

The objective of this Guidance Note is to provide guidance in the preparation and presentation of Financial Statements of companies in accordance with various aspects of the Schedule III. However, it does not provide guidance on disclosure requirements under Accounting Standards, other pronouncements of the Institute of Chartered Accountants of India (ICAI), other statutes, etc.

Guidance Note on Accounting for Expenditure on Corporate Social Responsibility Activities.

The objective of this Guidance Note is to provide guidance on recognition, measurement, presentation and disclosure of expenditure on activities relating to corporate social responsibility.

The Guidance Note does not deal with identification of activities that constitute CSR activities but only provides guidance on accounting for expenditure on CSR activities in line with the requirements of the generally accepted accounting principles including the applicable Accounting Standards.

The Act clearly lay down that the expenditure on CSR activities is to be disclosed only in the Board's Report in accordance with the Rules made thereunder. In view of this, no provision for the amount which is not spent, i.e., any shortfall in the amount that was expected to be spent as per the provisions of the Act on CSR activities and the amount actually spent at the end of a reporting period, may be made in the financial statements. The proviso to section 135 (5) of the Act, makes it clear that if the specified amount is not spent by the company during the year, the Directors' Report should disclose the reasons for not spending the amount.

However, if a company has already undertaken certain CSR activity for which a liability has been incurred by entering into a contractual obligation, then in accordance with the generally accepted principles of accounting, a provision for the amount representing the extent to which the CSR activity was completed during the year, needs to be recognized in the financial statements.

Where a company spends more than that required under law, a question arises as to whether the excess amount 'spent' can be carried forward to be adjusted against amounts to be spent on CSR activities in future period. Since '2% of average net profits of immediately preceding three years' is the minimum amount which is required to be spent under section 135 (5) of the Act, the excess amount cannot be carried forward for set off against the CSR expenditure required to be spent in future.

A company may decide to undertake its CSR activities approved by the CSR Committee with a view to discharge its CSR obligation as arising under

section 135 of the Act in the following three ways:

(a) making a contribution to the funds as specified in Schedule VII to the Act; or

(b) through a registered trust or a registered society or a company established under section 8 of the Act (or section 25 of the Companies Act, 1956) by the company, either singly or along with its holding or subsidiary or associate company or along with any other company or holding or subsidiary or associate company of such other company, or otherwise; or

(c) in any other way in accordance with the Companies (Corporate Social Responsibility Policy) Rules, 2014, e.g. on its own.

In case a contribution is made to a fund specified in Schedule VII to the Act, the same would be treated as an expense for the year and charged to the statement of profit and loss. In case the amount is spent in the manner as specified in paragraph10 (b) above the same will also be treated as expense for the year by charging off to the statement of profit and loss. The accounting for expenditure incurred by the company otherwise e.g. on its own would be accounted for in accordance with the principles of accounting as explained hereinafter.

In case the expenditure incurred by the company is of such nature which may give rise to an 'asset', a question may arise as to whether such an 'asset' should be recognised by the company in its balance sheet. In this context, it would be relevant to note the definition of the term 'asset'.

Invariably future economic benefits from a 'CSR asset' would not flow to the company as any surplus from CSR cannot be included by the company in business profits in view of Rule 6(2) of the Companies (Corporate Social Responsibility Policy) Rules, 2014.

In some cases, a company may supply goods manufactured by it or render services as CSR activities. In such cases, the expenditure incurred should be recognised when the control on the goods manufactured by it is transferred or the allowable services are rendered by the employees. The goods manufactured by the company should be valued in accordance with the principles prescribed in Accounting Standard (AS) 2, Valuation of Inventories. The services rendered should be measured at cost. Indirect taxes (like excise duty, service tax, VAT or other applicable taxes) on the goods and services so contributed will also form part of the CSR expenditure.

Where a company receives a grant from others for carrying out CSR activities, the CSR expenditure should be measured net of the grant.

Rule 6 (2) of the Companies (Corporate Social Responsibility Policy) Rules, 2014, requires that "the surplus arising out of the CSR projects or programs or activities shall not form part of the business profit of a company". any surplus arising out of CSR project or programme or activities shall be recognised in the statement of profit and loss and since this surplus cannot be a part of business profits of the company, the same should immediately be recognised as liability for CSR expenditure in the balance sheet and recognised as a charge to the statement of profit and loss. Accordingly, such surplus would not form part of the minimum '2% of the average net profits of the company made during the three immediately preceding financial years in pursuance of its Corporate Social Responsibility Policy'.

It is recommended that all expenditure on CSR activities, that qualify to be recognised as expense in accordance with paragraphs 10-14 above should be recognised as a separate line item as 'CSR expenditure' in the statement of profit and loss. Further, the relevant note should disclose the break-up of various heads of expenses included in the line item 'CSR expenditure'.

Guidance Note on Accounting for Derivative Contracts.

The objective of this Guidance Note is to provide guidance on recognition, measurement, presentation and disclosure for derivative contracts so as to bring uniformity in their accounting and presentation in the financial statements. This Guidance Note also provides accounting treatment for such derivatives where the hedged item is covered under notified Accounting Standards, e.g., a commodity, an investment, etc., because except AS 11, no other notified Accounting Standard prescribes any accounting treatment for derivative accounting. This Guidance Note, however, does not cover foreign exchange forward contracts which are within the scope of AS 11. This Guidance Note is an interim measure to provide recommendatory guidance on accounting for derivative contracts and hedging activities considering the lack of mandatory guidance in this regard with a view to bring about uniformity of practice in accounting for derivative contracts by various entities.

This Guidance Note covers all derivative contracts that are not covered by an existing notified Accounting Standard. Hence, it does not apply to the following:

(i) Foreign exchange forward contracts (or other financial instruments which in substance are forward contracts covered) by AS 11.

(ii) Derivatives that are covered by regulations specific to a sector or specified set of entities.

The accounting for derivatives covered by this Guidance Note is based on the following key principles:

(i) All derivative contracts should be recognised on the balance sheet and measured at fair value.

(ii) If any entity decides not to use hedge accounting as described in this Guidance Note, it should account for its derivatives at fair value with changes in fair value being recognised in the statement of profit and loss.

(iii) If an entity decides to apply hedge accounting as described in this Guidance Note, it should be able to clearly identify its risk management objective, the risk that it is hedging, how it will measure the derivative instrument if its risk management objective is being met and document this adequately at the inception of the hedge relationship and on an ongoing basis.

(iv) An entity may decide to use hedge accounting for certain derivative contracts and for derivatives not included as part of hedge accounting, it will apply the principles at (i) and (ii) above.

(v) Adequate disclosures of accounting policies, risk management objectives and hedging activities should be made in its financial statements

Hedge accounting may be required due to accounting mismatches in:

- Measurement –
- Recognition

Types of hedge accounting

This Guidance Note recognises the following three types of hedging;

- the fair value hedge accounting model is applied when hedging the risk of a fair value change of assets and liabilities already recognised in the balance sheet, or a firm commitment that is not yet recognised.
- the cash flow hedge accounting model is applied when hedging the risk of changes in highly probable future cash flows or a firm commitment in a foreign currency.
- the hedge of a net investment in a foreign operation.

Derivative assets and liabilities recognised on the balance sheet at fair value should be presented as current and non-current.

Guidance Note on Accounting for Depreciation in Companies in the context of Schedule II to the Companies Act, 2013

This Guidance Note is issued with the objective to provide guidance on certain significant issues that may arise from the practical application of Schedule II with a view to establish consistent practice with regard to the accounting for depreciation.

This Guidance Note includes relevant provisions of Schedule II and provides guidance on implementing the requirements of Schedule II.

Schedule II to the Companies Act, 2013, specifies useful lives for the purpose of computation of depreciation. The said Schedule II was further amended by the Ministry of Corporate Affairs (MCA) through its notifications G.S.R. 237(E) dated March 31, 2014 and G.S.R. 627(E) dated August 29, 2014, respectively. As compared to Schedule XIV to the Companies Act, 1956, Schedule II, instead of specifying rates of depreciation for various assets, specifies that depreciation should be provided on the basis of useful life of an asset. While Schedule XIV was prescriptive in nature as it specified the minimum rate of depreciation, Schedule II provides indicative useful lives for various assets. As a consequence, the companies are in a position to charge depreciation based on the useful life of an asset supported by technical advice, even though such lives are higher or lower than those specified in the said schedule. In view of this, depreciation charged as per the useful life is true commercial depreciation bringing the financial statements prepared accordingly closer to those prepared in accordance with international standards.

the useful lives as given under Part 'C' of Schedule II for various types of assets are indicative only and are not minimum or maximum. Where the useful lives of various specific assets are the same as those under Schedule II, the company should use these useful lives. In case the useful life of an asset as estimated by the company, supported by the technical advice, external or internal, differs, i.e., higher or lower from the indicative useful life given under Schedule II, the former should be applied by the company for providing depreciation. The disclosures in this regard should be made as described later in this Guidance Note. The process of determination of useful life is explained in the chart below. A company has to determine the useful life at the beginning of the year for all fixed assets, existing as at the end of the immediately preceding period and for newly acquired assets, as and when acquired. All fixed assets existing at the beginning of the year should be classified into assets for which no extra shift depreciation is applicable which would include continuous process plant (CPP) and assets for which extra shift depreciation applies. Of the assets for which extra shift depreciation applies, assets which are going to be used on single shift, double shift or triple shift are segregated. This segregation is required as the extra shift depreciation is applicable only to those assets whose useful life is determined on single shift basis. After segregation, the remaining useful life of the asset is estimated. A company recognises depreciation expense based on the useful life estimated by the management. Where the useful life estimated by the management is different from that specified by Schedule II, the same is disclosed in notes.

Illustration

A Limited is a company incorporated under the Companies Act, 1956, engaged in the business of manufacturing of toys. A Limited purchased a unit of machinery costing ₹ 60 lakhs as on April 01, 2014. As per Schedule II the general useful life of the assets is15 years. However, as per A Ltd.'s estimation, the useful life of the asset is 20 years supported by the technical advice.

Should the company use the useful life as 15 years or 20 years?

Solution

In this case, keeping in view the requirements under Schedule II, A Ltd. should depreciate the machinery over its useful life of 20 years as determined by the company and not over 15 years as indicated in Schedule II. A limited should also provide disclosures in this regard as recommended later in this Guidance Note in the notes to accounts to justify the reason for difference between the indicative use life and A's estimated useful life.

Illustration

B Limited had considered the minimum rates of depreciation mentioned in Schedule XIV for depreciating all its fixed assets till March 31, 2014. Based on the rates mentioned for SLM and WDV in Schedule XIV, B Limited had derived the useful lives for the assets. Schedule II of the Companies Act, 2013 is now applicable to B Limited w.e.f. April 1, 2014.

Whether B Limited needs to follow the useful lives mentioned in the Schedule II or derived useful lives considered till March 31, 2013 can be considered?

Solution

W.e.f. April 1, 2014, B limited should estimate the remaining useful lives of its assets based on the definition of useful life in Schedule II and the factors specified in AS 6 for recognising depreciation in the statement of profit and loss. There is no relevance of the derived useful life as per Schedule XIV. However, if B Limited estimates useful lives different from those specified in Schedule II, it should disclose such differences in the financial statements and provide justification in this behalf duly supported by technical advice.

Note 8 to Schedule II defines the expression 'Continues Process Plant' as:

"Continuous process plant" means a plant which is required and designed to operate for twenty-four hours a day.

The words "required and designed to operate twenty-four hours a day" are very significant and should be interpreted with reference to the inherent technical nature of the plant, i.e., the technical design of a CPP is such that there is a requirement to run it continuously for twenty-four hours a day. If it is not so run, there are significant shut-down and/or start-up costs. If such a plant is shut-down, there may be significant spoilage of materials-in-process/ some damage to the plant itself/significant energy loss. It is, however, possible that due to various reasons, e.g., lack of demand, maintenance etc., such a plant may be shut down for some time. The shut-down does not change the inherent technical nature of the plant.

CPP is distinct from the repetitive process plant or assembly-line type plants. These plants are not CPP since such plants do not involve significant shut-down and/or start-up costs and are not technically required and designed to operate twenty-four hours a day, e.g., an automobile manufacturing plant.

It is noted that extra shift depreciation does not apply to CPP and the assets which have been marked as No Extra Shift Depreciation (NESD) under Schedule II. The concept of extra shift depreciation applies only to those assets for which the useful life has been estimated on single shift basis at the beginning of the year

Where a company, which estimated the useful life of an asset on single shift basis at the beginning of the year, used the asset on double or triple shifts during the year, the depreciation expense should be increased by 50% or 100% as the case may be for that period. Further, for such assets, the company at the beginning of the next year should determine whether the asset used in extra shift during the past year was on sporadic basis and is expected to be used on sporadic basis in future also. In such a case, the useful life to be on single shift basis and if in future the asset is used on double or triple shift then as in the past, the depreciation expense for the double or triple shift should be increased by 50% or 100% as the case may be for the period of use. In case the company estimates that the use of the asset for extra shift would not be on sporadic basis i.e. the extra shift working for the asset would be on regular or continuous basis, it should reassess its useful life considering its use on extra shift basis. The reassessed useful life should then be used for the purpose of charging depreciation expense henceforth.

a result of application of Schedule II, a company may use UOP method, where appropriate, keeping in view the various factors mentioned in paragraph 12 of AS 6. UOP method is generally considered appropriate where the number of units that can be produced or serviced from the use of the asset is the major limiting factor for the use of the asset rather than the time.

with the introduction of UOP method in Schedule II, a company may change from SLM or WDV method to UOP method. In such cases, in accordance with AS 6, depreciation on the underlying asset should be calculated retrospectively using the UOP method from the date the asset came into use to the company with adjustment of any surplus or deficiency arising from change in method to the statement of profit and loss as such change is required by the statute. However, as a first time application of Schedule II, if a company changes its method of depreciation from WDV to SLM or vice versa, the same cannot be justified as required by law as both the methods were allowed under Schedule XIV and AS 6. In accordance with AS 6, a shift from WDV to SLM or vice versa can only be applied by the company if it is considered that the change would result in a more appropriate preparation or presentation of the financial statements of the company. In such a case also, any surplus or deficiency arising from change in method should be adjusted to the statement of profit and loss in accordance with AS 6. It may also be noted that in case of change in method of depreciation, transitional provisions given under Note 7 (b) of Schedule II will not apply.

Illustration:

A Limited is a company incorporated under the Companies Act and engaged in the business of oil exploration. Keeping in view the requirement in Schedule XIV it was depreciating its oil and gas assets on

SLM basis. In the financial year 2014-15, when A applies Schedule II it decides to depreciate the said assets by following the UOP method.

How should change in method be accounted for?

Solution

In this case, in accordance with AS 6, A Limited should calculate depreciation on all such assets following the UOP method since the assets came into existence and recognise any deficiency/gain in the statement of profit and loss for the period ending on March 31, 2015.

Useful life specified in Part C of the Schedule is for whole of the asset. Where cost of a part of the asset is significant to total cost of the asset and useful life of that part is different from the useful life of the remaining asset, useful life of that significant part shall be determined separately. It is commonly known as 'component accounting'. Companies will need to identify and depreciate significant components with different useful lives separately.

Under component accounting, companies will capitalise these costs as a separate component of the asset and decapitalise the carrying amount of previously recognised component. A company is required to apply component accounting (if appropriate) for all depreciable fixed assets (existing or newly acquired) as at 1 April 2014 if a company opts to follow it voluntarily and as at 1 April, 2015 mandatorily. However, if the carrying amount of any asset is lower than or equal to the estimated residual value of the asset(s), company is not required to apply component accounting for such asset(s).

The company must split the fixed asset into various identifiable parts to the extent possible. The identified parts should be grouped together if they have the same or similar useful life for the purpose of separate depreciation. Insignificant parts may be combined together in the remainder of the asset or with the principal asset.

It may be noted that Schedule II does not prescribe any such requirement to provide depreciation at the rate of hundred percent. Therefore, an issue may arise whether the earlier requirement of providing hundred percent depreciation on assets with value less than rupees five thousand can still be followed or not.

As the life of the asset is a matter of estimation, the materiality of impact of such charge should be considered with reference to the cost of asset. The size of the company will also be a factor to be considered for such policy. Accordingly, a company may have a policy to fully depreciate assets upto certain threshold limits considering materiality aspect in the year of acquisition.

The company may group additions and disposals in appropriate time period(s), e.g., 15 days, a month, a quarter etc., for the purpose of charging pro rata depreciation in respect of additions and disposals of its assets keeping in view the materiality of the amounts involved.

The use of different methods for similar assets at different geographical locations is not justified.

Illustration 1

HSL Ltd. is manufacturing goods for local sale and exports. As on 31st March, 2017, it has the following finished stocks in the factory warehouse:

(i) Goods meant for local sale ₹ 100 lakhs (cost ₹ 75 lakhs).

(ii) Goods meant for exports ₹ 50 lakhs (cost ₹ 20 lakhs).

Excise duty is payable at the rate of 16%. The company's Managing Director says that excise duty is payable only on clearance of goods and hence is not a cost. Please advise HSL using guidance note, if any issued on this, including valuation of stock.

Solution

Guidance Note on Accounting Treatment for Excise Duty says that excise duty is a duty on manufacture or production of excisable goods in India.

According to Central Excise Rules, 2002, excise duty should be collected at the time of removal of goods from factory premises or factory warehouse. The levy of excise duty is upon the manufacture or production, the collection part of it is shifted to the stage of removal.

Further, paragraph 23(i) of the Guidance Note makes it clear that excise duty should be considered as a manufacturing expense and like other manufacturing expenses be considered as an element of cost for inventory valuation.

Therefore, in the given case of HSL Ltd., the Managing Director's contention that "excise duty is payable only on clearance of goods and hence is not a cost is incorrect. Excise duty on the goods meant for local sales should be provided for at the rate of 16% on the selling price, that is, ₹ 100 lakhs for valuation of stock.

Excise duty on goods meant for exports, should be provided for, since the liability for excise duty arises when the manufacture of the goods is completed. However, if it is assumed that all the conditions specified in Rule 19 of the Central Excise Rules, 2002 regarding export of excisable goods without payment of duty are fulfilled by HSL Ltd., excise duty may not be provided for.

Illustration 2

A factory went into commercial production on 1st April, 2017. It uses as its raw materials product X on which excise duty of ₹ 30 per kg. is paid and product Y on which excise duty of ₹ 20 per kg. is paid. On 31st March, 2017 it had stock of 20,000 kgs. of X and 15,000 kgs. of Y which it had purchased at an all inclusive price of ₹ 150 per kg. for X and ₹ 120 per kg. for Y. The suppliers of X and Y are to receive payment on 15th May, 2017.

During April 2017, the factory manufactured 40,000 units of the end product for which the consumption of material X was 60,000 kgs. and material Y was 45,000 kgs. The excise duty on the end product is ₹ 60 per unit. 30,000 units of the end product were dispatched, 8,000 units were kept in warehouse and balance 2,000 kgs. were kept in finished goods godown.

During the month the factory purchased 50,000 kgs. of X at ₹ 145 per kg. (inclusive of excise duty of ₹ 30 per kg.) on credit of 60 days and 50,000 kgs. of Y at ₹ 110 per kg. (inclusive of excise duty of ₹ 20 per kg.) on credit of 45 days.

The cost of "converting" the raw materials into finished product amounts to ₹ 150 per unit of end product of which ₹ 100 is "cash cost" paid immediately and ₹ 50 represents non-cash charge for depreciation. There is no work in process.

Sales are effected at ₹ 750 per unit in respect of credit transactions and at ₹ 700 per unit in respect of cash transactions. 20% of dispatches were in respect of cash transactions while the balance 80% were in respect of credit transactions (one month credit).

You are required to:

(a) (i) Calculate MODVAT credit available, MODVAT credit availed of and balance in MODVAT credit as on 30th April, 2017.

(ii) Show the necessary ledger accounts in respect of MODVAT.

(b) Value the inventory of:

(i) raw material

(ii) finished goods in warehouse

(iii) finished goods in finished goods godown on "first in first out" principle.

(c) Show the ledger accounts of customers, suppliers and bank, assuming that the necessary bank balance is available at the start of the month to meet "cash" expenses of that month.

(d) Calculate the working capital as on 30th April, 2017.

(e) State the impact of 'MODVAT' on working capital requirement of the factory as on 30th April, 2017.

Solution

(a) (i) Excise duty paid on raw materials:

	X			Y			Total
	kgs.	@	Amount ₹	kgs.	@	Amount ₹	Amount ₹
Stock on 31st March, 2017	20,000	30	6,00,000	15,000	20	3,00,000	9,00,000
Purchases	50,000	30	15,00,000	50,000	20	10,00,000	25,00,000
			21,00,000			13,00,000	34,00,000

MODVAT credit available:

₹ 21,00,000 + 13,00,000 = ₹ 34,00,000

MODVAT credit availed of:

Production = 40,000 units

Excise duty on the end product = ₹ 60 per unit

MODVAT credit availed of = 40,000 × 60 = ₹ 24,00,000

Balance in MODVAT credit 34,00,000 – 24,00,000 = ₹ 10,00,000

Note: Normally goods are removed from factory on payment of excise duty. However, in respect of certain goods, provision has been made to store the goods in warehouses without payment of duty (Rule 20 of Central Excise Rules, 2002). These provisions are also applicable to goods transferred to customs warehouse.

It is to be noted that as per para 33 of The Guidance Note on Accounting Treatment for Excise Duty, it is necessary that a provision for liability in respect of unpaid excise duty should be made in the accounts in respect of stocks lying in the factory or warehouse since the liability for excise duty arises when the manufacture of the goods is completed.

(ii) **MODVAT Credit Receivable Account**

2015			₹	*2015*		₹
April 1	To Balance b/d			April	By Excise Duty A/c	24,00,000
	X	6,00,000		1 to 30		
	Y	3,00,000				
			9,00,000	April 30	By Balance c/d	10,00,000
April 1	To Suppliers A/c					
to 30	X	15,00,000				
	Y	10,00,000				
			25,00,000			
			34,00,000			34,00,000

Purchases Account

2015		₹	*2015*		₹
April	To Suppliers A/c		April 30	By Balance c/d	1,02,50,000
1 to 30	X: [50,000 × (145 – 30)]	57,50,000			
	Y: [50,000 × (110 – 20)]	45,00,000			
		1,02,50,000			1,02,50,000

(b) Valuation of Inventory

(i) Raw material:

	X (Kgs.)	*Y (Kgs.)*
Opening stock	20,000	15,000
Purchases	50,000	50,000
	70,000	65,000
Consumption	60,000	45,000
Closing stock	10,000	20,000
Inventory:		₹
X : 10,000 × (145 – 30)		11,50,000
Y : 20,000 × (110 – 20)		18,00,000
		29,50,000

(ii) Finished goods in warehouse

		₹
Raw material cost of 8,000 units of output		
X : 12,000* × (145 – 30)	13,80,000	
Y : 9,000* × (110 – 20)	8,10,000	21,90,000
Conversion cost		
Cash cost : 8,000 × ₹ 100	8,00,000	
Non-cash : 8,000 × ₹ 50	4,00,000	12,00,000
Excise duty		
8,000 × ₹ 60		4,80,000
		38,70,000

* For 40,000 units of output,

Input of X = 60,000 Kgs.

Input of Y = 45,000 Kgs.

Therefore, for 8,000 units of finished goods in warehouse:

Input of X = $\frac{60,000}{40,000} \times 8,000 = 12,000$ Kgs.

Input of Y = $\frac{45,000}{40,000} \times 8,000 = 9,000$ Kgs.

(iii) Finished goods in finished goods godown

	₹
Cost of 8,000 units of finished goods in warehouse	38,70,000
Cost of 2,000 units of finished goods in finished goods godown $= \frac{38,70,000}{8,000} \times 2,000$	9,67,500

		By Purchases A/c	1,02,50,000

		By Modvat Credit Receivable A/c X : 50,000 × 30 = 15,00,000 Y : 50,000 × 20 = 10,00,000	25,00,000
	1,75,50,000		1,75,50,000

Bank Account

	₹		₹
To Balance b/d	40,00,000	By Cash Expenses (40,000 × 100)	40,00,000
To Sales (cash sales) A/c $\left(\frac{20}{100} \times 30,000 \times ₹\ 700\right)$	42,00,000	By Balance c/d	42,00,000
	82,00,000		82,00,000

(d) Working Capital as on 30th April, 2017

Current Assets:

Inventory

(i)	Raw materials		
	X	11,50,000	
	Y	18,00,000	29,50,000
(ii)	Finished goods in warehouse	38,70,000	
	in finished goods godown	9,67,500	48,37,500
Customers			1,80,00,000
Bank balance			42,00,000
MODVAT credit receivable			10,00,000
			3,09,87,500
Less: Current Liabilities			
Sundry creditors			(1,75,50,000)
			1,34,37,500

(e) Impact of Modvat on Working Capital Requirement

Modvat has enabled

(i) dispatch on sale of 30,000 units of finished product,

(ii) removal of 10,000 units of finished product, without payment of a single rupee in cash. Cash outlay so saved at ₹ 60 per unit is ₹ 24,00,000.

It has also ensured creation of a current asset worth ₹ 10,00,000 in MODVAT Credit Receivable Account. Thus, MODVAT reduces the pressure on working capital.

Illustration 3

Vikas Ltd. purchased a plant for ₹ 50 lakhs from Yash Ltd. during 2015 - 2016 and installed immediately. The price includes excise duty of ₹ 5 lakhs. During 2015 - 2016, the company produced excisable goods on which the excise authority charged excise duty to the extent of ₹ 4.5 lakhs. Show *the necessary Journal Entries explaining the treatment of CENVAT credit. You are also required to indicate the value of plant at which it should be recorded in Fixed Asset register.*

Answer

(i) **Journal Entries**

			₹ *in lakhs*	
(a)	Plant and Machinery A/c	Dr.	45	
	CENVAT credit receivable on capital goods A/c	Dr.	5	
	To Bank A/c or Yash Ltd.			50
	(Being capitalization of plant and machinery)			
(b)	Excise duty A/c	Dr.	2.5	
	To CENVAT credit receivable on capital goods A/c			2.5
	(Being excise duty set off available to the extent of 50% in the first year of acquisition of capital asset)			

(ii) **Value of plant to be recorded in Fixed Asset Register:** As per Guidance Note on "Accounting Treatment for CENVAT", fixed assets have to be capitalised net of refundable amounts.

The plant and machinery will be recorded at ₹ 45 lakhs (₹ 50 lakhs - ₹ 5 lakhs) in the fixed asset register.

Illustration 4

A Company has its share capital divided into shares of ₹ 10 each. On 1st April, 2016, it granted 10,000 employees' stock options at ₹ 40, when the market price was ₹ 130. The options were to be exercised between 16th December, 2016 and 15th March, 2017. The employees exercised their options for 9,500 shares only; the remaining options lapsed. The company closes its books on 31st March every year.

Illustration 6

H Ltd. engaged in the business of manufacturing lotus wine. The process of manufacturing this wine takes around 18 months. Due to this reason H Ltd. has prepared its financial statements considering its operating cycle as 18 months and accordingly classified the raw material purchased and held in stock for less than 18 months as current asset. Comment on the accuracy of the decision and the treatment of the asset by H Ltd., as per the Schedule III.

Solution

As per Schedule III to the Companies Act, 2013, one of the criteria for classification of an asset as a current asset is that the asset is expected to be realised in the company's' operating cycle or is intended for sale or consumption in the company's normal operating cycle.

Further, Schedule III to the Companies Act, 2013 defines that an operating cycle is the time between the acquisition of assets for processing and their realization in cash or cash equivalents. However, when the normal operating cycle cannot be identified, it is assumed to have duration of 12 months.

As per the facts given in the question, the process of manufacturing of lotus wine takes around 18 months; therefore, its realisation into cash and cash equivalents will be done only when it is ready for sale i.e. after 18 months. This means that normal operating cycle of the product is 18 months. Therefore, the contention of the company's management that the operating cycle of the product lotus wine is 18 months and not 12 months is correct.

Illustration 7

Combine Ltd. is a group engaged in manufacture and sale of industrial and consumer products. One of its division deals with the real estate. The real estate division is continuously engaged in leasing of real estate properties. The accountant showed the rent arising from leasing of real estate as 'other income' in the Statement of Profit and Loss. State, whether the classification of the rent income made by the accountant is correct or not in light of Schedule III to the companies Act, 2013?

Solution

As per para 4 of the 'General Instructions for preparation of Statement of Profit and Loss' given in the Schedule III to the Companies Act, 2013, 'other income' does not include operating income. However, rent income arising from leasing of real estate properties is an operating income as Real Estate is one of the divisions of Combine Ltd. There is a separate head for operating income i.e. 'Revenue from Operations'. Therefore, classification of rent income as 'Other income' in the Statement of Profit and Loss will not be correct. It would, infact, be shown under the heading 'Revenue from Operations' only.

Illustration 8

Presented below is an extract of the Schedule of Secured and Unsecured Loans of Annual Report 2016-2017 of Super Star Ltd.

Particulars	*Schedule No*	*As at 31st March, 2017 (₹)*
Loan Funds		
a) Secured Loans	*3*	*6,07,114*
b) Unsecured Loans - Short Term Banks		*36,112*
		6,43,226
Schedule 3: Secured Loans		
Term Loans from:		
- Banks		*2,95,002*
- Others		*3,12,112*
		6,07,114
Other Information:		
Current maturities of long-term loan from bank	*₹ 30,000*	
Current maturities of long-term loan from other parties	*₹ 15,376*	

There was no interest accrued/due as at end of the year.

Prepare appropriate note to accounts complying with the requirements of Schedule III to the Companies Act, 2013 on the basis of available information.

Solution

Balance Sheet of Super Star Ltd.
As on 31st March, 2017

Particulars	Note No	Amount
Non Current Liabilities		
Long term borrowings	4	5,61,738
Current Liabilities		
Short term borrowings	5	36,112
Other current liabilities	6	45,376
		6,43,226

Notes to Accounts

4. Long-Term Borrowings	
Term loans – Secured	
- from banks	2,95,002
- from other parties	3,12,112
	6,07,114

	Less : Shown in current maturities of long-term debt (Refer Note 6)	(45,376)
		5,61,738
5.	Short-Term Borrowings	
	(Unsecured – payable on demand)	
	- from bank	36,112
6.	Other Current Liabilities	
	Current maturities of long-term debt	
	From banks	30,000
	From other	15,376
		45,376

It is assumed the Note 1 is for 'Significant Accounting Policies', Note 2 for 'Share Capital', Note 3 for 'Reserves and Surplus'.

Illustration 9

Astha Ltd. has FCCBs worth ₹ 100 crore which are due to mature on 31st December 2016. While preparing the financial statements for the year ending 31st March 2016, it is expected that the FCCB holders will not exercise the option of converting the same to equity shares. How should the company classify the FCCBs on 31st March 2016? Will your answer be different if the company expects that FCCB holders will convert their holdings into equity shares of Astha Ltd.?

Solution

Schedule III to the companies Act, 2013 provides that:

"A liability shall be classified as current when it satisfies any of the following criteria:

(a) it is expected to be settled in the company's normal operating cycle;

(b) it is held primarily for the purpose of being traded;

(c) it is due to be settled within twelve months after the reporting date; or

(d) the company does not have an unconditional right to defer settlement of the liability for at least twelve months after the reporting date. Terms of a liability that could, at the option of the counterparty, result in its settlement by the issue of equity instruments and do not affect its classification."

In the present situation, Astha Ltd. does not have an unconditional right to defer settlement of the liability for at least 12 months after the reporting date. The position will be same even when the FCCB holders are expected to convert their holdings into equity shares of Astha Ltd. Expectations cannot be called as unconditional rights. Thus, in both the situations, Astha Ltd. should classify the FCCBs as current liabilities as on 31 March 2016.

Illustration 10

The Balance Sheet of Appropriate Ltd. as at 31st March, 2016 is as follows:

	Note No.	*31st March, 2016*	*31st March, 2015*
Equity & Liabilities			
Share Capital	1	XXX	XXX
Reserves and Surplus	2	0	0
Employee stock option outstanding	3	XXX	XXX
Share application money refundable	4	XXX	XXX
Non-Current Liabilities			
Deferred tax liability (Arising from Indian Income Tax)	5	XXX	XXX
Current Liabilities			
Trade Payables	6	XXX	XXX
Total		XXXX	XXXX
Assets			
Non-Current Assets			
Fixed Assets -Tangible	7	XXX	XXX
Capital Work in progress (including capital advances)	8	XXX	XXX
Current Assets			
Trade Receivables	9	XXX	XXX
Deferred Tax Asset (Arising from Indian Income Tax)	10	XXX	XXX
Profit and Loss (Debit balance)		XXX	XXX
Total		XXXX	XXXX

Comment on the presentation in terms of Schedule III to the Companies Act, 2013 and Accounting Standards notified by the Central Government.

Solution

(1) Share Capital' and 'Reserves and Surplus' are required to be shown under the heading "Shareholders' funds", which have not been shown in the given balance sheet. Although it is a part of 'Equity and Liabilities' yet it must be shown under the head "Shareholders' Funds". The heading "Shareholders' Funds" is missing in the balance sheet given in the question.

(2) Reserves & Surplus is showing zero balance, which is not correct since there is. Debit balance of Statement of Profit & Loss. This debit balance of Profit and Loss should be shown as a negative figure under the head 'Surplus'. The balance of 'Reserves and Surplus', after adjusting negative balance of surplus shall be shown under the head 'Reserves and Surplus' even if the resulting figure is in the negative. It should be noted that Profit and Loss Debit Balance is not a part of current assets rather debit balance of Statement of Profit and Loss shall be shown as a negative figure under the head 'Surplus' as per requirement of Schedule III to the Companies Act, 2013.

(3) As per Schedule III to the Companies Act, 2013, Employee Stock Option Outstanding A/c is part of Reserves and Surplus and should not be shown separately. Classification of Reserves and Surplus should be reflected is 'Notes to Accounts' for the same.

(4) Share application money refundable shall be shown by way of note under the sub-heading "Other Current Liabilities". As this is refundable and not pending for allotment, hence it is not a part of equity.

(5) Deferred Tax Liabilities has been correctly shown under Non-Current Liabilities. But Deferred tax assets and deferred tax liabilities, both, can not be shown in balance sheet because only the net balance of Deferred Tax Liabilities or Asset is to be shown as per para 29 of AS 22, Appropriate Ltd. should offset Deferred Tax Asset & Deferred Tax Liabilities and the break up of Deferred Tax Asset & Deferred Tax Liabilities into major components of the respective balance should be disclosed in 'Notes to Account'. Deferred Tax Asset shall be shown under Non-current Asset. It should be the net balance of Deferred Tax Asset after adjusting the balance of deferred tax liability.

(6) Under the main heading of Non-Current Assets, Fixed Assets are further classified as under:

(i) Tangible assets

(ii) Intangible assets

(iii) Capital work in Progress

(iv) Intangible assets under development.

Keeping in view the above, the Capital Work-in Progress shall be shown under Fixed Assets as Capital Work in Progress. The amount of Capital advances included in CWIP shall be disclosed under the sub-heading "Long term loans and advances" under the heading Non-Current Assets.

CHAPTER 2 – INDIAN ACCOUNTING STANDARDS (IND AS)

CHAPTER 4 – ACCOUNTING FOR CORPORATE RESTRUCTURING

2

Indian Accounting Standards (Ind AS)

1. Introduction to Ind AS

In the present era of globalisation and liberalisation, the world has become an economic village. The globalisation of the business world, the attendant structures and the regulations, which support it, as well as the development of e-commerce make it imperative to have a single globally accepted financial reporting system. A number of multi-national companies are establishing their businesses in various countries with emerging economies and vice versa. The entities in emerging economies are increasingly accessing the global markets to fulfill their capital needs by getting their securities listed on the stock exchanges outside their country. Capital markets are, thus, becoming integrated consistent with this world-wide trend. More and more Indian companies are being listed on overseas stock exchanges. The use of different accounting frameworks in different countries, which require inconsistent treatment and presentation of the same underlying economic transactions, creates confusion for users of financial statements. This confusion leads to inefficiency in capital markets across the world. Therefore, increasing complexity of business transactions and globalisation of capital markets call for a single set of high quality accounting standards.

High standards of financial reporting underpin the trust investors place in financial and non-financial information. Thus, the case for a single set of globally accepted accounting standards has prompted many countries to pursue convergence of national accounting standards with IFRS.

International Financial Reporting Standards (IFRS) are considered a "principles-based" set of standards. In fact, they establish broad rules rather than dictating specific treatments. Every major nation is moving toward adopting them to some extent. Large number of authorities requires public companies to use IFRS for stock-exchange listing purposes, and in addition, banks, insurance companies and stock exchanges may use them for their statutorily required reports. So over the next few years, thousands of companies will adopt the international financial reporting standards while preparing their financial statements.

2. Benefits of Convergence with IFRS

There are many beneficiaries of convergence with IFRS such as the economy, investors, industry etc.

The Economy: When the markets expand globally the need for convergence increases since the convergence benefits the economy by increasing growth of its international business. It facilitates maintenance of orderly and efficient capital markets and also helps to increase the capital formation and thereby economic growth. It encourages international investing and thereby leads to more foreign capital flows to the country.

Investors: A strong case for convergence can be made from the viewpoint of the investors who wish to invest outside their own country. Investors want the information that is more relevant, reliable, timely and comparable across the jurisdictions. Financial statements prepared using a common set of accounting standards help investors better understand investment opportunities as opposed to financial statements prepared using a different set of national accounting standards. Investors' confidence is strong when accounting standards used are globally accepted. Convergence with IFRS contributes to investors' understanding and confidence in high quality financial statements.

The Industry: A major force in the movement towards convergence has been the interest of the industry. The industry is able to raise capital from foreign markets at lower cost if it can create confidence in the minds of foreign investors that their financial statements comply with globally accepted accounting standards. With the diversity in accounting standards from country to country, enterprises which operate in different countries face a multitude of accounting requirements prevailing in the countries. The burden of financial reporting is lessened with convergence of accounting standards because it simplifies the process of preparing the individual and group financial statements and thereby reduces the costs of preparing the financial statements using different sets of accounting standards.

3. History of IFRS-converged Indian Accounting Standards (Ind AS)

3.1 First Step towards IFRS

The Institute of Chartered Accountants of India (ICAI) being the accounting standards-setting body in India, way back in 2006, initiated the process of moving towards the International Financial Reporting Standards (IFRS) issued by the International Accounting Standards Board (IASB) with a view to enhance acceptability and transparency of the financial information communicated by the Indian corporates through their financial statements. This move towards IFRS was subsequently accepted by the Government of India.

The Government of India in consultation with the ICAI decided to converge and not to adopt IFRS issued by the IASB. The decision of convergence rather than adoption was taken after the detailed analysis of IFRS requirements and extensive discussion with various stakeholders. Accordingly, while formulating IFRS-converged Indian Accounting Standards (Ind AS), efforts have been made to keep these Standards, as far as possible, in line with the corresponding IAS/IFRS and departures have been made where considered absolutely essential. These changes have been made considering various factors, such as, various terminology related changes have been made to make it consistent with the terminology used in law, e.g., 'statement of profit and loss' in place of 'statement of comprehensive income' and 'balance sheet' in place of 'statement of financial position'. Certain changes have been made considering the economic environment of the country, which is different as compared to the economic environment presumed to be in existence by IFRS.

3.2 Government of India - Commitment to IFRS Converged Ind AS

Consistent, comparable and understandable financial reporting is essential to develop a robust economy. With a view to achieve international benchmarks of financial reporting, the Institute of Chartered Accountants of India (ICAI), as a proactive role in accounting, set out to introduce Indian Accounting Standards (Ind AS) converged with the International Financial Reporting Standards (IFRS). This endeavour of the ICAI is supported by the Government of India.

Initially Ind AS were expected to be implemented from the year 2011. However, keeping in view the fact that certain issues including tax issues were still to be addressed, the Ministry of Corporate Affairs decided to postpone the date of implementation of Ind AS.

In July 2014, the Finance Minister of India at that time, Shri Arun Jaitely ji, in his Budget Speech, announced an urgency to converge the existing accounting standards with the International Financial Reporting Standards (IFRS) through adoption of the new Indian Accounting Standards (Ind AS) by the Indian companies from the financial year 2015-16 voluntarily and from the financial year 2016-17 on a mandatory basis.

Pursuant to the above announcement, various steps have been taken to facilitate the implementation of IFRS-converged Indian Accounting Standards (Ind AS). Moving in this direction, the Ministry of Corporate Affairs (MCA) has issued the Companies (Indian Accounting Standards) Rules, 2015 vide Notification dated February 16, 2015 covering the revised roadmap of implementation of Ind AS for companies other than Banking companies, Insurance Companies and NBFCs and Indian Accounting Standards (Ind AS). As per the Notification, Indian Accounting Standards (Ind AS) converged with International Financial Reporting Standards (IFRS) shall be implemented on voluntary basis from 1st April, 2015 and mandatorily from 1st April, 2016.

Initially, India decided to adopt Ind AS 115 corresponding to IFRS 15 two years ahead of the world. However, after the same were notified by the MCA, many representations were being received from various organisations, industry associations etc. for deferring the applicability of Ind AS 115. Considering the difficulties being faced by various industries, it was decided to defer the applicability of Ind AS 115 and to bring Ind AS 11 and Ind AS 18 in its place. Further, there were certain amendments that were made in IFRS/IAS issued by the IASB. The Institute of Chartered Accountants of India (ICAI) to keep up the pace with the global developments, revised the notified Ind AS in line with the amendments made in IFRS/IAS issued by the IASB. MCA had notified the amendments to the Ind AS vide notification dated March 30, 2016, as Companies (Indian Accounting Standards) Amendment Rules, 2016.

4. What are Indian Accounting Standards (Ind AS)?

Indian Accounting Standards (Ind-AS) are the International Financial Reporting Standards (IFRS) converged standards issued by the Central Government of India under the supervision and control of Accounting Standards Board (ASB) of ICAI and in consultation with National Advisory Committee on Accounting Standards (NACAS).

ASB is a committee under Institute of Chartered Accountants of India (ICAI) which consists of representatives from government department, academicians, other professional bodies viz. icsi, icai, representatives from ASSOCHAM, CII, FICCI, etc. National Advisory Committee on Accounting Standards (NACAS) recommend these standards to the Ministry of Corporate Affairs (MCA). MCA has to spell out the accounting standards applicable for companies in India.

The Ind AS are named and numbered in the same way as the corresponding International Financial Reporting Standards (IFRS).

5. What are Carve outs/ins in Ind AS?

The Government of India in consultation with the ICAI decided to converge and not to adopt IFRS issued by the IASB. The decision of convergence rather than adoption was taken after the detailed analysis of IFRS requirements and extensive discussion with various stakeholders.

Accordingly, while formulating IFRS-converged Indian Accounting Standards (Ind AS), efforts have been made to keep these Standards, as far as possible, in line with the corresponding IAS/IFRS and departures have been made where considered absolutely essential. These changes have been made considering various factors, such as

- Various terminology related changes have been made to make it consistent with the terminology used in law, e.g., 'statement of profit and loss' in place of 'statement of comprehensive income' and 'balance sheet' in place of 'statement of financial position'.
- Removal of options in accounting principles and practices in Ind AS vis-a-vis IFRS, have been made to maintain consistency and comparability of the financial statements to be prepared by following Ind AS. However, these changes will **not result into carve outs.**
- Certain changes have been made considering the economic environment of the country, which is different as compared to the economic environment presumed to be in existence by IFRS. These differences are due to differences in application of accounting principles and practices and economic conditions prevailing in India. These diffferences which are in deviation to the accounting principles and practices stated in IFRS, are commonly known as **'Carve-outs'.**

Note: In Ind AS 103 "Business Combination", an additional guidance on "Accounting of Business Combinations of Entities under Common Control" is given which is over and above what is given in IFRS. This is termed as **'Carve-in'.**

6. Roadmap for Implementation of Indian Accounting Standards (Ind AS): A Snapshot

6.1 For Companies other than banks, NBFCs and Insurance Companies

Phase I	**1st April 2015 or thereafter: Voluntary Basis for all companies (with Comparatives)**	
	1st April 2016: Mandatory Basis	
	(a)	Companies listed/in process of listing on Stock Exchanges in India or Outside India having net worth $\geq$ INR 5 Billion
	(b)	Unlisted Companies having net worth $\geq$ INR 5 Billion
	(c)	Parent, Subsidiary, Associate and J.V. of above
Phase II	**1st April 2017: Mandatory Basis**	
	(a)	All companies which are listed/or in process of listing
		inside or outside India on Stock Exchanges not
		covered in Phase I (other than companies listed on
		SME Exchanges)
	(b)	Unlisted companies having net worth INR 5 Billion >
		INR 2.5 Billion
	(c)	Parent, Subsidiary, Associate and J.V. of Above

- Companies listed on SME exchange not required to apply Ind AS.
- Once Ind AS are applicable, an entity shall be required to follow the Ind AS for all the subsequent financial statements.
- Companies not covered by the above roadmap shall continue to apply existing Accounting Standards notified in Companies (Accounting Standards) Rules, 2006.

6.2 For Scheduled Commercial Banks (Excluding RRBs), Insurers/Insurance Companies and Non-Banking Financial Companies (NBFC's)

Non-Banking Financial Companies (NBFC's)	
Phase I:	From 1st April, 2018 (with comparatives)
	• NBFCs (whether listed or unlisted) having net worth 500 crore or more
	• Holding, Subsidiary, JV and Associate companies of above NBFC other than those already covered under corporate roadmap shall also apply from said date

Phase II:	From 1st April, 2019 (with comparatives)
	• NBFCs whose equity and/or debt securities are listed or are in the process of listing on any stock exchange in India or outside India and having net worth less than 500 crore
	• NBFCs that are unlisted having net worth 250 crore or more but less 500 crore
	• Holding, Subsidiary, JV and Associate companies of above other than those already covered under corporate roadmap shall also apply from said date
➢ Applicable for both Consolidated and individual Financial Statements	
➢ NBFC having net worth below 250 crore shall not apply Ind AS.	
➢ Adoption of Ind AS is allowed only when required as per the roadmap.	
➢ Voluntary adoption of Ind AS is not allowed.	
Scheduled Commercial banks (excluding RRB's) and Insurers/Insurance companies	
➢ From 1st April, 2018 (with comparatives):	
• Holding, subsidiary, JV and Associates companies of scheduled commercial banks (excluding RRB's) shall also apply from the said date irrespective of it being covered under corporate roadmap.	
• Applicable for both Consolidated and individual Financial Statements	
➢ Urban Cooperative banks (UCBs) and Regional Rural banks (RRBs) are not required to apply Ind AS.	

7. List of Ind AS *vis-a-vis* IFRS and AS

Ind AS	IFRS	Title of Ind AS/IFRS	AS/GN	AS/GN Title
101	1	First Time Adoption of Indian Accounting Standards	-	-
102	2	Share Based Payment	GN 18	Guidance Note on Accounting for Employee Share-based Payments
103	3	Business Combinations	AS 14	Accounting for Amalgamations
104	4	Insurance Contracts	-	-
105	5	Non-current Assets Held for Sale and Discontinued Operations	AS 24	Discontinuing Operations
106	6	Exploration for and Evaluation of Mineral Resources	GN 15	Guidance Note on Accounting for Oil and Gas Producing Activities
107	7	Financial Instruments: Disclosures	AS 32	Financial Instruments: Disclosures
108	8	Operating Segments	AS 17	Segment Reporting

109	9	Financial Instruments	AS 30	Financial Instruments: Recognition and Measurement
110	10	Consolidated Financial Statements	AS 21	Consolidated Financial Statements
111	11	Joint Arrangements	AS 27	Financial Reporting of Interests in Joint Ventures
112	12	Disclosure of Interests in Other Entities	-	-
113	13	Fair Value Measurement	-	-
114	14	Regulatory Deferral Accounts	GN	Accounting for Rate Regulated Activities
1	1	Presentation of Financial Statements	AS 1	Disclosure of Accounting Policies
2	2	Inventories	AS 2	Valuation of Inventories
7	7	Statement of Cash Flows	AS 3	Cash Flow Statements
8	8	Accounting Policies, Changes in Accounting Estimates and Errors	AS 5	Net Profit or Loss for the Period, Prior period Items and Changes in Accounting Policies
10	10	Events after the Reporting Period	AS 4	Contingencies and Events Occurring After the Balance Sheet
11	11	Construction Contracts	AS 7	Construction Contracts
12	12	Income Taxes	AS 22	Accounting for Taxes on Income
16	16	Property, Plant and Equipment	AS 10	Property, Plant and Equipment
17	17	Leases	AS 19	Leases
18	18	Revenue	AS 9	Revenue Recognition
19	19	Employee Benefits	AS 15	Employee Benefits
20	20	Accounting for Government Grants and Disclosure of Government Assistance	AS 12	Accounting for Government Grants
21	21	The Effects of Changes in Foreign Exchange Rates	AS 11	The Effects of Changes in Foreign Exchange Rates
23	23	Borrowing Costs	AS 16	Borrowing Costs
24	24	Related Party Disclosures	AS 18	Related Party Disclosures
27	27	Separate Financial Statements	-	-
28	28	Investment in Associates and Joint Ventures	AS 23	Accounting for Investment in Associates in Consolidated Financial Statements
29	29	Financial Reporting in Hyperinflationary Economies	-	-
32	32	Financial Instruments: Presentation	AS 31	Financial Instruments: Presentation

33	33	Earnings per Share	AS 20	Earnings per Share
34	34	Interim Financial Reporting	AS 25	Interim Financial Reporting
36	36	Impairment of Assets	AS 28	Impairment of Assets
37	37	Provisions, Contingent Liabilities and Contingent Assets	AS 29	Provisions, Contingent Liabilities and Contingent Assets
38	38	Intangible Assets	AS 26	Intangible Assets
40	40	Investment Property	AS 13	Accounting for Investments
41	41	Agriculture	-	-

8. Summary of Indian Accounting Standards (Ind AS)

8.1 Ind AS 1 : Presentation of Financial Statements

8.1.1 Objective

This Standard prescribes the basis for presentation of general purpose financial statements to ensure comparability both with the entity's financial statements of previous periods and with the financial statements of other entities. It sets out

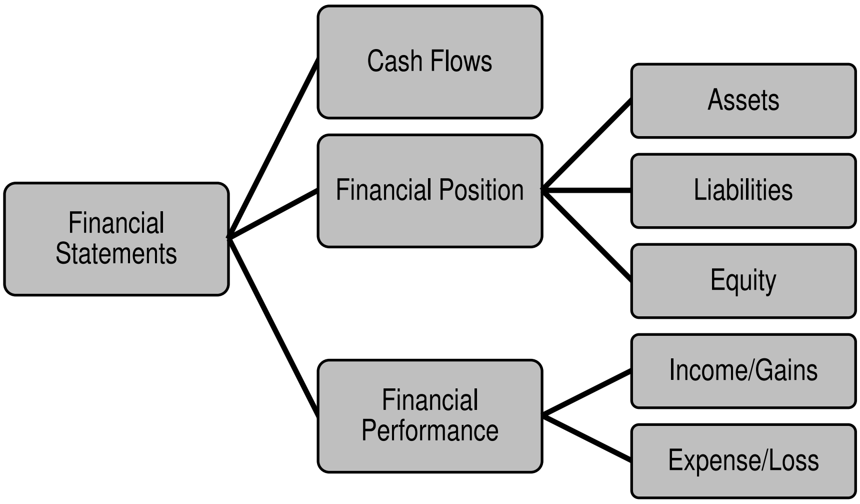
- Overall requirements for the presentation of financial statements,
- Guidelines for their structure and
- Minimum requirements for their content.

8.1.2 Financial Statements

Purpose of financial statements

Financial statements are a structured representation of the:

- financial position and
- financial performance of an entity.



A complete set of financial statements comprises:

- A balance sheet as at the end of the period
- Statement of changes in equity for the period
- A statement of profit and loss for the period
- A statement of cash flows for the period
- Notes, comprising significant accounting policies and other explanatory information
- Comparative information in respect of the preceeding period
- A balance sheet as at the beginning of the preceeding period when an entity applies an accounting policy retrospectively or makes a retrospective restatement of items in its financial statements, or when it reclassifies items in its financial statements

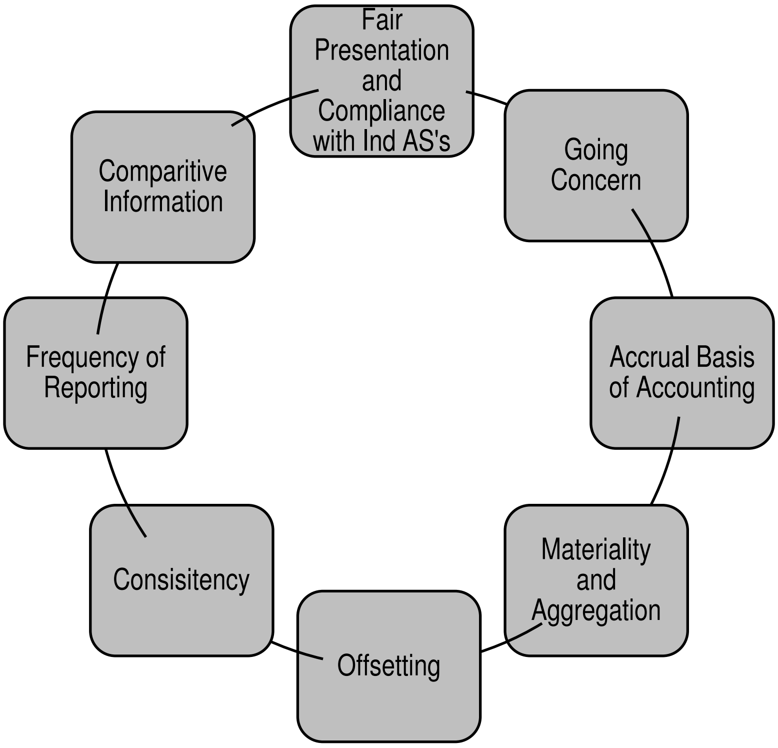
The Standard requires an entity to present, in a statement of changes in equity, all owner changes in equity. All non-owner changes in equity (ie comprehensive income) are required to be presented in single statement of profit and loss, with profit or loss and other comprehensive income presented in two sections. The sections shall be presented together, with the profit or loss section presented first followed directly by the other comprehensive income section.

The Standard requires that an entity whose financial statements comply with Ind AS must make an explicit and unreserved statement of such compliance in the notes. An entity must not describe financial statements as complying with Ind AS unless they comply with all the requirements of Ind AS. The application of Ind AS, with additional disclosure when necessary, is presumed to result in financial statements that achieve a presentation of true and fair view.

8.1.3 Presentation of True and Fair View

Presentation of true and fair view requires the faithful representation of

- The effects of transactions, other events and conditions in accordance with the definitions and recognition criteria for assets, liabilities, income and expenses set out in the Framework.
- The application of Ind AS, with additional disclosure when necessary, is presumed to result in financial statements that present a true and fair view.



Structure and Content: The Standard requires that an entity shall clearly identify the financial statements and distinguish them from other information in the same published document. ***The Standard requires some line items to be presented in the balance sheet. An entity shall present additional line items, headings and sub-totals in the balance sheet when such presentation is relevant to an understanding of the entity's financial position.*** It also prescribes the information to be presented in statement of profit and loss, other comprehensive income section and statement of changes in equity. However, this Standard does not apply to the structure and content of condensed interim financial statements prepared in accordance with Ind AS 34 *'Interim Financial Reporting'*. However, this Standard does not apply to the structure and content of condensed interim financial statements prepared in accordance with

Ind AS 34 *'Interim Financial Reporting'*.

Other Comprehensive Income: Other comprehensive income comprises items of income and expenses (including reclassification adjustments) that are not recognised in profit or loss as required or permitted by other Ind AS.

The Standard requires an entity to disclose reclassification adjustments and income tax relating to each component of other comprehensive income. Reclassification adjustments are the amounts reclassified to profit or loss in the current period that were previously recognised in other comprehensive income.

The other comprehensive income section shall present line items for amounts for the period of:

(a) items of other comprehensive income (excluding amounts in paragraph (b)), classified by nature and grouped into those that, in accordance with other Ind AS:

(i) will not be reclassified subsequently to profit or loss; and

(ii) will be reclassified subsequently to profit or loss when specific conditions are met.

(b) the share of the other comprehensive income of associates and joint ventures accounted for using the equity method, separated into the share of items that in accordance with other Ind AS:

(i) will not be reclassified subsequently to profit or loss; and

(ii) will be reclassified subsequently to profit or loss when specific conditions are met.

Current/non-current distinction: The Standard requires that an entity shall present current and non-current assets, and current and non-current liabilities, as separate classifications in its balance sheet except when a presentation based on liquidity provides information that is reliable and more relevant. When that exception applies, an entity shall present all assets and liabilities in order of liquidity.

The Standard also requires that whichever method of presentation is adopted, an entity shall disclose the amount expected to be recovered or settled after more than twelve months for each asset and liability line item that combines amounts expected to be recovered or settled:

(a) no more than twelve months after the reporting period, and

(b) more than twelve months after the reporting period.

8.1.4 Other Issues

The Standard also deals with certain issues like

(a) Going Concern

- When preparing financial statements, management shall make an assessment of an entity's ability to continue as a going concern.

- An entity shall prepare financial statements on a going concern basis unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so.
- When management is aware, in making its assessment, of material uncertainties related to events or conditions that may cast significant doubt upon the entity's ability to continue as a going concern, the entity shall disclose those uncertainties.
- When an entity does not prepare financial statements on a going concern basis, it shall disclose that fact, together with the basis on which it prepared the financial statements and the reason why the entity is not regarded as a going concern.

(b) Accrual Basis of Accounting

- An entity shall prepare its financial statements, except for cash flow information, using the accrual basis of accounting.
- When the accrual basis of accounting is used, an entity recognises items as assets, liabilities, equity, income and expenses (the elements of financial statements) when they satisfy the definitions and recognition criteria for those elements in the Framework.

(c) Materiality and Aggregation

- An entity shall present separately each material class of similar items.
- An entity shall present separately items of a dissimilar nature or function unless they are immaterial except when required by law.
- ***An entity shall not reduce the understanding ability of financial statements by obscuring material information or by aggregating material items that have different natures or functions.***
- ***An entity shall consider whether to provide additional disclosures when compliance with the specific requirements in Ind AS is insufficient to enable users of financial statements to understand the impact of particular transactions, other events and conditions on the entity's financial position and financial performance.***

(d) Offsetting

- An entity shall not offset assets and liabilities or income and expenses, unless required or permitted by an Ind AS.
- An entity reports separately both assets and liabilities, and income and expenses. Offsetting in the statements of profit and loss or balance sheet, except when offsetting reflects the substance of the transaction or other event, detracts from the ability of users both to understand the transactions, other events and conditions that have occurred and to assess the entity's future cash flows. Measuring assets net of valuation allowances—for example, obsolescence allowances on inventories and doubtful debts allowances on receivables—is not offsetting.

(e) Frequency of Reporting

An entity shall present a complete set of financial statements (including comparative information) at least annually. When an entity changes the end of its reporting period and presents financial statements for a period longer or shorter than one year, an entity shall disclose, in addition to the period covered by the financial statements:

1. the reason for using a longer or shorter period, and
2. the fact that amounts presented in the financial statements are not entirely comparable.

(f) Comparative Information

Except when Ind AS permit or require otherwise, an entity shall present comparative information in respect of the preceding period for all amounts reported in the current period's financial statements. An entity shall include comparative information for narrative and descriptive information if it is relevant to understanding the current period's financial statements.

An entity shall present, as a minimum:

- 2 Balance Sheets
- 2 Statement of Profit and Loss
- 2 Statement of Cash Flows
- 2 Statement of Changes in Equity and
- Related Notes

In some cases, narrative information provided in the financial statements for the preceding period(s) continues to be relevant for the current period.

(g) Change in Accounting Policy, Retrospective Restatement or Reclassification

An entity shall present a Third Balance Sheet as at the beginning of the preceding period in addition to the minimum comparative financial statements if:

(a) It applies an accounting policy retrospectively, makes a retrospective restatement of items in its financial statements or reclassifies items in its financial statements; and

(b) The retrospective application, retrospective restatement or the reclassification has a material effect on the information in the balance sheet at the beginning of the preceding period.

In the above circumstances, an entity shall present 3 Balance sheets as at:

(a) The end of the current period;

(b) The end of the preceding period;

(c) The beginning of the preceding period.

When an entity is required to present an additional Balance sheet, it need not present the related notes to the opening Balance Sheet as at the beginning of the preceding period.

If an entity changes the presentation or classification of items in its financial statements, it shall reclassify comparative amounts unless reclassification is impracticable.

When an entity reclassifies comparative amounts, it shall disclose (including as at the beginning of the preceding period):

(a) the nature of the reclassification;

(b) the amount of each item or class of items that is reclassified; and

(c) the reason for the reclassification.

When it is impracticable to reclassify comparative amounts, an entity shall disclose:

(a) the reason for not reclassifying the amounts, and

(b) the nature of the adjustments that would have been made if the amounts had been reclassified.

(h) Consistency of Presentation

An entity shall retain the presentation and classification of items in the financial statements from one period to the next.

8.1.5 Disclosures

The Standard, among other things, requires that:

(a) An entity shall disclose, alongwith its significant accounting policies or other notes, the judgements, apart from those involving estimations, that management has made in the process of applying the entity's accounting policies and that have the most significant effect on the amounts recognised in the financial statements.

(b) An entity shall disclose information about the assumptions it makes about the future, and other major sources of estimation uncertainty at the end of the reporting period, that have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

(c) An entity shall disclose information that enables users of its financial statements to evaluate the entity's objectives, policies and processes for managing capital. An entity shall also provide additional disclosures on puttable financial instruments classified as equity instruments.

8.1.6 Major Changes in Ind AS 1 *vis-à-vis* IAS* 1

8.1.6.1 Resulting in Carve outs: This carve-out is due to difference in application of accounting principles and practices and economic conditions prevailing in India.

IAS 1 requires that in case of a loan liability, if any condition of the loan agreement which was classified as non-current is breached on the reporting date, such loan liability should be classified as current. Where the breach is rectified after the balance sheet date IAS requires loans to be classified as current.

Carve Out: Ind AS 1 clarifies that where there is a breach of a material provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand on the reporting date, the entity does not classify the liability as current, if the lender agreed, after the reporting period and before the approval of the financial statements for issue, not to demand payment as a consequence of the breach.

Reason: Under Indian banking system, a long-term loan agreement generally contains a large number of conditions. Some of these conditions are substantive, such as, recalling the loan in case interest is not paid, and some conditions are procedural and not substantive, such as, submission of insurance details where the entity has taken the insurance but not submitted the details to the lender at the end of the reporting period. Generally, customer-banker relationships are developed whereby in case of any procedural breach, a loan is generally not recalled. Also, in many cases, a breach is rectified after the balance sheet date and before the approval of financial statements. Carve out has been made as it is felt that if the breach is rectified after the balance sheet date and before the approval of the financial statements, it would be appropriate that the users are informed about the true nature of liabilities being non-current liabilities and not current liabilities.

8.1.6.2 Not Resulting in Carve outs

1. ***Statement of Profit or Loss:*** With regard to preparation of statement of profit and loss, IAS 1 provides an option either to follow the single statement approach or to follow the two statement approach. An entity may present a single statement of profit or loss and other comprehensive income, with profit or loss and other comprehensive income presented in two sections or an entity may present the profit or loss section in a separate statement of profit or loss which shall immediately precede the statement presenting comprehensive income beginning with profit or loss.

   Ind AS 1 allows only the single statement approach with profit or loss and other comprehensive income presented in two sections.

2. ***Different Terminology:*** IAS 1 gives the option to individual entities to follow different terminology for the titles of financial statements. Ind AS 1 is changed to remove alternatives by giving one terminology to be used by all entities.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

3. ***Periodicity:*** IAS 1 permits the periodicity, for example, of 52 weeks for preparation of financial statements. Ind AS 1 does not permit it.

4. ***Analysis / Classification of Expenses:*** IAS 1 requires an entity to present an analysis of expenses recognised in profit or loss using a classification based on either their nature or their function within the equity. Ind AS 1 requires only nature-wise classification of expenses.

5. ***Materiality:*** Paragraphs 29 of IAS 1 requires that items of dissimilar nature or function shall be presented separately unless these are immaterial and paragraph 31 provides that specific disclosure required by IFRS need not be provided if the information is not material. In Ind AS 1, such paragraphs have been modified to include words 'except when required by law'.

6. ***Disclosures regarding Reconciliation:*** Paragraph 106(d)(iv) of Ind AS 1 dealing with disclosures regarding reconciliation between the carrying amount at the beginning and the end of the period for each component of equity, has been amended to include disclosure regarding recognition of bargain purchase gain arising on business combination in line with treatment prescribed in this regard in Ind AS 103.

8.1.7 Major Changes in Ind AS 1 *vis-a-vis* Notified AS 1

Ind AS 1 deals with presentation of financial statements, whereas existing AS 1 (issued 1979) deals only with the disclosure of accounting policies. The scope of Ind AS 1 is thus much wider and line by line comparison of the differences with the existing standard is not possible. However, the major requirements as laid down in Ind AS 1 are as follows:

(i) ***Explicit Statement of Compliance:*** An enterprise shall make an explicit statement in the financial statements of compliance with all the Indian Accounting Standards. Further, Ind AS 1 allows deviation from a requirement of an accounting standard in case the management concludes that compliance with Ind AS will be misleading and if the regulatory framework requires or does not prohibit such a departure.

(ii) ***Current and Non-current Classification:*** Ind AS 1 requires presentation and provides criteria for classification of Current / Non- Current assets / liabilities.

(iii) ***Extraordinary Items:*** Ind AS 1 prohibits presentation of any item as 'Extraordinary Item' in the statement of profit and loss or in the notes.

(iv) ***Disclosure of Judgements and Assumptions made:*** Ind AS 1 requires disclosure of judgments made by management while framing of accounting policies. Also, it requires disclosure of key assumptions about the future and other sources of measurement of uncertainty that have significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within next financial year.

(v) ***Classification of Expenses:*** Ind AS 1 requires classification of expenses to be presented based on nature of expenses.

(vi) ***Comparative Balance Sheets:*** Ind AS 1 requires presentation of balance sheet as at the beginning of the earliest period when an entity applies an accounting policy retrospectively or makes a retrospective restatement of items in the financial statements, or when it reclassifies items in its financial statements.

(vii) ***Disclosure of Reclassified Items:*** In respect of reclassification of items, Ind AS 1 requires disclosure of nature, amount and reason for reclassification in the notes to financial statements.

(viii) ***Statement of Changes in Equity:*** Ind AS 1 requires the financial statements to include a Statement of Changes in Equity to be shown as a separate statement, which, inter alia, includes reconciliation between opening and closing balance for each component of equity.

(ix) ***Statement of Other Comprehensive Income:*** Ind AS 1 requires that an entity shall present a single statement of profit and loss, with profit or loss and other comprehensive income presented in two sections. The sections shall be presented together, with the profit or loss section presented first followed directly by the other comprehensive income section.

(x) ***Inclusion of Comparative Information:*** As per Ind AS 1, an entity shall include certain comparative information for understanding the current period's financial statements.

(xi) ***Classification of Long-term Loan Arrangement:*** Ind AS 1 clarifies that long term loan arrangement need not be classified as current on account of breach of a material provision, for which the lender has agreed to waive before the approval of financial statements for issue. (Paragraph 74)

8.2 Ind AS 2: Valuation of Inventory

Inventories constitute a major portion of current assets of an entity. A primary issue in accounting for inventories is the amount of cost to be recognised as an asset and carried forward until the related revenues are recognised.

This Standard deals with the

- determination of cost and
- its subsequent recognition as an expense.
- Including any write-down to net realisable value.
- It also provides guidance on the cost formulas that are used to assign costs to inventories.

8.2.1 Scope

Ind AS 2 applies to all inventories, except ***work in progress arising under construction contracts, including directly related service contracts (Ind AS 11, 'Construction Contracts');*** financial instruments (Ind AS 32, *'Financial Instruments: Presentation'* and Ind AS 109, *'Financial Instruments')*; and biological assets (i.e., living animals or plants) related to agricultural activity and agricultural produce at the point of harvest ***(Ind AS 41, 'Agriculture').***

8.2.2 Definition of Inventory

Inventories are Assets:

(a) held for sale in the ordinary course of business (Finished Goods);

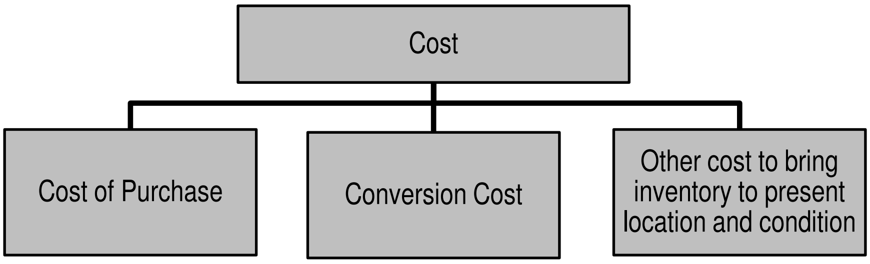
(b) in the process of production for such sale (WIP); or

(c) In the form of materials or supplies to be consumed in the production process or in the rendering of services (Raw Material).

8.2.3 Principles for Valuation of Inventory

Measurement of Inventories: Inventories shall be measured at the lower of cost and net realisable value.

Cost: Cost of inventories comprises all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition.



Cost of Purchase: The costs of purchase of inventories comprise the

- purchase price,
- import duties and other taxes (other than those subsequently recoverable by the entity from the taxing authorities),
- transport, handling and other costs directly attributable to the acquisition of finished goods, materials and services.
- trade discounts, rebates and other similar items are deducted in determining the costs of purchase.

Conversion Cost: The costs of conversion of inventories include

- costs directly related to the units of production, such as direct labour
- systematic allocation of fixed and variable production overheads that are incurred in converting materials into finished goods.

Other Cost: Other costs are included in the cost of inventories only to the extent that they are incurred in bringing the inventories to their present location and condition. For example, it may be appropriate to include non-production overheads or the costs of designing products for specific customers in the cost of inventories.

Excluded in Cost

(a) abnormal amounts of wasted materials, labour or other production costs; (Normal wastage will be considered)

(b) storage costs, unless those costs are necessary in the production process before a further stage; (For example: In case of wine, it has to be stored as a part of the production process)

(c) administrative overheads that do not contribute to bringing inventories to their present location and condition; and

(d) selling costs.

8.2.4 Cost of Inventories of a Service Provider

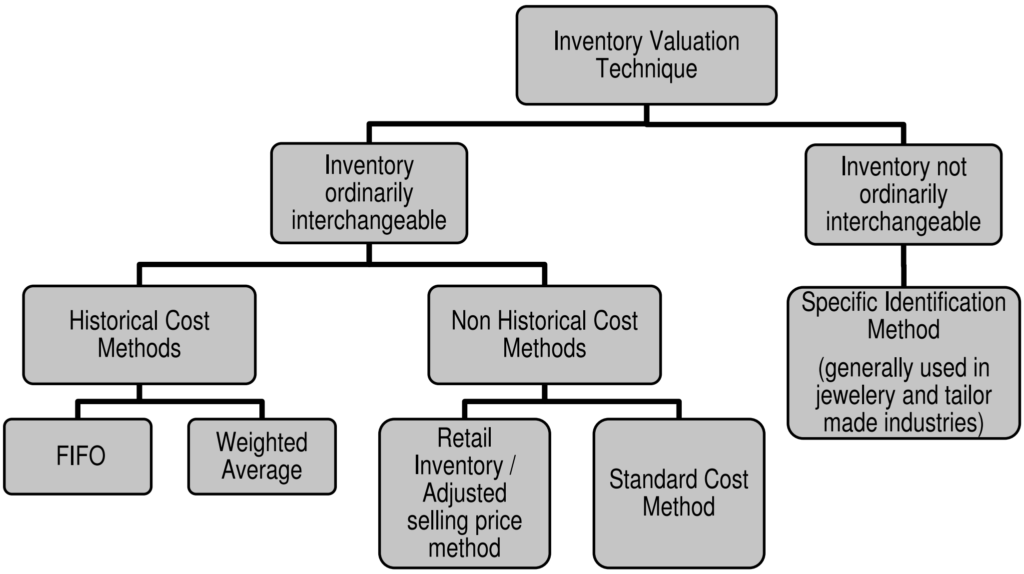
To the extent that service providers have inventories, they measure them at the costs of their production. These costs consist primarily of the labour and other costs of personnel directly engaged in providing the service, including supervisory personnel, and attributable overheads. Labour and other costs relating to sales and general administrative personnel are not included but are recognised as expenses in the period in which they are incurred. The cost of inventories of a service provider does not include profit margins or non-attributable overheads that are often factored into prices charged by service providers.

8.2.5 Cost of Agricultural Produce Harvested from Biological Assets

In accordance with Ind AS 41, Agriculture, inventories comprising agricultural produce that an entity has harvested from its biological assets are measured on initial recognition at their fair value less costs to sell at the point of harvest. This is the cost of the inventories at that date for application of this Standard.

8.2.6 Inventory Valuation Techniques - Cost Formulae

The cost of inventories shall be assigned by using the first-in first-out (FIFO) or weighted average cost formula. An entity shall use the same cost formula for all inventories having a similar nature and use to the entity.



8.2.7 Net Realisable Value

Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale. Estimates of net realisable value are based on the most reliable evidence available at the time the estimates are made, of the amount the inventories are expected to realise.

NRV would be different for finished goods and WIP. It is fully applicable to WIP, but for fished goods it would be:

Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs necessary to make the sale.

Recognition as an expense: When inventories are sold, the carrying amount of those inventories shall be recognised as an expense in the period in which the related revenue is recognised.

The amount of any write-down of inventories to net realisable value and all losses of inventories shall be recognised as an expense in the period the write-down or loss occurs.

The amount of any reversal of any write-down of inventories, arising from an increase in net realisable value, shall be recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reversal occurs.

Some inventories may be allocated to other asset accounts, for example, inventory used as a component of self-constructed property, plant or equipment. Inventories allocated to another asset in this way are recognised as an expense during the useful life of that asset.

8.2.8 Major Change in Ind AS 2 *vis-à-vis* IAS* 2 Not Resulting in Carve Out

Classification of Expenses: Paragraph 38 of IAS 2 dealing with recognition of inventories as an expense based on function-wise classification, has been deleted keeping in view the fact that option provided in IAS 1 to present an analysis of expenses recognised in profit or loss using a classification based on their function within the entity has been removed and Ind AS 1 requires only nature-wise classification of expenses.

8.2.9 Major Changes in Ind AS 2 *vis-à-vis* Notified AS 2

(i) ***Subsequent Recognition:*** Ind AS 2 deals with the subsequent recognition of cost/carrying amount of inventories as an expense, whereas the existing AS 2 does not provide the same.

(ii) ***Inventory of Service Provider:*** Ind AS 2 provides explanation with regard to inventories of service providers whereas the existing AS 2 does not contain such an explanation.

(iii) ***Machinery Spares: The existing AS 2 explains that inventories do not include spare parts, servicing equipment and standby equipment which meet the definition of property, plant and equipment as per AS 10, Property, Plant and Equipment. Such items are accounted for in accordance with Accounting Standard (AS) 10, Property,***

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

Plant and Equipment. Ind AS 2 does not contain specific explanation in respect of such spares as this aspect is covered under Ind AS 16.

(iv) ***Inventory held by Commodity Broker-traders:*** Ind AS 2 does not apply to measurement of inventories held by commodity broker-traders, who measure their inventories at fair value less costs to sell. However, this aspect is not there in the existing AS 2.

(v) ***Definition of Fair Value and Distinction Between NRV and Fair Value:*** Ind AS 2 defines fair value and provides an explanation in respect of distinction between 'net realisable value' and 'fair value'. The existing AS 2 does not contain the definition of fair value and such explanation.

(vi) ***Subsequent Assessment of NRV:*** Ind AS 2 provides detailed guidance in case of subsequent assessment of net realisable value. It also deals with the reversal of the write-down of inventories to net realisable value to the extent of the amount of original write-down, and the recognition and disclosure thereof in the financial statements. The existing AS 2 does not deal with such reversal.

(vii) ***Inventories Acquired on Deferred Settlement Terms:*** An entity may purchase inventories on deferred settlement terms. When the arrangement effectively contains a financing element, that element, for example a difference between the purchase price for normal credit terms and the amount paid, is recognised as interest expense over the period of the financing.

(viii) ***Exclusion from its Scope but Guidance given:*** Ind AS 2 excludes from its scope only the measurement of inventories held by producers of agricultural and forest products, agricultural produce after harvest, and minerals and mineral products though it provides guidance on measurement of such inventories. However, the existing AS 2 excludes from its scope such types of inventories.

(ix) ***Cost Formulae:*** The existing AS 2 specifically provides that the formula used in determining the cost of an item of inventory should reflect the fairest possible approximation to the cost incurred in bringing the items of inventory to their present location and condition whereas Ind AS 2 does not specifically state so and requires the use of consistent cost formulas for all inventories having a similar nature and use to the entity.

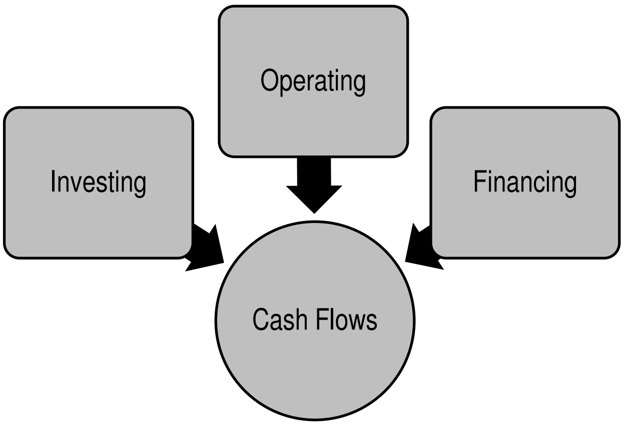
(x) ***Disclosures:*** Ind AS 2 requires more disclosures as compared to the existing AS 2.

8.3 Ind AS 7: Cash Flow Statement

Ind AS 7, Statement of Cash Flows, prescribes principles and guidance on preparation and presentation of cash flows of an entity from operating activities, investing activities and financing activities for a reporting period.

8.3.1 Objective

The objective of this Standard is to require the provide information about the historical changes in cash and cash equivalents of an entity by means of a statement of cash flows which classifies cash flows during the period from operating, investing and financing activities.



Cash comprises Cash on hand; and Demand deposits.

Cash flows are Inflows and Outflows of cash and cash equivalents.

Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value. Cash equivalents are held for the purpose of meeting short-term cash commitments rather than for investment or other purposes. Cash and cash equivalents include demand deposits, certain short-term investments and in some cases, bank overdrafts.

- For an investment to qualify as a cash equivalent it must be readily convertible to a known amount of cash and be subject to an insignificant risk of changes in value. Therefore, an investment normally qualifies as a cash equivalent only when it has a short maturity of, say, three months or less from the date of acquisition.
- Equity investments are excluded from cash equivalents unless they are, in substance, cash equivalents, for example in the case of preference shares acquired within a short period of their maturity and with a specified redemption date.
- Bank borrowings are generally considered to be financing activities. However, where bank overdrafts which are repayable on demand form an integral part of an entity's cash management, bank overdrafts are included as a component of cash and cash equivalents. A characteristic of such banking arrangements is that the bank balance often fluctuates from being positive to overdrawn.

Information about the cash flows of an entity is useful in providing users of financial statements with a basis to assess the ability of the entity to generate cash and cash equivalents and the needs of the entity to utilise those cash flows. The economic decisions that are taken by users require an evaluation of the ability of an entity to generate cash and cash equivalents and the timing and certainty of their generation.

8.3.2 Presentation of Cash Flow Statement

The statement of cash flows is required to report cash flows classified by operating, investing and financing activities along with the components of cash and cash equivalents at the beginning and end of the reporting period, except in limited circumstances where cash flows are offset and reported on net basis.

(a) Operating Activities: Operating activities are the principal revenue-producing activities of the entity and other activities that are not investing or financing activities. Cash flows from operating activities are primarily derived from the principal revenue-producing activities of the entity. Therefore, they generally result from the transactions and other events that enter into the determination of profit or loss.

The amount of cash flows arising from operating activities is a key indicator of the extent to which the operations of the entity have generated sufficient cash flows to repay loans, maintain the operating capability of the entity, pay dividends and make new investments without recourse to external sources of financing.

An entity shall report cash flows from operating activities using either the 'direct method' or the 'indirect method'. Under direct method, major classes of gross cash receipts and payments are presented. However, under indirect method, profit or loss is adjusted for the effects of transactions of a non-cash nature; deferrals or accruals of past or future operating cash receipts or payments; and items of income or expenses associated with investing or financing cash flows.

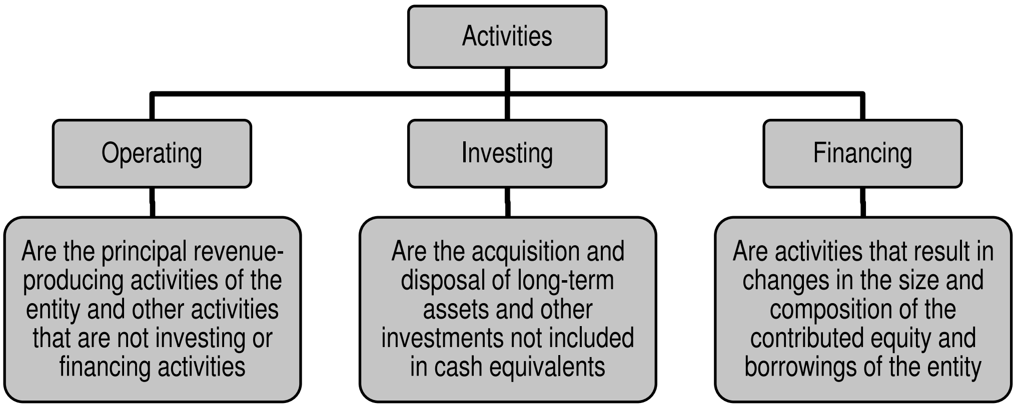
Cash flows arising from taxes on income shall be separately disclosed and classified as cash flow from operating activities unless they can be specifically identified with financing or investing activities.

(b) Investing Activities: Investing activities are the acquisition and disposal of long-term assets and other investments not included in cash equivalents. The separate disclosure of cash flows arising from investing activities is important because the cash flows represent the extent to which expenditures have been made for resources intended to generate future income and cash flows.

The aggregate cash flows arising from obtaining or losing control of subsidiaries or other businesses shall be presented separately and classified as investing activities.

(c) Financing Activities: Financing activities are activities that result in changes in the size and composition of the contributed equity and borrowings of the entity. The separate disclosure of cash flows arising from financing activities is important because it is useful in predicting claims on future cash flows by providers of capital to the entity.

An entity shall report separately major classes of gross cash receipts and gross cash payments arising from investing and financing activities



Examples of cash flows from operating activities are:

(a) cash receipts from the sale of goods and the rendering of services;

(b) cash receipts from royalties, fees, commissions and other revenue;

(c) cash payments to suppliers for goods and services;

(d) cash payments to and on behalf of employees;

(e) cash receipts and cash payments of an insurance entity for premiums and claims, annuities and other policy benefits;

(f) cash payments or refunds of income taxes unless they can be specifically identified with financing and investing activities; and

(g) cash receipts and payments from contracts held for dealing or trading purposes.

Examples of cash flows arising from investing activities are:

(a) cash payments to acquire property, plant and equipment, intangibles and other long-term assets. These payments include those relating to capitalised development costs and self-constructed property, plant and equipment;

(b) cash receipts from sales of property, plant and equipment, intangibles and other long-term assets;

(c) cash payments to acquire equity or debt instruments of other entities and interests in joint ventures (other than payments for those instruments considered to be cash equivalents or those held for dealing or trading purposes);

(d) cash receipts from sales of equity or debt instruments of other entities and interests in joint ventures (other than receipts for those instruments considered to be cash equivalents and those held for dealing or trading purposes);

(e) cash advances and loans made to other parties (other than advances and loans made by a financial institution);

(f) cash receipts from the repayment of advances and loans made to other parties (other than advances and loans of a financial institution);

(g) cash payments for futures contracts, forward contracts, option contracts and swap contracts except when the contracts are held for dealing or trading purposes, or the payments are classified as financing activities; and

(h) cash receipts from futures contracts, forward contracts, option contracts and swap contracts except when the contracts are held for dealing or trading purposes, or the receipts are classified as financing activities.

Examples of cash flows arising from financing activities are:

(a) cash proceeds from issuing shares or other equity instruments;

(b) cash payments to owners to acquire or redeem the entity's shares;

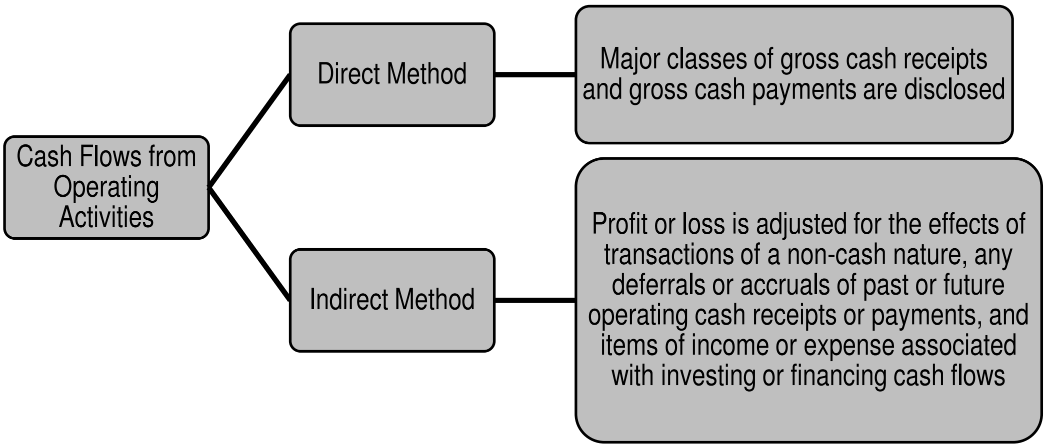
(c) cash proceeds from issuing debentures, loans, notes, bonds, mortgages and other short-term or long-term borrowings;

(d) cash repayments of amounts borrowed; and

(e) cash payments by a lessee for the reduction of the outstanding liability relating to a finance lease.

8.3.3 Reporting Cash Flows from Operating Activities

An entity shall report cash flows from operating activities using either:



8.3.4 Non-cash Transactions

Investing and financing transactions that do not require the use of cash or cash equivalents shall be excluded from a statement of cash flows. Such transactions shall be disclosed elsewhere in the financial statements in a way that provides all the relevant information about these investing and financing activities.

Many investing and financing activities do not have a direct impact on current cash flows although they do affect the capital and asset structure of an entity. The exclusion of non-cash transactions from the statement of cash flows is consistent with the objective of a statement of cash flows as these items do not involve cash flows in the current period.

Examples of non-cash transactions are:

(a) the acquisition of assets either by assuming directly related liabilities or by means of a finance lease;

(b) the acquisition of an entity by means of an equity issue; and

(c) the conversion of debt to equity.

8.3.5 Foreign Currency Cash Flows

Cash flows arising from transactions in a foreign currency shall be recorded in an entity's functional currency by applying to the foreign currency amount the exchange rate between the functional currency and the foreign currency at the date of the cash flow. The cash flows of a foreign subsidiary shall be translated at the exchange rates between the functional currency and the foreign currency at the dates of the cash flows.

Unrealised gains and losses arising from changes in foreign currency exchange rates are not cash flows. However, the effect of exchange rate changes on cash and cash equivalents held or due in a foreign currency is reported in the statement of cash flows in order to reconcile cash and cash equivalents at the beginning and the end of the period.

8.3.6 Cash and Cash Equivalents

An entity shall disclose the components of cash and cash equivalents and shall present a reconciliation of the amounts in its statement of cash flows with equivalent items reported in the balance sheet.

An entity shall disclose, together with a commentary by management, the amount of significant cash and cash equivalents held by the entity that are restricted for specific purposes.

8.3.7 Major Changes in Ind AS 7 vis-à-vis IAS* 7 Not Resulting in Carve Outs

1. ***Interest:*** In case of other than financial entities, IAS 7 gives an option to classify the interest paid and interest and dividends received as item of operating cash flows. Ind AS 7 does not provide such an option and requires these items to be classified as items of financing activity and investing activity, respectively.
2. ***Dividend:*** IAS 7 gives an option to classify the dividend paid as an item of operating activity. However, Ind AS 7 requires it to be classified as a part of financing activity only.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

8.3.8 Major Changes in Ind AS 7 vis-à-vis Notified AS 3

(i) ***Bank Overdraft Repayable on Demand:*** Ind AS 7 specifically includes bank overdrafts which are repayable on demand as a part of cash and cash equivalents, whereas the existing AS 3 is silent on this aspect.

(ii) ***Treatment of Cash Payments in Specific Cases:*** Ind AS 7 provides the treatment of cash payments to manufacture or acquire assets held for rental to others and subsequently held for sale in the ordinary course of business as cash flows from operating activities. Further, treatment of cash receipts from rent and subsequent sale of such assets as cash flow from operating activity is also provided. The existing AS 3 does not contain such requirements.

(iii) ***New Examples of Cash Flows arising from Financing Activities:*** Ind AS 7 includes the following new examples of cash flows arising from financing activities:

   (a) cash payments to owners to acquire or redeem the entity's shares

   (b) cash proceeds from mortgages

   (c) cash payments by a lessee for the reduction of the outstanding liability relating to a finance lease.

(iv) ***Adjustment of the Profit or Loss for the Effects of Undistributed Profits of Associates and Non-controlling Interests:*** As compared to the existing AS 3, Ind AS 7 specifically requires adjustment of the profit or loss for the effects of 'undistributed profits of associates and non-controlling interests' while determining the net cash flow from operating activities using the indirect method.

(v) ***Cash Flows associated with Extraordinary Activities:*** The existing AS 3 requires cash flows associated with extraordinary activities to be separately classified as arising from operating, investing and financing activities, whereas Ind AS 7 does not contain this requirement.

(vi) ***Disclosure of the Amount of Cash and Cash Equivalents in Specific Situations:*** As compared to the existing AS 3, Ind AS 7 requires an entity (except an investment entity) to disclose the amount of cash and cash equivalents and other assets and liabilities in the subsidiaries or other businesses over which control is obtained or lost. Ind AS 7 also requires to report the aggregate amount of the cash paid or received as consideration for obtaining or losing control of subsidiaries or other businesses in the statement of cash flows, net of cash and cash equivalents acquired or disposed of as a part of such transactions, events or changes in circumstances. The existing AS 3 does not contain such requirements.

(vii) ***Cash Flows arising from Changes in Ownership Interests in a Subsidiary:*** Ind AS 7 requires to classify cash flows arising from changes in ownership interests in a subsidiary that do not result in a loss of control as cash flows from financing activities. The existing AS 3 does not contain such a requirement.

(viii) ***Investment in Subsidiaries, Associates and Joint Ventures (Investees):*** Ind AS 7 mentions the use of equity or cost method while accounting for an investment in an associate, joint venture or a subsidiary. It also specifically deals with the reporting of interest in an associate or a joint venture using equity method. The existing AS 3 does not contain such requirements.

(ix) ***Use of Different Terminology and Translation of Cash Flows of a Foreign Subsidiary:*** Ind AS 7 uses the term 'functional currency' instead of 'reporting currency' (as used in the existing AS 3). Ind AS 7 also deals with translation of cash flows of a foreign subsidiary *whereas in the existing AS 3, it is not dealt with.*

(x) ***Disclosures:*** Ind AS 7 requires more disclosures as compared to the existing AS 3.

8.4 Ind AS 8: Accounting Policies, Changes in Accounting Estimates and Errors

8.4.1 Objective

The objective of this Standard is to prescribe:

- The criteria for selecting and changing accounting policies,
- The accounting treatment of changes in accounting policies, changes in accounting estimates and corrections of errors and
- Disclosure of changes in accounting policies, changes in accounting estimates and corrections of errors.

The Standard is intended to enhance the relevance and reliability of an entity's financial statements, and the comparability of those financial statements over time and with the financial statements of other entities.

Note: Disclosure requirements for accounting policies, except those for changes in accounting policies, are set out in Ind AS 1 Presentation of Financial Statements.

Note: The tax effects of corrections of prior period errors and of retrospective adjustments made to apply changes in accounting policies are accounted for and disclosed in accordance with Ind AS 12 '*Income Taxes*'.

8.4.2 Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements.

This Standard provides guidance in selection and application of the accounting policies. A two-step approach is advocated.

Step 1 requires that when an Ind AS specifically applies to a transaction, other event or condition, the accounting policy or policies applied to that item shall be determined by applying the Ind AS.

Step 2 provides that in the absence of an Ind AS that specifically applies to a transaction, other event or condition, management shall use its judgment in developing and applying an accounting policy. This judgment should result in information that is:

- relevant to the economic decision-making needs of users; and
- reliable, so that the financial statements:
  - represent faithfully the financial position, financial performance and cash flows of the entity;
  - reflect the economic substance of transactions, other events and conditions, and not merely the legal form;
  - are neutral, i.e. free from bias;
  - are prudent; and
  - are complete in all material respects.

Users of financial statements need to be able to compare the financial statements of an entity over time to identify trends in its financial position, financial performance and cash flows. Therefore, the same accounting policies are applied within each period and from one period to the next unless a change in accounting policy meets one of the criteria mentioned above.

An entity shall select and apply the accounting policies consistently for similar transactions, other events and conditions, unless an Ind AS specifically requires or permits categorisation of items for which different policies may be appropriate. If an Ind AS requires or permits such categorisation, an appropriate accounting policy shall be selected and applied consistently to each category.

8.4.3 Changes in Accounting Policies

An entity shall change an accounting policy only if the change:

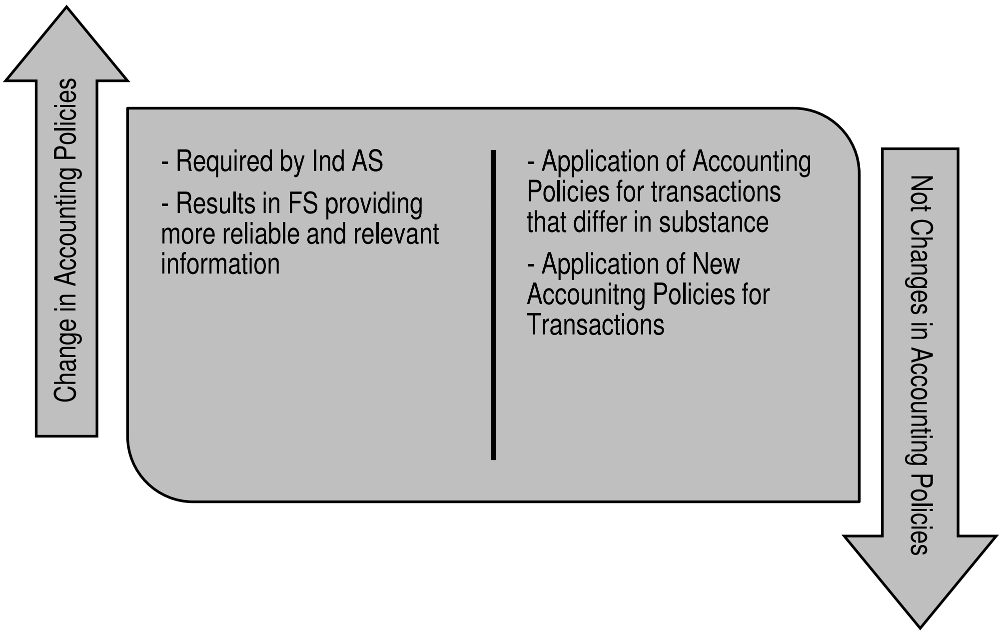
(a) is required by an Ind AS; or

(b) results in the financial statements providing reliable and more relevant information about the effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows.

The following are not changes in accounting policies:

(a) the application of an accounting policy for transactions, other events or conditions that differ in substance from those previously occurring; and

(b) the application of a new accounting policy for transactions, other events or conditions that did not occur previously or were immaterial.



When it is impracticable for an entity to apply a new accounting policy retrospectively, because it cannot determine the cumulative effect of applying the policy to all prior periods, the entity will apply the new policy prospectively from the start of the earliest period practicable. It therefore disregards the portion of the cumulative adjustment to assets, liabilities and equity arising before that date. Changing an accounting policy is permitted even if it is impracticable to apply the policy prospectively for any prior period.

8.4.4 Accounting Estimates

As a result of the uncertainties inherent in business activities, many items in financial statements cannot be measured with precision but can only be estimated. Estimation involves judgements based on the latest available, reliable information.

For example, estimates may be required of:

(a) bad debts;

(b) inventory obsolescence;

(c) the fair value of financial assets or financial liabilities;

(d) the useful lives of, or expected pattern of consumption of the future economic benefits embodied in, depreciable assets; and

(e) warranty obligations.

Note: The use of reasonable estimates is an essential part of the preparation of financial statements and does not undermine their reliability.

8.4.5 Changes in Accounting Estimates

An estimate may need revision if changes occur in the circumstances on which the estimate was based or as a result of new information or more experience.

By its nature, the revision of an estimate does not relate to prior periods and is not the correction of an error.

A change in accounting estimate is an:

- Adjustment of the carrying amount of an asset or a liability, or
- The amount of the periodic consumption of an asset,

That results from the assessment of the present status of, and expected future benefits and obligations associated with, assets and liabilities.

Changes in accounting estimates result from new information or new developments and, accordingly, are not corrections of errors.

A change in the measurement basis applied is a change in an accounting policy, and is not a change in an accounting estimate. When it is difficult to distinguish a change in an accounting policy from a change in an accounting estimate, the change is treated as a change in an accounting estimate.

The effect of change in an accounting estimate shall be recognised prospectively by including it in profit or loss in:

(a) the period of the change, if the change affects that period only; or

(b) the period of the change and future periods, if the change affects both.

Example: A provision for Depreciation is initially recognised by reflecting this as a charge to Profit and Loss. A change in such an estimate that would occur in a subsequent period, would also be taken to Profit and Loss. The debit in P&L corresponds to the credit in Accumulated Provision for Depreciation.

To the extent that a change in an accounting estimate gives rise to changes in assets and liabilities, or relates to an item of equity, it shall be recognised by adjusting the carrying amount of the related asset, liability or equity item in the period of the change.

Example: An estimate of a decommissioning liability or a liability for restoration of a site after removal of plant and machinery, the estimated amount of which would be initially recognised by increasing the carrying amount of related asset account and creating a liability account. Such estimates may undergo a change at a later date. Ind AS takes cognizance of these situations and provides that to the extent that where a change in accounting estimate affects assets and liabilities, or an item of equity, the change shall be recognised by adjusting the carrying amount of the related asset, liability or equity item in the period of the change.

Illustration

Cost of a machine acquired on 01.04.2013 was ₹ 5,00,000. The machine is expected to realize ₹ 50,000 at the end of its working life of 10 years. Straight-line depreciation of ₹ 45,000 per year has been charged upto 2015-2016. From 2016-17, the company switched over to 15% p.a. reducing balance method of depreciation in respect of the machine. The new rate of depreciation is based on revised useful life of 15 years. State how would you deal with the above in the annual accounts of the Company for the year ended 31st March, 2017 in light of Ind AS 8.

Solution

A change in the method of depreciation, as also a change in the useful life of an asset, are to be accounted for as a change in Accounting Estimates (Ind AS 16: Property, Plant and Equipment)

A change in an accounting estimate is to be given effect to on a prospective basis as per Ind AS 8 (Accounting Policies, Changes in Accounting Estimates and Errors)

In terms of Ind AS 8, the effect of change in an accounting estimate, shall be recognised prospectively by including it[1] in profit or loss in the following cases.

The period of the change, if the change affects that period only; or

The period of the change and future periods, if the change affects both.

A change in the method of depreciation, as also a change in the estimated useful life of a depreciable asset affects depreciation expense for the current period and in each future period during the asset's remaining revised useful life.

The effect of the change relating to the current period is included as expense in the current period. The effect, if any, on future periods is also to be similarly included in P&L as an item of expense in those future periods.

---

[1] In this context, the word "It" means, the revision in the estimated amount

Thus, the following accounting treatment and disclosures will be appropriate:

Step 1 : Computation of carrying amount of asset at the time of change (in ₹)

Original Cost (A)	Annual depreciation for three years so far (B)	Carrying amount (A – B)
5,00,000	135,000 (being 45,000 x 3)	3,65,000

Book Value of the Asset at the end 2015-16: ₹ 3,65,000.

Step 2 : Change in the method of depreciation and useful life occurred from 2016-17.

There is also a consequential change in RV. The effect of these changes results in an increase in the estimated amount of depreciation. The revised estimated amount of depreciation for the year 2016-17 is ₹ 54,750 as shown below:

(in ₹)

Carrying amount at the time of change(A)	The effect of changes resulting in increased depreciation is (B)	Carrying amount A minus B
3,65,000	54,750	3,10,250
	(being 15% of 365,000)	

Step 3: The effect of change is an increased depreciation of ₹ 54,750. Therefore, the amount to be included in the Statement of Profit and Loss for the year ended 2016-17 is ₹ 54,750

Step 4: Disclosures prescribed in Ind AS 8 are:

An entity shall disclose the nature and amount of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in future periods, except for the disclosure of the effect on future periods when it is impracticable to estimate that effect.

Disclosures in the year of change would be.

1. Under Significant Accounting Policies:

Effective current reporting period, the entity has adopted WDV method of depreciation in place of straight line method followed earlier, and has also changed the estimated useful life of the asset to 15 years, thus increasing the revised remaining useful life to 12 years (PY 7 years). These changes, and the resultant change in RV, are based on technical evaluation.

2. As part of Notes to the Statement of Profit and Loss:

Consequent to the change in depreciation method from WDV to SLM, the amount of depreciation allocable to the current accounting period has been re-computed at ₹ 54,750 and this sum has been included in the Statement of Profit and Loss (Previous year 45,000).

8.4.6 Prior Period Errors

Prior period errors are omissions from, and misstatements in, the entity's financial statements for one or more prior periods arising from a failure to use, or misuse of, reliable information that:

(a) was available when financial statements for those periods were approved for issue; and

(b) could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements.

Such errors include the effects of:

- mathematical mistakes,
- mistakes in applying accounting policies,
- oversights or
- misinterpretations of facts, and
- fraud.

Such errors include the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud.

Except to the extent that it is impracticable to determine either the period-specific effects or the cumulative effect of the error, the Standard requires to correct material prior period errors retrospectively in the first set of financial statements approved for issue after their discovery by:

(a) restating the comparative amounts for the prior period(s) presented in which the error occurred; or

(b) if the error occurred before the earliest prior period presented, restating the opening balances of assets, liabilities and equity for the earliest prior period presented.

Omissions or misstatements of items are material if they could, individually or collectively, influence the economic decisions that users make on the basis of the financial statements. Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor.

8.4.7 Major Change in Indian Accounting Standard (Ind AS) 8 vis-à-vis IAS* 8 Not Resulting in Carve Out

Guidance to the Standard: Paragraph 9 of IAS 8 provides that IFRS are accompanied by guidance to assist entities in applying their requirements. Guidance that is an integral part of IFRS is mandatory. Guidance that is not an integral part of IFRS does not contain requirements for financial statements. In Ind AS 8, paragraph 9 has been modified by not including the text given in the context of the guidance forming non-integral part of the Ind AS as such guidance

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

has not been given in the Ind AS.

8.4.8 Major Changes in Ind AS 8 vis-à-vis Notified AS 5

(i) ***Objective*****:** Objective of existing AS 5 is to prescribe the classification and disclosure of certain items in the statement of profit and loss for uniform preparation and presentation of financial statements. Objective of Ind AS 8 is to prescribe the criteria for selecting and changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies, changes in accounting estimates and corrections of errors. Ind AS 8 intends to enhance the relevance and reliability of an entity's financial statements and the comparability of those financial statements over time and with the financial statements of other entities.

(ii) ***Extraordinary Items*****:** Keeping in view that Ind AS 1, '*Presentation of Financial Statements'*, prohibits the presentation of any items of income or expense as extraordinary items, Ind AS 8 does not deal with the same.

(iii) ***Definition of Accounting Policies*****:** Existing AS 5 restricts the definition of accounting policies to specific accounting principles and the methods of applying those principles while Ind AS 8 broadens the definition to include bases, conventions, rules and practices (in addition to principles) applied by an entity in the preparation and presentation of financial statements.

(iv) ***Change in Accounting Policies*****:** In addition to the situations allowed under Ind AS 8 for changing an accounting policy, existing AS 5 allows change in accounting policy if required by statute.

(v) ***Accounting for Changes in Accounting Policies:*** Ind AS 8 specifically states that an entity shall select and apply its accounting policies consistently for similar transactions, other events and conditions, unless an Ind AS specifically requires or permits categorisation of items for which different policies may be appropriate. Neither existing AS 5 nor any other existing Standard specifically requires accounting policies to be consistent for similar transactions, other events and conditions.

(vi) ***Exceptions in Retrospective Accounting of Changes in Accounting Policies:*** Ind AS 8 requires that changes in accounting policies should be accounted for with retrospective effect subject to limited exceptions viz., where it is impracticable to determine the period specific effects or the cumulative effect of applying a new accounting policy. On the other hand, existing AS 5 does not specify how change in accounting policy should be accounted for.

(vii) ***Prior Period Items*****:** Existing AS 5 defines prior period items as incomes or expenses which arise in the current period as a result of errors or omissions in the preparation of financial statements of one or more prior periods. Ind AS 8 uses the term 'errors' and relates it to errors or omissions arising from a failure to use or misuse of reliable information (in addition to mathematical mistakes, mistakes in application of accounting policies etc.) that was available when the financial statements of the prior periods were approved for issuance and could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements. Ind AS 8 specifically states that errors include frauds, which is not covered in existing AS 5.

(viii) ***Rectification of Material Prior Period Errors:*** Ind AS 8 requires rectification of material prior period errors with retrospective effect subject to limited exceptions viz., where it is impracticable to determine the period specific effects or the cumulative effect of applying a new accounting policy. On the other hand, existing AS 5 requires the rectification of prior period items with prospective effect.

(ix) ***Disclosure Requirements*****:** Disclosure requirements given in Ind AS 8 are more detailed as compared to the disclosure requirements given in the existing AS 5.

8.5 Ind AS 10: Events after the Reporting Period

8.5.1 Objective

The objective of this Standard is to prescribe:

1. When an entity should adjust its financial statements for events after the reporting period; and
2. The disclosures that an entity should give about the date when the financial statements were approved for issue and about events after the reporting period.

Going Concern not appropriate

The Standard also requires that an entity should not prepare its financial statements on a going concern basis if events after the reporting period indicate that the going concern assumption is not appropriate.

8.5.2 Events after the Reporting Period

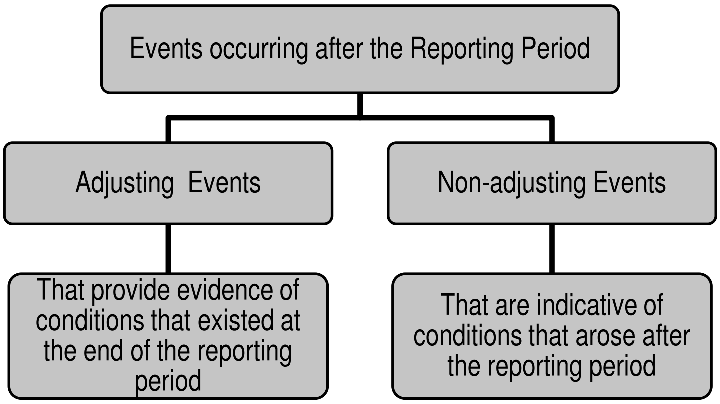
Events after the reporting period are those events:

- favourable and unfavourable,
- that occur between the end of the reporting period and the date when the financial statements are approved by the Board of Directors in case of a company, and, by the corresponding approving authority in case of any other entity for issue.

Two types of events can be identified:

(a) those that provide evidence **of conditions that existed** at the end of the reporting period (adjusting events after the reporting period); and

(b) those that are **indicative of conditions that arose after** the reporting period (non-adjusting events after the reporting period).



8.5.3 Recognition and Measurement

8.5.3.1 Adjusting Events after the Reporting Period: An entity shall adjust the amounts recognised in its financial statements to reflect adjusting events after the reporting period.

It requires an entity:

- To adjust the amounts recognised in its financial statements; OR
- To recognise items that were not previously recognised.

8.5.3.2 Non-adjusting Events after the Reporting Period: An entity shall not adjust the amounts recognised in its financial statements to reflect non-adjusting events after the reporting period.

If an entity declares dividends to holders of equity after the reporting period, the entity shall **not** recognise those dividends as a liability at the end of the reporting period.

If dividends are declared after the reporting period but before the financial statements are approved for issue, the dividends are not recognised as a liability at the end of the reporting period obligation existing at that time. Such dividends are disclosed in the notes in accordance with Ind AS 1 'Presentation of Financial Statements'.

Thus proposed dividend will not appear in the financial statements. Such dividends are disclosed in the notes in accordance with Ind AS 1.

8.5.4 Major Change in Ind AS 10 vis-à-vis IAS* 10 Resulting in Carve Out

As per IFRS: Rectification of any breach after the end of the reporting period is a non-adjusting event.

Carve Out: As a consequence to carve-out (resulted in carve out) stated in Ind AS 1 above, Ind AS 10 provides, in the definition of 'Events after the reporting period' that in case of breach of a

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

material provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand on the reporting date, if the lender, before the approval of the financial statements for issue, agrees to waive the breach, it shall be considered as an adjusting event.

8.5.5 Major Changes in Ind AS 10 vis-à-vis Notified AS 4

(i) ***Non Adjusting Events if Material*****:** In Ind AS 10, material non-adjusting events are required to be disclosed in the financial statements, whereas the existing AS 4 requires the same to be disclosed in the report of approving authority.

(ii) ***Accounting Treatment and Disclosure in case of Inappropriateness of Fundamental Accounting Assumption of Going Concern:*** If, after the reporting date, it is determined that the fundamental accounting assumption of going concern is no longer appropriate, Ind AS 10 requires a fundamental change in the basis of accounting. Whereas existing AS 4 requires assets and liabilities to be adjusted for events occurring after the balance sheet date that indicate that the fundamental accounting assumption of going concern is not appropriate.

In this regard, Ind AS 10 refers to Ind AS 1, which requires an entity to make the following disclosures:

- disclose the fact that the financial statements are not prepared on a going concern basis together with the basis on which the financial statements are prepared
- state the reason why the entity is not regarded as a going concern.

Existing AS 4 does not require any such disclosure. However, existing AS 1 requires the disclosure of the fact in case going concern assumption is not followed.

(iii) ***In case of breach of a material provision of a long-term loan arrangement:*** Consequent to changes made in Ind AS 1, it has been provided in the definition of 'Events after the reporting period' that in case of breach of a material provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand on the reporting date, if the lender, before the approval of the financial statements for issue, agrees to waive the breach, it shall be considered as an adjusting event.

(iv) ***Distribution of non-cash assets to owners*****:** Ind AS 10 includes an Appendix *Distribution of Non-cash Assets to Owners* which deals, inter alia, with when to recognise dividends payable to its owners.

8.6 Ind AS 11: Construction Contracts

Ind AS 11 prescribes the accounting treatment of revenue and costs associated with construction contracts. Because of the nature of the activity undertaken in construction contracts, the date at which the contract activity is entered into and the date when the activity is completed usually fall into different accounting periods. Therefore, the primary issue in accounting for construction contracts is the allocation of contract revenue and contract costs to the accounting periods in which construction work is performed.

8.6.1 Scope

The Standard shall be applied in accounting for construction contracts in the financial statements of contractors A construction contract is a contract specifically negotiated for the construction of an asset or a combination of assets that are closely interrelated or interdependent in terms of their design, technology and function or their ultimate purpose or use.

The requirements of this Standard are usually applied separately to each construction contract. However, in certain circumstances, it is necessary to apply the Standard to the separately identifiable components of a single contract or to a group of contracts together in order to reflect the substance of a contract or a group of contracts.

Contract revenue shall comprise:

(a) the initial amount of revenue agreed in the contract; and

(b) variations in contract work, claims and incentive payments:

   (i) to the extent that it is probable that they will result in revenue; and

   (ii) they are capable of being reliably measured. Contract revenue is measured at the fair value of the consideration received or receivable.

Contract costs shall comprise:

(a) costs that relate directly to the specific contract;

(b) costs that are attributable to contract activity in general and can be allocated to the contract; and

(c) such other costs as are specifically chargeable to the customer under the terms of the contract.

8.6.2 Recognition of Contract Revenue and Expenses

When the outcome of a construction contract can be estimated reliably, contract revenue and contract costs associated with the construction contract shall be recognised as revenue and expenses respectively by reference to the stage of completion of the contract activity at the end of the reporting period.

When the outcome of a construction contract cannot be estimated reliably:

(a) revenue shall be recognised only to the extent of contract costs incurred that it is probable will be recoverable; and

(b) contract costs shall be recognised as an expense in the period in which they are incurred

8.6.3 Recognition of Expected Losses

When it is probable that total contract costs will exceed total contract revenue, the expected loss shall be recognised as an expense immediately.

An entity shall disclose the amount recognised as contract revenue in the period, the method used to determine the contract revenue recognised and stage of completion of contracts in progress.

For the contracts in progress at the end of the period, an entity shall disclose the aggregate costs incurred and recognised profits to date, the amounts of retentions and advances received.

Appendix A of Ind AS 11 gives guidance on accounting by operators for publicto- private service concession arrangements. It sets out principles for recognition and measurement of the obligations and related rights in service concession arrangements. The Appendix prescribes that an operator shall not recognise the public service infrastructure (within the scope of this appendix) as its Property, Plant and Equipment because the contractual service arrangement does not convey the right to control the use of the infrastructure. It only gives operator the access to operate the infrastructure to provide public service on behalf of the grantor.

The operator shall account for revenue and costs relating to construction or upgrade services in accordance with Ind AS 11 and those relating to operation services in accordance with Ind AS 18. The consideration received or receivable shall be recognised at its fair value. The consideration may be rights to a financial asset or an intangible asset.

The operator recognises a financial asset to the extent that it has an unconditional contractual right to receive cash or another financial asset from or at the direction of the grantor for the construction services. The operator shall recognise an intangible asset to the extent that it receives a right (a license) to charge users of the public service.

8.6.4 Major Changes in Ind AS 11 vis-à-vis Notified AS 7

(i) ***Inclusion of Borrowing costs:*** Existing AS 7 includes borrowing costs as per AS 16, Borrowing Costs, in the costs that may be attributable to contract activity in general and can be allocated to specific contracts, whereas Ind AS 11 does not specifically make reference to Ind AS 23.

(ii) ***Fair Value:*** Existing AS 7 does not recognise fair value concept as contract revenue is measured at consideration received/receivable, whereas Ind AS 11 requires that contract revenue shall be measured at fair value of consideration received/receivable.

(iii) ***Accounting for Service Concession Arrangements:*** Existing AS 7 does not deal with accounting for Service Concession Arrangements, i.e., the arrangement where private sector entity (an operator) constructs or upgrades the infrastructure to be used to provide the public service and operates and maintains that infrastructure for a specified period of time, whereas Appendix A of Ind AS 11 deals with accounting aspects involved in such arrangements and Appendix B of Ind AS 11 deals with disclosures of such arrangements.

8.7 Ind AS 12: Income Taxes

8.7.1 Objective

The objective of this Standard is to prescribe the accounting treatment for income taxes.

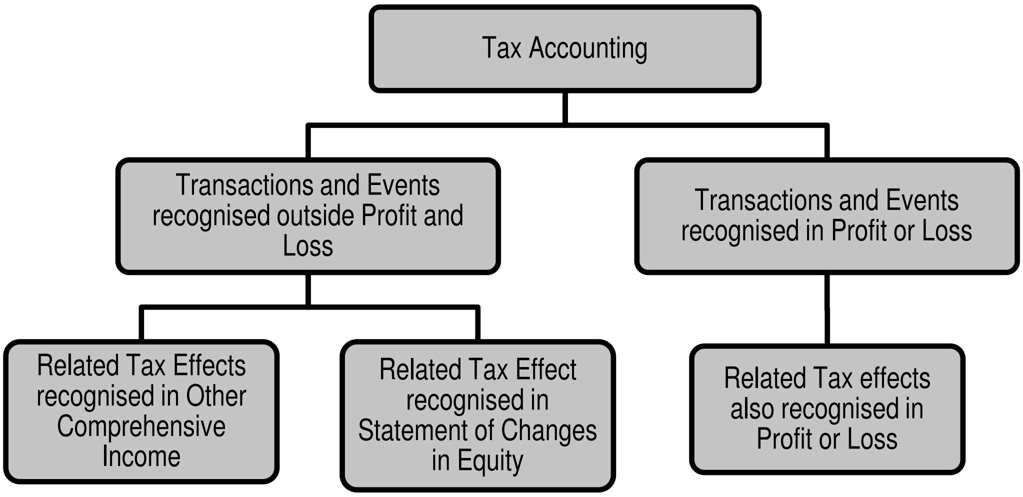
The principal issue in accounting for income taxes is how to account for the current and future tax consequences of:

(a) the future recovery (settlement) of the carrying amount of assets (liabilities) that are recognised in an entity's balance sheet; and

(b) transactions and other events of the current period that are recognised in an entity's financial statements.

It is inherent in the recognition of an asset or liability that the reporting entity expects to recover or settle the carrying amount of that asset or liability. If it is probable that recovery or settlement of that carrying amount will make future tax payments larger (smaller) than they would be if such recovery or settlement were to have no tax consequences, this Standard requires an entity to recognise a deferred tax liability (deferred tax asset), with certain limited exceptions.

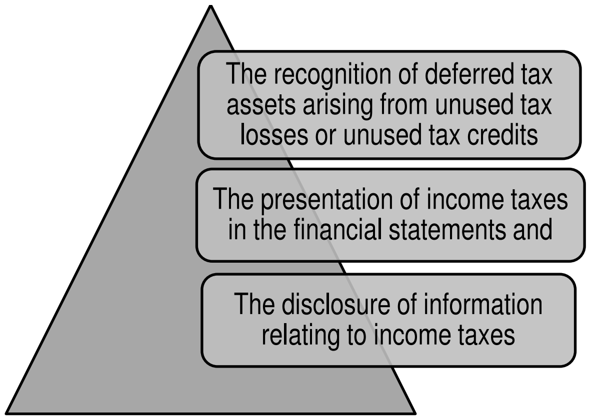
This Standard requires an entity to account for the tax consequences of transactions and other events in the same waythat it accounts for the transactions and other events themselves.



- Thus, for transactions and other events recognised in profit or loss, any related tax effects are also recognised in profit or loss.
- For transactions and other events recognised outside profit or loss (either in other comprehensive income or directly in equity), any related tax effects are also recognised outside profit or loss (either in other comprehensive income or directly in equity, respectively.

Similarly, the recognition of deferred tax assets and liabilities in a business combination affects the amount of goodwill arising in that business combination or the amount of the bargain purchase gain recognised.

This Standard also deals with:



8.7.2 Scope

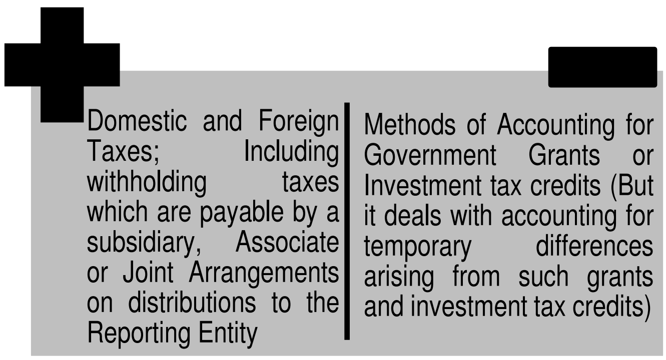
This Standard **shall be applied** in accounting for income taxes.

For the purposes of this Standard, income taxes include:

- All domestic and foreign taxes which are based on taxable profits.
- Taxes, such as withholding taxes, which are payable by a subsidiary, associate or joint arrangement on distributions to the reporting entity.

This Standard **does not deal** with the methods of accounting for government grants (Ind AS 20, Accounting for Government Grants and Disclosure of Government Assistance) or investment tax credits.

However, this Standard does deal with the accounting for temporary differences that may arise from such grants or investment tax credits.



8.7.3 Concept of Current Tax, Deferred Tax Assets/Liabilities, Temporary Differences and Tax Base

Accounting Profit is profit or loss for a period before deducting **tax expense.**

Tax expense (tax income) is the aggregate amount included in the determination of profit or loss for the period in respect of **current tax and deferred tax.** In other words tax expense (tax income) comprises current tax expense (current tax income) and deferred tax expense (deferred tax income).

Taxable Profit is the profit (loss) for a period, determined in accordance with the rules established by the taxation authorities, upon which income taxes are payable (recoverable).

Current tax is the amount of income taxes payable (recoverable) in respect of the taxable profit (tax loss) for a period.

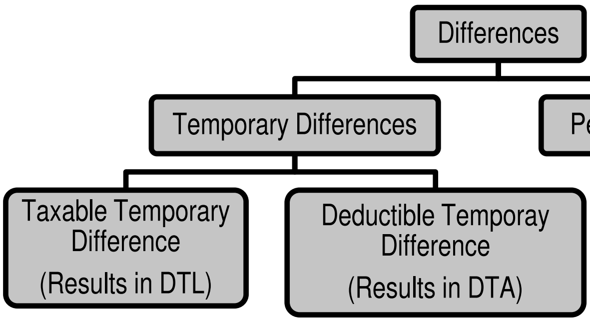
Deferred tax liabilities are the amounts of income taxes payable in future periods in respect of taxable temporary differences.

Deferred tax assets are the amounts of income taxes recoverable in future periods in respect of:

(a) deductible temporary differences;

(b) the carry forward of unused tax losses; and

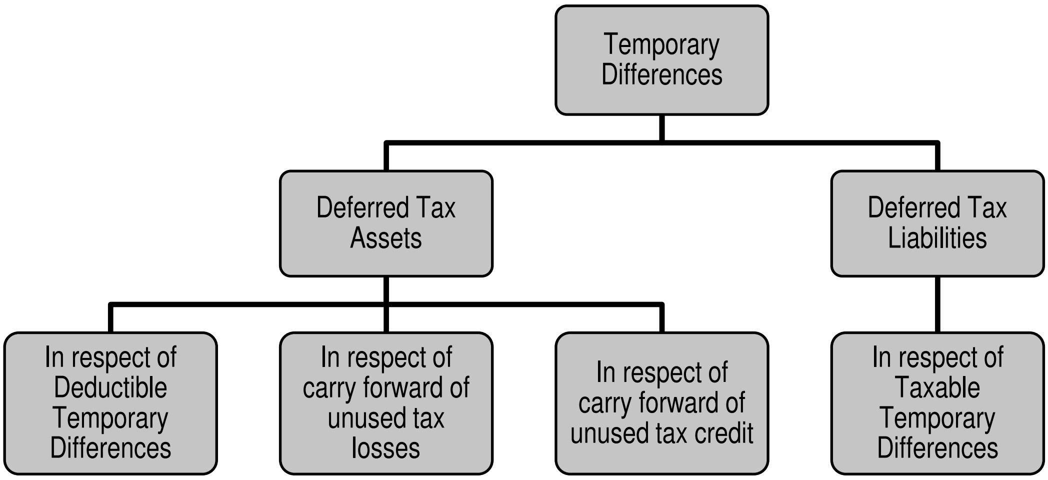
(c) the carry forward of unused tax credits.



Temporary differences are differences between the carrying amount of an asset or liability in the balance sheet and its tax base. Temporary differences may be either:

(a) taxable temporary differences, which are temporary differences that will result in taxable amounts in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled; or

(b) deductible temporary differences, which are temporary differences that will result in amounts that are deductible in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled.



8.7.4 Tax Base

The tax base of an **asset or liability** is the amount attributed to that asset or liability for tax purposes.

The tax base of an asset is the amount that will be deductible for tax purposes against any taxable economic benefits that will flow to an entity when it recovers the carrying amount of the asset. If those economic benefits will not be taxable, the tax base of the asset is equal to its carrying amount.

Examples of Tax Base of an Asset:

S.No.	Particulars	Tax Base of an Asset
1.	A machine cost ₹ 100. For tax purposes, depreciation of ₹ 30 has already been deducted in the current and prior periods and the remaining cost will be deductible in future periods, either as depreciation or through a deduction on disposal.	Revenue generated by using the machine is taxable, any gain on disposal of the machine will be taxable and any loss on disposal will be deductible for tax purposes. The tax base of the machine is ₹ 70.
2.	Interest receivable has a carrying amount of ₹ 100. The related interest revenue will be taxed on cash basis.	The tax base of the interest receivable is nil.
3.	Trade receivables have a carrying amount of ₹ 100. The related revenue has already been included in taxable profit (tax loss).	The tax base of trade receivable is ₹ 100.
4.	Dividends receivable from a subsidiary have a carrying amount of ₹ 100. The dividends are not taxable. In substance, the entire carrying amount of the asset is deductible against the economic benefits.	Consequently, the tax base of the dividends receivable is ₹ 100. {Under this analysis, there is no taxable temporary difference. An alternative analysis is that the accrued dividends

		receivable have a tax base of nil and that a tax rate of nil is applied to the resulting taxable temporary difference of ₹ 100. Under both analyses, there is no deferred tax liability.}
5.	A loan receivable has a carrying amount of ₹ 100. The repayment of the loan will have no tax consequences.	The tax base of the loan is ₹ 100.

The tax base of a liability is its carrying amount, less any amount that will be deductible for tax purposes in respect of that liability in future periods. In the case of revenue which is received in advance, the tax base of the resulting liability is its carrying amount, less any amount of the revenue that will not be taxable in future periods.

Examples of Tax Base of a Liability:

S. No.	Particulars	Tax Base of Liability
1.	Current liabilities include accrued expenses with a carrying amount of ₹ 100. The related expense will be deducted for tax purposes on a cash basis.	The tax base of the accrued expenses is nil.
2.	Current liabilities include interest revenue received in advance, with a carrying amount of ₹ 100. The related interest revenue was taxed on a cash basis.	The tax base of the interest received in advance is nil.
3.	Current liabilities include accrued expenses with a carrying amount of ₹ 100. The related expense has already been deducted for tax purposes.	The tax base of the accrued expenses is ₹ 100.
4.	Current liabilities include accrued fines and penalties with a carrying amount of ₹ 100. Fines and penalties are not deductible for tax purposes.	The tax base of the accrued fines and penalties is ₹ 100. {Under this analysis, there is no deductible temporary difference. An alternative analysis is that the accrued fines and penalties payable have a tax base of nil and that a tax rate of nil is applied to the resulting deductible temporary difference of ₹ 100. Under both analyses, there is no deferred tax asset.}
5.	A loan payable has a carrying amount of ₹ 100. The repayment of the loan will have no tax consequences.	The tax base of the loan is ₹ 100.

8.7.5 Recognition of Current Tax Liabilities and Current Tax Assets

- Current tax for current and prior periods shall, to the extent unpaid, be recognised as a liability**.**
- If the amount already paid in respect of current and prior periods exceeds the amount due for those periods, the excess shall be recognised as an asset**.**
- The benefit relating to a tax loss that can be carried back to recover current tax of a previous period shall be recognised as an asset**.**
- When a tax loss is used to recover current tax of a previous period, an entity recognises the benefit as an asset in the period in which the tax loss occurs because it is probable that the benefit will flow to the entity and the benefit can be reliably measured.

Example: A company had a loss of ₹ 1,00,000 in the current year. It had a profit of ₹ 60,000 and ₹ 50,000 in last 2 years.

The tax authorities allowed the company to offset the loss of current year against the profit of last 2 years and claim a tax refund for the tax paid in last 2 years.

Thus, if the company uses its tax loss of current year to recover current tax of the prior years, it can record the tax refund (which if probable) as an asset.

8.7.6 Recognition of Deferred Tax Liabilities and Deferred Tax Assets

Taxable Temporary Differences: A deferred tax liability shall be recognised for all taxable temporary differences, except to the extent that the deferred tax liability arises from:

(a) the initial recognition of goodwill; or

(b) the initial recognition of an asset or liability in a transaction which:

 (i) is not a business combination; and

 (ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss).

However, for taxable temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures, a deferred tax liability shall be recognised.

It is inherent in the recognition of an asset that its carrying amount will be recovered in the form of economic benefits that flow to the entity in future periods.

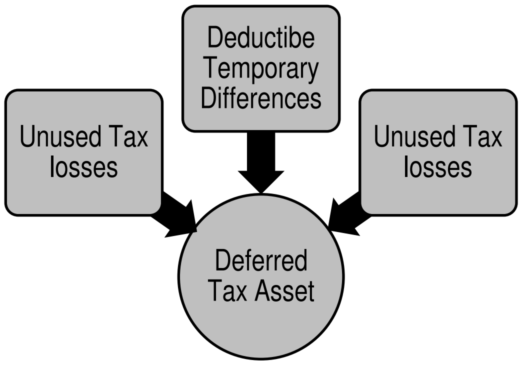
When the **carrying amount of the asset exceeds its tax base**, the amount of taxable economic benefits will exceed the amount that will be allowed as a deduction for tax purposes. This difference is a **taxable temporary difference** and the obligation to pay the resulting income taxes in future periods is a deferred tax liability.

As the entity recovers the carrying amount of the asset, the taxable temporary difference will reverse and the entity will have taxable profit. This makes it probable that economic benefits will flow from the entity in the form of tax payments. Therefore, this Standard requires the recognition of all deferred tax liabilities, except in certain circumstances described in paragraphs 15 and 39 of Ind AS 12.

Example: An asset which cost ₹ 150 has a carrying amount of ₹ 100. Cumulative depreciation for tax purposes is ₹ 90 and the tax rate is 25%.

The tax base of the asset is ₹ 60 (cost of ₹ 150 less cumulative tax depreciation of ₹ 90). To recover the carrying amount of ₹ 100, the entity must earn taxable income of ₹ 100, but will only be able to deduct tax depreciation of ₹ 60. Consequently, the entity will pay income taxes of ₹ 10 (₹ 40 at 25%) when it recovers the carrying amount of the asset. The difference between the carrying amount of ₹ 100 and the tax base of ₹ 60 is a taxable temporary difference of ₹ 40. Therefore, the entity recognises a deferred tax liability of ₹ 10 (₹ 40 at 25%) representing the income taxes that it will pay when it recovers the carrying amount of the asset.

Unused Tax Losses and Unused Tax Credits



A deferred tax asset shall be recognised for the carry forward of unused tax losses and unused tax credits to the extent that it is probable that future taxable profit will be available against which the unused tax losses and unused tax credits can be utilised.

The criteria for recognising deferred tax assets arising from the carry forward of unused tax losses and tax credits are the same as the criteria for recognising deferred tax assets arising from deductible temporary differences.

However, the existence of unused tax losses is strong evidence that future taxable profit may not be available. Therefore, when an entity has a **history of recent losses**, the entity recognises a deferred tax asset arising from unused tax losses or tax credits only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused tax credits can be utilised by the entity. In such circumstances, paragraph 82 requires disclosure of the amount of the deferred tax asset and the nature of the evidence supporting its recognition.

Reassessment of unrecognised deferred tax assets: At the end of each reporting period, an entity reassesses unrecognised deferred tax assets. The entity recognises a previously unrecognised deferred tax asset to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

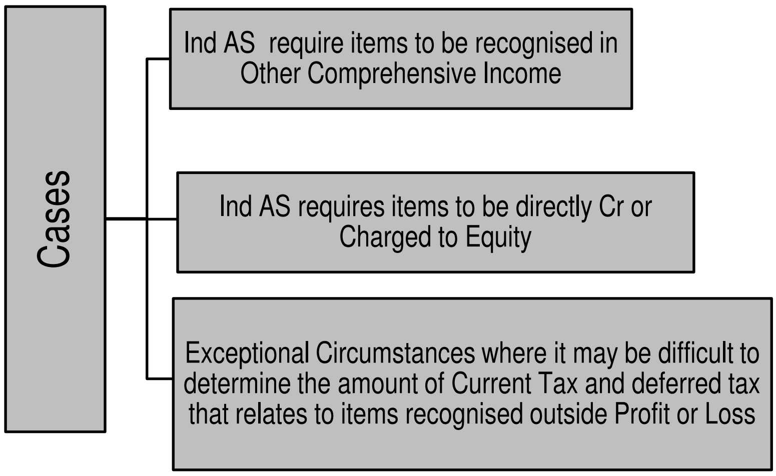
Measurement

- Current tax liabilities (assets) for the current and prior periods shall be measured at the amount expected to be paid to (recovered from) the taxation authorities, using the tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.
- Deferred tax assets and liabilities shall be measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

Items recognised outside profit or loss: Current tax and deferred tax shall be recognised outside profit or loss if the tax relates to items that are recognised, in the same or a different period, outside profit or loss. Therefore, current tax and deferred tax that relates to items that are recognised, in the same or a different period:

(a) in other comprehensive income, shall be recognised in other comprehensive income.

(b) directly in equity, shall be recognised directly in equity.



CASE I: Indian Accounting Standards require or permit particular items to be recognised in other comprehensive income.

Examples of such items are:

(a) a change in carrying amount arising from the revaluation of property, plant and equipment (Ind AS 16); and

(b) exchange differences arising on the translation of the financial statements of a foreign operation (Ind AS 21).

CASE II: Indian Accounting Standards require or permit particular items to be credited or charged directly to equity.

Examples of such items are:

(a) an adjustment to the opening balance of retained earnings resulting from either a change in accounting policy that is applied retrospectively or the correction of an error (Ind AS 8 Accounting Policies, Changes in Accounting Estimates and Errors); and

(b) amounts arising on initial recognition of the equity component of a compound financial instrument.

CASE III: In exceptional circumstances it may be difficult to determine the amount of current and deferred tax that relates to items recognised outside profit or loss (either in other comprehensive income or directly in equity).

This may be the case**, for example,** when:

(a) there are graduated rates of income tax and it is impossible to determine the rate at which a specific component of taxable profit (tax loss) has been taxed;

(b) a change in the tax rate or other tax rules affects a deferred tax asset or liability relating (in whole or in part) to an item that was previously recognised outside profit or loss; or

(c) an entity determines that a deferred tax asset should be recognised, or should no longer be recognised in full, and the deferred tax asset relates (in whole or in part) to an item that was previously recognised outside profit or loss.

8.7.7 Presentation - Offset

An entity shall offset **current tax assets and current tax liabilities** if, and only if, the entity:

(a) has a legally enforceable right to set off the recognised amounts; and

(b) intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

An entity shall offset **deferred tax assets and deferred tax liabilities** if, and only if:

(a) the entity has a legally enforceable right to set off current tax assets against current tax liabilities; and

(b) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same taxation authority on either:

    (i) the same taxable entity; or

    (ii) different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

8.7.8 Deferred Tax Assets and Liabilities shall not be Discounted

The carrying amount of a deferred tax asset shall be reviewed at the end of each reporting period. An entity shall reduce the carrying amount of a deferred tax asset to the extent that it is no longer probable that sufficient taxable profit will be available to allow the benefit of part or all of that deferred tax asset to be utilised. Any such reduction shall be reversed to the extent that it becomes probable that sufficient taxable profit will be available.

8.7.9 Major Changes in Ind AS 12 vis-à-vis IAS* 12 Not Resulting in Carve Outs

(i) ***Presentation of Tax Expense:*** IAS 12 requires presentation of tax expense (income) in the separate income statement, where separate income statement is presented. Ind AS 12 does not require such presentation since in Ind AS 1 option regarding the two statement approach has been removed.

(Ii) ***Fair Value Model:*** Since fair value model is not allowed in Ind AS 40, paragraph 20 of Ind AS 12 has been modified by not giving reference of Ind AS 40 and consequently paragraphs 51C-51D have been deleted.

(iii) ***Deferred Tax Benefits Related to Business Combinations:*** IAS 12 provides that acquired deferred tax benefits recognised within the measurement period that results from new information about facts and circumstances existed at the acquisition date shall be applied to reduce the carrying amount of goodwill related to that acquisition. If the carrying amount of that goodwill is zero, any remaining deferred tax benefits shall be recognised in profit and loss. As a consequence of different accounting treatment of bargain purchase gain prescribed in Ind AS 103, in comparison to IFRS 3, Ind AS 12 provides that if the carrying amount of such goodwill is zero, any remaining deferred tax benefits shall be recognised in other comprehensive income and accumulated in equity as capital reserve or recognised directly in capital reserve.

(iv) ***Specified Grant Related to Asset (Para 33):***As against IAS 12, Ind AS 12 does not allow the option of deducting specified grant from the cost of the related asset as this option is not permitted in Ind AS 20 *'Accounting for Government Grants and Disclosure of Government Assistance'.*

8.7.10 Major Changes in Ind AS 12 vis-à-vis Notified AS 22

(i) ***Approach for creating Deferred Tax:*** Ind AS 12 is based on balance sheet approach. It requires recognition of tax consequences of differences between the carrying amounts of assets and liabilities and their tax base. Existing AS 22 is based on income statement approach. It requires recognition of tax consequences of differences between taxable income and accounting income. For this purpose, differences between taxable income.

(ii) ***Limited Exceptions for Recognition of Deferred Tax Asset:*** As per Ind AS 12, subject to limited exceptions, deferred tax asset is recognised for all deductible temporary differences to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised. The criteria for recognising deferred tax assets arising from the carry forward of unused tax losses and tax credits are the same that for recognising deferred tax assets arising from deductible temporary differences.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

However, the existence of unused tax losses is strong evidence that future taxable profit may not be available. Therefore, when an entity has a history of recent losses, the entity recognises a deferred tax asset arising from unused tax losses or tax credits only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused tax credits can be utilised by the entity

(iii) ***Recognition of Current and Deferred Tax:*** As per the existing AS 22, deferred tax assets are recognised and carried forward only to the extent that there is a reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realised. Where deferred tax asset is recognised against unabsorbed depreciation or carry forward of losses under tax laws, it is recognised only to the extent that there is virtual certainty supported by convincing evidence that sufficient future taxable income will be available against which such deferred tax assets can be realised.

As per Ind AS 12, current and deferred tax are recognised as income or an expense and included in profit or loss for the period, except to the extent that the tax arises from a transaction or event which is recognised outside profit or loss, either in other comprehensive income or directly in equity, in those cases tax is also recognised in other comprehensive income or in equity, as appropriate. Existing AS 22 does not specifically deal with this aspect.

(iv) ***Disclosure of DTA and DTL in Balance Sheet:*** Existing AS 22 deals with disclosure of deferred tax assets and deferred tax liabilities in the balance sheet. Ind AS 12 does not deal with this aspect except that it requires that income tax relating to each component of other comprehensive income shall be disclosed as current or non-current asset/liability in accordance with the requirements of Ind AS 1.

(v) ***Disclosure Requirements:*** Disclosure requirements given in the Ind AS 12 are more detailed as compared to existing AS 22.

(vi) ***DTA/DTL arising out of Revaluation of Assets:*** Ind AS 12 requires that deferred tax asset/liability arising from revaluation of non-depreciable assets shall be measured on the basis of tax consequences from the sale of asset rather than through use. Existing AS 22 does not deal with this aspect.

(vii) ***Changes in Entities Tax Status or that of its Shareholders:*** Ind AS 12 provides guidance as to how an entity should account for the tax consequences of a change in its tax status or that of its shareholders. Existing AS 22 does not deal with this aspect.

(viii) ***Virtual Certainty:*** Existing AS 22 explains virtual certainty supported by convincing evidence. Since the concept of virtual certainty does not exist in Ind AS 12, this explanation is not included.

(ix) ***Guidance for Recognition of Deferred Tax in a Tax Holiday Period:*** Existing AS 22 specifically provides guidance regarding recognition of deferred tax in the situations of Tax Holiday under Sections 80-IA and 80-IB and Tax Holiday under Sections 10A and 10B of the Income Tax Act, 1961. Similarly, existing AS 22 provides guidance regarding recognition of deferred tax asset in case of loss under the head 'capital gains'. Ind AS 12 does not specifically deal with these situations.

(x) ***Guidance on Certain Issues:*** Existing AS 22 specifically provides guidance regarding tax rates to be applied in measuring deferred tax assets/liabilities in a situation where a company pays tax under section 115JB. Ind AS 12 does not specifically deal with this aspect.

8.8 Ind AS 16 : Property, Plant and Equipment

8.8.1 Objective

The objective of this Standard is to prescribe the **accounting treatment** for property, plant and equipment so that users of the financial statements can discern information about an entity's investment in its property, plant and equipment and the changes in such investment.

The **principal issues** in accounting for property, plant and equipment are:

- The recognition of the assets
- The determination of their carrying amounts
- The depreciation charges
- Impairment losses to be recognised in relation to them

8.8.2 Scope

This Standard shall be applied in accounting for property, plant and equipment **except** when another Standard requires or permits a different accounting treatment.

This Standard does not apply to:

Property, plant and equipment classified as held for sale	
Ind AS 105	

Biological assets related to agricultural activity	
Ind AS 41	See Note below

Recognition and measurement of exploration and evaluation assets	
Ind AS 106	See Note below

Mineral rights and mineral reserves such as oil, natural gas and similar non-regenerative resources	
No Ind AS	See Note below

This Standard applies to property, plant and equipment used to **develop or maintain the assets** described above.

For example: Ind AS 17 'Leases' requires an entity to evaluate its recognition of an item of leased property, plant and equipment on the basis of the transfer of risks and rewards. However, in such cases other aspects of the accounting treatment for these assets, including depreciation, are prescribed by this Standard.

An entity accounting for investment property in accordance with Ind AS 40 'Investment Property' shall use the cost model in this Standard.

8.8.3 Property, Plant and Equipment

8.8.3.1 Definition: Property, plant and equipment are tangible items that:

(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and

(b) are expected to be used during more than one period.

8.8.3.2 Recognition: The cost of an item of property, plant and equipment shall be recognised as an asset if, and only if:

(a) it is probable that future economic benefits associated with the item will flow to the entity; and

(b) the cost of the item can be measured reliably.

An entity evaluates under this recognition principle all its property, plant and equipment costs at the time they are incurred. These costs include:

(a) **Initial Costs:** Costs incurred initially to acquire or construct an item of property, plant and equipment and

(b) **Subsequent Costs:** Costs incurred subsequently to add to, replace part of, or service it.

Items such as spare parts, stand-by equipment and servicing equipment are recognised in accordance with this Ind AS when they meet the definition of property, plant and equipment. Otherwise, such items are classified as inventory.

8.8.4 Measurement at Recognition

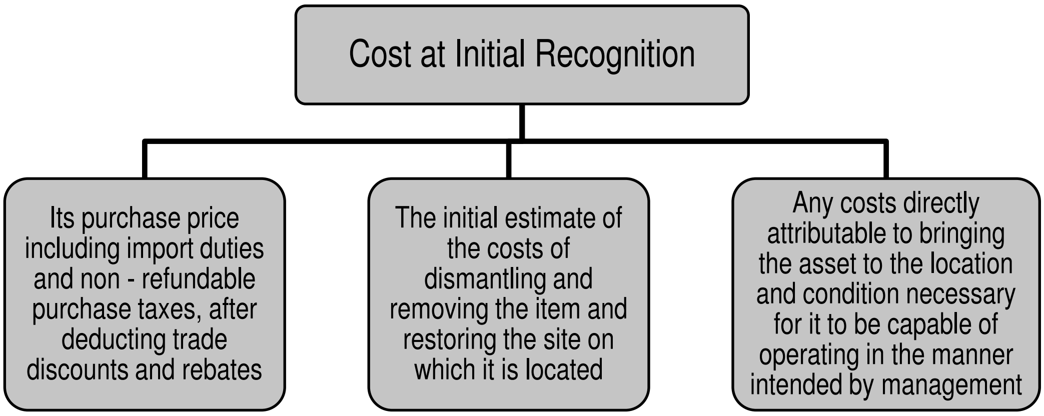
An item of property, plant and equipment that qualifies for recognition as an asset shall be measured at its cost**.**

The cost of an item of property, plant and equipment is the cash price equivalent at the recognition date. If payment is deferred beyond normal credit terms, the difference between the cash price equivalent and the total payment is recognised as interest over the period of credit unless such interest is capitalised in accordance with Ind AS 23.

Cost is:

- The amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire an asset
- At the time of its acquisition or construction or, where applicable, the amount attributed to that asset when initially recognised in accordance with the specific requirements of other Indian Accounting Standards, e.g. Ind AS 102 *'Share-based Payment'*.

8.8.4.1 Elements of Cost: The cost of an item of property, plant and equipment comprises:



8.8.4.2 Cost of Dismantling, Removal and Restoration: The obligation for which an entity incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period.

An entity applies Ind AS 2*'Inventories'* to the costs of obligations for dismantling, removing and restoring the site on which an item is located that are incurred during a particular period as a consequence of having used the item to produce inventories during that period.

8.8.4.3 Examples of Directly Attributable Costs: costs of employee benefits (as defined in Ind AS 19 *'Employee Benefits'*) arising directly from the construction or acquisition of the item of property, plant and equipment;

- costs of site preparation;
- initial delivery and handling costs;
- installation and assembly costs;
- costs of testing whether the asset is functioning properly, after deducting the net proceeds from selling any items produced while bringing the asset to that location and condition (such as samples produced when testing equipment); and
- professional fees.

8.8.4.4 Examples of Costs that are not Costs of an Item of Property, Plant and Equipment

1. • Costs of opening a new facility
2. • Costs of introducing a new product or service (including costs of advertising and promotional activities)
3. • Costs of conducting business in a new location or with a new class of customer (including costs of staff training)
4. • Administration and other general overhead costs

8.8.4.5 Costs not Included in the Carrying Amount of an Item of Property, Plant and Equipment

1. • Costs incurred while an item capable of operating in the manner intended by management has yet to be brought into use or is operated at less than full capacity
2. • Initial operating losses, such as those incurred while demand for the item's output builds up
3. • Costs of relocating or reorganising part or all of an entity's operations

8.8.4.6 Self-constructed Asset: The cost of a self-constructed asset is determined using the same principles as for an acquired asset. Therefore, any internal profits are eliminated in arriving at such costs.

For Example: A transfer from one division of an organisation to another at a transfer price including profit margin. In such a case we will consider only the cost of transfer and not transfer price.

Similarly, the cost of abnormal amounts of wasted material, labour, or other resources incurred in self-constructing an asset is not included in the cost of the asset.

Ind AS 23 *'Borrowing Costs'* establishes criteria for the recognition of interest as a component of the carrying amount of a self-constructed item of property, plant and equipment.

8.8.4.7 Asset Exchange Transaction: One or more items of property, plant and equipment may be acquired in exchange for:

- A non-monetary asset or assets, or
- A combination of monetary and non-monetary assets.

The cost of such an item of property, plant and equipment is measured at fair value unless:

(a) the exchange transaction lacks commercial substance or

(b) the fair value of neither the asset received nor the asset given up is reliably measurable.

8.8.5 Measurement after Recognition

An entity shall choose either:

- The cost model or
- The revaluation model

As its accounting policy and shall apply that policy to an entire class of property, plant and equipment.

8.8.5.1 Cost Model: After recognition as an asset, an item of property, plant and equipment shall be carried at its cost less any accumulated depreciation less any accumulated impairment losses**.**

8.8.5.2 Revaluation Model: After recognition as an asset, an item of property, plant and equipment whose fair value can be measured reliably shall be carried at revalued amount, being its fair value at the date of the revaluation less any subsequent accumulated depreciation less subsequent accumulated impairment losses.

Revaluations should be made with sufficient regularity to ensure that the carrying amount does not differ materially from that which would be determined using fair value at the end of the reporting period.

If an asset's carrying amount is increased as a result of a revaluation, the increase should be recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus. However, the increase should be recognised in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognised in profit or loss.

If an asset's carrying amount is decreased as a result of a revaluation, the decrease should be recognised in profit or loss. However, the decrease shall be recognised in other comprehensive income to the extent of any credit balance existing in the revaluation surplus in respect of that asset. The decrease recognised in other comprehensive income reduces the amount accumulated in equity under the heading of revaluation surplus.

8.8.6 Depreciation

Depreciation is the systematic allocation of the depreciable amount of an asset over its useful life. The depreciable amount of an asset should be determined after deducting its residual value.

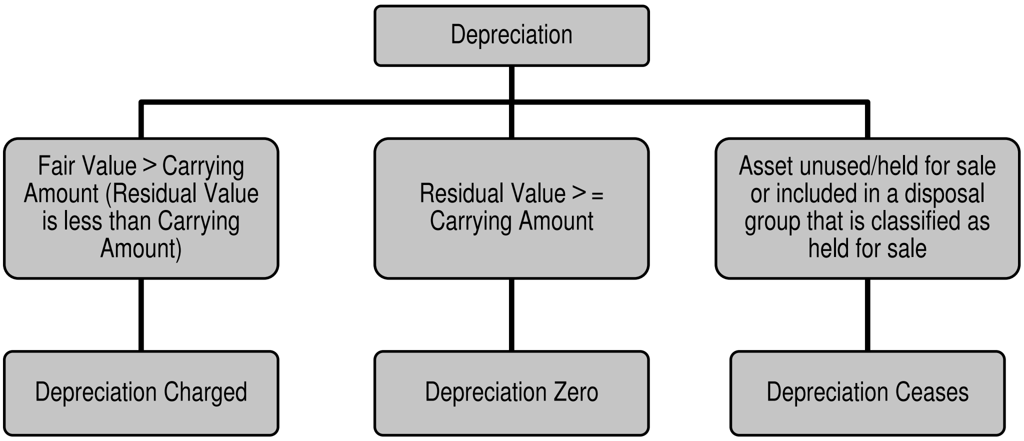
8.8.6.1 Component Cost Approach: Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item shall be depreciated separately.

An entity allocates the amount initially recognised in respect of an item of property, plant and equipment to its significant parts and depreciates separately each such part.

The depreciation charge for each period shall be recognised in profit or loss unless it is included in the carrying amount of another asset.

The depreciation charge for a period is usually recognised in profit or loss.

However, sometimes, the future economic benefits embodied in an asset are absorbed **in producing other assets.** In this case, the depreciation charge constitutes part of the cost of the other asset and is included in its carrying amount.



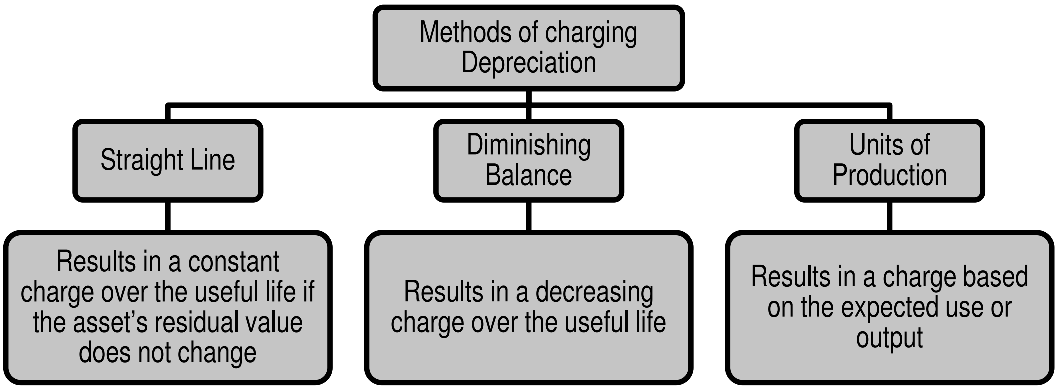
Depreciation Begins: Depreciation of an asset begins when it is available for use, i.e. when it is in the location and condition necessary for it to be capable of operating in the manner intended by management.

Depreciation Ceases: Depreciation of an asset ceases at the earlier of the date that the asset is classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with Ind AS 105 and the date that the asset is derecognised.

Therefore, depreciation does not cease when the asset becomes idle or is retired from active use unless the asset is fully depreciated. However, under usage methods of depreciation the depreciation charge can be zero while there is no production.

8.8.6.2 Depreciation Method

- The depreciation method used shall reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity.
- The depreciation method applied to an asset shall be reviewed at least at each financial year-end and, if there has been a significant change in the expected pattern of consumption of the future economic benefits embodied in the asset, the method shall be changed to reflect the changed pattern. Such a change shall be accounted for as a change in an accounting estimate in accordance with Ind AS 8.



8.8.7 Impairment

To determine whether an item of property, plant and equipment is impaired, an entity applies Ind AS 36 'Impairment of Assets'.

8.8.8 Derecognition

The carrying amount of an item of property, plant and equipment shall be derecognised:

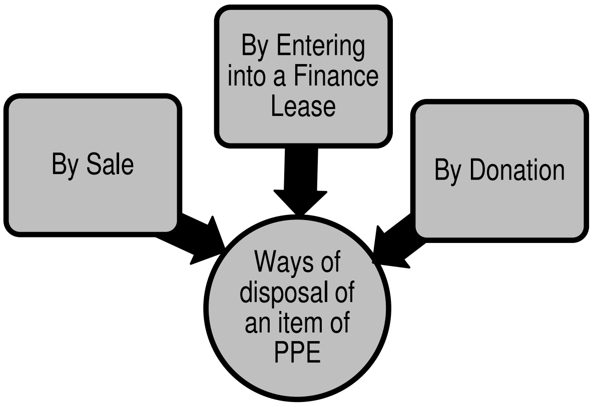
(a) on disposal; or

(b) when no future economic benefits are expected from its use or disposal.

The gain or loss arising from the de-recognition of an item of property, plant and equipment shall be included in profit or loss when the item is derecognised (unless Ind AS 17 requires otherwise on a sale and leaseback). Gains shall not be classified as revenue.

However, an entity that, in the course of its ordinary activities, routinely sells items of property, plant and equipment that it has held for rental to others shall transfer such assets to inventories at their carrying amount when they cease to be rented and become held for sale.

8.8.8.1 Ways of Disposal:



8.8.8.2 Gain or Loss: The gain or loss arising from the de-recognition of an item of property, plant and equipment shall be determined as the difference between

- The net disposal proceeds, if any, and
- The carrying amount of the item.

8.8.8.3 Consideration Receivable

- The consideration receivable on disposal of an item of property, plant and equipment is recognised initially at its fair value.
- If payment for the item **is deferred,** the consideration received is recognised initially at the cash price equivalent.

8.8.9 Major Changes in Ind AS 16 vis-à-vis IAS* 16 Not Resulting in Carve Outs

1. ***Reduction in the Carrying Amount of PPE:*** Paragraph 28 has been shown as deleted since Ind AS 20 '*Accounting for Government Grants and Disclosure of Government Assistance'* does not permit the option of reducing the carrying amount of an item of property, plant and equipment by the amount of government grant received in respect of such an item, as permitted in IAS 20.
2. ***Fair Value Model:*** Paragraph 5 of Ind AS 16 has been modified, since Ind AS 40, '*Investment Property'*, prohibits the use of fair value model.
3. ***Guidance for Allocation Basis:*** Paragraph 12 of Appendix B has been modified by giving example of types of costs that would be included as directly attributable overhead costs of the stripping activity asset. Paragraph 13A has been added in Appendix B to provide guidance on allocation basis.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

8.8.10 Major Changes in Ind AS 16 vis-à-vis Notified AS 10

(i) ***Fixed Assets retired from Active Use and Held for Sale:*** Ind AS 16 does not deal with the assets 'held for sale' because the treatment of such assets is covered in Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations. Existing AS 10 deals with accounting for items of fixed assets retired from active use and held for sale.

(ii) ***Stripping Costs in the Production Phase of a Surface Mine:*** Ind AS 16 provides guidance on measuring 'Stripping Costs in the Production Phase of a Surface Mine'. Existing AS does not contain this guidance.

8.9 Ind AS 17: Leases

8.9.1 Objective

The objective of this Standard is to prescribe, for lessees and lessors, the appropriate accounting policies and disclosure to apply in relation to leases.

8.9.2 Scope

This Standard shall be applied in accounting for all leases other than:

- Leases to explore for or use minerals, oil, natural gas and similar non-regenerative resources; and
- Licensing agreements for such items as motion picture films, video recordings, plays, manuscripts, patents and copyrights

However, this Standard shall not be applied as the basis of measurement for:

- Property held by lessees that is accounted for as investment property (Ind AS 40, 'Investment Property')
- Investment property provided by lessors under operating leases (Ind AS 40, 'Investment Property')
- Biological assets within the scope of Ind AS 41, 'Agriculture' held by lessees under finance leases
- Biological assets within the scope of Ind AS 41, provided by lessors under operating leases

8.9.3 Lease

A lease is an agreement whereby:

- The lessor conveys to the lessee

- In return for a payment or series of payments
- The right to use an asset
- For an agreed period of time

8.9.3.1 Finance Lease: A finance lease is a lease that transfers substantially all the risks and rewards incidental to ownership of an asset.

Where, Risks include the possibilities of losses from idle capacity or technological obsolescence and of variations in return because of changing economic conditions.

Rewards may be represented by the expectation of profitable operation over the asset's economic life and of gain from appreciation in value or realisation of a residual value.

Title may or may not eventually be transferred.

8.9.3.2 Operating Lease: An operating lease is a lease other than a finance lease.

8.9.3.3 Non-cancellable Lease: A non-cancellable lease is a lease that is cancellable only:

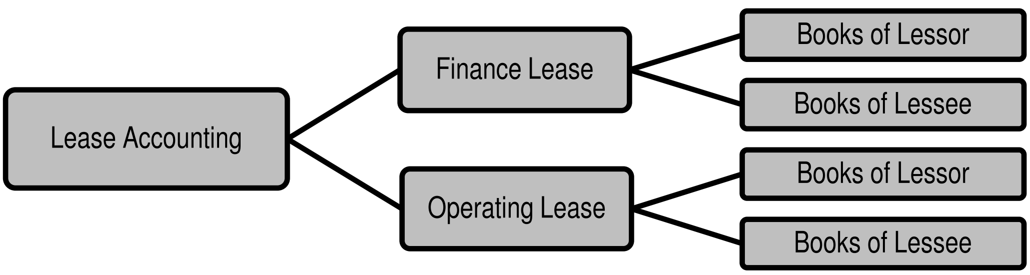
(a) upon the occurrence of some remote contingency;

(b) with the permission of the lessor;

(c) if the lessee enters into a new lease for the same or an equivalent asset with the same lessor; or

(d) upon payment by the lessee of such an additional amount that, at inception of the lease, continuation of the lease is reasonably certain.

8.9.4 Accounting Treatment of Lease



8.9.4.1 Leases in the Financial Statements of Lessees

(a) Finance Leases

Initial recognition: At the commencement of the lease term, lessees shall recognise finance leases as assets and liabilities in their balance sheets at amounts equal to the fair value of the leased property or, if lower, the present value of the minimum lease payments, each determined at the inception of the lease.

The discount rate to be used in calculating the present value of the minimum lease payments is the interest rate implicit in the lease, if this is practicable to determine; if not, the lessee's incremental borrowing rate shall be used.

Any initial direct costs of the lessee are added to the amount recognised as an asset.

Subsequent measurement

- Minimum lease payments shall be apportioned between the finance charge and the reduction of the outstanding liability.
- The finance charge shall be allocated to each period during the lease term so as to produce a constant periodic rate of interest on the remaining balance of the liability.
- Contingent rents shall be charged as expenses in the periods in which they are incurred.
- A finance lease gives rise to depreciation expense for depreciable assets as well as finance expense for each accounting period.
- The depreciation policy for depreciable leased assets shall be consistent with that for depreciable assets that are owned, and the depreciation recognised shall be calculated in accordance with Ind AS 16, 'Property, Plant and Equipment' and Ind AS 38, 'Intangible Assets'.

(b) Operating Leases: Lease payments under an operating lease shall be recognised as an expense on a straight-line basis over the lease term unless either:

(a) another systematic basis is more representative of the time pattern of the user's benefit even if the payments to the lessors are not on that basis; or

(b) the payments to the lessor are structured to increase in line with expected general inflation to compensate for the lessor's expected inflationary cost increases.

8.9.4.2 Leases in the Financial Statements of Lessors

(a) Finance Leases

Initial recognition: Lessors shall recognise assets held under a finance lease in their balance sheets and present them as a receivable at an amount equal to the net investment in the lease.

Subsequent measurement: The recognition of finance income shall be based on a pattern reflecting a constant periodic rate of return on the lessor's net investment in the finance lease.

(b) Operating Leases: Lessors shall present assets subject to operating leases in their balance sheet according to the nature of the asset.

Lease income from operating leases (excluding amounts for services such as insurance and maintenance) shall be recognised in income on a straight-line basis over the lease term, unless either:

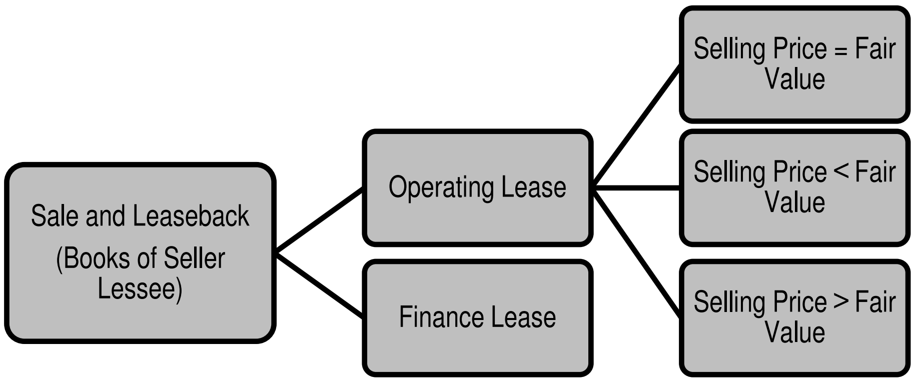
(a) another systematic basis is more representative of the time pattern in which use benefit derived from the leased asset is diminished, even if the payments to the lessors are not on that basis; or

(b) the payments to the lessor are structured to increase in line with expected general inflation to compensate for the lessor's expected inflationary cost increases. If payments to the lessor vary according to factors other than inflation, then this condition is not met

The depreciation policy for depreciable leased assets shall be consistent with the lessor's normal depreciation policy for similar assets, and depreciation shall be calculated in accordance with Ind AS 16 and Ind AS 38.

8.9.5 Sale and Leaseback Transactions

A sale and leaseback transaction involves the sale of an asset and the leasing back of the same asset. The lease payment and the sale price are usually interdependent because they are negotiated as a package. The accounting treatment of a sale and leaseback transaction depends upon the type of lease involved.



8.9.5.1 If a Sale and Leaseback Transaction Results in a Finance Lease: If a sale and leaseback transaction results in a finance lease, any excess of sales proceeds over the carrying amount shall not be immediately recognised as income by a seller-lessee. Instead, it shall be deferred and amortised over the lease term.

8.9.5.2 If a Sale and Leaseback Transaction Results in an Operating Lease

CASE I: When Sale Price = Fair Value: If a sale and leaseback transaction results in an operating lease, and it is clear that the transaction is established at fair value, any profit or loss shall be recognised immediately.

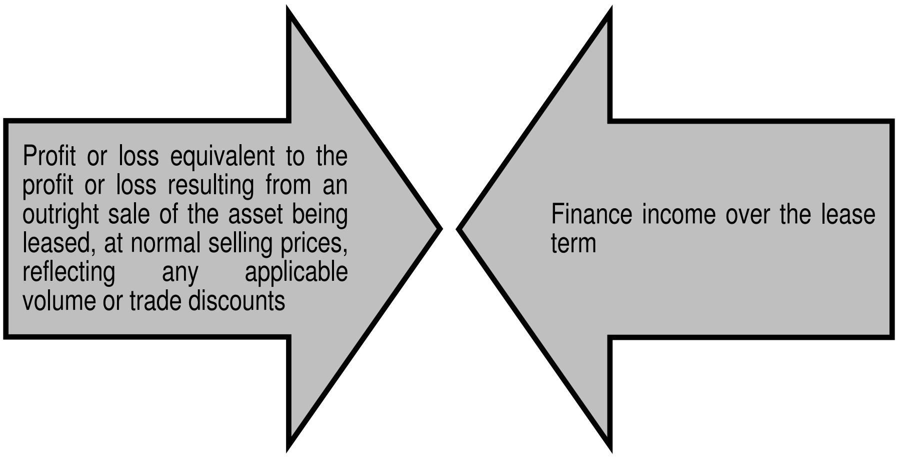
CASE II: When Sale Price < Fair Value: If the sale price is below fair value, any profit or loss shall be recognised immediately except that, if the loss is compensated for by future lease payments at below market price, it shall be deferred and amortised in proportion to the lease payments over the period for which the asset is expected to be used.

CASE III: When Sale Price > Fair Value: If the sale price is above fair value, the excess over fair value shall be deferred and amortised over the period for which the asset is expected to be used.

For operating leases, if the fair value at the time of a sale and leaseback transaction is less than the carrying amount of the asset, a loss equal to the amount of the difference between the carrying amount and fair value shall be recognised immediately.

8.9.6 Accounting Treatment in the Books of Manufacturer or Dealer Lessors

- Manufacturer or dealer lessors shall recognise selling profit or loss in the period, in accordance with the policy followed by the entity for outright sales.
- If artificially low rates of interest are quoted, selling profit shall be restricted to that which would apply if a market rate of interest were charged.
- Costs incurred by manufacturer or dealer lessors in connection with negotiating and arranging a lease shall be recognised as an expense when the selling profit is recognised.
- Manufacturers or dealers often offer to customers the choice of either buying or leasing an asset. A finance lease of an asset by a manufacturer or dealer lessor gives rise to two types of income:



Appendix C of Ind AS 17 provides guidance (a) for determining whether the arrangement is, or contain, leases that should be accounted for in accordance with Ind AS 17; (b) when the assessment or a reassessment of whether an arrangement is, or contains, a lease should be made; and (c) if an arrangement is, or contains, a lease, how the payments for the lease should be separated from payments for any other elements in the arrangement.

Appendix A of Ind AS 17 provides guidance on recognition of incentives in an operating lease in the financial statements of lessor and lessee. The Appendix prescribes that the lessor shall recognise the aggregate cost of incentives as a reduction of rental income over the lease term, on a straight-line basis unless another systematic basis is representative of the time pattern over which the benefit of the leased asset is diminished. The lessee shall recognise the aggregate benefit of incentives as a reduction of rental expense over the lease term, on a straight-line basis unless another systematic basis is representative of the time pattern of the lessee's benefit from the use of the leased asset.

8.9.7 Major Changes in Ind AS 17 vis-à-vis IAS* 17

8.9.7.1 Resulting in Carve Out

As per IFRS: IAS 17 requires all leases rentals to be charged to statement of profit and loss on straight-line basis in case of operating leases unless another systematic basis is more representative of the time pattern of the user's benefit even if the payments to the lessor are not on that basis.

Carve out: A carve-out has been made to provide that lease rentals, in case of operating leases, shall be charged to the statement of profit and loss in accordance with the lease agreement unless the payments to the lessor are structured to increase in line with expected general inflation to compensate for the lessor's expected inflationary cost increases. If payments to the lessor vary because of factors other than general inflation, then this condition is not met.

Reason: Companies enter into various kinds of lease agreements to get the right to use an asset of the lessor. Considering the Indian inflationary situation, lease agreements contain periodic rent escalation. Accordingly, where there is periodic rent escalation in line with the expected inflation so as to compensate the lessor for expected inflationary cost increases, the rentals shall not be straight-lined.

8.9.7.2 Not Resulting in Carve Out

Investment Property: IAS 17 provides that separate measurement of land and buildings elements is not required when the lessee's interest in both land and buildings is classified as an investment property in accordance with Ind AS 40, '*Investment Property',* and fair value model is adopted. IAS 17 also permits property interest held under an operating lease as an investment property, if the definition of investment property is otherwise met and fair value model is applied. Since Ind AS 40 '*Investment Property'* prohibits the use of fair value model, these provisions of IAS 17 have not been included in Ind AS 17.

8.9.8 Major Changes in Ind AS 17 vis-à-vis Notified AS 19

(i) ***Land:*** The existing standard excludes leases of land from its scope. Ind AS 17 does not have such scope exclusion. It has specific provisions dealing with leases of land and building applicable. Further, Ind AS 17 is not applicable as the basis of measurement for

- property held by lessees/provided by lessors under operating leases but treated as investment property and
- biological assets held by lessees/provided by lessors under operating leases that are covered in the Standard on Agriculture.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

The existing standard does not contain such provisions.

(ii) ***Definition of Residual Value:*** The definition of residual value appearing in the existing standard has been deleted in Ind AS 17.

(iii) ***Initial Direct Costs:*** Consequent upon the difference between the existing standard and Ind AS 17 in respect of treatment of initial direct costs incurred by a non-manufacturer/non-dealer-lessor in respect of a finance lease (see point 5 below), the term 'initial direct costs' has been specifically defined in Ind AS 17 and definition of the term 'interest rate implicit in the lease' as per the existing standard has been modified in Ind AS 17.

(iv) ***Inception of Lease and Commencement of Lease:*** Ind AS 17 makes a distinction between inception of lease and commencement of lease. In the existing standard, though both the terms are used at some places, these terms have not been defined and distinguished. Further, Ind AS 17 deals with adjustment of lease payments during the period between inception of the lease and the commencement of the lease term. This aspect is not dealt with in the existing standard. Also, as per Ind AS 17, the lessee shall recognise finance leases as assets and liabilities in balance sheet at the commencement of the lease term whereas as per the existing standard such recognition is at the inception of the lease.

(v) ***Treatment of Initial Direct Costs:*** Treatment of initial direct costs under Ind AS 17 differs from the treatment prescribed under the existing standard. This is tabulated below:

Subject	*Existing standard*	*Ind AS 17*
Finance lease-lessee accounting	Added to the amount recognised as asset.	Same as per the existing standard.
Finance lease-lessor accounting		
Non- manufacturer/ Non-dealer	Either recognised as expense immediately or allocated against the finance income over the lease term.	Interest rate implicit in the lease is defined in such a way that the initial direct costs included automatically in the finance lease receivable; there is no need to add them separately.
Manufacturer/dealer:	Recognised as expense at the commencement of the lease term.	Same as per the existing standard.
Operating lease-Lessee accounting	No discussion	No discussion
Operating lease-Lessor accounting	Either deferred and allocated to income over the lease term in proportion to the recognition of rent	Added to the carrying amount of the leased asset and recognized as expense over the lease term on the same basis as lease income

	income, or recognized as expense in the period in which incurred.	

(vi) ***Current/Non-current Classification of Lease Liabilities:*** Ind AS 17 requires current/non-current classification of lease Liabilities if such classification is made for other liabilities. Also, it makes reference to Ind AS 105, '*Non-current Assets Held for Sale and Discontinued Operations'*. These matters are not addressed in the existing standard.

(vii) ***Sale and Leaseback Transaction:*** As per the existing standard, if a sale and leaseback transaction results in a finance lease, excess, if any, of the sale proceeds over the carrying amount shall be deferred and amortised by the seller-lessee over the lease term in proportion to depreciation of the leased asset. While Ind AS 17 retains the deferral and amortisation principle, it does not specify any method of amortisation.

(viii) ***Accounting for Incentives in the Case of Operating Leases:*** Ind AS 17 provides guidance on accounting for incentives in the case of operating leases, evaluating the substance of transactions involving the legal form of a lease and determining whether an arrangement contains a lease. The existing standard does not contain such guidance.

(ix) ***Recognition of Lease Payments:*** Ind AS 17 requires that in case of operating lease, where escalation of lease rentals is in line with the expected general inflation so as to compensate the lessor for expected inflationary cost increases shall not be straight lined. AS 19 does not provide for the same.

(x) ***Disclosure Requirements****:* There are some differences in disclosure requirements as per the existing standard and disclosure requirements as per Ind AS 17.

8.10 Ind AS 18 : Revenue

The primary issue in accounting for revenue is determining when to recognise revenue. Revenue is recognised when it is probable that future economic benefits will flow to the entity and these benefits can be measured reliably. This Standard identifies the circumstances in which these criteria will be met and, therefore, revenue will be recognised. It also provides practical guidance on the application of these criteria.

Revenue is the gross inflow of economic benefits during the period arising in the course of the ordinary activities of an entity when those inflows result in increases in equity, other than increases relating to contributions from equity participants.

The Standard shall be applied in accounting for revenue arising from the following transactions and events: (a) the sale of goods; (b) the rendering of services; and (c) the use by others of entity assets yielding interest and royalties The Standard deals with recognition of interest. However, measurement of interest and recognition and measurement of dividend are dealt in accordance with Ind AS 109, *Financial Instruments*.

The impairment of any contractual right to receive cash or another financial asset arising from this Standard shall be dealt in accordance with Ind AS 109, *Financial Instruments.*

8.10.1 Identification of the transaction

The recognition criteria in this Standard are usually applied separately to each transaction. However, in certain circumstances, it is necessary to apply the recognition criteria to the separately identifiable components of a single transaction in order to reflect the substance of the transaction. For example, when the selling price of a product includes an identifiable amount for subsequent servicing, that amount is deferred and recognised as revenue over the period during which the service is performed. Conversely, the recognition criteria are applied to two or more transactions together when they are linked in such a way that the commercial effect cannot be understood without reference to the series of transactions as a whole. For example, an entity may sell goods and, at the same time, enter into a separate agreement to repurchase the goods at a later date, thus negating the substantive effect of the transaction; in such a case, the two transactions are dealt with together.

8.10.2 Measurement of revenue

Revenue shall be measured at the fair value of the consideration received or receivable. *Fair value* is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The amount of revenue arising on a transaction is usually determined by agreement between the entity and the buyer or user of the asset. It is measured at the fair value of the consideration received or receivable taking into account the amount of any trade discounts and volume rebates allowed by the entity.

8.10.3 Sale of goods

Revenue from the sale of goods shall be recognised when all the following conditions have been satisfied: (a) the entity has transferred to the buyer the significant risks and rewards of ownership of the goods; (b) the entity retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold; (c) the amount of revenue can be measured reliably; (d) it is probable that the economic benefits associated with the transaction will flow to the entity; and (e) the costs incurred or to be incurred in respect of the transaction can be measured reliably.

8.10.4 Rendering of services

When the outcome of a transaction involving the rendering of services can be estimated reliably, revenue associated with the transaction shall be recognised by reference to the stage of completion of the transaction at the end of the reporting period. The outcome of a transaction can be estimated reliably when all the following conditions are satisfied: (a) the amount of revenue can be measured reliably; (b) it is probable that the economic benefits associated with the transaction will flow to the entity; (c) the stage of completion of the transaction at the end of the reporting period can be measured reliably; and (d) the costs incurred for the transaction and the costs to complete the transaction can be measured reliably.

The recognition of revenue by reference to the stage of completion of a transaction is often referred to as the percentage of completion method. Under this method, revenue is recognised in the accounting periods in which the services are rendered. The recognition of revenue on this basis provides useful information on the extent of service activity and performance during a period.

When the outcome of the transaction involving the rendering of services cannot be estimated reliably, revenue shall be recognised only to the extent of the expenses recognised that are recoverable.

8.10.5 Interest and Royalties

Revenue arising from the use by others of entity assets yielding interest and royalties shall be recognised when: (a) it is probable that the economic benefits associated with the transaction will flow to the entity; and (b) the amount of the revenue can be measured reliably.

Revenue shall be recognised on the following bases: (a) interest shall be recognised using the effective interest method as set out in Ind AS 109; (b) royalties shall be recognised on an accrual basis in accordance with the substance of the relevant agreement.

8.10.6 Major Changes in Ind AS 18 vis-à-vis IAS* 18

8.10.6.1 Resulting in Carve Out

As per IFRS: On the basis of principles of the IAS 18, IFRIC 15, Agreement for Construction of Real Estate, prescribes that construction of real estate should be treated as sale of goods and revenue should be recognised when the entity has transferred significant risks and rewards of ownership and retained neither continuing managerial involvement nor effective control.

Carve out: IFRIC 15 has not been included in Ind AS 18 to scope out such agreements from Ind AS 18. A separate guidance note on accounting for real estate developers (for Ind AS compliant entities) has been issued by the ICAI to address the matter.

Reason: It was observed that requirement will lead to recognition of revenue in the financial statements by real estate developers based on the completion method, i.e., only in the last year of the completion of project. It was felt that in case the revenue for the whole project is recognised in the last year of completion of project, it will not reflect the true performance of the business of the real estate developer. Further, it was felt that since Ind AS 11 requires recognition of revenue of all construction contracts by reference to stage of completion, it may lead to inappropriate accounting in case of certain real estate development projects in case this Ind AS is applied for all real estate development projects. Therefore, it was considered appropriate that rather than making changes in Ind AS 11 or Ind AS 18, a separate Guidance note (for Ind AS-compliant entities) should be issued in line with the Guidance note on Accounting for Real Estate Transactions issued by the Institute of Chartered Accountants of India (for entities on which AS are applicable).

8.10.6.2 Not Resulting in Carve Out

1. ***Recognition and Measurement of Interest:*** Paragraph 1A is inserted in Ind AS 18 which states that recognition of interest is dealt in this standard whereas measurement of interest is dealt in accordance with Ind AS 109, *Financial Instruments.*

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

2. ***Impairment of Contractual Right***: Paragraph 1B is inserted in Ind AS 18, which prescribes the impairment of any contractual right to receive cash or another financial asset arising from this standard, shall be dealt in accordance with Ind AS 109, *Financial Instruments*.

8.10.7 Major Changes in Ind AS 18 vis-à-vis Notified AS 9

(i) ***Definition of 'Revenue':*** Definition of 'revenue' given in Ind AS 18 is broad compared to the definition of 'revenue' given in existing AS 9 because it covers all economic benefits that arise in the ordinary course of activities of an entity which result in increases in equity, other than increases relating to contributions from equity participants. On the other hand, as per the existing AS 9, revenue is gross inflow of cash, receivables or other consideration arising in the course of the ordinary activities of an enterprise from the sale of goods, from the rendering of services, and from the use by others of enterprise resources yielding interest, royalties and dividends.

(ii) ***Measurement of Revenue:*** Measurement of revenue is briefly covered in the definition of revenue in the existing AS 9, while Ind AS 18 deals separately in detail with measurement of revenue. As per existing AS 9, revenue is recognised at the nominal amount of consideration receivable. Ind AS 18 requires the revenue to be measured at fair value of the consideration received or receivable.

(iii) ***Barter Transactions***: Ind AS 18 specifically deals with the exchange of goods and services with goods and services of similar and dissimilar nature. In this regard specific guidance is given regarding barter transactions involving advertising services. This aspect is not dealt with in the existing AS 9.

(iv) ***Recognition of Separately Identifiable Components:*** Ind AS 18 provides guidance on application of recognition criteria to the separately identifiable components of a single transaction in order to reflect the substance of the transaction. Existing AS 9 does not specifically deal with the same.

(v) ***Recognition of Interest:*** Existing AS 9 requires the recognition of revenue from interest on time proportion basis. Ind AS 18 requires interest to be recognised using effective interest rate method as set out in Ind AS 109, Financial Instruments.

(vi) ***Guidance Regarding Revenue Recognition in Specific Cases:*** Ind AS 18 specifically provides guidance regarding revenue recognition in case the entity is under any obligation to provide free or discounted goods or services or award credits to its customers due to any customer loyalty programme. Existing AS 9 does not deal with this aspect.

(vii) ***Disclosure of Excise Duty***: Existing AS 9 specifically deals with disclosure of excise duty as a deduction from revenue from sales transactions. Ind AS 18 does not specifically deal with the same.

(viii) ***Disclosure Requirements:*** Disclosure requirements given in the Ind AS 18 are more detailed as compared to existing AS 9.

8.11 Ind AS 19 : Employee Benefits

8.11.1 Objective

The objective of this Standard is to prescribe the accounting and disclosure for employee benefits. The Standard requires an entity to recognise:

- A liability - When an employee has provided service in exchange for employee benefits to be paid in the future
- An expense - When the entity consumes the economic benefit arising from service provided by an employee in exchange for employee benefits

8.11.2 Scope

This Standard shall be applied by an employer in accounting for all employee benefits, except those to which Ind AS 102, *'Share-based Payment'*, applies.

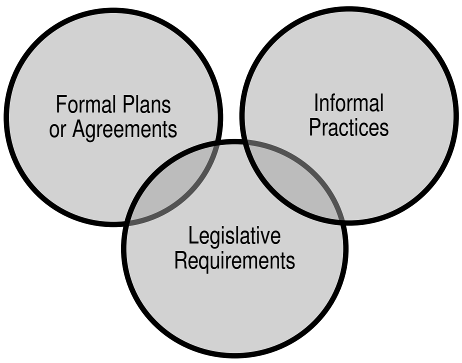
This Standard does not deal with reporting by employee benefit plans.

The employee benefits to which this Standard applies include those provided:

(a) under formal plans or other formal agreements between an entity and individual employees, groups of employees or their representatives;

(b) under legislative requirements, or through industry arrangements, whereby entities are required to contribute to national, state, industry or other multi-employer plans; or

(c) by those informal practices that give rise to a constructive obligation. Informal practices give rise to a constructive obligation where the entity has no realistic alternative but to pay employee benefits.



8.11.3 Employee Benefits

Employee benefits are all forms of consideration given by an entity in exchange for service rendered by employees or for the termination of employment.

8.11.3.1 Types of Employee Benefits: Employee benefits include:

(a) **Short-term Employee Benefits:** Short-term employee benefits are employee benefits (other than termination benefits) that are expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related services. It includes:

   (i) wages, salaries and social security contributions;

   (ii) paid annual leave and paid sick leave;

   (iii) profit-sharing and bonuses; and

   (iv) non-monetary benefits (such as medical care, housing, cars and free or subsidised goods or services) for current employees;

(b) **Post-employment Benefits:** Post-employment benefits are employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment. Post-employment benefit plans are formal or informal arrangements under which an entity provides post-employment benefits for one or more employees, such as the following:

   (i) retirement benefits (e.g. pensions and lump sum payments on retirement); and

   (ii) other post-employment benefits, such as post-employment life insurance and post-employment medical care;

(c) **Other Long-term Employee Benefits:** Other long-term employee benefits are all employee benefits other than short-term employee benefits, post-employment benefits and termination benefits, such as the following:

   (i) long-term paid absences such as long-service leave or sabbatical leave;

   (ii) jubilee or other long-service benefits; and

   (iii) long-term disability benefits; and

(d) **Termination Benefits:** Termination benefits are employee benefits provided in exchange for the termination of an employee's employment.

8.11.3.2 Settlement of Employee Benefits: Employee benefits include benefits provided:

- To employees or

- To their dependants or beneficiaries

And may be settled by payments (or the provision of goods or services) made either directly:

- To the employees; or
- To their spouses; or
- Children; or
- Other dependants; or
- To others, such as insurance companies.

An employee may provide services to an entity on:

- A full-time
- Part-time
- Permanent
- Casual or
- Temporary basis

For the purpose of this Standard, employees include directors and other management personnel.

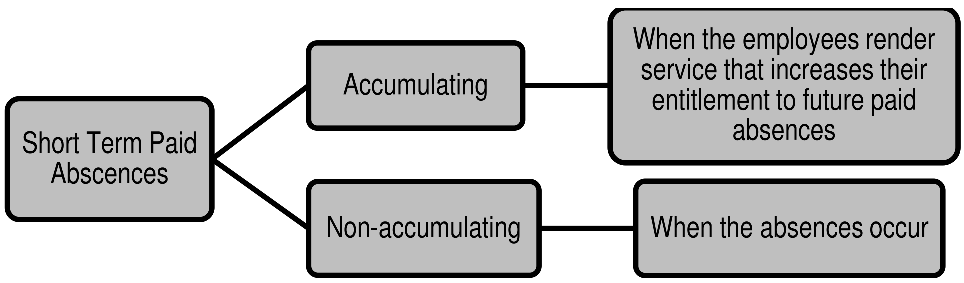
8.11.4 Short-term Employee Benefits

When an employee has rendered service to an entity during an accounting period, the entity shall recognise the undiscounted amount of short-term employee benefits expected to be paid in exchange for that service:

(a) **as a liability** (accrued expense), after deducting any amount already paid. If the amount already paid exceeds the undiscounted amount of the benefits, an entity shall recognise that excess as an **asset** (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund.

(b) **as an expense**, unless another Ind AS requires or permits the inclusion of the benefits in the cost of an asset (For example, Ind AS 2, *'Inventories'*, and Ind AS 16*, 'Property, Plant and Equipment'*).

Short-term paid absences: An entity shall recognise the expected cost of short-term employee benefits in the form of paid absences as follows:



Profit-sharing and bonus plans: An entity shall recognise the expected cost of profit-sharing and bonus payments, only when:

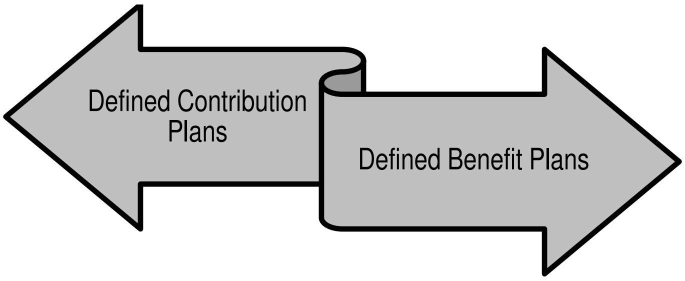
(i) the entity has a present legal or constructive obligation to make such payments as a result of past events; and

(ii) a reliable estimate of the obligation can be made.

A present obligation exists when, and only when, the entity has no realistic alternative but to make the payments.

8.11.5 Post-Employment Benefits

Post-employment benefit plans are classified as either defined contribution plans or defined benefit plans, depending on the economic substance of the plan as derived from its principal terms and conditions.



8.11.5.1 Defined Contribution Plans: The entity's legal or constructive obligation is limited to the amount that it agrees to contribute to the fund. Thus, the amount of the post-employment benefits received by the employee is determined by the amount of contributions paid by an entity (and perhaps also the employee) to a post-employment benefit plan or to an insurance company, together with investment returns arising from the contributions.

In consequence, actuarial risk (that benefits will be less than expected) and investment risk (that assets invested will be insufficient to meet expected benefits) fall, in substance, on the employee.

Recognition and measurement: When an employee has rendered service to an entity during a period, the entity shall recognise the contribution payable to a defined contribution plan in exchange for that service:

(a) as a liability (accrued expense), after deducting any contribution already paid. If the contribution already paid exceeds the contribution due for service before the end of the reporting period, an entity shall recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund.

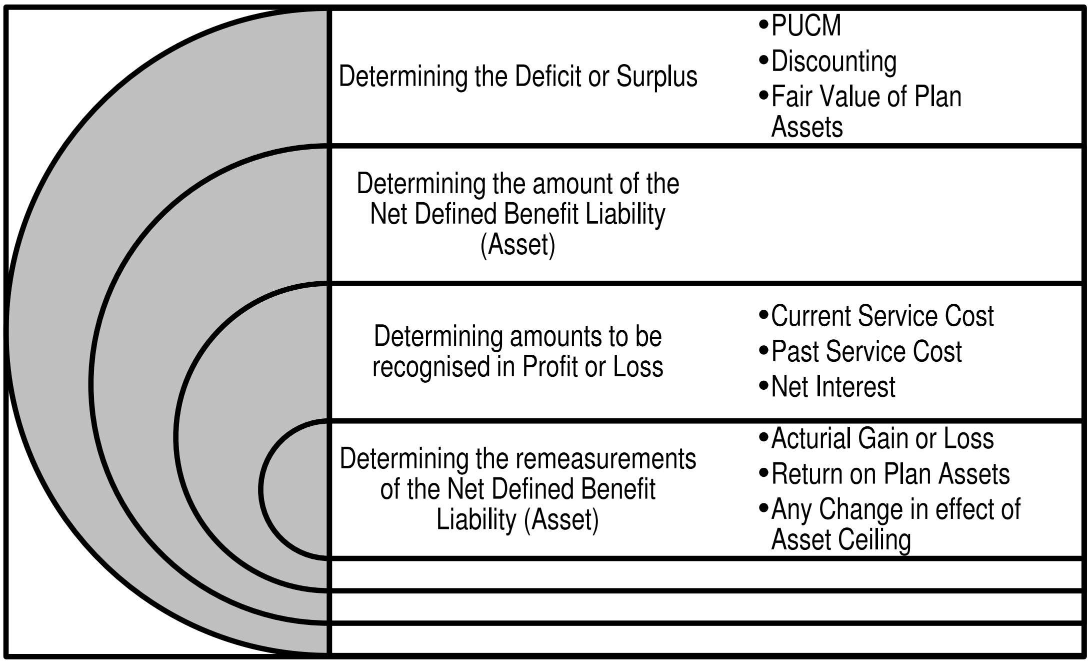
(b) as an expense, unless another Ind AS requires or permits the inclusion of the contribution in the cost of an asset (For example, Ind AS 2 and Ind AS 16).

> **Note:** When contributions to a defined contribution plan are not expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related service, they shall be discounted using discount rate.

8.11.5.2 Defined Benefit Plans

- The entity's obligation is to provide the agreed benefits to current and former employees; and
- Actuarial risk (that benefits will cost more than expected) and investment risk fall, in substance, on the entity. If actuarial or investment experience are worse than expected, the entity's obligation may be increased.

Recognition and Measurement:



Accounting by an entity for defined benefit plans involves the following steps:

(A) Determining the deficit or surplus. This involves:

(i) using an actuarial technique, the projected unit credit method, to make a reliable estimate of the ultimate cost to the entity of the benefit that employees have earned in return for their service in the current and prior periods.

(ii) discounting that benefit in order to determine the present value of the defined benefit obligation and the current service cost.

(iii) deducting the fair value of any plan assets from the present value of the defined benefit obligation.

(B) Determining the amount of the net defined benefit liability (asset) as the amount of the deficit or surplus determined in (A), adjusted for any effect of limiting a net defined benefit asset to the asset ceiling.

(C) Determining amounts to be recognised in profit or loss:

   (i) current service cost.

   (ii) any past service cost and gain or loss on settlement.

   (iii) net interest on the net defined benefit liability (asset).

(D) Determining the remeasurements of the net defined benefit liability (asset), to be recognised in other comprehensive income, comprising:

   (i) actuarial gains and losses;

   (ii) return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset); and

   (iii) any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).

8.11.6 Other Long-term Employee Benefits

Other long-term employee benefits are all employee benefits other than short-term employee benefits, post-employment benefits and termination benefits.

Recognition and Measurement

The Standard does not require the measurement of other long-term employee benefits to the same degree of uncertainty as the measurement of post-employment benefits. The Standard requires a simplified method of accounting for other long-term employee benefits. Unlike the accounting required for post-employment benefits, this method does not recognise re-measurements in other comprehensive income.

For other long-term employee benefits, an entity shall recognise the net total of the following amounts in profit or loss, except to the extent that another Ind AS requires or permits their inclusion in the cost of an asset:

- Service cost;
- Net interest on the net defined benefit liability (asset); and
- Remeasurements of the net defined benefit liability (asset).

8.11.7 Termination Benefits

Termination benefits are employee benefits provided in exchange for the termination of an employee's employment as a result of either:

(a) an entity's decision to terminate an employee's employment before the normal retirement date; or

(b) an employee's decision to accept an offer of benefits in exchange for the termination of employment.

Recognition and Measurement

An entity shall recognise a liability and expense for termination benefits at the earlier of the following dates:

(a) when the entity can no longer withdraw the offer of those benefits; and

(b) when the entity recognises costs for a restructuring that is within the scope of Ind AS 37 and involves the payment of termination benefits.

An entity shall measure termination benefits on initial recognition, and shall measure and recognise subsequent changes, in accordance with the nature of the employee benefit, provided that if the termination benefits are an enhancement to post-employment benefits, the entity shall apply the requirements for post-employment benefits. Otherwise:

(i) if the termination benefits are expected to be settled wholly before twelve months after the end of the annual reporting period in which the termination benefit is recognised, the entity shall apply the requirements for short-term employee benefits.

(ii) if the termination benefits are not expected to be settled wholly before twelve months after the end of the annual reporting period, the entity shall apply the requirements for other long-term employee benefits.

8.11.8 Major Changes in Ind AS 19 vis-à-vis IAS* 19 Not Resulting in Carve Outs

1. ***Discount Rate*: ** According to Ind AS 19, the rate to be used to discount postemployment benefit obligations (both funded and unfunded) shall be determined by reference to the market yields on government bonds whereas under IAS 19, the government bonds can be used only where there is no deep market of high quality corporate bonds. However, requirements given in IAS 19 in this regard have been retained with appropriate modifications for currencies other than Indian rupee.
2. ***Example on Gratuity:*** To illustrate treatment of gratuity subject to ceiling under Indian Gratuity Rules, an example has been added in Ind AS 19.
3. ***Appendix B of Ind AS 19:*** In Appendix B of Ind AS 19, paragraph of IFRIC 14 dealing with reason for amending IFRIC 14 has not been included.

8.11.9 Major Changes in Ind AS 19 vis-à-vis Notified AS 15

(i) Constructive Obligations: In Ind AS 19, employee benefits arising from constructive obligations are also covered whereas the existing AS 15 does not deal with the same.

(ii) Definition of Employee: As per the existing standard, the term 'employee' includes whole-time directors whereas under Ind AS 19 the term includes directors.

(iii) Other Definitions: Definitions of short-term employee benefits, other long-term employee benefits, and past service cost as per the existing AS 15 have been changed in Ind AS 19.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

(iv) ***Contractual Agreement between a Multi-employer Plan and its Participants:*** Ind AS 19 deals with situations where there is a contractual agreement between a multi-employer plan and its participants that determines how the surplus in the plan will be distributed to the participants (or the deficit funded). The existing AS 15 does not deal with it.

(v) ***Participation in a Defined Benefit Plan Sharing Risks Between Various Entities under Common Control:*** As per Ind AS 19, participation in a defined benefit plan sharing risks between various entities under common control is a related party transaction for each group entity and some disclosures are required in the separate or individual financial statements of an entity whereas the existing AS 15 does not contain similar provisions.

(vi) ***Qualified Actuary:*** Ind AS 19 encourages, but does not require, an entity to involve a qualified actuary in the measurement of all material post-employment benefit obligations whereas the existing standard, though does not require involvement of a qualified actuary, does not specifically encourage the same.

(vii) ***Recognition of Actuarial Gains and Losses:*** Actuarial valuation is based on certain assumptions. Changes in these assumptions give rise to actuarial gains and losses, for example, changes in estimates of salary or medical cost. Existing AS 15 requires recognition of actuarial gains and losses immediately in the profit and loss but Ind AS 19 requires that the same shall be recognised in other comprehensive income and should not be recognised in profit or loss.

(viii) ***Financial Assumptions:*** Ind AS 19 makes it clear that financial assumptions shall be based on market expectations, at the end of the reporting period, for the period over which the obligations are to be settled whereas the existing standard does not clarify the same.

(ix) ***Discounting of Post-employment Benefit Obligations:*** As per Ind AS 19, subsidiaries, associates, joint ventures and branches domiciled outside India shall discount post-employment benefit obligations arising on account of post-employment benefit plans using the rate determined by reference to market yields at the end of the reporting period on high quality corporate bonds. In case, such subsidiaries, associates, joint ventures and branches are domiciled in countries where there is no deep market in such bonds, the market yields (at the end of the reporting period) on government bonds of that country shall be used.

As per existing AS 15, the rate used to discount post-employment benefit obligations should always be determined by reference to market yields at the balance sheet date on government bond.

(x) ***Timing of Recognition of Termination Benefits:*** Under Ind AS 19, more guidance has been given for timing of recognition of termination benefits. Recognition criteria for termination benefits under the revised standard differ from the criteria prescribed in the existing standard.

(xi) ***Guidance on Interaction of Ceiling of Asset Recognition and Minimum Funding Requirement:*** Ind AS 19 gives guidance on the interaction of ceiling of asset recognition and minimum funding requirement in the case of defined benefit obligations, whereas this guidance is not available in the existing standard.

8.12 Ind AS 20: Accounting for Government Grants and Disclosure of Government Assistance

8.12.1 Scope

This Standard shall be applied in:

- Accounting for and the disclosure of government grants and
- In the disclosure of other forms of government assistance.

This Standard does not deal with:

Ind AS 20 does not deal with

- The special problems arising in accounting for government grants in financial statements reflecting the effects of changing prices or in supplementary information of a similar nature
- Government assistance that is provided for an entity in the form of benefits that are available in determining taxable profit or tax loss, or are determined or limited on the basis of income tax liability.
- Government participation in the ownership of the entity
- Government grants covered by Ind AS 41 on Agriculture

8.12.2 Government Grants

Government grants are sometimes called by other names such as subsidies, subventions, or premiums.

Government grants are

- assistance by **government**
- in the form of transfers of resources to an entity in return for past or future compliance with certain conditions
- relating to the operating activities of the entity.

They exclude those forms of government assistance which cannot reasonably have a value placed upon them and transactions with government which cannot be distinguished from the normal trading transactions of the entity.

8.12.2.1 Forgivable Loan: Forgivable loans are loans which the lender undertakes to waive repayment under certain prescribed conditions.

A forgivable loan from government is treated as a government grant when there is reasonable assurance that the entity will meet the terms for forgiveness of the loan.

8.12.2.2 Government Loan at a below Market Rate of Interest: The benefit of a government loan at a below-market rate of interest is treated as a government grant.

The loan shall be recognised and measured in accordance with Ind AS 109 Financial Instruments: Recognition and Measurement. The benefit of the below-market rate of interest shall be measured as the difference between the initial carrying value of the loan determined in accordance with Ind AS 109 and the proceeds received.

The benefit is accounted for in accordance with this Standard. The entity shall consider the conditions and obligations that have been, or must be, met when identifying the costs for which the benefit of the loan is intended to compensate.

8.12.3 Government Assistance

- is action by government
- designed to provide an economic benefit specific to an entity or range of entities qualifying under certain criteria.

Government assistance for the purpose of this Standard does not include benefits provided only indirectly through action affecting general trading conditions, such as the provision of infrastructure in development areas or the imposition of trading constraints on competitors.

In this Standard, government assistance does not include the provision of infrastructure by improvement to the general transport and communication network and the supply of improved facilities such as irrigation or water reticulation which is available on an ongoing indeterminate basis for the benefit of an entire local community.

8.12.4 Recognition and Presentation of Government Grants

Government grants, including non-monetary grants at fair value, shall not be recognised until there is reasonable assurance that:

(a) the entity will comply with the conditions attaching to them; and

(b) the grants will be received.

A government grant may take the form of a transfer of a non-monetary asset, such as land or other resources, for the use of the entity. In these circumstances, the fair value of the non-monetary asset is assessed and both grant and asset are accounted for at that fair value.

Government grants shall be recognised in profit or loss on a systematic basis over the periods in which the entity recognises as expenses the related costs for which the grants are intended to compensate.

8.12.4.1 Grants Related to Assets: Grants related to assets are Government grants whose primary condition is that an entity qualifying for them should purchase, construct or otherwise acquire long-term assets. Subsidiary conditions may also be attached restricting the type or location of the assets or the periods during which they are to be acquired or held.

Government grants related to assets, including non-monetary grants at fair value, shall be presented in the balance sheet by setting up the grant as deferred income.

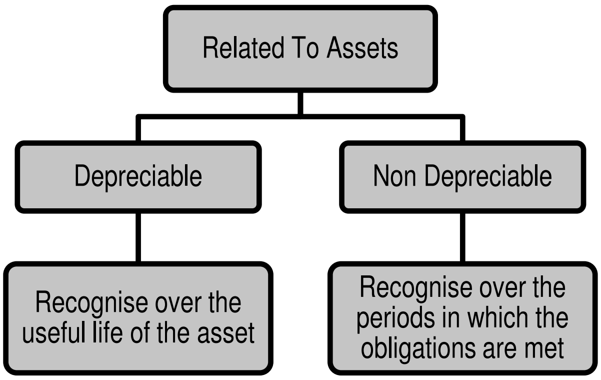
1. **Grants Related to Depreciable Assets:** Grants related to depreciable assets are usually recognised in profit or loss over the periods and in the proportions in which depreciation expense on those assets is recognised.

2. **Grants Related to Non-depreciable Assets:** Grants related to non-depreciable assets may also require the fulfilment of certain obligations and would then be recognised in profit or loss over the periods that bear the cost of meeting the obligations.

For example: A grant of land may be conditional upon the erection of a building on the site and it may be appropriate to recognise the grant in profit or loss over the life of the building.

Presentation of Grants Related to Assets: Government grants related to assets, including non-monetary grants at fair value, shall be

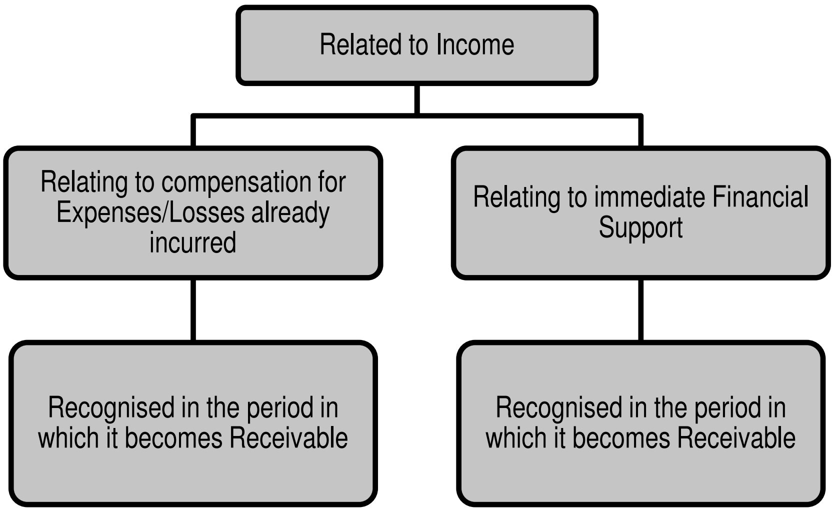
- Presented in the balance sheet by setting up the grant as deferred income.
- The grant set up as deferred income is recognised in profit or loss on a systematic basis over the useful life of the asset.
- The purchase of assets and the receipt of related grants can cause major movements in the cash flow of an entity. For this reason and in order to show the gross investment in assets, such movements are disclosed as separate items in the statement of cash flows (as a Financing Activity).



8.12.4.2 Grants related to Income: Grants related to income are Government grants other than those related to assets. Grants related to income are presented as part of profit or loss, either separately or under a general heading such as 'Other income'; alternatively, they are deducted in reporting the related expenses.

Presentation of Grants related to Income: Grants related to income are presented as a

- As a part of profit and loss, either separately or under a general heading such as 'Other income';
- Alternatively, they are deducted in reporting the related expense.



8.12.4.3 Grants Receivable as Compensation for Expenses or Losses with no Future Related Costs: A government grant that becomes receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the entity with no future related costs shall be recognised in profit or loss of the period in which it becomes receivable.

8.12.4.4 Grants Received as a Package: Grants are sometimes received as part of a package of financial or fiscal aids to which a number of conditions are attached. In such cases, care is needed in identifying the conditions giving rise to costs and expenses which determine the periods over which the grant will be earned. It may be appropriate to allocate part of a grant on one basis and part on another.

8.12.5 Repayment of Government Grants

A government grant that becomes repayable shall be accounted for as a change in accounting estimate as per Ind AS 8 'Accounting Policies, Changes in Accounting Estimates and Errors'.

8.12.5.1 Repayment of a Grant Related to Income: Repayment of a grant related to income shall be applied first against any unamortised deferred credit recognised in respect of the grant.

To the extent that the repayment exceeds any such deferred credit, or when no deferred credit exists, the repayment shall be recognised immediately in profit or loss.

8.12.5.2 Repayment of a Grant Related to an Asset: Repayment of a grant related to an asset shall be recognised by reducing the deferred income balance by the amount repayable.

8.12.6 Government Assistance

Excluded from the definition of government grants are certain forms of government assistance which cannot reasonably have a value placed upon them and transactions with government which cannot be distinguished from the normal trading transactions of the entity.

Examples of assistance that cannot reasonably have a value placed upon them are:

- Free technical or marketing advice and
- The provision of guarantees.

Appendix A of Ind AS 20 address the issue that whether government assistance is a government grant within the scope of Ind AS 20 and, therefore, should be accounted for in accordance within the Standard. The Appendix prescribes that government assistance to entities meets the definition of government grants in Ind AS 20, even if there are no conditions specifically relating to the operating activities of the entity other than the requirement to operate in certain regions or industry sectors. The Appendix provides that such grants shall not be credited directly to shareholders' interests.

8.12.7 Disclosures

The following matters shall be disclosed:

(a) the accounting policy adopted for government grants, including the methods of presentation adopted in the financial statements;

(b) the nature and extent of government grants recognised in the financial statements and an indication of other forms of government assistance from which the entity has directly benefited; and

(c) unfulfilled conditions and other contingencies attaching to government assistance that has been recognised.

8.12.8 Major Changes in Ind AS 20 vis-à-vis IAS* 20 Not Resulting in Carve Outs

1. ***Non-Monetary Grant:*** IAS 20 gives an option to measure non-monetary government grants either at their fair value or at nominal value. Ind AS 20 requires measurement of such grants only at their fair value. Thus, the option to measure these grants at nominal value is not available under Ind AS 20.
2. ***Grant related to Assets:*** IAS 20 gives an option to present the grants related to assets, including non-monetary grants at fair value in the balance sheet either by setting up the grant as deferred income or by deducting the grant in arriving at the carrying amount of the asset. Ind AS 20 requires presentation of such grants in balance sheet only by setting up the grant as deferred income. Thus, the option to present such grants by deduction of the grant in arriving at the carrying amount of the asset is not available under Ind AS 20.
3. ***Presentation of Grants Related to Income:*** IAS 20 requires presentation of grants related to income in the separate income statement. This requirement is not provided in Ind AS 20 consequential to the removal of option regarding two statement approach in Ind AS 1. Ind AS 1 requires that the components of profit or loss and components of other comprehensive income shall be presented as a part of the statement of profit and loss.

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

8.12.9 Major Changes in Ind AS 20 vis-à-vis Notified AS 12

(i) ***Government Assistance which does not fall within the Definition of Government Grants:*** Ind AS 20 deals with the other forms of government assistance which do not fall within the definition of government grants. It requires that an indication of other forms of government assistance from which the entity has directly benefited should be disclosed in the financial statements. However, AS 12 does not deal with such government assistance.

(ii) ***Grant in respect of Non Depreciable Assets:*** AS 12 requires that in case the grant is in respect of non-depreciable assets, the amount of the grant should be shown as capital reserve which is a part of shareholders' funds. It further requires that if a grant related to a non-depreciable asset requires the fulfilment of certain obligations, the grant should be credited to income over the same period over which the cost of meeting such obligations is charged to income. AS 12 also gives an alternative to treat such grants as a deduction from the cost of such asset.

As compared to the above, Ind AS 20, is based on the principle that all government grants would normally have certain obligations attached to them and these grants should be recognised as income over the periods which bear the cost of meeting the obligation. It, therefore, specifically prohibits recognition of grants directly in the shareholders' funds.

(iii) ***Government Grants in the Nature of Promoters Contribution:*** AS 12 recognises that some government grants have the characteristics similar to those of promoters' contribution. It requires that such grants should be credited directly to capital reserve and treated as a part of shareholders' funds. Ind AS 20 does not recognise government grants of the nature of promoters' contribution. As stated at (ii) above, Ind AS 20 is based on the principle that all government grants would normally have certain obligations attached to them and it, accordingly, requires all grants to be recognised as income over the periods which bear the cost of meeting the obligation.

(iv) ***Valuation of Non-monetary Grants given Free or at a Concessional Rate:*** AS 12 requires that government grants in the form of non-monetary assets, given at a concessional rate, should be accounted for on the basis of their acquisition cost. In case a non-monetary asset is given free of cost, it should be recorded at a nominal value. Ind AS 20 requires to value non-monetary grants at their fair value, since it results into presentation of more relevant information and is conceptually superior as compared to valuation at a nominal amount.

(v) ***Accounting for Grant Related to Assets including Non-monetary Grant:*** Existing AS 12 gives an option to present the grants related to assets, including non-monetary grants at fair value in the balance sheet either by setting up the grant as deferred income or by deducting the grant from the gross value of asset concerned in arriving at its book value. Ind AS 20 requires presentation of such grants in balance sheet only by setting up the grant as deferred income. Thus, the option to present such grants by deduction of the grant in arriving at its book value is not available under Ind AS 20.

(vi) ***Government Assistance:*** Ind AS 20 includes Appendix A which deals with Government Assistance—No Specific Relation to Operating Activities.

(vii) ***Loans at Concessional Rate:*** Ind AS 20 requires that loans received from a government that have a below-market rate of interest should be recognised and measured in accordance with Ind AS 109 (which requires all loans to be recognised at fair value, thus requiring interest to be imputed to loans with a below-market rate of interest) whereas AS 12 does not require so.

8.13 Ind AS 21: The Effects of Changes in Foreign Exchange Rates

8.13.1 Objective

An entity may carry on foreign activities in two ways:

1. It may have transactions in foreign currencies or
2. It may have foreign operations.

In addition, an entity may present its financial statements in a foreign currency.

The objective of this Standard is to prescribe how to:

- Include foreign currency transactions and foreign operations in the financial statements of an entity
- How to translate financial statements into a presentation currency

The principal issues are which exchange rate(s) to use and how to report the effects of changes in exchange rates in the financial statements.

8.13.2 Scope

This Standard shall be applied:

(a) in accounting for transactions and balances in foreign currencies

(b) in translating the results and financial position of foreign operations that are included in the financial statements of the entity by consolidation or the equity method; and

(c) in translating an entity's results and financial position into a presentation currency.

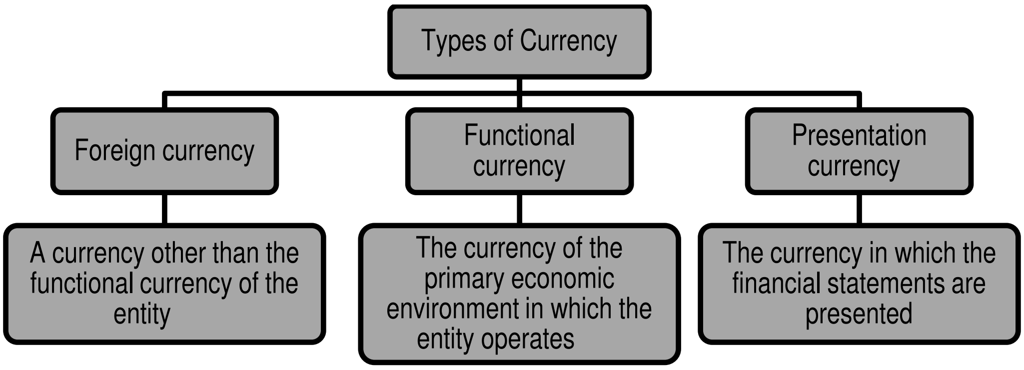
This Standard does not apply to

(a) hedge accounting for foreign currency items, including the hedging of a net investment in a foreign operation. Ind AS 109 applies to hedge accounting.

(b) the presentation in a statement of cash flows of the cash flows arising from transactions in a foreign currency, or to the translation of cash flows of a foreign operation

(c) long-term foreign currency monetary items for which an entity has opted for the exemption.

8.13.3 Types of Currency



8.13.4 Functional Currency

Functional currency is the currency of the primary economic environment in which the entity operates. The primary economic environment in which an entity operates is normally the one in which it primarily generates and expends cash. An entity considers the following factors in determining its functional currency:

(a) the currency:

   (i) that mainly influences sales prices for goods and services (this will often be the currency in which sales prices for its goods and services are denominated and settled); and

   (ii) of the country whose competitive forces and regulations mainly determine the sales prices of its goods and services.

(b) the currency that mainly influences labour, material and other costs of providing goods or services (this will often be the currency in which such costs are denominated and settled).

The following factors may also provide evidence of an entity's functional currency:

(a) the currency in which funds from financing activities (i.e. issuing debt and equity instruments) are generated.

(b) the currency in which receipts from operating activities are usually retained.

Change in Functional Currency: When there is a change in an entity's functional currency, the entity shall apply the translation procedures applicable to the new functional currency **prospectively** from the date of the change.

8.13.5 Reporting Foreign Currency Transactions in the Functional Currency

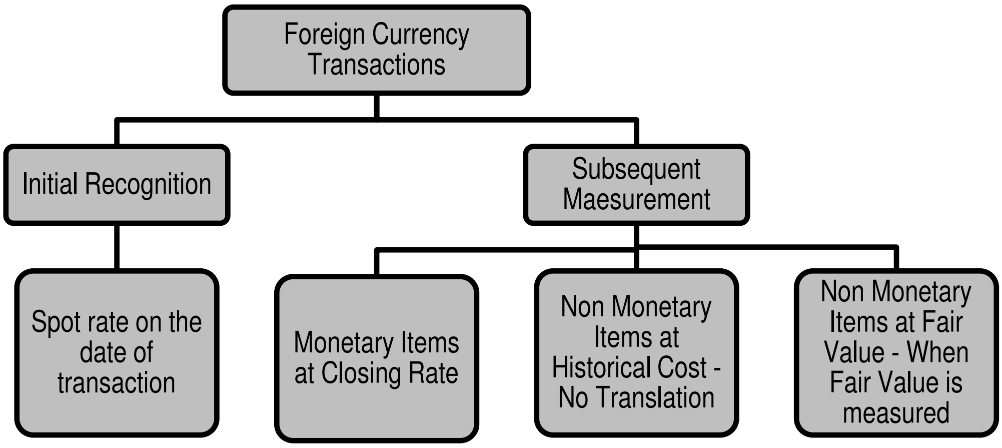
8.13.5.1 Initial Recognition: A foreign currency transaction shall be recorded, on initial recognition in the functional currency, by applying to the foreign currency amount the spot exchange rate between the functional currency and the foreign currency at the date of the transaction.

8.13.5.2 Reporting at the End of Subsequent Reporting Periods: At the end of each reporting period:

(a) foreign currency monetary items shall be translated using the closing rate;

(b) non-monetary items that are measured in terms of historical cost in a foreign currency shall be translated using the exchange rate at the date of the transaction; and

(c) non-monetary items that are measured at fair value in a foreign currency shall be translated using the exchange rates at the date when the fair value was measured.



8.13.5.3 Recognition of Exchange Differences: Exchange differences arising on the settlement of monetary items or on translating monetary items at rates different from those at which they were translated on initial recognition during the period or in previous financial statements shall be recognised in profit or loss in the period in which they arise.

When a gain or loss on a non-monetary item is recognised in other comprehensive income, any exchange component of that gain or loss shall be recognised in other comprehensive income. Conversely, when a gain or loss on a non-monetary item is recognised in profit or loss, any exchange component of that gain or loss shall be recognised in profit or loss.

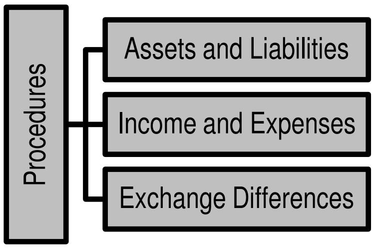
Exchange differences arising on a monetary item that forms part of a reporting entity's net investment in a foreign operation shall be recognised in profit or loss in the separate financial statements of the reporting entity or the individual financial statements of the foreign operation, as appropriate. In the financial statements that include the foreign operation and the reporting entity (e.g. consolidated financial statements when the foreign operation is a subsidiary), such exchange differences shall be recognised initially in other comprehensive income and reclassified from equity to profit or loss on disposal of the net investment.

8.13.6 Translation to the Presentation Currency from/other than the Functional Currency

An entity may present its financial statements in any currency (or currencies).If the presentation currency differs from the entity's functional currency, it translates its results and financial position into the presentation currency.

For example, when a group contains individual entities with different functional currencies, the results and financial position of each entity are expressed in a common currency so that consolidated financial statements may be presented.

8.13.6.1 The Results and Financial Position of an Entity whose Functional Currency is NOT the Currency of a Hyperinflationary Economy : The results and financial position of an entity whose functional currency is **NOT** the currency of a hyperinflationary economy shall be translated into a different presentation currency using the following procedures:



1. ***Assets and liabilities for each balance sheet presented (i.e. including comparatives):*** Translated at the closing rate at the date of that balance sheet
2. ***Income and expenses for each statement of profit and loss presented (i.e. including comparatives):*** Translated at exchange rates at the dates of the transactions.
3. ***All resulting exchange differences:*** Recognised in other comprehensive income

8.13.6.2 The Results and Financial Position of an Entity whose Functional Currency is the Currency of a Hyperinflationary Economy: The results and financial position of an entity whose functional currency is the currency of a hyperinflationary economy shall be translated into a different presentation currency using the following procedures:

(a) all amounts (i.e. assets, liabilities, equity items, income and expenses, including comparatives) shall be translated at the closing rate at the date of the most recent balance sheet, except that

(b) when amounts are translated into the currency of a non-hyperinflationary economy, comparative amounts shall be those that were presented as current year amounts in the relevant prior year financial statements (i.e. not adjusted for subsequent changes in the price level or subsequent changes in exchange rates).

8.13.7 Foreign Operation

Foreign operation is an entity that is a Subsidiary, Associate, Joint arrangement or Branch of a reporting entity the activities of which are based or conducted in a country or currency other than those of the reporting entity.

8.13.7.1 Approach required by this Standard

- In preparing financial statements, each entity—whether a stand-alone entity, an entity with foreign operations (such as a parent) or a foreign operation (such as a subsidiary or branch)—determines its functional currency.
- Many reporting entities comprise a number of individual entities (e.g. A group is made up of a parent and one or more subsidiaries). It is necessary for the results and financial position of each individual entity included in the reporting entity to be translated into the currency in which the reporting entity presents its financial statements. This Standard permits the presentation currency of a reporting entity to be any currency (or currencies). The results and financial position of any individual entity within the reporting entity whose functional currency differs from the presentation currency are translated in accordance with this AS.
- This Standard also permits a stand-alone entity preparing financial statements or an entity preparing separate financial statements in accordance with Ind AS 27, 'Separate Financial Statements', to present its financial statements in any currency (or currencies). If the entity's presentation currency differs from its functional currency, its results and financial position are also translated into the presentation currency.

8.13.7.2 Translation of a Foreign Operation: Any goodwill arising on the acquisition of a foreign operation and any fair value adjustments to the carrying amounts of assets and liabilities arising on the acquisition of that foreign operation shall be treated as assets and liabilities of the foreign operation. Thus they shall be expressed in the functional currency of the foreign operation and shall be translated at the closing rate.

8.13.7.3 Disposal or Partial Disposal of a Foreign Operation: On the disposal of a foreign operation, the cumulative amount of the exchange differences relating to that foreign operation, recognised in other comprehensive income and accumulated in the separate component of equity, shall be reclassified from equity to profit or loss (as a reclassification adjustment) when the gain or loss on disposal is recognised (Ind AS 1, Presentation of Financial Statements).

On the partial disposal of a subsidiary that includes a foreign operation, the entity shall re-attribute the proportionate share of the cumulative amount of the exchange differences recognised in other comprehensive income to the non-controlling interests in that foreign operation. In any other partial disposal of a foreign operation the entity shall reclassify to profit or loss only the proportionate share of the cumulative amount of the exchange differences recognised in other comprehensive income.

8.13.8 Major Change in Ind AS 21 vis-à-vis IAS* 21 Not Resulting in Carve Out

In case of Change in Functional Currency: When there is a change in functional currency, IAS 21 requires disclosure of that fact and the reason for the change in functional currency. Ind AS 21 requires an additional disclosure of the date of change in functional currency.

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

8.13.9 Major Changes in Ind AS 21 vis-à-vis Notified AS 11

(i) ***Forward Exchange Contracts and other similar Financial Instruments:*** Ind AS 21 excludes from its scope forward exchange contracts and other similar financial instruments, which are treated in accordance with Ind AS 109. The existing AS 11 does not such exclude accounting for such contracts.

(ii) ***Exchange Differences arising on Translation of Certain Long-term Monetary Items from Foreign Currency to Functional Currency:*** Existing AS 11, gives an option to recognise exchange differences arising on translation of certain long-term monetary items from foreign currency to functional currency directly in equity, to be transferred to profit or loss over the life of the relevant liability/asset if such items are not related to acquisition of fixed assets. Where such items are related to acquisition of fixed assets, the foreign exchange differences can be recognised as part of the cost of the asset.

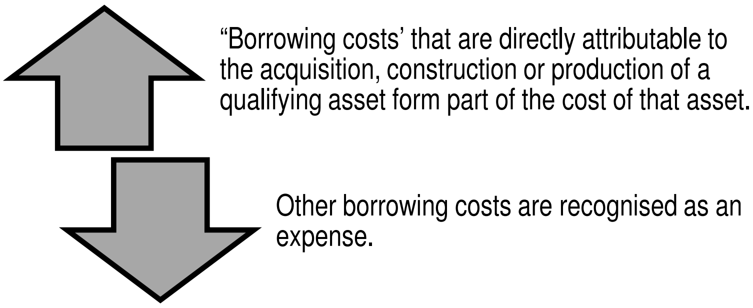
Ind AS 21 does not give the above option. However, Ind AS 21 does not apply to long-term foreign currency monetary items recognised in the financial statements before the beginning of the first Ind AS financial reporting period as per the previous GAAP, i.e. AS 11. However, as provided in Ind AS 101, such an entity may continue to apply the accounting policy so opted for such long-term foreign currency monetary items as per the previous GAAP.

(iii) ***Approach for Translation:*** The existing AS 11 is based on integral foreign operations and non-integral foreign operations approach for accounting for a foreign operation, whereas Ind AS 21 is based on the functional currency approach. However, in Ind AS 21 the factors to be considered in determining an entity's functional currency are similar to the indicators in existing AS 11 to determine the foreign operations as non-integral foreign operations. As a result, despite the difference in the term, there are no substantive differences in respect of accounting of a foreign operation.

(iv) ***Presentation Currency:*** As per Ind AS 21, presentation currency can be different from local currency and it gives detailed guidance in this regard, whereas the existing AS 11 does not explicitly state so.

8.14 Ind AS 23: Borrowing Costs

8.14.1 Core Principle



8.14.2 Scope

- An entity shall apply this Standard in accounting for borrowing costs.
- The Standard does not deal with the actual or imputed cost of equity, including preferred capital **not classified as a liability (Irredeemable Preferred Capital).**

An entity is **not required** to apply the Standard to borrowing costs directly attributable to the acquisition, construction or production of:

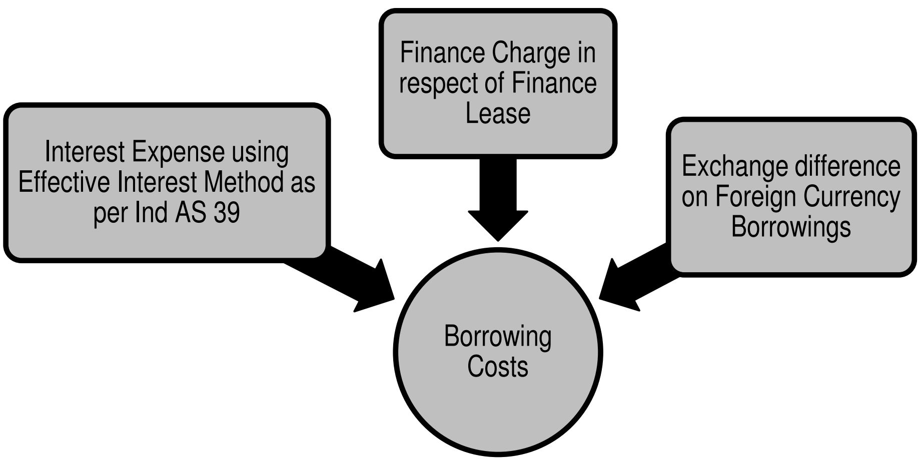
- A qualifying asset measured at fair value {For example: A biological asset}
- Inventories that are manufactured, or otherwise produced, in large quantities on a repetitive basis

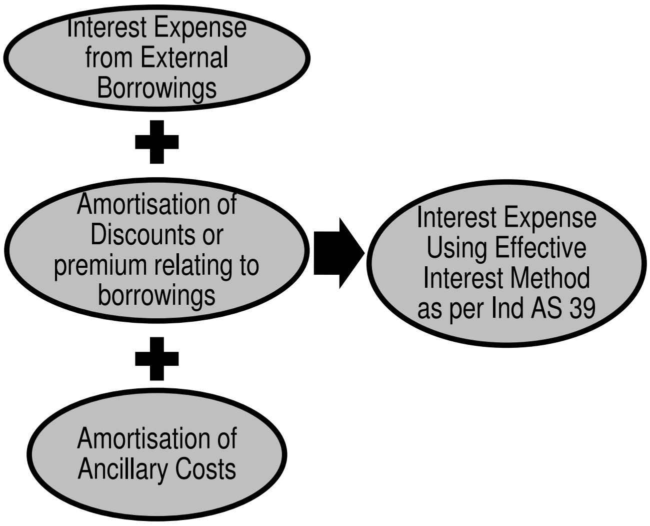
8.14.3 Borrowing Costs

Borrowing costs **are interest and other costs** that an entity incurs in connection with the borrowing of funds.

Borrowing costs may include:

1. interest expense calculated using the effective interest method as described in Ind AS 39 *'Financial Instruments: Recognition and Measurement'*;
2. finance charges in respect of finance leases recognised in accordance with Ind AS 17 *'Leases'*; and
3. exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs.





8.14.4 Exchange Difference

With regard to exchange difference required to be treated as borrowing cost, the manner of arriving at the adjustments stated therein shall be as follows:

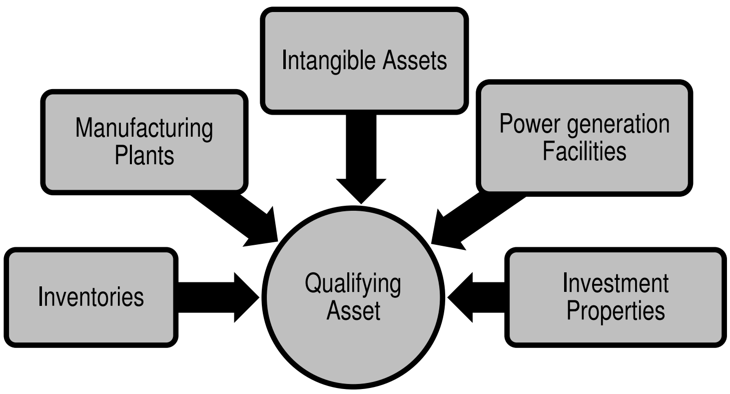
(i) the adjustment should be of an amount which is equivalent to the extent to which the exchange loss does not exceed the difference between the cost of borrowing in functional currency when compared to the cost of borrowing in a foreign currency.

(j) where there is an unrealised exchange loss which is treated as an adjustment to interest and subsequently there is a realised or unrealised gain in respect of the settlement or translation of the same borrowing, the gain to the extent of the loss previously recognised as an adjustment should also be recognised as an adjustment to interest.

8.14.5 Qualifying Asset

A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

Depending on the circumstances, any of the following may be qualifying assets:

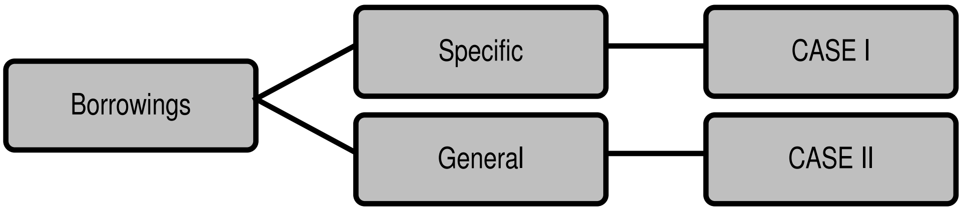


Financial assets, and inventories that are manufactured, or otherwise produced, over a short period of time, are not qualifying assets. Assets that are ready for their intended use or sale when acquired are not qualifying assets.

8.14.6 Recognition

Principle 1: An entity shall capitalise borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset as part of the cost of that asset.

Principle 2: An entity shall recognise other borrowing costs as an expense in the period in which it incurs them.



CASE I: To the extent that an entity borrows funds **specifically** for the purpose of obtaining a qualifying asset, the entity shall determine:

The amount of borrowing costs eligible for capitalisation as the actual borrowing costs incurred on that borrowing during the period **less** any investment income on the temporary investment of those borrowings

CASE II: To the extent that an entity borrows funds **generally** and uses them for the purpose of obtaining a qualifying asset, the entity shall determine the amount of borrowing costs eligible for capitalisation by applying a capitalisation rate to the expenditures on that asset.

The capitalisation rate shall be the weighted average of the borrowing costs applicable to the borrowings of the entity that are outstanding during the period, other than borrowings made specifically for the purpose of obtaining a qualifying asset.

The amount of borrowing costs that an entity capitalises during a period shall not exceed the amount of borrowing costs it incurred during that period.

8.14.6.1 Commencement of Capitalisation: An entity shall begin capitalising borrowing costs as part of the cost of a qualifying asset on the commencement date.

The commencement date for capitalisation is the date when the entity first meets **ALL** of the following conditions:

(a) it incurs expenditures for the asset;

(b) it incurs borrowing costs; and

(c) it undertakes activities that are necessary to prepare the asset for its intended use or sale.

8.14.6.2 Suspension of Capitalisation: An entity shall suspend capitalisation of borrowing costs during extended periods in which it suspends active development of a qualifying asset.

An entity may incur borrowing costs during an extended period in which it suspends the activities necessary to prepare an asset for its intended use or sale. Such costs are costs of holding partially completed assets and do not qualify for capitalisation.

Exception:

1. An entity does not normally suspend capitalising borrowing costs during a period when it carries out substantial technical and administrative work.
2. An entity also does not suspend capitalising borrowing costs when a temporary delay is a necessary part of the process of getting an asset ready for its intended use or sale.

For example: Capitalisation continues during the extended period that high water levels delay construction of a bridge, if such high water levels are common during the construction period in the geographical region involved.

8.14.6.3 Cessation of Capitalisation: An entity shall cease capitalising borrowing costs when **substantially all the activities** necessary to prepare the qualifying asset for its intended use or sale are complete.

8.14.7 Disclosures

An entity shall disclose

(a) the amount of borrowing costs capitalised during the period; and

(b) the capitalisation rate used to determine the amount of borrowing costs eligible for capitalisation.

8.14.8 Major Change in Ind AS 23 vis-à-vis IAS* 23 Not Resulting in Carve Out

Exchange Difference: IAS 23 provides no guidance as to how the adjustment for exchange differences arising from foreign currency borrowings to the extent that they are regarded as an adjustment to interest costs (as prescribed in paragraph 6(e)) is to be determined. Ind AS 23 provides guidance in this regard.

8.14.9 Major Changes in Ind AS 23 vis-à-vis Notified AS 16

(i) ***Qualifying Asset measured at Fair Value:*** Ind AS 23 does not require an entity to apply this standard to borrowing costs directly attributable to the acquisition, construction or production of a qualifying asset measured at fair value, for example, a biological asset whereas the existing AS 16 does not provide for such scope relaxation.

(ii) ***Applicability to Inventories:*** Ind AS 23 excludes the application of this Standard to borrowing costs directly attributable to the acquisition, construction or production of inventories that are manufactured, or otherwise produced, in large quantities on a repetitive basis whereas existing AS 16 does not provide for such scope relaxation and is applicable

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

to borrowing costs related to all inventories that require substantial period of time to bring them in saleable condition.

(iii) ***Inclusion as Borrowing Costs:*** As per existing AS 16, *Borrowing Costs*, inter alia, include the following:

- interest and commitment charges on bank borrowings and other short-term and long-term borrowings;
- amortisation of discounts or premiums relating to borrowings;
- amortisation of ancillary costs incurred in connection with the arrangement of borrowings;

Ind AS 23 requires to calculate the interest expense using the effective interest rate method as described in Ind AS 109. Certain items therein have been deleted, as some of those components of borrowing costs are considered as the components of interest expense calculated using the effective interest rate method.

(iv) ***Explanation of Substantial Period of Time:*** Existing AS 16 gives explanation for meaning of 'substantial period of time' appearing in the definition of the term 'qualifying asset'. This explanation is not included in Ind AS 23.

(v) ***Reporting in Hyperinflationary Economies:*** Ind AS 23 provides that when Ind AS 29, '*Financial Reporting in Hyperinflationary Economies',* is applied, part of the borrowing costs that compensates for inflation should be expensed as required by that Standard (and not capitalized in respect of qualifying assets). The existing AS 16 does not contain a similar clarification because at present, in India, there is no Standard on '*Financial Reporting in Hyperinflationary Economies'.*

(vi) ***Borrowings of the Parent and its Subsidiaries for Computing Weighted Average:*** Ind AS 23 specifically provides that in some circumstances, it is appropriate to include all borrowings of the parent and its subsidiaries when computing a weighted average of the borrowing costs while in other circumstances, it is appropriate for each subsidiary to use a weighted average of the borrowing costs applicable to its own borrowings. This specific provision is not there in the existing AS 16.

(vii) ***Disclosure of Capitalisation Rate:*** Ind AS 23 requires disclosure of capitalization rate used to determine the amount of borrowing costs eligible for capitalization. The existing AS 16 does not have this disclosure requirement.

8.15 Ind AS 24: Related Party Disclosures

8.15.1 Objective

The objective of this Standard is to ensure that an entity's financial statements contain the disclosures necessary to draw attention to the possibility that its financial position and profit or loss may have been affected by the existence of related parties and by transactions and outstanding balances, including commitments, with such parties.

8.15.2 Scope

This Standard shall be applied in:

- Identifying related party relationships and transactions
- Identifying outstanding balances, including commitments, between an entity and its related parties
- Identifying the circumstances in which disclosure of the items above are required
- Determining the disclosures to be made about those items

This Standard requires disclosure of:

- related party relationships,
- transactions and
- outstanding balances, including commitments,

In the consolidated and separate financial statements of:

- a parent,
- or investors with joint control of, or significant influence over, an investee

Presented in accordance with Indian Accounting Standard (Ind AS) 110 or 27 'Consolidated' and 'Separate Financial Statements'. This Standard also applies to individual financial statements.

This Standard shall not be applied:

- in circumstances where providing such disclosures would conflict with the reporting entity's duties of confidentiality as specifically required in terms of a statute or by any regulator or similar competent authority.
- In case a statute or a regulator or a similar competent authority governing an entity prohibits the entity to disclose certain information which is required to be disclosed as per this Standard, disclosure of such information is not warranted. For example, banks are obliged by law to maintain confidentiality in respect of their customers' transactions and this Standard would not override the obligation to preserve the confidentiality of customers' dealings.

8.15.3 Definition of Related Party and Related Party Transactions

8.15.3.1 A related party is a person or entity that is related to the entity that is preparing its financial statements (in this Standard referred to as the 'reporting entity').

(a) A person or a close member of that person's family is related to a reporting entity if that person:

   (i) has control or joint control of the reporting entity;

   (ii) has significant influence over the reporting entity; or

   (iii) is a member of the key management personnel of the reporting entity or of a parent of the reporting entity.

   Where,

   Close members of the family of a person are those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity including:

   (a) that person's children, spouse or domestic partner, brother, sister, father and mother;

   (b) children of that person's spouse or domestic partner; and

   (c) dependants of that person or that person's spouse or domestic partner.

   The terms **'Control'** and **'Investment entity'**, **'Joint Control'** and **'Significant Influence'** are defined in Ind AS 110, Ind AS 111 and Ind AS 28 respectively and are used in this standard with the meanings specified in those Ind AS's.

   Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity.

(b) An entity is related to a reporting entity if any of the following conditions applies:

   (i) The entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others).

   (ii) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

   (iii) Both entities are joint ventures of the same third party.

   (iv) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

   (v) The entity is a post-employment benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity.

   (vi) The entity is controlled or jointly controlled by a person identified in (a).

   (vii) A person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

   (viii) The entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or to the parent of the reporting entity.

The following are not related parties:

(a) two entities simply because they have a director or other member of key management personnel in common or because a member of key management personnel of one entity has significant influence over the other entity.

(b) Two joint venturers simply because they share joint control of a joint venture.

(c) (i) providers of finance,

(ii) trade unions,

(iii) public utilities, and

(iv) departments and agencies of a **government** that does not control, jointly control or significantly influence the reporting entity, simply by virtue of their normal dealings with an entity (even though they may affect the freedom of action of an entity or participate in its decision-making process).

(c) a customer, supplier, franchisor, distributor or general agent with whom an entity transacts a significant volume of business, simply by virtue of the resulting economic dependence.

8.15.3.2 A related party transaction is a transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged.

8.15.4 Disclosures

Relationships between a parent and its subsidiaries shall be disclosed irrespective of whether there have been transactions between them. An entity shall disclose the name of its parent and, if different, the ultimate controlling party. If neither the entity's parent nor the ultimate controlling party produces consolidated financial statements available for public use, the name of the next most senior parent that does so shall also be disclosed.

An entity shall disclose key management personnel compensation in total and for each of the following categories:

(a) short-term employee benefits;

(b) post-employment benefits;

(c) other long-term benefits;

(d) termination benefits; and

(e) share-based payment.

If an entity has had related party transactions during the periods covered by the financial statements, it shall disclose the nature of the related party relationship as well as information about those transactions and outstanding balances, including commitments, necessary for users to understand the potential effect of the relationship on the financial statements. These disclosure requirements are in addition to those in paragraph 17 of the Standard. At a minimum, disclosures shall include:

(a) the amount of the transactions;

(b) the amount of outstanding balances, including commitments, and:

   (i) their terms and conditions, including whether they are secured, and the nature of the consideration to be provided in settlement; and

   (ii) details of any guarantees given or received;

(c) provisions for doubtful debts related to the amount of outstanding balances; and

(d) the expense recognised during the period in respect of bad or doubtful debts due from related parties. (paragraph 18 of the Standard)

The Standard requires that the disclosures, as per paragraph 18 of the Standard, shall be made separately for each of the following categories:

(a) the parent;

(b) entities with joint control of, or significant influence over, the entity;

(c) subsidiaries;

(d) associates;

(e) joint ventures in which the entity is a joint venturer;

(f) key management personnel of the entity or its parent; and

(g) other related parties.

Items of a similar nature may be disclosed in aggregate except when separate disclosure is necessary for an understanding of the effects of related party transactions on the financial statements of the entity.

Disclosure of details of particular transactions with individual related parties would frequently be too voluminous to be easily understood. Accordingly, items of a similar nature may be disclosed in aggregate by type of related party. However, this is not done in such a way as to obscure the importance of significant transactions. Hence, purchases or sales of goods are not aggregated with purchases or sales of fixed assets. Nor a material related party transaction with an individual party is clubbed in an aggregated disclosure.

A reporting entity is exempt from the disclosure requirements of paragraph 18 of the Standard in relation to related party transactions and outstanding balances, including commitments, with:

(a) a government that has control or joint control of, or significant influence over, the reporting entity; and

(b) another entity that is a related party because the same government has control or joint control of, or significant influence over, both the reporting entity and the other entity. (paragraph 25 of the Standard)

If a reporting entity applies the exemption in paragraph 25 of the Standard, it shall disclose the following about the transactions and related outstanding balances referred to in paragraph 25 of the Standard:

(a) the name of the government and the nature of its relationship with the reporting entity (ie control, joint control or significant influence);

(b) the following information in sufficient detail to enable users of the entity's financial statements to understand the effect of related party transactions on its financial statements:

   (i) the nature and amount of each individually significant transaction; and

   (ii) for other transactions that are collectively, but not individually, significant, a qualitative or quantitative indication of their extent. Types of transactions include those listed in paragraph 21 of the Standard.

8.15.5 Major Changes in Ind AS 24 vis-à-vis IAS* 24 Not Resulting in Carve Outs

1. ***Confidentially:*** In Ind AS 24, disclosures which conflict with confidentiality requirements of statute/regulations are not required to be made since Accounting Standards cannot override legal/regulatory requirements.

2. ***Additional Clarificatory Guidance Regarding Aggregation of Transactions:*** Paragraph 24A (reproduced below) has been included in the Ind AS 24. It provides additional clarificatory guidance regarding aggregation of transactions for disclosure.

   "24A Disclosure of details of particular transactions with individual related parties would frequently be too voluminous to be easily understood. Accordingly, items of a similar nature may be disclosed in aggregate by type of related party. However, this is not done in such a way as to obscure the importance of significant transactions. Hence, purchases or sales of goods are not aggregated with purchases or sales of fixed assets. Nor a material related party transaction with an individual party is clubbed in an aggregated disclosure."

3. ***Modification of Paragraph 14:*** Paragraph 14 of Ind AS 24 has been modified to explain the rationale for disclosing related party relationship when control exists.

4. ***Management Contracts Including for Deputation or Employees:*** In Ind AS 24, '(k) management contracts including for deputation or employees' has been added in the example of transactions that are disclosed if they are with related party.

5. ***Definition of Close Members of the Family of a Person:*** 'Definition of close members of the family of a person' has been amended to include brother, sister, father and mother in the category of family members who may be expected to influence, or be influenced.

8.15.6 Major Changes in Ind AS 24 vis-à-vis Notified AS 18

(i) ***Definition of Relative:*** Existing AS 18 uses the term "relatives of an individual", whereas Ind AS 24 uses the term "a close member of the family of a person".

Existing AS 18 covers the spouse, son, daughter, brother, sister, father and mother who may be expected to influence, or be influenced by, that individual in his/her dealings with the reporting enterprise.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

However, definition of close members of family as per Ind AS 24 includes those family members, who may be expected to influence, or be influenced by, that person in their dealings with the entity, including:

(a) that person's children, spouse or domestic partner, brother, sister, father and mother;

(b) children of that person's spouse or domestic partner; and

(c) dependants of that person or that person's spouse or domestic partner.

Hence, the definition as per Ind AS 24 is much wider.

(ii) ***State Controlled Enterprise:*** Existing AS 18 defines state-controlled enterprise as *"an enterprise which is under the control of the Central Government and/or any State Government(s)"*. However, in Ind AS 24, there is extended coverage of Government Enterprises, as it defines a government-related entity as "an entity that is controlled, jointly controlled or significantly influenced by a government." Further, "Government refers to government, government agencies and similar bodies whether local, national or international."

(iii) ***Key Management Personnel:*** Existing AS 18 covers key management personnel (KMP) of the entity only, whereas, Ind AS 24 covers KMP of the parent as well. Ind AS 24 also covers the entity, or any member of a group of which it is a part, providing key management personnel services to the reporting entity or to the parent of the reporting entity

(iv) ***Related Parties in case of Joint Venture:*** Under Ind AS 24 there is extended coverage in case of joint ventures. Two entities are related to each other in both their financial statements, if they are either co-venturers or one is a venturer and the other is an associate. Whereas as per existing AS 18, co-venturers or co-associates are not related to each other.

(v) ***Effect of influences which do not lead to transactions:*** Existing AS 18 mentions that where there is an inherent difficulty for management to determine the effect of influences which do not lead to transactions, disclosure of such effects is not required whereas Ind AS 24 does not specifically mention this.

(vi) ***Post-employment Benefits:*** Existing AS 18 does not specifically cover entities that are post-employment benefit plans, as related parties. However, Ind AS 24 specifically includes post-employment benefit plans for the benefit of employees of an entity or its related entity as related parties.

(vii) ***Next Most Senior Parent:*** Ind AS 24 requires an additional disclosure as to the name of the next most senior parent which produces consolidated financial statements for public use, whereas the existing AS 18 has no such requirement.

(viii) ***Disclosure for Compensation:*** Ind AS 24 requires extended disclosures for compensation of KMP under different categories, whereas the existing AS 18 does not specifically require.

(ix) ***Disclosure of 'Amount of the Transactions' vs 'Volume of the Transactions:*** Ind AS 24 requires "the amount of the transactions" need to be disclosed, whereas existing

AS 18 gives an option to disclose the "Volume of the transactions either as an amount or as an appropriate proportion".

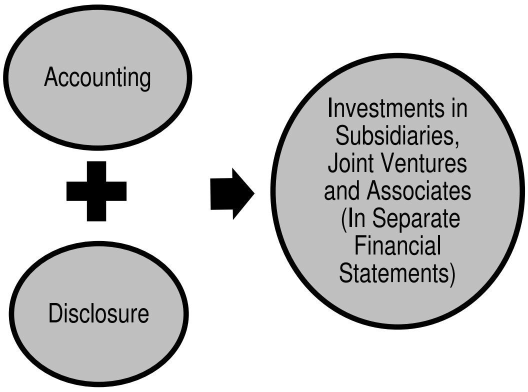
(x) ***Government Related Entities:*** Ind AS 24 requires disclosures of certain information by the government related entities, whereas the existing AS 18 presently exempts the disclosure of such information.

(xi) ***Clarification of Control, Substantial Interest and Significant Influence:*** Existing AS 18 includes definition and clarificatory text, primarily with regard to control, substantial interest (including 20% threshold), significant influence (including 20% threshold). However, Ind AS 24 neither defines these terms nor it includes such clarificatory text and allows respective standards to deal with the same.

8.16 Ind AS 27: Separate Financial Statements

8.16.1 Objective

The objective of this Standard is to prescribe the accounting and disclosure requirements for investments in subsidiaries, joint ventures and associates when an entity prepares separate financial statements.



8.16.2 Scope

- This Standard shall be applied in accounting for investments in subsidiaries, joint ventures and associates when an entity elects, or is required by law, to present separate financial statements.
- This Standard does not mandate which entities produce separate financial statements. It applies when an entity prepares separate financial statements shall comply with Indian Accounting Standards.

8.16.3 Separate and Consolidated Financial Statements

Consolidated financial statements are the financial statements of a group in which the assets, liabilities, equity, income, expenses and cash flows of the parent and its subsidiaries are presented as those of a single economic entity.

Separate financial statements are those presented by a parent (i.e. an investor with control of a subsidiary) or an investor with joint control of, or significant influence over, an investee, in which the investments are accounted for at cost or in accordance with Ind AS 109, *'Financial Instruments'*.

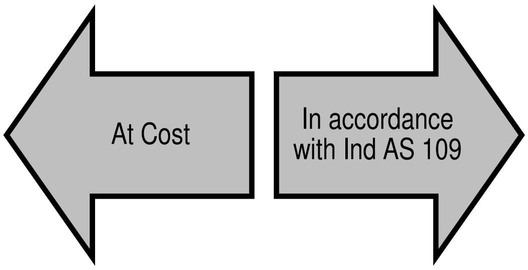
8.16.4 Preparation of Separate Financial Statements

Separate financial statements shall be prepared in accordance with all applicable Ind AS.

When an entity prepares separate financial statements, it shall account for investments in subsidiaries, joint ventures and associates either:

(a) at cost, or

(b) in accordance with Ind AS 109, *Financial Instruments*.

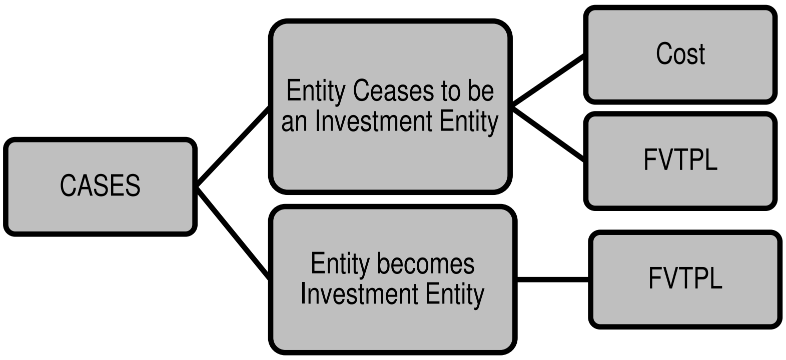


The entity shall apply the same accounting for each category of investments. Investments accounted for at cost shall be accounted for in accordance with Ind AS 105, {Non-current Assets Held for Sale and Discontinued Operations}, when they are classified as held for sale (or included in a disposal group that is classified as held for sale). The measurement of investments accounted for in accordance with Ind AS 109 is not changed in such circumstances.

If an entity elects, in accordance with Ind AS 28, to measure its investments in associates or joint ventures at fair value through profit or loss in accordance with Ind AS 109, it shall also account for those investments in the same way in its separate financial statements.

If a parent is required, in accordance with Ind AS 110, to measure its investment in a subsidiary at fair value through profit or loss in accordance with Ind AS 109, it shall also account for its investment in a subsidiary in the same way in its separate financial statements.

8.16.5 When a Parent Ceases to be an Investment Entity, or Becomes an Investment Entity



When a parent ceases to be an investment entity, or becomes an investment entity, it shall account for the change from the date when the change in status occurred, as follows:

(a) when an entity ceases to be an investment entity, the entity shall, either:

(i) Account for an investment in a subsidiary at cost.

The fair value of the subsidiary at the date of the change of status shall be used as the deemed cost at that date; or

(ii) Continue to account for an investment in a subsidiary in accordance with Ind AS 109.

(b) when an entity becomes an investment entity, it shall account for an investment in a subsidiary at fair value through profit or loss in accordance with Ind AS 109.

The difference between the previous carrying amount of the subsidiary and its fair value at the date of the change of status of the investor shall be recognised as a gain or loss in profit or loss. The cumulative amount of any fair value adjustment previously recognised in other comprehensive income in respect of those subsidiaries shall be treated as if the investment entity had disposed of those subsidiaries at the date of change in status.

8.16.6 Dividend

An entity shall recognise a dividend from a subsidiary, a joint venture or an associate in profit or loss in its separate financial statements when its right to receive the dividend is established.

8.16.7 Major Changes in Ind AS 27 vis-à-vis IAS* 27 Not Resulting in Carve Outs

1. ***Separate Financial Statements:*** IAS 27 requires to disclose the reason for preparing separate financial statements if not required by law. In India, since the Companies Act

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

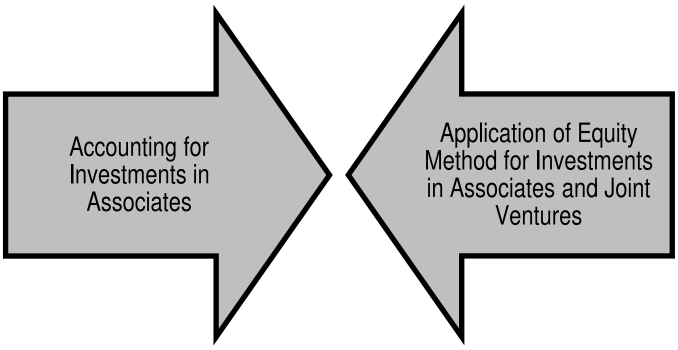
mandates preparation of separate financial statements, such requirement has been removed in Ind AS 27.

2. ***Option to use Equity Method:*** IAS 27 allows the entities to use the equity method to account for investment in subsidiaries, joint ventures and associates in their Separate Financial Statements (SFS). This option is not given in Ind AS 27, as the equity method is not a measurement basis like cost and fair value but is a manner of consolidation and therefore would lead to inconsistent accounting conceptually.

8.17 Ind AS 28: Investments in Associates and Joint Ventures

8.17.1 Objective

The objective of this Standard is to prescribe the accounting for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures.



8.17.2 Scope

This Standard shall be applied by all entities that are investors with joint control of, or significant influence over, an investee.

8.17.3 Definitions

An associate is an entity over which the investor has ***significant influence***.

Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control of those policies.

Significant Influence

- If an entity holds, directly or indirectly (e.g. through subsidiaries), 20 per cent or more of the voting power of the investee, it is presumed that the entity has significant influence, unless it can be clearly demonstrated that this is not the case.
- A substantial or majority ownership by another investor does not necessarily preclude an entity from having significant influence.

The existence of significant influence by an entity is usually evidenced in one or more of the following ways:

- Representation on the board of directors or equivalent governing body of the investee
- Participation in policy-making processes, including participation in decisions about dividends or other distributions
- Material transactions between the entity and its investee
- Interchange of managerial personnel
- Provision of essential technical information

A **joint venture** is a ***joint arrangement*** whereby the parties that have ***joint control*** of the arrangement have rights to the net assets of the arrangement.

Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

A joint arrangement is an arrangement of which two or more parties have joint control.

Ind AS 111, *Joint Arrangements,* establishes principles for the financial reporting of parties to joint arrangements. As per the Standard, an entity shall determine the type of joint arrangement in which it is involved. The classification of a joint arrangement as a joint operation or a joint venture depends upon the rights and obligations of the parties to the arrangement. The Standard requires that a joint venturer shall recognise its interest in a joint venture as an investment and shall account for that investment using the equity method in accordance with Ind AS 28 unless the entity is exempted from applying the equity method as specified in the standard.

8.17.4 Equity Method

The equity method is a method of accounting whereby the investment is initially recognised at cost and adjusted thereafter for the post-acquisition change in the investor's share of the investee's net assets.

8.17.4.1 Application of the Equity Method: An investment is accounted for using the equity method from the date on which it becomes an associate or a joint venture.

The investor's profit or loss includes its share of the investee's profit or loss and the investor's other comprehensive income includes its share of the investee's other comprehensive income.

Distributions received from an investee reduce the carrying amount of the investment. Adjustments to the carrying amount may also be necessary for changes in the investor's proportionate interest in the investee arising from changes in the investee are other comprehensive income. Such changes include those arising from the revaluation of property, plant and equipment and from foreign exchange translation differences. The investor's share of those changes is recognised in the investor's other comprehensive income (Ind AS 1, *Presentation of Financial Statements*).

If an investment in an associate becomes an investment in a joint venture or an investment in a joint venture becomes an investment in an associate, the entity continues to apply the equity method and does not re-measure the retained interest.

8.17.4.2 Equity Method Procedures: Many of the procedures that are appropriate for the application of the equity method are similar to the consolidation procedures described in Ind AS 110.

A group's share in an associate or a joint venture is the aggregate of the holdings in that associate or joint venture by the parent and its subsidiaries. The holdings of the group's other associates or joint ventures are ignored for this purpose. When an associate or a joint venture has subsidiaries , associates or joint ventures, the profit or loss, other comprehensive income and net assets taken into account in applying the equity method are those recognised in the associate's or joint venture's financial statements (including the associate's or joint venture's share of the profit or loss, other comprehensive income and net assets of its associates and joint ventures), after any adjustments necessary to give effect to uniform accounting policies.

Goodwill/Capital Reserve

On acquisition of the investment, any difference between the cost of the investment and the entity's share of the net fair value of the investee's identifiable assets and liabilities is accounted for as follows:

(i) Goodwill relating to an associate or a joint venture is included in the carrying amount of the investment.

Amortisation of that goodwill is not permitted.

(ii) Any excess of the entity's share of the net fair value of the investee's identifiable assets and liabilities over the cost of the investment is recognised directly in equity as capital reserve in the period in which the investment is acquired.

8.17.4.3 Changes in Ownership Interest: If an entity's ownership interest in an associate or a joint venture is reduced, but the entity continues to apply the equity method, the entity shall reclassify to profit or loss the proportion of the gain or loss that had previously been recognised in other comprehensive income relating to that reduction in ownership interest if that gain or loss would be required to be reclassified to profit or loss on the disposal of the related assets or liabilities.

8.17.4.4 Exemptions from Applying the Equity Method: An entity need not apply the equity method to its investment in an associate or a joint venture if the entity is a parent that is exempt from preparing consolidated financial statements by the scope exception of Ind AS 110 or if all the following apply:

(a) The entity is a wholly-owned subsidiary, or is a partially-owned subsidiary of another entity and its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the entity not applying the equity method.

(b) The entity's debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).

(c) The entity did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organisation, for the purpose of issuing any class of instruments in a public market.

(d) ***The ultimate or any intermediate parent of the entity produces financial statements available for public use that comply with Ind AS, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with Ind AS 110.***

The Standard also provides exemptions from applying the equity method when the investment in an associate or a joint venture is held by, or is held indirectly through, an entity that is a venture capital organisation, or a mutual fund, unit trust and similar entities including investment-linked insurance funds. Those investments may be measured at fair value through profit or loss in accordance with Ind AS 109,

8.17.4.5 Discontinuing the use of the Equity Method: An entity shall discontinue the use of the equity method from the date when its investment ceases to be an associate or a joint venture as follows:

(a) If the investment becomes a subsidiary, the entity shall account for its investment in accordance with Ind AS 103, Business Combinations, and Ind AS 110.

(b) If the retained interest in the former associate or joint venture is a financial asset, the entity shall measure the retained interest at fair value. The fair value of the retained interest shall be regarded as its fair value on initial recognition as a financial asset in accordance with Ind AS 109. The entity shall recognise in profit or loss any difference between:

    (i) the fair value of any retained interest and any proceeds from disposing of a part interest in the associate or joint venture; and

    (ii) the carrying amount of the investment at the date the equity method was discontinued.

When an entity discontinues the use of the equity method, the entity shall account for all amounts previously recognised in other comprehensive income in relation to that investment on the same basis as would have been required if the investee had directly disposed of the related assets or liabilities.

8.17.5 Financial Statements

- The most recent available financial statements of the associate or joint venture are used by the entity in applying the equity method.
- When the end of the reporting period of the entity is different from that of the associate or joint venture, the associate or joint venture prepares, for the use of the entity, financial

statements as of the same date as the financial statements of the entity unless it is impracticable to do so.

- When, the financial statements of an associate or a joint venture used in applying the equity method are prepared as of a date different from that used by the entity, adjustments shall be made for the effects of significant transactions or events that occur between that date and the date of the entity's financial statements. In any case, the difference between the end of the reporting period of the associate or joint venture and that of the entity shall be no more than three months.
- The entity's financial statements shall be prepared using uniform accounting policies for like transactions and events in similar circumstances unless, in case of an associate, it is impracticable to do so.

Separate Financial Statements

An investment in an associate or a joint venture shall be accounted for in the entity's separate financial statements in accordance with Ind AS 27.

8.17.6 Impairment Losses

The entity applies the impairment requirements in Ind AS 109 to its other interests in the associate or joint venture that are in the scope of Ind AS 109 and that do not constitute a part of the net investment.

Because goodwill that forms part of the carrying amount of the net investment in an associate or a joint venture is not separately recognised, it is not tested for impairment separately by applying the requirements for impairment testing goodwill in Ind AS 36, 'Impairment of Assets'.

Instead, the entire carrying amount of the investment is tested for impairment in accordance with Ind AS 36 as a single asset, by comparing its recoverable amount (higher of value in use and fair value less costs to sell) with its carrying amount, whenever there is an indication that the net investment may be impaired.

8.17.7 Major Change in Ind AS 28 vis-à-vis IAS* 28 Resulting in Carve Out

As per IFRS: IAS 28 requires that for the purpose of applying equity method of accounting in the preparation of investor's financial statements, uniform accounting policies should be used. In other words, if the associate's accounting policies are different from those of the investor, the investor should change the financial statements of the associate by using same accounting policies.

Carve out 1: In Ind AS 28, the phrase, 'unless impracticable to do so' has been added in the relevant requirements, i.e., paragraph 35.

Reasons: Certain associates, e.g., regional rural banks (RRBs), being associates of nationalized banks, are not in a position to use the Ind AS as these may be too advanced for

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

the RRBs. Accordingly, the above-stated words have been included to exempt such associates.

Carve out 2: Further, in IAS 28, Capital Reserve when Investors share in Net Assets exceeds Cost of Investment is recognised in profit or loss while in Ind AS 28, Paragraph 32 (b) has been modified on the lines of Ind AS 103, *'Business Combinations'*, to transfer excess of the investor's share of the net fair value of the investee's identifiable assets and liabilities over the cost of investment in capital reserve.

8.17.8 Major Changes in Ind AS 28 vis-à-vis Notified AS 23

(i) ***Definition of Significant Influence:*** In the existing AS 23, 'Significant Influence' has been defined as 'power to participate in the financial and/or operating policy decisions of the investee but is not control over those policies'. In Ind AS 28, the same has been defined as 'power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies'. Ind AS 28 defines joint control also.

(ii) ***Potential Equity Shares:*** For considering share ownership for the purpose of significant influence, potential equity shares of the investee held by investor are not taken into account as per the existing AS 23. As per Ind AS 28, existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether an entity has significant influence or not.

(iii) ***Equity Method:*** Existing AS 23 requires application of the equity method only when the entity has subsidiaries and prepares Consolidated Financial Statements. Ind AS 28 requires application of equity method in financial statements other than separate financial statements even if the investor does not have any subsidiary.

(iv) ***Exemption:*** One of the exemptions from applying equity method in the existing AS 23 is where the associate operates under severe long-term restrictions that significantly impair its ability to transfer funds to the investee. No such exemption is provided in Ind AS 28.

(v) ***Explanation regarding the term 'Near Future':*** An explanation has been given in existing AS 23 regarding the term 'near future' used in another exemption from applying equity method, i.e., where the investment is acquired and held exclusively with a view to its subsequent disposal in the near future. This explanation has not been given in the Ind AS 28 as such situations are covered by Ind AS 105, '*Non-current Assets Held for Sale and Discontinued Operations'*.

(vi) ***Measurement of Investment:*** Ind AS 28 now permits an entity that has an investment in an associate, a portion of which is held indirectly through venture capital organisations, or a mutual fund, unit trust and similar entities including investment-linked insurance funds, to elect to measure that portion of the investment in the associate at fair value through profit or loss in accordance with Ind AS 109 regardless of whether these entities have significant influence over that portion of the investment.

(vii) ***Investment Classified as Held for Sale:*** Ind AS 28 requires a portion of an investment in an associate or a joint venture to be classified as held for sale if the disposal of that portion of the interest would fulfill the criteria to be classified as held for sale in accordance with Ind AS 105. AS 23 does not specifically deal with this aspect.

(vii) ***Application of Equity Method in Separate Financial Statements:*** As per the existing AS 23, in separate financial statements, investment in an associate is not accounted for as per the equity method, the same is accounted for in accordance with existing AS 13, *'Accounting for Investments'*. As per Ind AS 28, the same is to be accounted for at cost or in accordance with Ind AS 109, '*Financial Instruments'*.

(viii) ***Difference in Reporting Dates:*** The existing AS 23 permits the use of financial statements of the associate drawn upto a date different from the date of financial statements of the investor when it is impracticable to draw the financial statements of the associate upto the date of the financial statements of the investor. There is no limit on the length of difference in the reporting dates of the investor and the associate. As per Ind AS 28, length of difference in the reporting dates of the associate or joint venture should not be more than three months unless.

(ix) ***Accounting Policies:*** Both the existing AS 23 and Ind AS 28 require that similar accounting policies should be used for preparation of investor's financial statements and in case an associate uses different accounting policies for like transactions, appropriate adjustments shall be made to the accounting policies of the associate. The existing AS 23 provides exemption to this that if it is not possible to make adjustments to the accounting policies of the associate, the fact shall be disclosed along with a brief description of the differences between the accounting policies. Ind AS 28 provides that the entity's financial statements shall be prepared using uniform accounting policies for like transactions and events in similar circumstances unless, in case of an associate, it is impracticable to do so.

(x) ***Share in Losses:*** As per existing AS 23, investor's share of losses in the associate is recognised to the extent of carrying amount of investment in the associate. As per Ind AS 28, carrying amount of investment in the associate or joint venture determined using the equity method together with any long term interests that, in substance form part of the entity's net investment in the associate or joint venture shall be considered for recognising entity's share of losses in the associate or joint venture.

(xi) ***Impairment Loss:*** With regard to impairment, the existing AS 23 requires that the carrying amount of investment in an associate should be reduced to recognise a decline, other than temporary, in the value of the investment. Ind AS 28 requires that after application of equity method, including recognising the associate's or joint venture's losses, the requirements of Ind AS 109 shall be applied to determine whether it is necessary to recognise any additional impairment loss.

8.18 Ind AS 29 : Financial Reporting in Hyperinflationary Economies

8.18.1 Scope

This Standard shall be applied to the financial statements, including the consolidated financial statements, of any entity whose functional currency is the currency of a hyperinflationary economy.

The Standard does not establish an absolute rate at which hyperinflation is deemed to arise. It is a matter of judgement when restatement of financial statements in accordance with this Standard becomes necessary. Hyperinflation is indicated by characteristics of the economic environment of a country which include, but are not limited to, the following:

- The general population prefers to keep its wealth in non-monetary assets or in a relatively stable foreign currency. Amounts of local currency held are immediately invested to maintain purchasing power.
- The general population regards monetary amounts not in terms of the local currency but in terms of a relatively stable foreign currency. Prices may be quoted in that currency.
- Sales and purchases on credit take place at prices that compensate for the expected loss of purchasing power during the credit period, even if the period is short.
- Interest rates, wages and prices are linked to a price index.
- The cumulative inflation rate over three years is approaching, or exceeds, 100%.

1. It is preferable that all entities that report in the currency of the same hyperinflationary economy apply this Standard from the same date.
2. This Standard applies to the financial statements of any entity from the beginning of the reporting period in which it identifies the existence of hyperinflation in the country in whose currency it reports.

8.18.2 Restatement of Financial Statements

Entities that prepare financial statements on the historical cost basis of accounting do so without regard either to:

- Changes in the general level of prices or
- Increases in specific prices of recognised assets or liabilities.

The Exceptions to this are those assets and liabilities that the entity is required, or chooses, to measure at fair value.

For example, property, plant and equipment may be revalued to fair value and biological assets are generally required to be measured at fair value.

Some entities, however, present financial statements that are based on a current cost approach that reflects the effects of changes in the specific prices of assets held.

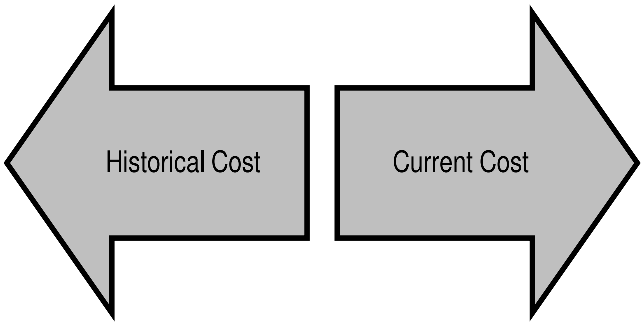
The financial statements of an entity whose functional currency is the currency of a hyperinflationary economy, whether they are based on a historical cost approach or a current cost approach, shall be stated in terms of the measuring unit current at the end of the reporting period.

The corresponding figures for the previous period required by Ind AS 1, Presentation of Financial Statements, and any information in respect of earlier periods shall also be stated in terms of the measuring unit current at the end of the reporting period.

The gain or loss on the net monetary position shall be included in profit or loss and separately disclosed.

The restatement of financial statements in accordance with this Standard requires the application of certain procedures as well as judgement. The consistent application of these procedures and judgements from period to period is more important than the precise accuracy of the resulting amounts included in the restated financial statements.

8.18.3 Approaches for Preparation of Financial Statements



8.18.3.1 Historical Cost Financial Statements

Balance Sheet

- Balance sheet amounts not already expressed in terms of the measuring unit current at the end of the reporting period are restated by applying a general price index.
- Monetary items are not restated because they are already expressed in terms of the monetary unit current at the end of the reporting period. Monetary items are money held and items to be received or paid in money.
- Assets and liabilities linked by agreement to changes in prices, such as index linked bonds and loans, are adjusted in accordance with the agreement in order to ascertain the amount outstanding at the end of the reporting period. These items are carried at this adjusted amount in the restated balance sheet.
- All other assets and liabilities are non-monetary. Some non-monetary items are carried at amounts current at the end of the reporting period, such as net realisable value and fair value, so they are not restated. All other non-monetary assets and liabilities are restated.

- The restated amount of a non-monetary item is reduced, in accordance with appropriate Ind AS, when it exceeds its recoverable amount. For example, restated amounts of property, plant and equipment, goodwill, patents and trademarks are reduced to recoverable amount and restated amounts of inventories are reduced to net realisable value.

Statement of Profit and Loss

- This Standard requires that all items in the statement of profit and loss are expressed in terms of the measuring unit current at the end of the reporting period.
- Therefore, all amounts need to be restated by applying the change in the general price index from the dates when the items of income and expenses were initially recorded in the financial statements.

Gain or Loss on Net Monetary Position

In a period of inflation, an entity holding an excess of monetary assets over monetary liabilities loses purchasing power and an entity with an excess of monetary liabilities over monetary assets gains purchasing power to the extent the assets and liabilities are not linked to a price level.

- This gain or loss on the net monetary position may be derived as the difference resulting from the restatement of non-monetary assets, owners' equity and items in the statement of profit and loss and the adjustment of index linked assets and liabilities.
- The gain or loss may be estimated by applying the change in a general price index to the weighted average for the period of the difference between monetary assets and monetary liabilities.
- The gain or loss on the net monetary position is included in profit or loss.
- The adjustment to those assets and liabilities linked by agreement to changes in prices is offset against the gain or loss on net monetary position.
- Other income and expense items, such as interest income and expense, and foreign exchange differences related to invested or borrowed funds, are also associated with the net monetary position. Although such items are separately disclosed, it may be helpful if they are presented together with the gain or loss on net monetary position in the statement of profit and loss.

8.18.3.2 Current Cost Financial Statements

Balance Sheet

- Items stated at current cost are not restated because they are already expressed in terms of the measuring unit current at the end of the reporting period.
- Other items in the balance sheet are restated in accordance with same principles as Historical Cost Financial Statements.

Statement of Profit and Loss

- The current cost statement of profit and loss, before restatement, generally reports costs current at the time at which the underlying transactions or events occurred.
- Cost of sales and depreciation are recorded at current costs at the time of consumption.
- Sales and other expenses are recorded at their money amounts when they occurred.
- Therefore, all amounts need to be restated into the measuring unit current at the end of the reporting period by applying a general price index.

Gain or Loss on Net Monetary Position

The gain or loss on the net monetary position is accounted for in accordance with same principles as Historical Cost Financial Statements.

8.18.4 Taxes

The restatement of financial statements in accordance with this Standard may give rise to differences between the carrying amount of individual assets and liabilities in the balance sheet and their tax bases. These differences are accounted for in accordance with Ind AS 12, Income Taxes.

8.18.5 Statement of Cash Flows

This Standard requires that all items in the statement of cash flows are expressed in terms of the measuring unit current at the end of the reporting period.

8.18.6 Corresponding Figures

Corresponding figures for the previous reporting period, whether they were based on a historical cost approach or a current cost approach, are restated by applying a general price index so that the comparative financial statements are presented in terms of the measuring unit current at the end of the reporting period. Information that is disclosed in respect of earlier periods is also expressed in terms of the measuring unit current at the end of the reporting period.

8.18.7 Consolidated Financial Statements

- A parent that reports in the currency of a hyperinflationary economy may have subsidiaries that also report in the currencies of hyperinflationary economies. The financial statements of any such subsidiary need to be restated by applying a general price index of the country in whose currency it reports before they are included in the consolidated financial statements issued by its parent. Where such a subsidiary is a foreign subsidiary, its restated financial statements are translated at closing rates.
- The financial statements of subsidiaries that do not report in the currencies of hyperinflationary economies are dealt with in accordance with Ind AS 21.
- If financial statements with different ends of the reporting periods are consolidated, all items, whether non-monetary or monetary, need to be restated into the measuring unit current at the date of the consolidated financial statements.

8.18.8 Selection and Use of the General Price Index

The restatement of financial statements in accordance with this Standard requires the use of a general price index that reflects changes in general purchasing power. It is preferable that all entities that report in the currency of the same economy use the same index.

8.18.9 Economies Ceasing to be Hyperinflationary

When an economy ceases to be hyperinflationary and an entity discontinues the preparation and presentation of financial statements prepared in accordance with this Standard, it shall treat the amounts expressed in the measuring unit current at the end of the previous reporting period as the basis for the carrying amounts in its subsequent financial statements.

Appendix A of Ind AS 29 provides guidance on how to apply the requirements of Ind AS 29 in a reporting period in which an entity identifies the existence of hyperinflation in the economy of its functional currency, when that economy was not hyperinflationary in the prior period, and the entity therefore restates its financial statements in accordance with Ind AS 29. The Appendix prescribes that in the reporting period in which an entity identifies the existence of hyperinflation in the economy of its functional currency, not having been hyperinflationary in the prior period, the entity shall apply the requirements of Ind AS 29 as if the economy had always been hyperinflationary. At the end of the reporting period, deferred tax items are recognised and measured in accordance with Ind AS 12.

8.18.10 Major Change in Ind AS 29 vis-à-vis IAS 29 Not Resulting in Carve Out

Disclosure: Ind AS 29 requires an additional disclosure regarding the duration of the hyperinflationary situation existing in the economy as compared to IAS 29.

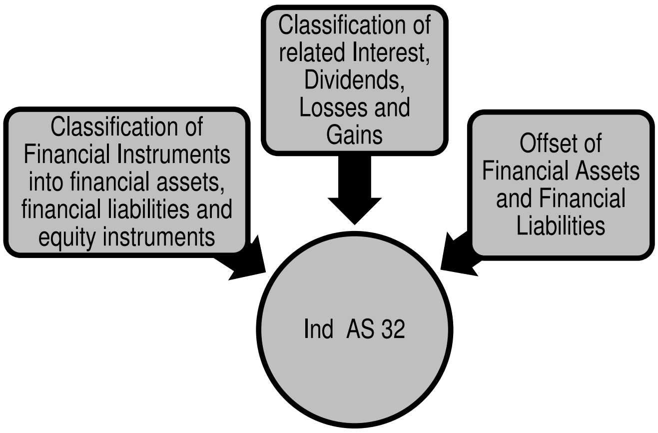
8.19 Ind AS 32 : Financial Instruments: Presentation

8.19.1 Objective

The objective of this Standard is to establish principles for presenting financial instruments as liabilities or equity and for offsetting financial assets and financial liabilities.

It applies to

1. The classification of financial instruments, from the perspective of the issuer, into financial assets, financial liabilities and equity instruments;
2. The classification of related interest, dividends, losses and gains; and
3. The circumstances in which financial assets and financial liabilities should be offset.



8.19.2 Scope

This Standard shall be applied by all entities to all types of financial instruments except:

(a) interests in subsidiaries, associates or joint ventures that are accounted for in accordance with:

- Ind AS 110 *"Consolidated Financial Statements"*
- Ind AS 27 *"Separate Financial Statements"* or
- Ind AS 28 *"Investments in Associates and Joint Ventures"*.

Entities shall also apply this Standard to all derivatives linked to interests in subsidiaries, associates or joint ventures.

(b) employers' rights and obligations under employee benefit plans, to which Ind AS 19, *'Employee Benefits'*, applies.

(c) insurance contracts as defined in Ind AS 104, *'Insurance Contracts'*.

However, this Standard applies to derivatives that are embedded in insurance contracts if Ind AS 109 requires the entity to account for them separately. Moreover, an issuer shall apply this Standard to financial guarantee contracts if the issuer applies Ind AS 109 in recognising and measuring the contracts.

(d) financial instruments that are within the scope of Ind AS 104 because they contain a discretionary participation feature. Furthermore, this Standard applies to derivatives that are embedded in these instruments (Ind AS 109).

(e) financial instruments, contracts and obligations under share-based payment transactions to which Ind AS 102*, 'Share-based Payment'*, applies, except for:

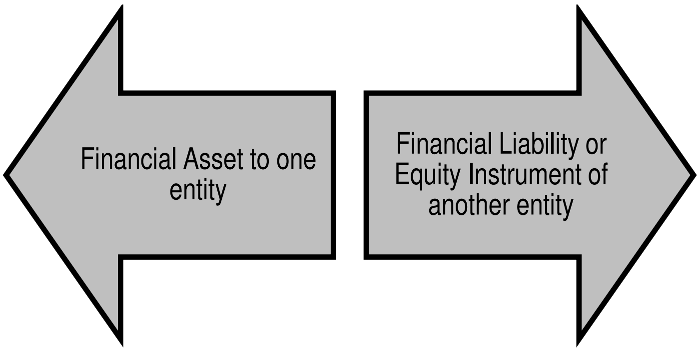
(i) contracts within the scope of this Standard, to which this Standard applies,

(ii) to treasury shares purchased, sold, issued or cancelled in connection with employee share option plans, employee share purchase plans, and all other share-based payment arrangements.

This Standard shall be applied to those contracts to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments, as if the contracts were financial instruments, with the exception of contracts that were entered into and continue to be held for the purpose of the receipt or delivery of a non-financial item in accordance with the entity's expected purchase, sale or usage requirements. However, this Standard shall be applied to those contracts that an entity designates as measured at fair value through profit or loss in accordance with Ind AS 109, *'Financial Instruments'*.

8.19.3 Financial Instrument

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.



8.19.3.1 Financial Asset: A financial asset is any asset that is:

(a) cash;

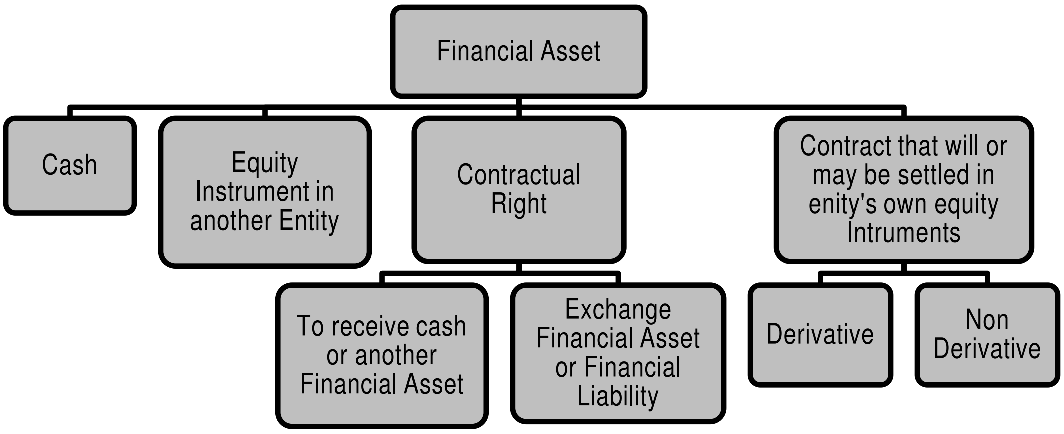
(b) an equity instrument of another entity;

(c) a contractual right:

- (i) to receive cash or another financial asset from another entity; or
- (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or

(d) a contract that will or may be settled in the entity's own equity instruments and is:

- (i) a non-derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or
- (ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.



8.19.3.2 Financial Liability: A financial liability is any liability that is:

(a) a contractual obligation:

(i) to deliver cash or another financial asset to another entity; or

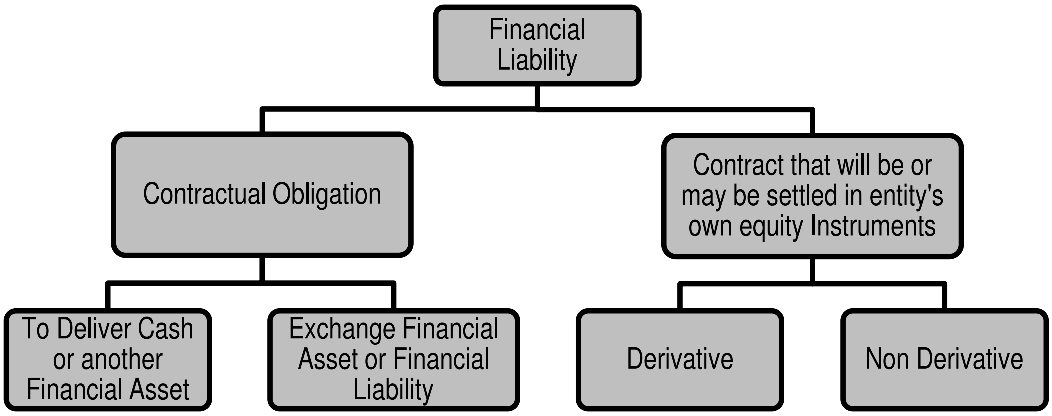
(ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity; or

(b) a contract that will or may be settled in the entity's own equity instruments and is:

(i) a non-derivative for which the entity is or may be obliged to deliver a variable number of the entity's own equity instruments; or

(ii) a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose, rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments.

The equity conversion option embedded in a convertible bond denominated in foreign currency to acquire a fixed number of the entity's own equity instruments is an equity instrument if the exercise price is fixed in any currency.



8.19.3.3 Equity Instrument: An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.

8.19.3.4 Puttable Financial Instruments: As an exception, puttable instruments are classified as an equity instrument even if they meet the definition of financial liability. A puttable instrument is a financial instrument that gives the holder of the instrument the right to put the instrument back to the issuer for cash or another financial asset or is automatically put back to the issuer on the occurrence of an uncertain future event or the death or retirement of the instrument holder.

8.19.4 Presentation

Liabilities and equity: The issuer of a financial instrument shall classify the instrument, or its component parts, on initial recognition as a financial liability, a financial asset or an equity instrument in accordance with the substance of the contractual arrangement and the definitions of a financial liability, a financial asset and an equity instrument.

The instrument is an equity instrument if, and only if, **both conditions (a) and (b) below are met.**

(a) The instrument includes no contractual obligation:

  (i) to deliver cash or another financial asset to another entity; or

  (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the issuer.

(b) In case of settlement by the issuer's own equity instruments, it should be fixed to fixed contracts (no. of equity instruments and the price per unit of equity instruments is fixed).

Apart from the aforesaid, the equity conversion option embedded in a convertible bond denominated in foreign currency to acquire a fixed number of the entity's own equity instruments is an equity instrument if the exercise price is fixed in any currency.

A contractual obligation, including one arising from a derivative financial instrument, that will or may result in the future receipt or delivery of the issuer's own equity instruments, but does not meet conditions (a) and (b) above, is not an equity instrument. As an exception, an instrument that meets the definition of a financial liability is classified as an equity instrument if it has all the features and meets the conditions in paragraphs 16A and 16B or paragraphs 16C and 16D.

8.19.5 Specific Situations

8.19.5.1 Contingent settlement provisions A financial instrument may require the entity to deliver cash or another financial asset, or otherwise to settle it in such a way that it would be a financial liability, in the event of the occurrence or non-occurrence of uncertain future events (or on the outcome of uncertain circumstances) that are beyond the control of both the issuer and the holder of the instrument, such as a change in a stock market index, consumer price index, interest rate or taxation requirements, or the issuer's future revenues, net income or debt-to-equity ratio.

The issuer of such an instrument does not have the unconditional right to avoid delivering cash or another financial asset (or otherwise to settle it in such a way that it would be a financial liability). Therefore, it is a financial liability of the issuer unless:

(i) the part of the contingent settlement provision that could require settlement in cash or another financial asset (or otherwise in such a way that it would be a financial liability) is not genuine;

(ii) the issuer can be required to settle the obligation in cash or another financial asset (or otherwise to settle it in such a way that it would be a financial liability) only in the event of liquidation of the issuer; or

(iii) the instrument has all the features and meets the conditions in paragraphs 16A and 16B.

8.19.5.2 Settlement options In case a derivative financial instruments provides an option to one party to choose between various modes of settlement (settlement net in cash or by exchanging shares for cash), such derivative instrument should be a financial asset or a financial liability unless all of the settlement alternatives would result in it being an equity instrument.

8.19.5.3 Compound Financial Instruments: It may be possible that a non-derivative financial instrument may contain both component of liability and component of equity as well. Such components shall be classified separately as financial liabilities or equity instruments. Example, bonds with a option to convert into equity.

The sum of the carrying amounts assigned to the liability and equity components on initial recognition is always equal to the fair value that would be ascribed to the instrument as a whole.

No gain or loss arises from initially recognising the components of the instrument separately.

8.19.5.4 Treasury Shares: If an entity reacquires its own equity instruments, those instruments ('treasury shares') shall be deducted from equity. No gain or loss shall be recognised in profit or loss on the purchase, sale, issue or cancellation of an entity's own equity instruments. Such treasury shares may be acquired and held by the entity or by other members of the consolidated group. Consideration paid or received shall be recognised directly in equity.

8.19.5.5 Interest, Dividends, Losses and Gains: Interest, dividends, losses and gains relating to a financial instrument or a component that is a financial liability shall be recognised as income or expense in profit or loss. Distributions to holders of an equity instrument shall be recognised by the entity directly in equity.

Transaction costs of an equity transaction shall be accounted for as a deduction from equity. Income tax relating to distributions to holders of an equity instrument and to transaction costs of an equity transaction shall be accounted for in accordance with Ind AS 12, *'Income Taxes'*.

Changes in the fair value of an equity instrument are not recognised in the financial statements.

8.19.5.6 Offsetting a Financial Asset and a Financial Liability: A financial asset and a financial liability shall be offset and the net amount presented in the balance sheet when, and only when, an entity:

(i) currently has a legally enforceable right to set off the recognised amounts; and

(ii) intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

In accounting for a transfer of a financial asset that does not qualify for derecognition, the entity shall not offset the transferred asset and the associated liability.

An entity that undertakes a number of financial instrument transactions with a single counterparty may enter into a 'master netting arrangement' with that counterparty. Such an agreement provides for a single net settlement of all financial instruments covered by the agreement in the event of default on, or termination of, any one contract.

8.19.5.7 Consolidated Financial Statements: An entity in its consolidated financial statements, when classifying a financial instrument (or a component of it) should consider all terms and conditions agreed between members of the group and the holders of the instrument in determining whether the group as a whole has an obligation to deliver cash or another financial asset in respect of the instrument or to settle it in a manner that results in liability classification.

8.19.6 Major Changes in Ind AS 32 vis-à-vis IAS* 32

8.19.6.1 Resulting in Carve out/carve in

As per IFRS: As per accounting treatment prescribed under IAS 32, equity conversion option in case of foreign currency denominated convertible bonds is considered a derivative liability which is embedded in the bond. Gains or losses arising on account of change in fair value of the derivative need to be recognised in the statement of profit and loss as per IAS 32.

Carve out: In Ind AS 32, an exception has been included to the definition of 'financial liability' in paragraph 11 (b) (ii), whereby conversion option in a convertible bond denominated in foreign currency to acquire a fixed number of entity's own equity instruments is classified as an equity instrument if the exercise price is fixed in any currency.

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

Reasons: This treatment as per IAS 32 is not appropriate in instruments, such as, FCCBs since the number of shares convertible on the exercise of the option remains fixed and the amount at which the option is to be exercised in terms of foreign currency is also fixed; merely the difference in the currency should not affect the nature of derivative, i.e., the option. Further, the fair value of the option is based on the fair value of the share prices of the company. If there is decrease in the share price, the fair value of derivative liability would also decrease which would result in recognition of gain in the statement of profit and loss. This would bring unintended volatility in the statement of profit and loss due to volatility in share prices. This will also not give a true and fair view of the liability as in this situation, when the share prices fall, the option will not be exercised. However, it has been considered that if such option is classified as equity, fair value changes would not be required to be recognised. Accordingly, the exception has been made in definition of financial liability in Ind AS 32.

8.19.6.2 Not Resulting in Carve out

Presentation of Dividends: IAS 32 requires presentation of dividends classified as an expense in the separate income statement, where separate income statement is presented. This requirement is not provided in Ind AS 32 consequential to the removal of option regarding two statement approach in Ind AS 1. Ind AS 1 requires that the components of profit or loss and components of other comprehensive income shall be presented as a part of the statement of profit and loss.

8.20 Ind AS 33 : Earnings Per Share

8.20.1 Objective

The objective of this Standard is to prescribe principles for the determination and presentation of Earnings per share, so as to improve performance comparisons between different entities in the same reporting period and between different reporting periods for the same entity.

Even though earnings per share data have limitations because of different accounting policies that may be used for determining 'earnings', a consistently determined denominator enhances financial reporting.

The focus of this Standard is on the denominator of the earnings per share calculation.

8.20.2 Scope

This Indian Accounting Standard shall apply to companies that have issued ordinary shares to which Indian Accounting Standards (Ind AS) notified under the Companies Act apply.

An entity that discloses earnings per share shall calculate and disclose earnings per share in accordance with this Standard.

When an entity presents both consolidated financial statements and separate financial statements prepared in accordance with Ind AS 110, *'Consolidated Financial Statements'*, and Ind AS 27, *'Separate Financial Statements'*, respectively, the disclosures required by this Standard shall be presented both in the consolidated financial statements and separate financial statements.

1. In consolidated financial statements such disclosures shall be based on consolidated information and in separate financial statements such disclosures shall be based on information given in separate financial statements.
2. An entity shall not present in consolidated financial statements, earnings per share based on the information given in separate financial statements and shall not present in separate financial statements, earnings per share based on the information given in consolidated financial statements.

8.20.3 Measurement

8.20.3.1 Basic Earnings Per Share: An ordinary share is an equity instrument that is subordinate to all other classes of equity instruments.

A potential ordinary share is a financial instrument or other contract that may entitle its holder to ordinary shares.

Examples of potential ordinary shares are:

(a) financial liabilities or equity instruments, including preference shares, that are convertible into ordinary shares;

(b) options and warrants;

(c) shares that would be issued upon the satisfaction of conditions resulting from contractual arrangements, such as the purchase of a business or other assets.

An entity shall calculate basic earnings per share amounts for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.

Basic earnings per share shall be calculated by:

$$\frac{\text{Profit or loss attributable to ordinary equity holders of the parent entity}}{\text{Weighted average number of ordinary shares outstanding during the period}}$$

For the purpose of calculating basic earnings per share, the amounts attributable to ordinary equity holders of the parent entity in respect of:

(a) profit or loss from continuing operations attributable to the parent entity; and

(b) profit or loss attributable to the parent entity

adjusted for the after-tax amounts of preference dividends, differences arising on the settlement of preference shares, and other similar effects of preference shares classified as equity.

Where any item of income or expense which is otherwise required to be recognised in profit or loss in accordance with Indian Accounting Standards is debited or credited to securities premium account/other reserves, the amount in respect thereof shall be deducted from profit or loss from continuing operations for the purpose of calculating basic earnings per share.

For the purpose of calculating basic earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares outstanding during the period.

The weighted average number of ordinary shares outstanding during the period and for all periods presented shall be adjusted for events, other than the conversion of potential ordinary shares that have changed the number of ordinary shares outstanding without a corresponding change in resources.

Ordinary shares may be issued, or the number of ordinary shares outstanding may be reduced, without a corresponding change in resources. Examples include:

- Capitalisation or bonus issue (sometimes referred to as a stock dividend)
- Bonus element in any other issue (For example a bonus element in a rights issue to existing shareholders)
- A share split
- A reverse share split (consolidation of shares)

8.20.3.2 Diluted Earnings Per Share: An entity shall calculate diluted earnings per share amounts for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.

For the purpose of calculating diluted earnings per share, an entity shall **ADJUST** profit or loss attributable to ordinary equity holders of the parent entity, and the weighted average number of shares outstanding, for the effects of all dilutive potential ordinary shares.

Diluted EPS shall be calculated by:

$$\frac{\text{Adjusted Profit/loss attributable to ordinary Equity holders of the parent entity}}{\text{Adjusted Weighted average number of ordinary shares outstanding during the period}}$$

For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, as calculated in accordance with Basic EPS, by the after-tax effect of:

(a) any dividends or other items related to dilutive potential ordinary shares deducted in arriving at profit or loss attributable to ordinary equity holders of the parent entity;

(b) any interest recognised in the period related to dilutive potential ordinary shares; and

(c) any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares.

For the purpose of calculating diluted earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares plus the weighted average number of ordinary shares that would be issued on the conversion of all the dilutive potential ordinary shares into ordinary shares.

Potential ordinary shares shall be treated as dilutive when, and only when, their conversion to ordinary shares would decrease earnings per share or increase loss per share from continuing operations.

8.20.4 Presentation

An entity shall present in the statement of profit and loss basic and diluted earnings per share for profit or loss from continuing operations attributable to the ordinary equity holders of the parent entity and for profit or loss attributable to the ordinary equity holders of the parent entity for the period for each class of ordinary shares that has a different right to share in profit for the period.

An entity shall present basic and diluted earnings per share with equal prominence for all periods presented.

An entity that reports a discontinued operation shall disclose the basic and diluted amounts per share for the discontinued operation either in the statement of profit and loss or in the notes.

(a) An entity that reports a discontinued operation shall disclose the basic and diluted amounts per share for the discontinued operation either in the statement of profit and loss or in the notes.

(b) An entity shall present basic and diluted earnings per share, even if the amounts are negative (i.e. a loss per share).

8.20.5 Retrospective Adjustments

If the number of ordinary or potential ordinary shares outstanding increases as a result of a capitalisation, bonus issue or share split, or decreases as a result of a reverse share split, the calculation of basic and diluted earnings per share for all periods presented shall be adjusted retrospectively. If these changes occur after the reporting period but before the financial statements are approved for issue, the per share calculations for those and any prior period financial statements presented shall be based on the new number of shares.

8.20.6 Major Changes in Ind AS 33 vis-à-vis IAS* 33 Not Resulting in Carve Outs

1. ***Consolidated Financial Statements and Separate Financial Statements:*** IAS 33 provides that when an entity presents both consolidated financial statements and separate financial statements, it may give EPS related information in consolidated financial statements only, whereas, Ind AS 33 requires EPS related information to be disclosed both in consolidated financial statements and separate financial statements.

2. ***Applicability of the Standard:*** Paragraph 2 of IAS 33 requires that the entire standard applies to:

   (a) the separate or individual financial statements of an entity:

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

(i) whose ordinary shares or potential ordinary shares are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets) or

(ii) that files, or is in the process of filing, its financial statements with a Securities Regulator or other regulatory organisation for the purpose of issuing ordinary shares in a public market; and

(b) the consolidated financial statements of a group with a parent:

(i) whose ordinary shares or potential ordinary shares are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets) or

(ii) that files, or is in the process of filing, its financial statements with a Securities Regulator or other regulatory organisation for the purpose of issuing ordinary shares in a public market.

It also requires that an entity that discloses earnings per share shall calculate and disclose earnings per share in accordance with this Standard.

The above requirements have been deleted in the Ind AS as the applicability or exemptions to the Ind AS are governed by the Companies Act and the Rules made there under.

3. ***Usage of Information:*** Paragraph 4 has been modified in Ind AS 33 to clarify that an entity shall not present in separate financial statements, earnings per share based on the information given in consolidated financial statements, besides requiring as in IAS 33, that earnings per share based on the information given in separate financial statements shall not be presented in the consolidated financial statements.

4. ***Adjustment of Securities Premium:*** In Ind AS 33, a paragraph has been added after paragraph 12 on the following lines -

   "Where any item of income or expense which is otherwise required to be recognized in profit or loss in accordance with Indian Accounting Standards is debited or credited to securities premium account/other reserves, the amount in respect thereof shall be deducted from profit or loss from continuing operations for the purpose of calculating basic earnings per share."

5. ***Amortisation of Discount or Premium:*** In Ind AS 33 paragraph 15 has been amended by adding the phrase, 'irrespective of whether such discount or premium is debited or credited to securities premium account' to further clarify that such discount or premium shall also be amortised to retained earnings.

6. ***Disclosure of Amounts of per Share using a Reported Component:*** IAS 33 requires disclosure of amounts of per share using a reported component, basic and diluted earnings per share and basic and diluted earnings per share for discontinued operations in the separate income statement, where separate income statement is presented. This requirement is not provided in Ind AS 33 consequential to the removal of option regarding two statement approach in Ind AS 1. Ind AS 1 requires that the components of profit or

loss and components of other comprehensive income shall be presented as a part of the statement of profit and loss.

8.20.7 Major Changes in Ind AS 33 vis a vis Notified AS 20

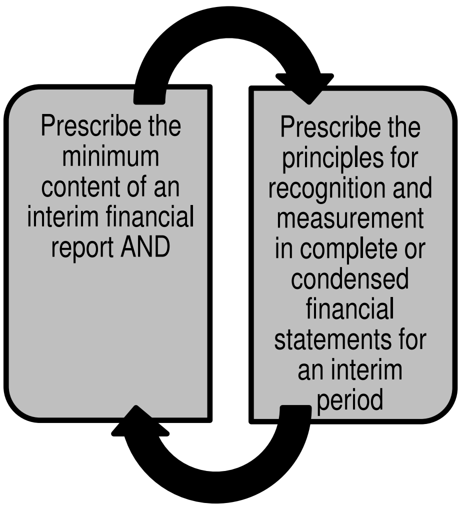
(i) ***Options held by the Entity on its Shares:*** Existing AS 20 does not specifically deal with options held by the entity on its shares, e.g., purchased options, written put option etc. Ind AS 33 deals with the same.

(ii) ***Presentation of Basic and Diluted EPS from Continuing and Discontinued Operations:*** Ind AS 33 requires presentation of basic and diluted EPS from continuing and discontinued operations separately. However, existing AS 20 does not require any such disclosure.

(iii) ***Disclosure of EPS with and without Extraordinary Items:*** Existing AS 20 requires the disclosure of EPS with and without extraordinary items. Since as per Ind AS 1, '*Presentation of Financial Statements*', no item can be presented as extraordinary item, Ind AS 33 does not require the aforesaid disclosure.

8.21 Ind AS 34 : Interim Financial Reporting

8.21.1 Objective



Timely and reliable interim financial reporting improves the ability of investors, creditors, and others to understand an entity's capacity to generate earnings and cash flows and its financial condition and liquidity.

8.21.2 Scope

This Standard does not mandate which entities should be required to publish interim financial reports, how frequently, or how soon after the end of an interim period. However, governments, securities regulators, stock exchanges, and accountancy bodies often require entities whose debt or equity securities are publicly traded to publish interim financial reports.

This Standard applies if an entity is required or elects to publish an interim financial report in accordance with Indian Accounting Standards.

8.21.3 Interim Financial Report

Interim financial report means a financial report containing either a complete set of financial statements (as described in Ind AS 1, *'Presentation of Financial Statements'*), or a set of condensed financial statements (as described in this Standard) for an interim period.

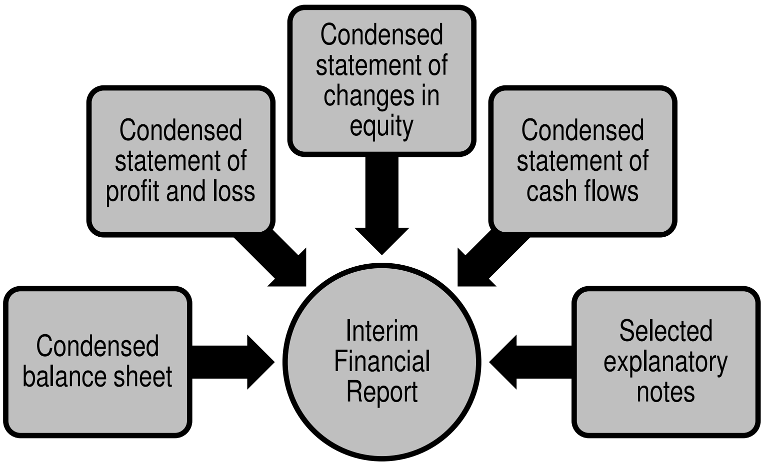
Interim period is a financial reporting period shorter than a full financial year.

8.21.4 Minimum Components of an Interim Financial Report

In the interest of timeliness and cost considerations and to avoid repetition of information previously reported, an entity may be required to or may elect to provide less information at interim dates as compared with its annual financial statements. This Standard defines the minimum content of an interim financial report as including condensed financial statements and selected explanatory notes. The interim financial report is intended to provide an update on the latest complete set of annual financial statements. Accordingly, it focuses on new activities, events, and circumstances and does not duplicate information previously reported.

Nothing in this Standard is intended to prohibit or discourage an entity from publishing a complete set of financial statements (as described in Ind AS 1) in its interim financial report, rather than condensed financial statements and selected explanatory notes. If an entity publishes a complete set of financial statements in its interim financial report, the form and content of those statements shall conform to the requirements of Ind AS 1 for a complete set of financial statements.

An interim financial report shall include, at a minimum, the following components:



Form and Content of Interim Financial Statements

$\boxed{\textbf{Situation I}}$: if an entity publishes a complete set of financial statements in its interim financial report, the form and content of those statements shall conform to the requirements of Ind AS 1 for a complete set of financial statements.

Situation II: If an entity publishes a set of condensed financial statements in its interim financial report, those condensed statements shall include, at a minimum:

- Each of the headings and subtotals that were included in its most recent annual financial statements
- The selected explanatory notes as required by this Standard
- Additional line items or notes shall be included if their omission would make the condensed interim financial statements misleading
- In the statement that presents the components of profit or loss for an interim period, an entity shall present basic and diluted earnings per share for that period when the entity is within the scope of Ind AS 33, *'Earnings per Share'*.

8.21.5 Significant Events and Transactions

The following is a list of events and transactions for which disclosures would be required if they are significant (the list is not exhaustive):

(a) the write-down of inventories to net realisable value and the reversal of such a write-down;

(b) recognition of a loss from the impairment of financial assets, property, plant and equipment, intangible assets, or other assets, and the reversal of such an impairment loss;

> In addition to disclosing significant events and transactions in accordance with paragraphs 15–15C, an entity shall include the following information, in the notes to its interim financial statements or elsewhere in the interim financial report. The following disclosures shall be given either in the interim financial statements or incorporated by cross-reference from the interim financial statements to some other statement (such as management commentary or risk report) that is available to users of the financial statements on the same terms as the interim financial statements and at the same time. If users of the financial statements do not have access to the information incorporated by cross-reference on the same terms and at the same time, the interim financial report is incomplete. The information shall normally be reported on a financial year-to-date basis.

(c) the reversal of any provisions for the costs of restructuring;

(d) acquisitions and disposals of items of property, plant and equipment;

(e) commitments for the purchase of property, plant and equipment;

(f) litigation settlements;

(g) corrections of prior period errors;

(h) changes in the business or economic circumstances that affect the fair value of the entity's financial assets and financial liabilities, whether those assets or liabilities are recognised at fair value or amortised cost;

(i) any loan default or breach of a loan agreement that has not been remedied on or before the end of the reporting period;

(j) related party transactions;

(k) transfers between levels of the fair value hierarchy used in measuring the fair value of financial instruments;

(l) changes in the classification of financial assets as a result of a change in the purpose or use of those assets; and

(m) changes in contingent liabilities or contingent assets.

8.21.6 Interim Reporting Periods

Interim reports shall include interim financial statements (condensed or complete) for periods as follows:

(a) Balance sheet as of the end of the current interim period and a comparative balance sheet as of the end of the immediately preceding financial year.

(b) Statements of profit and loss for the current interim period and cumulatively for the current financial year to date, with comparative statements of profit and loss for the comparable interim periods (current and year-to-date) of the immediately preceding financial year.

(c) Statement of changes in equity cumulatively for the current financial year to date, with a comparative statement for the comparable year-to-date period of the immediately preceding financial year.

(d) Statement of cash flows cumulatively for the current financial year to date, with a comparative statement for the comparable year-to-date period of the immediately preceding financial year.

(e) For an entity whose business is highly seasonal, financial information for the twelve months up to the end of the interim period and comparative information for the prior twelve-month period may be useful.

8.21.7 Recognition and Measurement

In deciding how to recognise, measure, classify, or disclose an item for interim financial reporting purposes, materiality shall be assessed in relation to the interim period financial data. In making assessments of materiality, it shall be recognised that interim measurements may rely on estimates to a greater extent than measurements of annual financial data.

The measurement procedures to be followed in an interim financial report shall be designed to ensure that the resulting information is reliable and that all material financial information that is relevant to an understanding of the financial position or performance of the entity is appropriately disclosed. While measurements in both annual and interim financial reports are often based on reasonable estimates, the preparation of interim financial reports generally will require a greater use of estimation methods than annual financial reports.

8.21.7.1 Same Accounting Policies as Annual: An entity shall apply the same accounting policies in its interim financial statements as are applied in its annual financial statements, except for accounting policy changes made after the date of the most recent annual financial statements that are to be reflected in the next annual financial statements. However, the frequency of an entity's reporting (annual, half-yearly, or quarterly) shall not affect the measurement of its annual results. To achieve that objective, measurements for interim reporting purposes shall be made on a year-to-date basis.

8.21.7.2 Revenues received Seasonally, Cyclically, or Occasionally: Revenues that are received seasonally, cyclically, or occasionally within a financial year shall not be anticipated or deferred as of an interim date if anticipation or deferral would not be appropriate at the end of the entity's financial year.

8.21.7.3 Costs incurred unevenly during the financial year: Costs that are incurred unevenly during an entity's financial year shall be anticipated or deferred for interim reporting purposes if, and only if, it is also appropriate to anticipate or defer that type of cost at the end of the financial year.

8.21.7.4 Use of Estimates: The measurement procedures to be followed in an interim financial report shall be designed to ensure that the resulting information is reliable and that all material financial information that is relevant to an understanding of the financial position or performance of the entity is appropriately disclosed. While measurements in both annual and interim financial reports are often based on reasonable estimates, the preparation of interim financial reports generally will require a greater use of estimation methods than annual financial reports.

8.21.8 Restatement of Previously Reported Interim Periods

A change in accounting policy, other than one for which the transition is specified by a new Ind AS, shall be reflected by:

(a) restating the financial statements of prior interim periods of the current financial year and the comparable interim periods of any prior financial years that will be restated in the annual financial statements in accordance with Ind AS 8; or

(b) when it is impracticable to determine the cumulative effect at the beginning of the financial year of applying a new accounting policy to all prior periods, adjusting the financial statements of prior interim periods of the current financial year, and comparable interim periods of prior financial years to apply the new accounting policy prospectively from the earliest date practicable.

There is an issue that whether an entity reverse impairment losses recognised in an interim period on goodwill if a loss would not have been recognised, or a smaller loss would have been recognised, had an impairment assessment been made only at the end of a subsequent reporting period. Appendix A of Ind AS 34 prescribes that an entity shall not reverse an impairment loss recognised in a previous interim period in respect of goodwill. Further this Appendix also prescribes that an entity shall not extend this accounting principle by analogy to other areas of potential conflict between Ind AS 34 and other Indian Accounting Standards.

8.21.9 Major Changes in Ind AS 34 vis-à-vis IAS* 34 Not Resulting in Carve Outs

(i) ***Addition of a footnote regarding Unaudited Financial Results:*** A footnote has been added to paragraph 1 of Ind AS 34, *'Interim Financial Reporting'* that Unaudited Financial Results required to be prepared and presented under Clause 41 of Listing Agreement with stock exchanges is not an 'Interim Financial Report' as defined in paragraph 4 of this Standard.

(ii) ***Single Statement Approach:*** IAS 34 provides option either to follow single statement approach or to follow two statement approaches. Ind AS 34 allows only single statement approach on the lines of Ind AS 1, *'Presentation of Financial Statements',* which also allows only single statement approach.

8.21.10 Major Differences between Ind AS 34 vis a vis Notified AS 25

(i) ***Scope:*** Under the existing AS 25, if an entity is required or elects to prepare and present an interim financial report, it should comply with that standard. Ind AS 34 applies only if an entity is required or elects to prepare and present an interim financial report in accordance with Accounting Standards. Consequently, it is specifically stated in Ind AS 34 that the fact that an entity may not have provided interim financial reports during a particular financial year or may have provided interim financial reports that do not comply with Ind AS 34 does not prevent the entity's annual financial statements from conforming to Ind AS if they otherwise do so.

(ii) ***Complete set of Financial Statements:*** In Ind AS 34, the term 'complete set of financial statements' appearing in the definition of interim financial report has been expanded as compared to AS 25. Accordingly, the said term (as described in Ind AS 1, '*Presentation of Financial Statements*') includes balance sheet as at the beginning of the preceding period when an entity applies an accounting policy retrospectively or makes a retrospective restatement of items in its financial statements, or when it reclassifies items in its financial statements and comparative information in respect of the preceding period as specified in paragraphs 38 and 38A of Ind AS 1.

(iii) ***Contents of Interim Report:*** As per the existing standard, the contents of an interim financial report include, at a minimum, a condensed balance sheet, a condensed statement of profit and loss, a condensed cash flow statement and selected explanatory notes. Ind AS 34 requires, in addition to the above, a condensed statement of changes in equity.

(iv) ***Reversal of Impairment Loss:*** Ind AS 34 prohibits reversal of impairment loss recognised in a previous interim period in respect of goodwill or an investment in either an equity instrument or a financial asset carried at cost. There is no such specific prohibition in the existing standard. Ind AS 34 includes Appendix A which addresses the interaction between the requirements of Ind AS 34 and the recognition of impairment losses on goodwill in Ind

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

AS 36 and certain financial assets in Ind AS 109, and the effect of that interaction on subsequent interim and annual financial statements.

(v) ***Inclusion of the Parent's Separate Statements and The Consolidated Financial Statements in the Entity's Interim Report:*** Under the existing standard, if an entity's annual financial report included the consolidated financial statements in addition to the separate financial statements, the interim financial report should include both the consolidated financial statements and separate financial statements, complete or condensed. Ind AS 34 states that it neither requires nor prohibits the inclusion of the parent's separate statements in the entity's interim report prepared on a consolidated basis.

(vi) ***Accounting Policies:*** The existing standard requires the Notes to interim financial statements, (if material and not disclosed elsewhere in the interim financial report), to contain a statement that the same accounting policies are followed in the interim financial statements as those followed in the most recent annual financial statements or, in case of change in those policies, a description of the nature and effect of the change. Ind AS 34 additionally requires the above information in respect of methods of computation followed.

(vii) ***Dividends:*** The existing standard requires furnishing information, in interim financial report, of dividends, aggregate or per share (in absolute or percentage terms), for equity and other shares. Ind AS 34 requires furnishing of information, in interim financial report, on dividends paid, aggregate or per share separately for equity and other shares.

(viii) ***Contingent Liabilities and Contingent Assets:*** While the existing standard requires furnishing of information on contingent liabilities only, Ind AS 34 requires furnishing of information on both contingent liabilities and contingent assets, if they are significant.

(ix) ***Extraordinary Items:*** In comparison to AS 25, reference to extraordinary items (in the context of materiality) is deleted in Ind AS 34 in line with the Ind AS 1.

(x) ***Interim Financial Statements prepared on Complete Basis:*** Ind AS 34 requires that, where an interim financial report has been prepared in accordance with the requirements of Ind AS 34, that fact should be disclosed. Further, an interim financial report should not be described as complying with Ind AS unless it complies with all of the requirements of Ind AS. (The latter statement is applicable when interim financial statements are prepared on complete basis instead of 'condensed basis'). The existing standard does not contain these requirements.

(xi) ***Change in Accounting Policy:*** Under the existing standard, a change in accounting policy, other than the one for which the transitional provisions are specified by a new Standard, should be reflected by restating the financial statements of prior interim periods of the current financial year. Ind AS 34 additionally requires restatement of the comparable interim periods of prior financial years that will be restated in annual financial statements in accordance with Ind AS 8, subject to specific provisions when such restatement is impracticable.

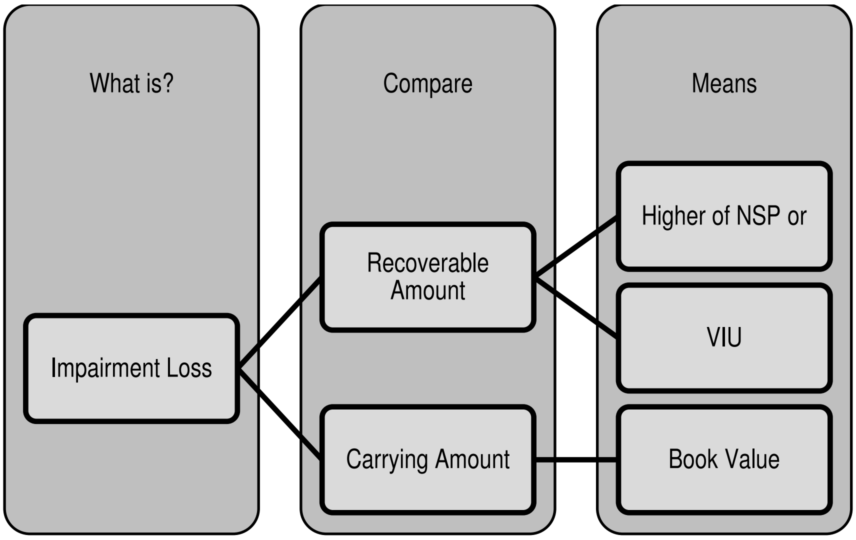
(xii) ***Impact of Convergence:*** Convergence of all other standards with IFRS also has impact on interim financial reporting. For example, treatment of constructive obligation in Ind AS 37, etc. will have impact in interim financial reporting which could be different in the context of relevant existing standards. There are other consequential impacts also. For example, existing AS 20 requires EPS with and without extraordinary items. Since the concept of extraordinary items is no longer valid in the context of Ind AS 1 the question of EPS with and without extraordinary items does not arise in the context of Ind AS 33. This changed requirement of Ind AS 33 is equally applicable to interim financial reporting under Ind AS 34.

(xiii) ***Transitional Provision:*** Under the existing standard, when an interim financial report is presented for the first time in accordance with that Standard, an entity need not present, in respect of all the interim periods of the current financial year, comparative statements of profit and loss for the comparable interim periods (current and year-to-date) of the immediately preceding financial year and comparative cash flow statement for the comparable year-to-date period of the immediately preceding financial year. Ind AS 34 does not have this transitional provision.

8.22 Ind AS 36 : Impairment of Assets

8.22.1 Objective

The objective of this Standard is to prescribe the procedures that an entity applies to ensure that its assets are carried at no more than their recoverable amount. An asset is carried at more than its recoverable amount if its carrying amount exceeds the amount to be recovered through use or sale of the asset. If this is the case, the asset is described as impaired and the Standard requires the entity to recognise an impairment loss. The Standard also specifies when an entity should reverse an impairment loss and prescribes disclosures.



8.22.2 Scope

This Standard shall be applied in accounting for the impairment of all assets, other than:

1. • Inventories: Ind AS 2
2. • Assets arising from construction contracts; Ind AS 11
3. • Deferred Tax Assets; Ind AS 12
4. • Assets arising from Employee Benefits; Ind AS 19
5. • Financial assets that are within the scope of Ind AS 109
6. • Biological assets related to agricultural activity that are measured at fair value less costs to sell; Ind AS 41
7. • Deferred acquisition costs, and intangible assets, arising from an insurer's contractual rights under insurance contracts within the scope of Ind AS 104
8. • Non-current assets (or disposal groups) classified as held for sale in accordance with Ind AS 105

This Standard applies to financial assets classified as:

- Subsidiaries, as defined in Ind AS 110 Consolidated Financial Statements
- Associates, as defined in Ind AS 28 Investments in Associates and Joint Ventures
- Joint ventures, as defined in Ind AS 111 Joint Arrangements.

8.22.3 Identifying an Asset that may be Impaired

An entity shall assess at the end of each reporting period whether there is any indication that an asset may be impaired. If any such indication exists, the entity shall estimate the recoverable amount of the asset.

Irrespective of whether there is any indication of impairment, an entity shall also:

(a) test an intangible asset with an indefinite useful life or an intangible asset not yet available for use for impairment annually by comparing its carrying amount with its recoverable amount. This impairment test may be performed at any time during an annual period, provided it is performed at the same time every year. Different intangible assets may be tested for impairment at different times.

However, if such an intangible asset was initially recognised during the current annual period, that intangible asset shall be tested for impairment before the end of the current annual period.

(b) test goodwill acquired in a business combination for impairment annually.

In assessing whether there is any indication that an asset may be impaired, an entity shall consider, as a minimum, the following indications:

External Sources of Information

(a) there are observable indications that the asset's value has declined during the period significantly more than would be expected as a result of the passage of time or normal use.

(b) significant changes with an adverse effect on the entity have taken place during the period, or will take place in the near future, in the technological, market, economic or legal environment in which the entity operates or in the market to which an asset is dedicated.

(c) market interest rates or other market rates of return on investments have increased during the period, and those increases are likely to affect the discount rate used in calculating an asset's value in use and decrease the asset's recoverable amount materially.

(d) the carrying amount of the net assets of the entity is more than its market capitalisation.

Internal Sources of Information

(a) evidence is available of obsolescence or physical damage of an asset.

(b) significant changes with an adverse effect on the entity have taken place during the period, or are expected to take place in the near future, in the extent to which, or manner in which, an asset is used or is expected to be used. These changes include the asset becoming idle, plans to discontinue or restructure the operation to which an asset belongs, plans to dispose of an asset before the previously expected date, and reassessing the useful life of an asset as finite rather than indefinite.

(c) evidence is available from internal reporting that indicates that the economic performance of an asset is, or will be, worse than expected.

(d) for an investment in a subsidiary, joint venture or associate, the investor recognises a dividend from the investment and evidence is available that:

  (i) the carrying amount of the investment in the separate financial statements exceeds the carrying amounts in the consolidated financial statements of the investee's net assets, including associated goodwill; or

  (ii) the dividend exceeds the total comprehensive income of the subsidiary, joint venture or associate in the period the dividend is declared.

8.22.4 Recognising and Measuring an Impairment Loss

If, and only if, the recoverable amount of an asset is less than its carrying amount, the carrying amount of the asset shall be reduced to its recoverable amount. That reduction is an impairment loss.

An impairment loss shall be recognised immediately in profit or loss, unless the asset is carried at revalued amount in accordance with another Standard (for example, in accordance with the revaluation model in Ind AS 16). Any impairment loss of a revalued asset shall be treated as a revaluation decrease in accordance with that other Standard.

When the amount estimated for an impairment loss is greater than the carrying amount of the asset to which it relates, an entity shall recognise a liability if, and only if, that is required by another Standard.

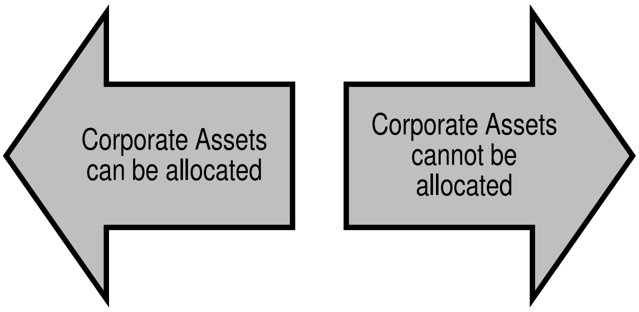
After the recognition of an impairment loss, the depreciation (amortisation) charge for the asset shall be adjusted in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

If there is an indication that an asset may be impaired, recoverable amount shall be estimated for individual asset. If it is not possible to estimate the recoverable amount of the individual asset, the entity shall determine the recoverable amount of the cash generating unit to which the asset belongs (the asset's cash generating unit).

8.22.5 Cash Generating Unit

A *cash-generating unit* is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.

Corporate Assets



Corporate assets include group or divisional assets such as the building of a headquarters or a division of the entity, EDP equipment or a research centre.

Because corporate assets do not generate separate cash inflows, the recoverable amount of an individual corporate asset cannot be determined unless management has decided to dispose of the asset. As a consequence, if there is an indication that a corporate asset may be impaired, recoverable amount is determined for the cash-generating unit or group of cash-generating units to which the corporate asset belongs, and is compared with the carrying amount of this cash-generating unit or group of cash-generating units.

In testing a cash-generating unit for impairment, an entity shall identify all the corporate assets that relate to the cash-generating unit under review. If a portion of the carrying amount of a corporate asset:

(a) can be allocated on a reasonable and consistent basis to that unit, the entity shall compare the carrying amount of the unit, including the portion of the carrying amount of the corporate asset allocated to the unit, with its recoverable amount. Any impairment loss shall be recognised.

(b) cannot be allocated on a reasonable and consistent basis to that unit, the entity shall:

(i) compare the carrying amount of the unit, excluding the corporate asset, with its recoverable amount and recognise any impairment loss;

(ii) identify the smallest group of cash-generating units that includes the cash-generating unit under review and to which a portion of the carrying amount of the corporate asset can be allocated on a reasonable and consistent basis; and

(iii) compare the carrying amount of that group of cash-generating units, including the portion of the carrying amount of the corporate asset allocated to that group of units, with the recoverable amount of the group of units. Any impairment loss shall be recognised.

8.22.5.1 Measuring Cash Generating Unit: The *recoverable amount* of an asset or a cash-generating unit is the higher of its fair value less costs of disposal and its value in use.

It is not always necessary to determine both an asset's fair value less costs of disposal and its value in use. If either of these amounts exceeds the asset's carrying amount, the asset is not impaired and it is not necessary to estimate the other amount.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Costs of disposal are incremental costs directly attributable to the disposal of an asset or cash-generating unit, excluding finance costs and income tax expense.

Value in use is the present value of the future cash flows expected to be derived from an asset or cash-generating unit.

The following elements shall be reflected in the calculation of an asset's value in use:

(a) an estimate of the future cash flows the entity expects to derive from the asset;

(b) expectations about possible variations in the amount or timing of those future cash flows;

(c) the time value of money, represented by the current market risk-free rate of interest;

(d) the price for bearing the uncertainty inherent in the asset; and

(e) other factors, such as illiquidity, that market participants would reflect in pricing the future cash flows the entity expects to derive from the asset.

Estimates of future cash flows shall include:

(a) projections of cash inflows from the continuing use of the asset;

(b) projections of cash outflows that are necessarily incurred to generate the cash inflows from continuing use of the asset (including cash outflows to prepare the asset for use) and can be directly attributed, or allocated on a reasonable and consistent basis, to the asset; and

(c) net cash flows, if any, to be received (or paid) for the disposal of the asset at the end of its useful life.

Future cash flows shall be estimated for the asset in its current condition. Estimates of future cash flows shall not include estimated future cash inflows or outflows that are expected to arise from:

(a) a future restructuring to which an entity is not yet committed; or

(b) improving or enhancing the asset's performance.

Estimates of future cash flows shall not include:

(a) cash inflows or outflows from financing activities; or

(b) income tax receipts or payments.

8.22.5.2 Impairment Loss for a Cash Generating Unit: An impairment loss shall be recognised for a cash-generating unit (the smallest group of cash-generating units to which goodwill or a corporate asset has been allocated) if, and only if, the recoverable amount of the unit (group of units) is less than the carrying amount of the unit (group of units). The impairment loss shall be allocated to reduce the carrying amount of the assets of the unit (group of units) in the following order:

(a) first, to reduce the carrying amount of any goodwill allocated to the cash-generating unit (group of units); and

(b) then, to the other assets of the unit (group of units) pro rata on the basis of the carrying amount of each asset in the unit (group of units).

These reductions in carrying amounts shall be treated as impairment losses on individual assets.

In allocating an impairment loss, an entity shall not reduce the carrying amount of an asset below the highest of:

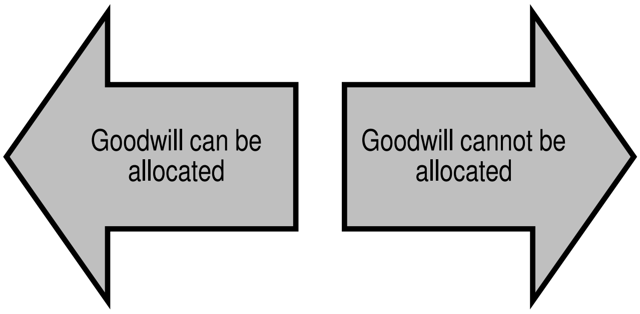
(a) its fair value less costs of disposal (if measurable);

(b) its value in use (if determinable); and

(c) zero.

The amount of the impairment loss that would otherwise have been allocated to the asset shall be allocated pro rata to the other assets of the unit (group of units).

8.22.5.3 Allocating goodwill to cash generating units



For the purpose of impairment testing, goodwill acquired in a business combination shall, from the acquisition date, be allocated to each of the acquirer's cash-generating units, or groups of cash-generating units, that is expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the acquiree are assigned to those units or groups of units. Each **unit or group of units to which the goodwill is so allocated** shall:

(a) represent the lowest level within the entity at which the goodwill is monitored for internal management purposes; and

(b) not be larger than an operating segment as defined by Ind AS 108, 'Operating Segments', before aggregation.

If goodwill has been allocated to a cash-generating unit and the entity disposes of an operation within that unit, the goodwill associated with the operation disposed of shall be:

(a) included in the carrying amount of the operation when determining the gain or loss on disposal; and

(b) measured on the basis of the relative values of the operation disposed of and the portion of the cash-generating unit retained, unless the entity can demonstrate that some other method better reflects the goodwill associated with the operation disposed of.

When, goodwill relates to a cash-generating unit but **has not been allocated to that unit**, the unit shall be tested for impairment, whenever there is an indication that the unit may be impaired, by comparing the unit's carrying amount, excluding any goodwill, with its recoverable amount.

8.22.6 Reversing an Impairment Loss

An entity shall assess at the end of each reporting period whether there is any indication that an impairment loss recognised in prior periods for an asset other than goodwill may no longer exist or may have decreased. If any such indication exists, the entity shall estimate the recoverable amount of that asset.

In assessing whether there is any indication that an impairment loss recognised in prior periods for an asset other than goodwill may no longer exist or may have decreased, an entity shall consider, as a minimum, the following indications:

External Sources of Information

(a) there are observable indications that the asset's value has increased significantly during the period.

(b) significant changes with a favourable effect on the entity have taken place during the period, or will take place in the near future, in the technological, market, economic or legal environment in which the entity operates or in the market to which the asset is dedicated.

(c) market interest rates or other market rates of return on investments have decreased during the period, and those decreases are likely to affect the discount rate used in calculating the asset's value in use and increase the asset's recoverable amount materially.

Internal Sources of Information

(a) significant changes with a favourable effect on the entity have taken place during the period, or are expected to take place in the near future, in the extent to which, or manner in which, the asset is used or is expected to be used. These changes include costs incurred during the period to improve or enhance the asset's performance or restructure the operation to which the asset belongs.

(b) evidence is available from internal reporting that indicates that the economic performance of the asset is, or will be, better than expected.

8.22.6.1 Reversing an Impairment Loss for an Individual Asset: The increased carrying amount of an asset other than goodwill attributable to a reversal of an impairment loss shall not exceed the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior years.

A reversal of an impairment loss for an asset other than goodwill shall be recognised immediately in profit or loss, unless the asset is carried at revalued amount in accordance with another Indian Accounting Standard (for example, the revaluation model in Ind AS 16). Any reversal of an impairment loss of a revalued asset shall be treated as a revaluation increase in accordance with that other Indian Accounting Standard.

NOTE: After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the asset shall be adjusted in future periods to allocate the asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

8.22.6.2 Reversing an Impairment Loss for a Cash-generating Unit: A reversal of an impairment loss for a cash-generating unit shall be allocated to the assets of the unit, except for goodwill, pro rata with the carrying amounts of those assets. These increases in carrying amounts shall be treated as reversals of impairment losses for individual assets.

In allocating a reversal of an impairment loss for a cash-generating unit, the carrying amount of an asset shall not be increased above the lower of:

(a) its recoverable amount (if determinable); and

(b) the carrying amount that would have been determined (net of amortisation or depreciation) had no impairment loss been recognised for the asset in prior periods.

The amount of the reversal of the impairment loss that would otherwise have been allocated to the asset shall be allocated pro rata to the other assets of the unit, except for goodwill.

8.22.6.3 Reversing an impairment loss for goodwill: An impairment loss recognised for goodwill shall not be reversed in a subsequent period.

8.22.7 Major Change in Ind AS 36 vis-à-vis IAS* 36 Not Resulting in Carve Out

Impairment of Investment Property: Paragraph 2(f) of IAS 36 provides that this standard is not applied to the accounting for impairment of investment property that is measured at fair value. Paragraph 2(f) is deleted in Ind AS 36 as Ind AS 40 requires cost model for measurement of investment property.

8.22.8 Major Differences between Ind AS 36 vis a vis Notified AS 28

(i) ***Financial Assets:*** Ind AS 36 applies to financial assets classified as subsidiaries, as defined in Ind AS 110, associates as defined in Ind AS 28, joint ventures as defined in Ind AS 111. The existing AS 28 does not apply to the above assets.

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

(ii) ***Biological Assets:*** Ind AS 36 specifically excludes biological assets related to agricultural activity. Existing AS 28 does not specifically exclude biological assets.

(iii) ***Impairment Testing for an Intangible Asset with an Indefinite Useful Life:*** Ind AS 36 requires annual impairment testing for an intangible asset with an indefinite useful life or not yet available for use and goodwill acquired in a business combination. The existing AS 28 does not require the annual impairment testing for the goodwill unless there is an indication of impairment.

(iv) ***Additional Guidance:*** Ind AS 36 gives additional guidance on, *inter alia*, the following aspects compared to the existing AS 28:

(a) estimating the value in use of an asset;

(b) for managements to assess the reasonableness of the assumptions on which cash flows are based; and

(c) using present value techniques in measuring an asset's value in use.

(v) ***Reversal of Goodwill:*** The existing AS 28 requires that the impairment loss recognised for goodwill should be reversed in a subsequent period when it was caused by a specific external event of an exceptional nature that is not expected to recur and subsequent external events that have occurred that reverse the effect of that event whereas Ind AS 36 prohibits the recognition of reversals of impairment loss for goodwill.

(vi) ***Bottom up and Top Down Test:*** In the existing AS 28, goodwill is allocated to CGUs only when the allocation can be done on a reasonable and consistent basis. If that requirement is not met for a specific CGU under review, the smallest CGU to which the carrying amount of goodwill can be allocated on a reasonable and consistent basis must be identified and the impairment test carried out at this level. Thus, when all or a portion of goodwill cannot be allocated reasonably and consistently to the CGU being tested for impairment, two levels of impairment tests are carried out, viz., bottom-up test and top-down test.

In Ind AS 36, goodwill is allocated to cash-generating units (CGUs) or groups of CGUs that are expected to benefit from the synergies of the business combination from which it arose. There is no bottom-up or top-down approach for allocation of goodwill.

(viii) ***Disclosures:*** Ind AS 36 requires certain extra disclosures as compared to the existing AS 28.

8.23 Ind AS 37: Provisions, Contingent Liabilities and Contingent Assets

8.23.1 Objective

The objective of this Standard is to ensure that

- appropriate recognition criteria and measurement bases are applied to provisions, contingent liabilities and contingent assets and
- that sufficient information is disclosed in the notes to enable users to understand their nature, timing and amount.

8.23.2 Scope

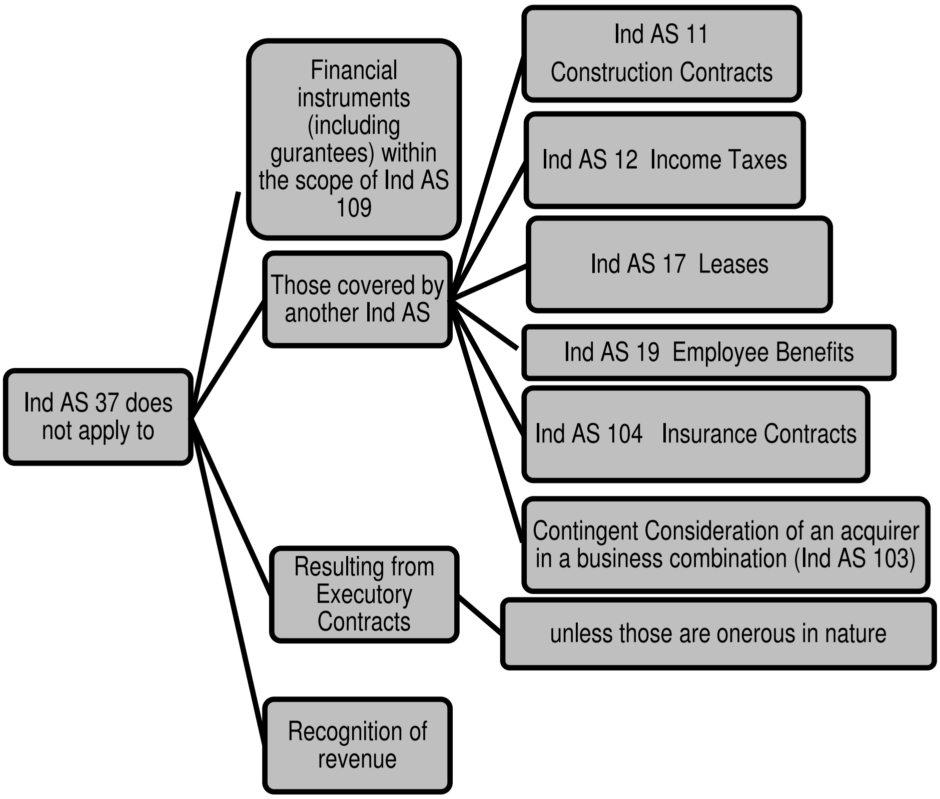
Executory contracts are contracts under which

- neither party has performed any of its obligations nor

➢ both parties have partially performed their obligations to an equal extent.

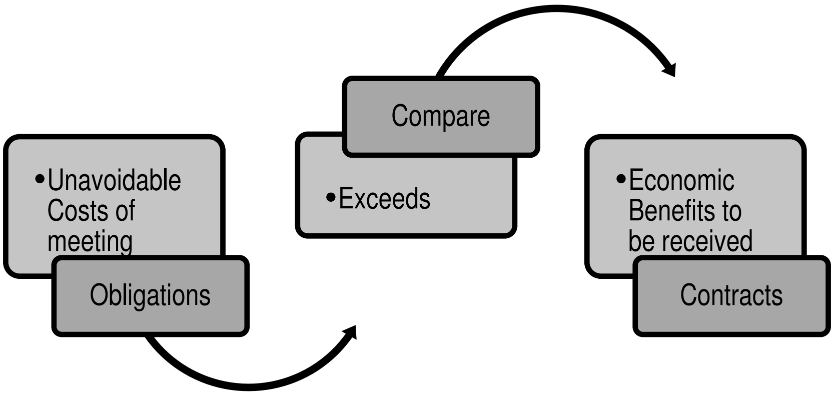
This Standard does not apply to executory contracts unless they are onerous.

Some amounts treated as provisions may relate to the recognition of revenue, for example, where an entity gives guarantees in exchange for fee. Ind AS 37 does not address the recognition of revenue. Ind AS 18, Revenue, identifies the circumstances in which revenue is recognised and provides practical guidance on the application of the recognition criteria. Ind AS 37 does not change the requirements of Ind AS 18.



8.23.3 Onerous contracts

An **onerous contract** is a contract in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.



If an entity has a contract that is onerous, the present obligation under the contract shall be recognised and measured as a provision.

Many contracts (for example, some routine purchase orders) can be cancelled without paying compensation to the other party, and therefore there is no obligation.

The unavoidable costs under a contract reflect the least net cost of exiting from the contract, which is the lower of

- the cost of fulfilling it and
- any compensation or penalties arising from failure to fulfil it.

Before a separate provision for an onerous contract is established, an entity recognises any impairment loss that has occurred on assets dedicated to that contract (Ind AS 36).

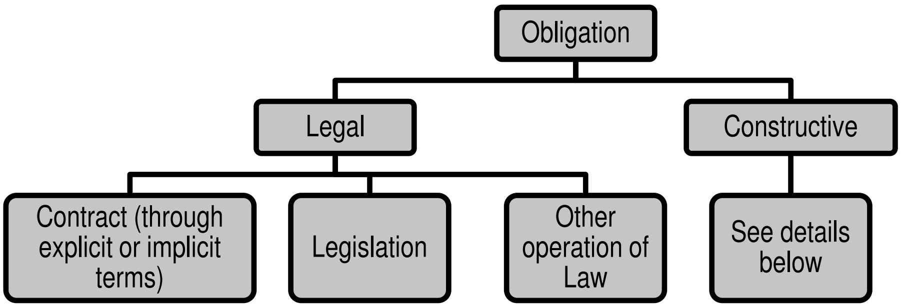
8.23.4 Provision

A **provision** is a liability of uncertain timing or amount.

A liability

- is a present obligation of the entity
- arising from past events,
- the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits.

An obligating event is an event that creates a legal or constructive obligation that results in an entity having no realistic alternative to settling that obligation.



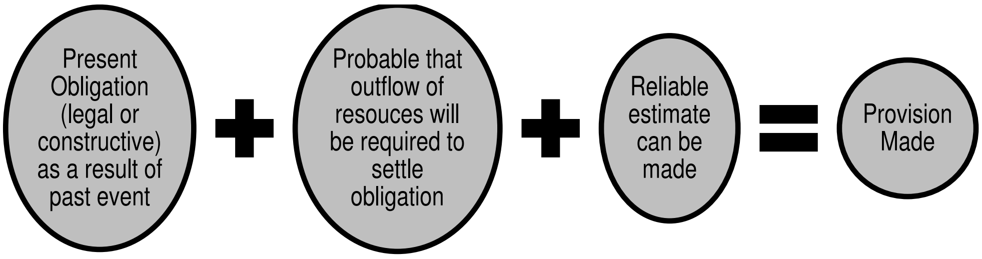
8.23.4.1 Recognition Principle of Provision: A provision shall be recognised when:

(a) an entity has a present obligation (legal or constructive) that is a result of a past event;

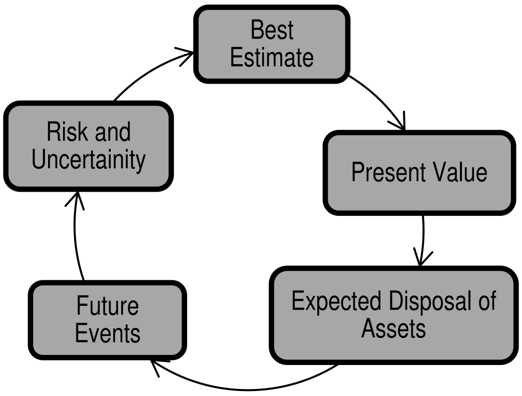
(b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and

(c) a reliable estimate can be made of the amount of the obligation.

If these conditions are not met, no provision shall be recognised.



8.23.4.2 Measurement of Provision



1. **Best estimate:** The amount recognised as a provision shall be the best estimate of the expenditure required to settle the present obligation at the end of the reporting period. The best estimate of the expenditure required to settle the present obligation is the amount that an entity would rationally pay to settle the obligation at the end of the reporting period or to transfer it to a third party at that time.

   Where the provision being measured involves a large population of items, the obligation is estimated by weighting all possible outcomes by their associated probabilities. Where a single obligation is being measured, the individual most likely outcome may be the best estimate of the liability. However, even in such a case, the entity considers other possible outcomes.

   The estimates of outcome and financial effect are determined

   - by the judgement of the management of the entity,
   - supplemented by experience of similar transactions and,
   - in some cases, reports from independent experts.

2. **Risks and uncertainties:** The risks and uncertainties that inevitably surround many events and circumstances shall be taken into account in reaching the best estimate of a provision**.**
   - Risk describes variability of outcome. A risk adjustment may increase the amount at which a liability is measured.
   - Disclosure of the uncertainties surrounding the amount of the expenditure is made under Ind AS 37.
3. **Present value:** Where the effect of the time value of money is material, the amount of a provision shall be the present value of the expenditures expected to be required to settle the obligation.
   - The discount rate (or rates) shall be a pre-tax rate (or rates) that reflect(s) current market assessments of the time value of money and the risks specific to the liability.
   - The discount rate(s) shall not reflect risks for which future cash flow estimates have been adjusted.
   - Government bond rate can be used as discount rate, as it is a risk-free pre-tax rate reflecting the time value of money.
   - Discount rate should also be reassessed at the end of each reporting period, including the interim reporting date, if any.
4. **Future events:** Future events that may affect the amount required to settle an obligation shall be reflected in the amount of a provision where there is sufficient objective evidence that they will occur.
5. **Expected disposal of assets:** Gains from the expected disposal of assets shall not be taken into account in measuring a provision. These are not recognised even if the expected disposal is closely linked to the event giving rise to the provision.

Reimbursements: Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the reimbursement shall be recognised when, and only when, it is virtually certain that reimbursement will be received if the entity settles the obligation.

8.23.4.4 Changes in Provisions: Provisions shall be reviewed at the end of each reporting period and adjusted to reflect the current best estimate.

If it is no longer probable that an outflow of resources embodying economic benefits will be required to settle the obligation, the provision shall be reversed.

Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as borrowing cost.

8.23.4.5 Application of the Recognition and Measurement Rules: Future operating losses: Provisions shall not be recognised for future operating losses.

Future operating losses do not meet the definition of a liability.

An expectation of future operating losses is an indication that certain assets of the operation may be impaired. An entity tests these assets for impairment under Ind AS 36 *'Impairment of Assets'.*

8.23.5 Contingent Liability

A contingent liability is

- a present obligation that arises from past events but is not recognised because:
  - It is not **probable** that an outflow of resources embodying economic benefits will be required to settle the obligation.
  - The amount of the obligation cannot be measured with sufficient reliability.
- a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.

Where an entity is jointly and severally liable for an obligation, the part of the obligation that is expected to be met by other parties is treated as a contingent liability.

For the purpose of Ind AS 37, the word 'probable' is defined as 'more likely than not'. 'More likely than not' means that the probability that the event will occur is greater than the probability that it will not occur. A percentage of over 50% chance that the event will occur can be used for this purpose.

8.23.6 Contingent Assets

A contingent asset

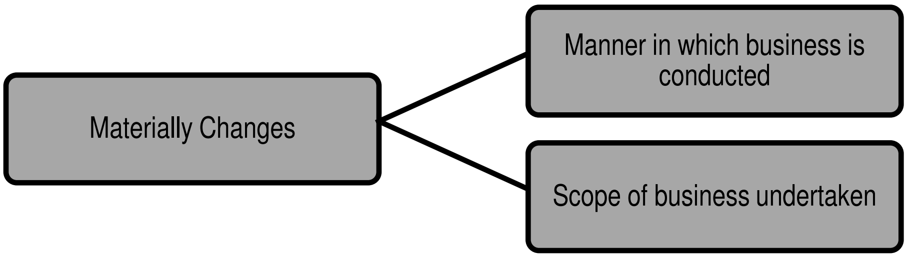
- is a possible asset
- that arises from past events and
- whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.

An example is a claim that an entity is pursuing through legal processes, where the outcome is uncertain.

An entity shall not recognise a contingent asset. Contingent assets are not recognised in financial statements since this may result in the recognition of income that may never be realised. However, when the realisation of income is virtually certain, then the related asset is not a contingent asset and its recognition is appropriate.

8.23.7 Restructuring

A restructuring is a programme that is planned and controlled by management, and materially changes either:



The following **are examples of events that** may fall under the definition of restructuring:

(a) sale or termination of a line of business;

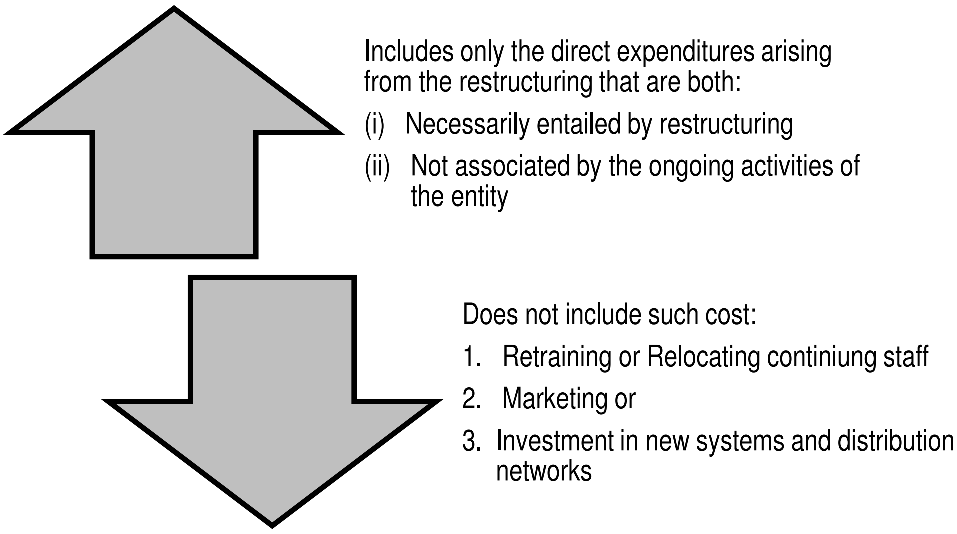
(b) the closure of business locations in a country or region or the relocation of business activities from one country or region to another;

(c) changes in management structure, for example, eliminating a layer of management; and

(d) fundamental reorganisations that have a material effect on the nature and focus of the entity's operations.

A provision for restructuring costs is recognised only when the general recognition criteria for provisions discussed earlier are met. The standard further sets out how the general recognition criteria apply to restructurings.

Restructuring cost provision will include and exclude the following:



Appendix A of Ind AS 37 provides guidance on (a) how a contributor account for its interest in a fund and (b) when a contributor has an obligation to make additional contributions, for example, in the event of the bankruptcy of another contributor or if the value of the investment assets held by the fund decreases to an extent that they are insufficient to fulfil the fund's reimbursement obligations, how that obligation be accounted for. The Appendix prescribes that the contributor shall recognise its obligation to pay decommissioning costs as a liability and recognise its interest in the fund separately unless the contributor is not liable to pay decommissioning costs even if the fund fails to pay. When a contributor has an obligation to make potential additional contributions, this obligation is a contingent liability that is within the scope of Ind AS 37. The contributor shall recognise a liability only if it is probable that additional contributions will be made.

Appendix B of Ind AS 37 provides guidance on the recognition, in the financial statements of producers, of liabilities for waste management under the European Union's Directive on Waste Electrical and Electronic Equipment (WE&EE), in respect of sales of historical household equipment. This Appendix addresses neither new waste nor historical waste from sources other than private households. The liability for such waste management is adequately covered in Ind AS 37. However, if, in national legislation, new waste from private households is treated in a similar manner to historical waste from private households, the principles of this Appendix apply by reference to the hierarchy in paragraphs 10-12 of Ind AS 8. The Ind AS 8 hierarchy is also relevant for other regulations that impose obligations in a way that is similar to the cost attribution model specified in the EU Directive.

Appendix C to Ind AS 16 addresses the accounting for a liability to pay a levy if that liability is within the scope of Ind AS 37. It also addresses the accounting for a liability to pay a levy whose timing and amount is certain. The Appendix prescribes that obligating event that gives rise to a liability to pay a levy is the activity that triggers the payment of the levy, as identified by the legislation. An entity does not have a constructive obligation to pay a levy that will be triggered by operating in a future period as a result of the entity being economically compelled to continue to operate in that future period. The liability to pay a levy is recognised progressively if the obligating event occurs over a period of time

8.23.8 Major Differences between Ind AS 37 vis a vis Notified AS 29

(i) ***Constructive obligations and Change in the Definition of Provision and Obligating Event:*** Unlike the existing AS 29, Ind AS 37 requires creation of provisions in respect of constructive obligations also. [However, the existing standard requires creation of provisions arising out of normal business practices, custom and a desire to maintain good business relations or to act in an equitable manner]. This has resulted in some consequential changes also. For example, definitions of provision and obligating event have been revised in Ind AS 37, while the terms 'legal obligation' and 'constructive obligation' have been inserted and defined in Ind AS 37. Similarly, the portion of existing AS 29 pertaining to restructuring provisions has been revised in Ind AS 37.

(ii) ***Discounting Provisions: The existing AS 29 prohibits discounting the amounts of provisions except in case of decommissioning, restoration and similar liabilities that are recognised as cost of Property, Plant and Equipment. Ind AS 37 requires discounting the amounts of provisions, if effect of the time value of money is material.***

(iii) ***Disclosure of Contingent Assets:*** The existing AS 29 notes the practice of disclosure of contingent assets in the report of the approving authority but prohibits disclosure of the same in the financial statements. Ind AS 37 requires disclosure of contingent assets in the financial statements when the inflow of economic benefits is probable. The disclosure, however, should avoid misleading indications of the likelihood of income arising.

(iv) ***Onerous Contracts:*** Ind AS 37 makes it clear that before a separate provision for an onerous contract is established, an entity should recognise any impairment loss that has occurred on assets dedicated to that contract in accordance with Ind AS 36. There is no such specific provision in the existing standard.

(v) ***Future Operating Losses:*** The existing AS 29 states that identifiable future operating losses up to the date of restructuring are not included in a provision. Ind AS 37 gives an exception to this principle viz. such losses related to an onerous contract.

(vi) ***Appendix:*** Ind AS 37 gives guidance on:

(a) Rights to Interests arising from Decommissioning, Restoration and Environmental Rehabilitation Funds

(b) Liabilities arising from Participating in a Specific Market — Waste Electrical and Electronic Equipment

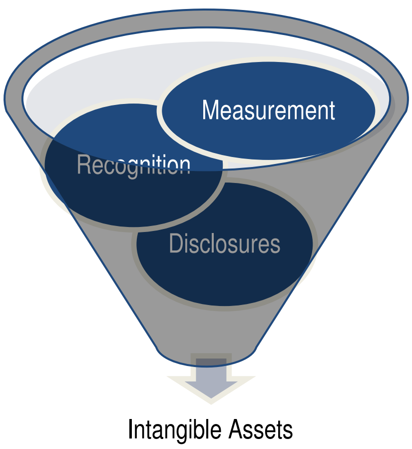
(c) Levies (imposed by government).

Existing AS 29 does not give such guidance.

8.24 Ind AS 38 : Intangible Assets

8.24.1 Objective

The objective of this Standard is to prescribe the accounting treatment for intangible assets that are not dealt with specifically in another Standard. This Standard requires an entity to recognise an intangible asset if, and only if, specified criteria are met. The Standard also specifies how to measure the carrying amount of intangible assets and requires specified disclosures about intangible assets.



8.24.2 Scope

This Standard shall be applied in accounting for intangible assets, **except**

1. • Intangible assets that are within the scope of another Standard (See below)
2. • Financial assets, as defined in Ind AS 32 'Financial Instruments: Presentation'
3. • The recognition and measurement of exploration and evaluation assets (Ind AS 106 'Exploration for and Evaluation of Mineral Resources')
4. • Expenditure on the development and extraction of minerals, oil, natural gas and similar non-regenerative resources

If another Standard prescribes the accounting for a specific type of intangible asset, an entity applies that Standard instead of this Standard. For example, this Standard **does not apply to:**

1. • Intangibles held for sale in ordinary course of business (Ind AS 2 and Ind AS 11)
2. • Deferred Tax Assets (Ind AS 12)
3. • Leases (Ind AS 17)
4. • Assets arsing from Employee Benefits (Ind AS 19)
5. • Financial Assets (Ind AS 32)
6. • Goodwill acquired in business combination (Ind AS 103)
7. • Insurance Contracts (Ind AS 104)
8. • Non-current Assets held for sale (Ind AS 105)

Caution: In determining whether an asset that incorporates both intangible and tangible elements should be treated under Ind AS 16 'Property, Plant and Equipment' or as an intangible asset under this Standard, an entity uses judgement to assess which element is more significant.

For example, computer software for a computer-controlled machine tool that cannot operate without that specific software is an integral part of the related hardware and it is treated as property, plant and equipment. The same applies to the operating system of a computer. When the software is not an integral part of the related hardware, computer software is treated as an intangible asset.

1. This Standard applies to, among other things;
   - expenditure on advertising,

- training,
- start-up,
- research and development activities.

Research and development activities are directed to the development of knowledge. Therefore, although these activities may result in an asset with physical substance (e.g. a prototype), the physical element of the asset is secondary to its intangible component, i.e. the knowledge embodied in it.

2. In the case of a **finance lease**, the underlying asset may be either tangible or intangible. After initial recognition, a lessee accounts for an intangible asset held under a finance lease in accordance with this Standard. Rights under licensing agreements for items such as motion picture films, video recordings, plays, manuscripts, patents and copyrights are excluded from the scope of Ind AS 17 and are within the scope of this Standard.
3. Exclusions from the scope of a Standard may occur if activities or transactions are so specialised that they give rise to accounting issues that may need to be dealt with in a different way. Such issues arise in the accounting for expenditure on the exploration for, or development and extraction of, oil, gas and mineral deposits in extractive industries and in the case of insurance contracts. Therefore, this Standard does not apply to expenditure on such activities and contracts. However, this Standard applies to other intangible assets used (such as computer software), and other expenditure incurred (such as start-up costs), in extractive industries or by insurers.

8.24.3 Intangible Asset

Intangible asset is an:

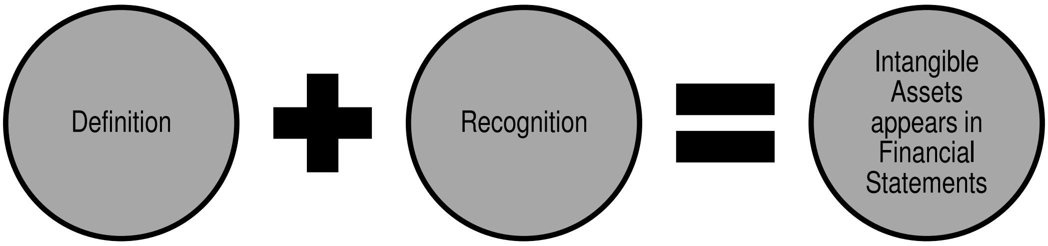
- Identifiable
- Non-monetary
- Asset
- Without physical substance.

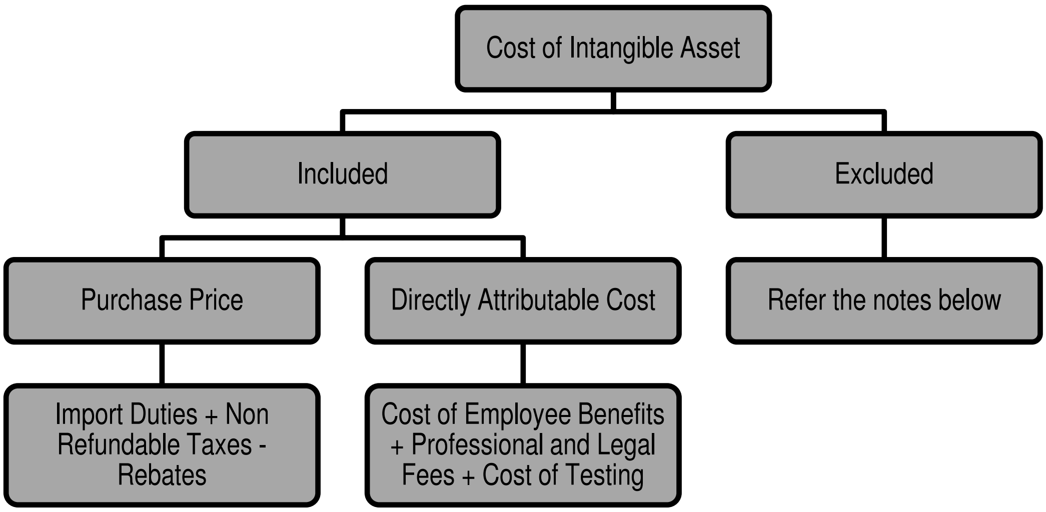
8.24.4 Recognition and Measurement

The recognition of an item as an intangible asset requires an entity to demonstrate that the item meets:

(a) the **definition** of an intangible asset; and

(b) the **recognition** criteria.





Examples of expenditures that are **not part** of the cost of an intangible asset are:

(a) costs of introducing a new product or service (including costs of advertising and promotional activities);

(b) costs of conducting business in a new location or with a new class of customer (including costs of staff training); and

(c) administration and other general overhead costs.

Deferred Payment

- If payment for an intangible asset is deferred beyond normal credit terms, its cost is the cash price equivalent.
- The difference between this amount and the total payments is recognised as interest expense over the period of credit unless it is capitalised in accordance with Ind AS 23 Borrowing Costs.

8.24.4.1 Separate Acquisition: The cost of a separately acquired intangible asset would comprise:

(a) its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates; and

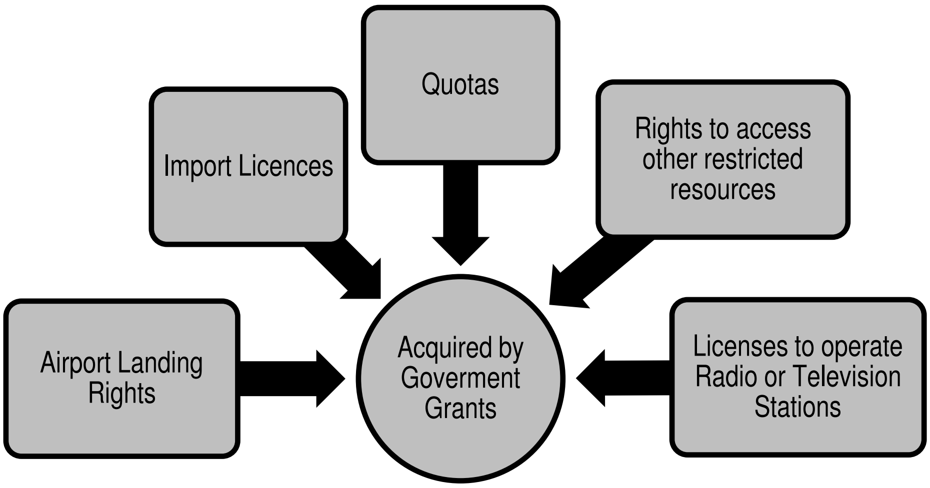
(b) any directly attributable cost of preparing the asset for its intended use.

8.24.4.2 Acquisition as part of a Business Combination: In accordance with Ind AS 103, '*Business Combinations'*, if an intangible asset is acquired in a business combination, the cost of that intangible asset is its fair value at the acquisition date. If an asset acquired in a business combination is separable or arises from contractual or other legal rights, sufficient information would exist to measure reliably the fair value of the asset.

In accordance with this Standard and Ind AS 103, an acquirer should recognise at the acquisition date, separately from goodwill, an intangible asset of the acquiree, if it meets the definition and recognition criteria for an intangible asset irrespective of whether the asset had been recognised by the acquiree before the business combination. This means that the acquirer recognises as an asset separately from goodwill an in-process research and development project of the acquiree if the project meets the definition of an intangible asset.

8.22.4.3 Acquisition by way of a Government Grant: In some cases, an intangible asset may be acquired free of charge, or for nominal consideration by way of a government grant.

This may happen when a government transfers or allocates to an entity intangible assets such as:



Note: In accordance with Ind AS 20 *'Accounting for Government Grants and Disclosure of Government Assistance'*, an entity recognises both the intangible asset and the grant **initially at fair value.**

8.24.4.4 Exchange of Assets: One or more intangible assets may be acquired in exchange for:

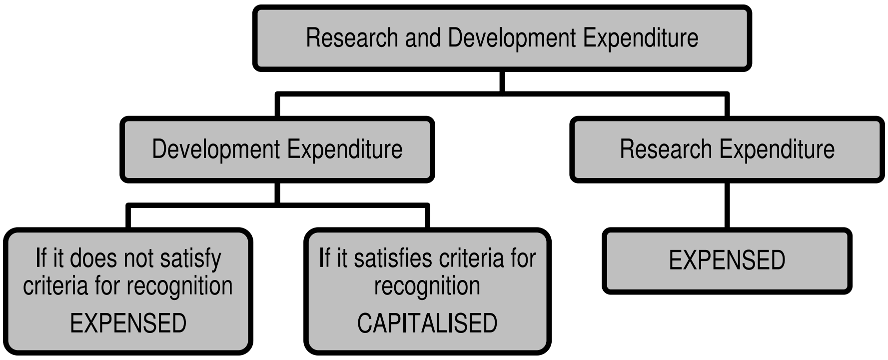
- A non-monetary asset or assets, or
- A combination of monetary and non-monetary assets.

The cost of such an intangible asset is measured at fair value unless:

(a) the exchange transaction lacks commercial substance or

(b) the fair value of neither the asset received nor the asset given up is reliably measurable.

8.24.5 Subsequent Expenditure on an Acquired In-process Research and Development Project



8.24.6 Internally Generated Goodwill

Internally generated goodwill shall **not be** recognised as an asset.

Internally generated goodwill is not recognised as an asset because it is not an identifiable resource (i.e. it is neither separable nor does it arise from contractual or other legal rights) controlled by the entity that can be measured reliably at cost.

In some cases, expenditure is incurred to generate future economic benefits, but it does not result in the creation of an intangible asset that meets the recognition criteria in this Standard. Such expenditure is often described as contributing to internally generated goodwill.

Differences between the fair value of an entity and the carrying amount of its identifiable net assets at any time may capture a range of factors that affect the fair value of the entity. However, such differences do not represent the cost of intangible assets controlled by the entity.

8.24.6.1 Internally Generated Intangible Assets -Requirements and Guidance: To assess whether an internally generated intangible asset meets the criteria for recognition, an entity classifies the generation of the asset into:

(a) a research phase; and

(b) a development phase.

If an entity cannot distinguish the research phase from the development phase of an internal project to create an intangible asset, the entity treats the expenditure on that project as if it were incurred in the research phase only.

1. **Research Phase:** No intangible asset arising from research (or from the research phase of an internal project) shall be recognised.

   Expenditure on research (or on the research phase of an internal project) shall be recognised as an expense when it is incurred.

2. **Development Phase:** An intangible asset arising from development (or from the development phase of an internal project) shall be recognised if, and only if, an entity can **demonstrate all** of the following:

   (a) the technical feasibility of completing the intangible asset so that it will be available for use or sale.

   (b) its intention to complete the intangible asset and use or sell it.

   (c) its ability to use or sell the intangible asset.

   (d) how the intangible asset will generate probable future economic benefits. Among other things, the entity can demonstrate the existence of a market for the output of the intangible asset or the intangible asset itself or, if it is to be used internally, the usefulness of the intangible asset.

   (e) the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset.

   (f) its ability to measure reliably the expenditure attributable to the intangible asset during its development.

8.24.6.2 Cost of an Internally Generated Intangible Asset: The cost of an internally generated intangible asset is the sum of expenditure incurred from the date when the intangible asset first meets the recognition criteria and the condition relating to development phase.

Ind AS 38 prohibits reinstatement of expenditure previously recognised as an expense.

The cost of an internally generated intangible asset comprises **all directly attributable costs** necessary to create, produce, and prepare the asset to be capable of operating in the manner intended by management.

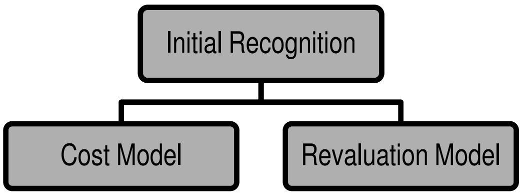
Examples of directly attributable costs are:

- Costs of materials and services used or consumed in generating the intangible asset
- Costs of employee benefits (as defined in Ind AS 19) arising from the generation of the intangible asset
- Fees to register a legal right
- Amortisation of patents and licences that are used to generate the intangible asset

Ind AS 23 specifies criteria for the recognition of interest as an element of the cost of an internally generated intangible asset.

Internally generated brands, mastheads, publishing titles, customer lists and items similar in substance should not be recognised as intangible assets.

8.24.7 Measurement after Recognition



An entity shall choose either the cost model or the revaluation model as its accounting policy.

If an intangible asset is accounted for using the revaluation model, all the other assets in its class shall also be accounted for using the same model, unless there is no active market for those assets.

1. **Cost Model:** After initial recognition, an intangible asset shall be carried at cost less any accumulated amortisation less any accumulated impairment losses
2. **Revaluation Model:** After initial recognition, an intangible asset shall be carried at a revalued amount, being fair value at the date of the revaluation less any subsequent accumulated amortisation less any subsequent accumulated impairment losses

Treatment of Revaluation Gains and Losses: If an intangible asset's carrying amount is increased as a result of a revaluation, the increase should be recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus. However, the increase should be recognised in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognised in profit or loss.

If an intangible asset's carrying amount is decreased as a result of a revaluation, the decrease should be recognised in profit or loss. However, the decrease should be recognised in other comprehensive income to the extent of any credit balance in the revaluation surplus in respect of that asset.

8.24.8 Useful Life

An entity shall assess whether the useful life of an intangible asset is:

- Finite {If finite, the length of, or number of production or similar units constituting, that useful life} OR
- Indefinite {An intangible asset shall be regarded by the entity as having an indefinite useful life when, based on an analysis of all of the relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows for the entity}

The accounting for an intangible asset is based on its useful life.

- An intangible asset with a finite useful life is amortised.
- An intangible asset with an indefinite useful life is not.

8.24.8.1 Intangible Assets with Finite Useful Lives

Amortisation

- The **depreciable amount** of an intangible asset with a finite useful life shall be allocated on a systematic basis over its useful life.
- Amortisation **shall begin** when the asset is available for use, i.e. when it is in the location and condition necessary for it to be capable of operating in the manner intended by management.
- Amortisation **shall cease** at the earlier of the date that the asset is classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with Ind AS 105 and the date that the asset is derecognised.
- The **amortisation method** used shall reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity. If that pattern cannot be determined reliably, the straight-line method shall be used.
- The amortisation charge for each period shall be recognised in **profit or loss** unless this or another Standard permits or requires it to be included in the carrying amount of another asset.

Residual Value: The residual value of an intangible asset with a finite useful life shall be **assumed to be zero unless:**

- there is a commitment by a third party to purchase the asset at the end of its useful life; or
- there is an active market (as defined in Ind AS 113) for the asset and:
  - I. residual value can be determined by reference to that market; and
  - II. it is probable that such a market will exist at the end of the asset's useful life.

Review of Amortisation Period and Amortisation Method

- The amortisation period and the amortisation method for an intangible asset with a finite useful life shall be <u>reviewed at least at each financial year-end</u>.
- If the expected useful life of the asset is different from previous estimates, the amortisation period shall be changed accordingly. If there has been a change in the expected pattern of consumption of the future economic benefits embodied in the asset, the amortisation method shall be changed to reflect the changed pattern. Such changes shall be accounted for <u>as changes in accounting estimates</u> in accordance with Ind AS 8.
- During the life of an intangible asset, it may become apparent that the estimate of its useful life is inappropriate. For example, the recognition of an impairment loss may indicate that the amortisation period needs to be changed.
- Over time, the pattern of future economic benefits expected to flow to an entity from an intangible asset may change.

8.24.8.2 Intangible Assets with Indefinite Useful Lives: An intangible asset with an indefinite useful life shall not be amortised.

In accordance with Ind AS 36, an entity is required to test an intangible asset with an indefinite useful life for impairment by comparing its recoverable amount with its carrying amount:

- Annually AND
- Whenever there is an indication that the intangible asset may be impaired

8.24.8.3 Review of Useful Life Assessment: The useful life of an intangible asset that is not being amortised should be reviewed each period to determine whether events and circumstances continue to support an indefinite useful life assessment for that asset. If they do not, the change in the useful life assessment from indefinite to finite should be accounted for as a change in an accounting estimate in accordance with Ind AS 8.

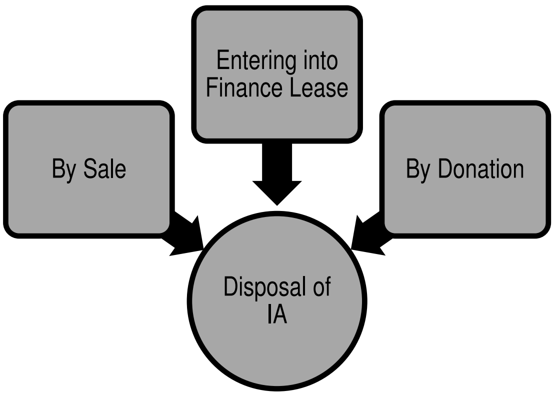
8.24.9 Retirements and Disposals

An intangible asset shall be derecognised:

- On Disposal OR
- When no future economic benefits are expected from its use or disposal

- The gain or loss arising from derecognition of an intangible asset shall be determined as the difference between the net disposal proceeds, if any, and the carrying amount of the asset.
- It shall be recognised in profit or loss when the asset is derecognised (unless Ind AS 17 requires otherwise on a sale and leaseback).
- Gains shall not be classified as revenue.

The disposal of an intangible asset may occur in a variety of ways:



In determining the date of disposal of such an asset, an entity applies the criteria in Ind AS 18, Revenue, for recognising revenue from the sale of goods. Ind AS 17 applies to disposal by a sale and leaseback.

Appendix A of Ind AS 38 provides guidance on whether the web site is an internally generated intangible asset that is subject to the requirements of Ind AS 38; and the appropriate accounting treatment of such expenditure. The Appendix prescribes that an entity's own web site that arises from development and is for internal or external access is an internally generated intangible asset that is subject to the requirements of Ind AS 38. Any internal expenditure on the development and operation of an entity's own web site shall be accounted for in accordance with Ind AS 38. The nature of each activity for which expenditure is incurred (eg training employees and maintaining the web site) and the web site's stage of development or post-development shall be evaluated to determine the appropriate accounting treatment. A web site that is recognised as an intangible asset under this Appendix shall be measured after initial recognition by applying the requirements of paragraphs 72-87 of Ind AS 38. The best estimate of a web site's useful life should be short.

8.24.10 Major Change in Ind AS 38 vis-à-vis IAS* 38 Not Resulting in Carve Out

Intangible Assets acquired by way of Government Grant: With regard to the acquisition of an intangible asset by way of a government grant, IAS 38, Intangible Assets, provides the option to an entity to recognise both asset and grant initially at fair value or at a nominal amount plus any expenditure that is directly attributable to preparing the asset for its intended use. Ind AS 38 allows only fair value for recognising the intangible asset and grant in accordance with Ind AS 20.

8.24.11 Major Changes in Ind AS 38 vis a vis Notified AS 26

(i) ***Exclusions:*** The existing standard (paragraph 5), does not apply to accounting issues of specialised nature that arise in respect of accounting for discount or premium relating to borrowings and ancillary costs incurred in connection with the arrangement of borrowings, share issue expenses and discount allowed on the issue of shares. Ind AS 38 does not include any such exclusion specifically as these are covered by other accounting standards.

Ind AS 38 contains a scope exclusion with regard to the amortisation method for intangible assets arising from service concession arrangements in respect of toll roads recognised in the financial statements before the beginning of the first Ind AS financial reporting period as per the previous GAAP, i.e., Schedule II to the Companies Act, 2013.

(ii) ***Definition of Intangible Assets:*** The existing standard defines an intangible asset as an identifiable non-monetary asset without physical substance held for use in the production or supply of goods or services, for rental to others, or for administrative purposes whereas in Ind AS 38, the requirement for the asset to be held for use in the production or supply

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

of goods or services, for rental to others, or for administrative purposes has been removed from the definition of an intangible asset.

(iii) ***Identifiability:*** The existing standard does not define 'identifiability', but states that an intangible asset could be distinguished clearly from goodwill if the asset was separable, but that separability was not a necessary condition for identifiability. Ind AS 38 provides detailed guidance in respect of identifiability.

(iv) ***Separately Acquired Intangible Assets:*** As per Ind AS 38, in the case of separately acquired intangibles, the criterion of probable inflow of expected future economic benefits is always considered satisfied, even if there is uncertainty about the timing or the amount of the inflow. However, there is no such provision in the existing standard.

(v) ***Revenue Based Amortisation Method:*** In Ind AS 38 there is a rebuttable presumption that an amortisation method that is based on the revenue generated by an activity that includes the use of an intangible asset is inappropriate. Ind AS 38 allows use of revenue based method of amortisation of intangible asset, in a limited way. Existing AS 26 does not specifically deal with revenue based amortisation method.

(vi) ***Payment Deferred beyond Normal Credit Terms:*** Under Ind AS 38, if payment for an intangible asset is deferred beyond normal credit terms, the difference between this amount and the total payments is recognised as interest expense over the period of credit unless it is capitalised as per Ind AS 23. However, there is no such provision in the existing standard.

(vii) ***Intangible Assets acquired in Business Combination:*** Ind AS 38 deals in detail in respect of intangible assets acquired in a business combination. On the other hand, the existing standard refers only to intangible assets acquired in an amalgamation in the nature of purchase and does not refer to business combinations as a whole.

(viii) ***Subsequent Expenditure on in Process Research and Development Project:*** The existing standard is silent regarding the treatment of subsequent expenditure on an in-process research and development project acquired in a business combination whereas Ind AS 38 gives guidance for the treatment of such expenditure

(ix) ***Intangible Assets Acquired in Exchange:*** Ind AS 38 requires that if an intangible asset is acquired in exchange of a non-monetary asset, it should be recognised at the fair value of the asset given up unless (a) the exchange transaction lacks commercial substance or (b) the fair value of neither the asset received nor the asset given up is reliably measurable. However, the existing standard requires the principles of existing AS 10 to be followed which require that when an asset is acquired in exchange for another asset, its cost is usually determined by reference to the fair market value of the consideration given. It may be appropriate to consider also the fair market value of the asset acquired if this is more clearly evident. An alternative accounting treatment to record the asset acquired at the net book value of the asset given up; in each case an adjustment is made for any balancing receipt or payment of cash or other consideration also.

(x) ***Intangible Assets acquired Free of Charge or for a Nominal Consideration by way of Government Grant:*** As per Ind AS 38, when intangible assets are acquired free of charge or for nominal consideration by way of government grant, an entity should, in accordance with Ind AS 20, record both the grant and the intangible asset at fair value. As per the existing standard, intangible assets acquired free of charge or for nominal consideration by way of government grant is recognised at nominal value or at acquisition cost, as appropriate plus any expenditure that is attributable to making the asset ready for intended use.

(xi) ***Useful Life of an Intangible Asset:*** The existing standard is based on the assumption that the useful life of an intangible asset is always finite, and includes a rebuttable presumption that the useful life cannot exceed ten years from the date the asset is available for use. That rebuttable presumption is not there in Ind AS 38. Ind AS 38 recognizes that the useful life of an intangible asset can even be indefinite subject to fulfillment of certain conditions, in which case it should not be amortised but should be tested for impairment.

(xii) ***Guidance on Certain Issues:*** In Ind AS 38, guidance is available on cessation of capitalisation of expenditure, de-recognition of a part of an intangible asset and useful life of a reacquired right in a business combination. There is no such guidance in the existing standard on these aspects.

(xiii) ***Valuation Model as Accounting Policy:*** Ind AS 38 permits an entity to choose either the cost model or the revaluation model as its accounting policy, whereas in the existing standard, revaluation model is not permitted.

(xiv) ***Intangible Assets recognised as an Expense:*** Ind AS 38 provides more guidance on recognition of intangible items recognised as expense. Ind AS 38 clarifies that in respect of prepaid expenses, recognition of an asset would be permitted only upto the point at which the entity has the right to access the goods or upto the receipt of services. Further, unlike the existing standard, mail order catalogues have been specifically identified as a form of advertising and promotional activities which are required to be expensed.

(xv) ***Contractual or Legal Rights may be Shorter than Legal Life:*** Ind AS 38 acknowledges that the useful life of an intangible asset arising from contractual or legal rights maybe shorter than the legal life. The existing standard does not include such a provision.

(xvi) ***Amortisation Lower than under SLM:*** As per the existing standard, there will rarely, if ever, be persuasive evidence to support an amortisation method for intangible assets that results in a lower amount of accumulated amortisation than under straight-line method. Ind AS 38 does not contain any such provision.

(xvii) ***Subsequent Increase of Residual Value for Changes in Prices or Value:*** Under Ind AS 38, the residual value is reviewed at least at each financial year-end. If it increases to an amount equal to or greater than the asset's carrying amount, amortisation charge is zero unless the residual value subsequently decreases to an amount below the asset's carrying amount. However, the existing standard specifically requires that the residual value is not subsequently increased for changes in prices or value.

(xviii) ***Change in Method of Amortization:*** As per the existing standard, change in the method of amortisation is a change in accounting policy whereas as per Ind AS 38, this would be a change in accounting estimate.

(xix) *Annual Impairment Testing:* The existing standard also requires annual impairment testing of an intangible asset not yet available for use. There is no such requirement in Ind AS 38.

(xx) *Disclosures:* Ind AS 38 also requires certain additional disclosures as compared to existing AS 26.

(xxi) *Intangible Assets Retired from Use and Held for Sale:* Intangible assets retired from use and held for sale are covered by the existing standard. However, Ind AS 38 does not include such intangible assets since they would be covered by Ind AS 105.

8.25 Ind AS 40 : Investment Property

8.25.1 Objective

The objective of this Standard is to prescribe the accounting treatment for investment property and related disclosure requirements.

8.25.2 Scope

This Standard shall be applied in the recognition, measurement and disclosure of investment property.

Among other things, this Standard applies to

This Standard does not deal with matters covered in Ind AS 17 'Leases'.

This Standard does not apply to:

1. • Biological assets related to agricultural activity (Ind AS 41)
2. • Mineral rights and mineral reserves such as oil, natural gas and similar non-regenerative resources

8.25.3 Investment Property and Owner Occupied Property

Investment property is property (land or a building—or part of a building—or both) held (by the owner or by the lessee under a finance lease) to earn rentals or for capital appreciation or both, rather than for:

(a) use in the production or supply of goods or services or for administrative purposes; or

(b) sale in the ordinary course of business.

Owner-occupied property is property held (by the owner or by the lessee under a finance lease) for use in the production or supply of goods or services or for administrative purposes.

CASE STUDY

S.No.	Property	Does it meet definition of Investment Property	Which Ind AS is Applicable
1.	Owned by a Company and leased out under an Operating Lease	Yes	Ind AS 40
2.	Held Under Finance Lease and Leased out under an Operating Lease	Yes	Ind AS 40
3.	Held under Finance Lease and Leased out under Finance Lease	No	Ind AS 17
4.	Property acquired with a view for development and resale	No	Ind AS 2
5.	Property developed on behalf of 3rd party	No	Ind AS 11
6.	Property partly owner occupied and partly leased out under Operating Lease	Depends	Ind AS 16 Ind AS 40
7.	Land held for currently undetermined use	Yes	Ind AS 40
8.	Property occupied by Employees paying rent at less than market rate	No	Ind AS 16
9.	Investment Property held for sale	No	Ind AS 105
10.	Existing Investment Property that is being redeveloped for continued use as Investment Property	Yes	Ind AS 40

8.25.4 Recognition

Investment property shall be recognised as an asset **when, and only when:**

(a) it is probable that the future economic benefits that are associated with the investment property will flow to the entity; and

(b) the cost of the investment property can be measured reliably.

An entity evaluates under this recognition principle all its investment property costs at the time they are incurred. These costs include

Costs incurred initially to acquire an investment property and Costs incurred subsequently to add to, replace part of, or service a property.	Under the recognition principle, an entity does not recognise in the carrying amount of an investment property the costs of the day-to-day servicing of such a property. Rather, these costs are recognised in profit or loss as incurred. *

*Costs of day-to-day servicing are primarily the cost of labour and consumables, and may include the cost of minor parts. The purpose of these expenditures is often described as for the 'repairs and maintenance' of the property.

8.25.5 Measurement at Recognition

An investment property shall be measured initially at its cost. Transaction costs shall be included in the initial measurement.

Purchase Price

Any directly attributable expenditure

Directly attributable expenditure includes, for example, professional fees for legal services, property transfer taxes and other transaction costs.

The cost of an investment property is **not increased by:**

(a) start-up costs (unless they are necessary to bring the property to the condition necessary for it to be capable of operating in the manner intended by management),

(b) operating losses incurred before the investment property achieves the planned level of occupancy, or

(c) abnormal amounts of wasted material, labour or other resources incurred in constructing or developing the property.

The initial cost of a property interest held under a lease and classified as an investment property shall be as prescribed for a finance lease by paragraph 20 of Ind AS 17, ie the asset shall be recognised at the lower of the fair value of the property and the present value of the minimum lease payments. An equivalent amount shall be recognised as a liability in accordance with that same paragraph.

8.25.6 Measurement After Recognition

Accounting policy: An entity shall adopt as its accounting policy the **cost model** to all of its investment property. However, the Standard requires all entities to measure the fair value of investment property, for the purpose of disclosure.

After initial recognition, an entity shall measure all of its investment properties in accordance with Ind AS 16's requirements for cost model, other than those that meet the criteria to be classified as held for sale (or are included in a disposal group that is classified as held for sale) in accordance with Ind AS 105, '*Non-current Assets Held for Sale and Discontinued Operations*'. Investment properties that meet the criteria to be classified as held for sale (or are included in a disposal group that is classified as held for sale) shall be measured in accordance with Ind AS 105.

8.25.7 Transfers

Transfers to, or from, investment property shall be made when, and only when, there is a change in use, evidenced by:

(a) commencement of owner-occupation, for a transfer from investment property to owner-occupied property;

(b) commencement of development with a view to sale, for a transfer from investment property to inventories;

(c) end of owner-occupation, for a transfer from owner-occupied property to investment property; or

(d) commencement of an operating lease to another party, for a transfer from inventories to investment property.

CASE STUDY

S. No.	Property	Transfer from to
1.	Office space previously rented to a third party, now the entity would use for its own	Investment Property to Owner Occupied
2.	Real Estate Company had a building given on rent for residential purpose. After 8 years the Company decides to build Commercial complex to sell	Investment Property to Inventory
3.	Building used as corporate office was vacated for an office in a better location	Owner Occupied to Investment Property
4.	Real Estate Company decides not to sell a building and give it on operating lease to a third party	Inventory to Investment Property

8.25.8 Disposals

1. An investment property shall be derecognised (eliminated from the balance sheet)
   - on disposal or
   - when the investment property is permanently withdrawn from use and no future economic benefits are expected from its disposal.
2. The disposal of an investment property may be achieved
   - by sale or
   - by entering into a finance lease.

In determining the date of disposal for investment property, an entity applies the criteria in Ind AS 18 for recognising revenue from the sale of goods. Ind AS 17 applies to a disposal effected by entering into a finance lease and to a sale and leaseback.

Gains or losses arising from the retirement or disposal of investment property shall be determined as the difference between the net disposal proceeds and the carrying amount of the asset and shall be recognised in profit or loss (unless Ind AS 17 requires otherwise on a sale and leaseback) in the period of the retirement or disposal.

The consideration receivable on disposal of an investment property is recognized initially at fair value. In particular, if payment for an investment property is deferred, the consideration received is recognised initially at the cash price equivalent. The difference between the nominal amount of the consideration and the cash price equivalent is recognised as interest revenue in accordance with Ind AS 18 using the effective interest method.

8.25.9 Major Changes in Ind AS 40 vis-à-vis IAS* 40 Not Resulting in Carve Outs

1. ***Valuation Models:*** IAS 40 permits both cost model and fair value model (except in some situations) for measurement of investment properties after initial recognition. Ind AS 40 permits only the cost model. Fair value model is not permitted because the unrealised gain and losses would have been required to be recognised in the statement of profit and loss. The fair value of investment property in India is not reliable and also using fair value model may lead to recognition and distribution of unrealised gains.

2. ***Operating Lease:*** IAS 40 permits treatment of property interest held in an operating lease as investment property, if the definition of investment property is otherwise met and fair value model is applied. In such cases, the operating lease would be accounted as if it were a finance lease. Since Ind AS 40 prohibits the use of fair value model, this treatment is prohibited in Ind AS 40. Also the expression 'investment property under a finance or operating lease' appearing in IAS 40 has been modified as 'investment property under finance lease' in Ind AS 40.

---

* The term 'IFRS' includes not only the International Financial Reporting Standards (IFRSs) issued by the IASB, it also includes the International Accounting Standards (IASs), IFRICs and SICs.

8.25.10 Major Changes in Ind AS 40 *vis-a-vis* Notified AS 13

AS 13 provides limited guidance on investment properties, as per the existing standard enterprise holding investment properties should account for them as per cost model prescribed in AS 10, Property, Plant and Equipment. However, Ind AS 40 is a detailed standard dealing with various aspects of investment property accounting.

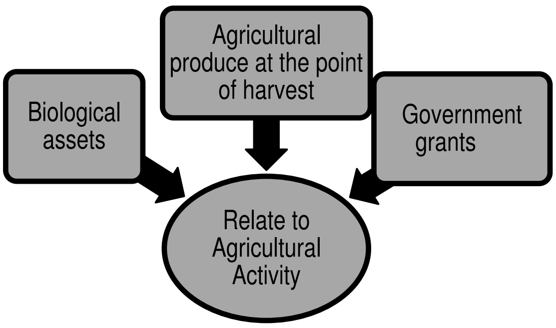
8.26 Ind AS 41 : Agriculture

8.26.1 Objective

The objective of Ind AS 41 is to prescribe the accounting treatment and disclosures related to agricultural activity.

8.26.2 Scope

This Standard shall be applied to account for the following when they relate to agricultural activity:



This Standard **does not apply to:**

1.
   - Land related to agricultural activity
   - Ind AS 16 'Property, Plant and Equipment' and Ind AS 40 'Investment Property'
2.
   - Bearer plants related to agricultural activity (Ind AS 16)
   - However, this Standard applies to the produce on those bearer plants
3.
   - Government grants related to bearer plants
   - Ind AS 20 'Accounting for Government Grants and Disclosure of Government Assistance'
4.
   - Intangible assets related to agricultural activity
   - Ind AS 38 'Intangible Assets'

Table below provides examples of biological assets, agricultural produce, and products that are the result of processing after harvest:

Biological assets	Agricultural produce	Products that are the result of processing after harvest
Sheep	Wool	Yarn, carpet
Trees in a timber plantation	Felled Trees	Logs, lumber
Dairy Cattle	Milk	Cheese
Pigs	Carcass	Sausages, cured hams
Cotton plants	Harvested cotton	Thread, clothing
Sugarcane	Harvested cane	Sugar
Tobacco plants	Picked leaves	Cured tobacco
Tea bushes	Picked leaves	Tea
Grape vines	Picked grapes	Wine
Fruit trees	Picked fruit	Processed fruit
Oil palms	Picked fruit	Palm oil
Rubber trees	Harvested latex	Rubber products

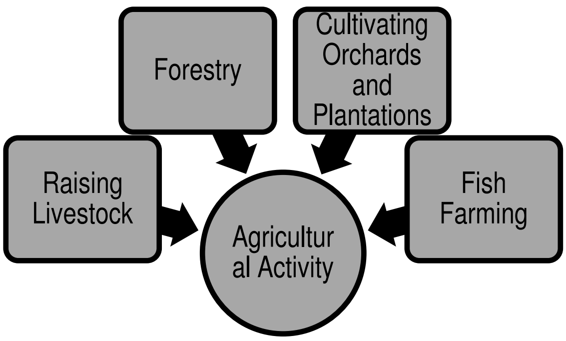
Some plants, for example, tea bushes, grape vines, oil palms and rubber trees, usually meet the definition of a bearer plant and are within the scope of Ind AS 16.

However, the produce growing on bearer plants, for example, tea leaves, grapes, oil palm fruit and latex, is within the scope of Ind AS 41.

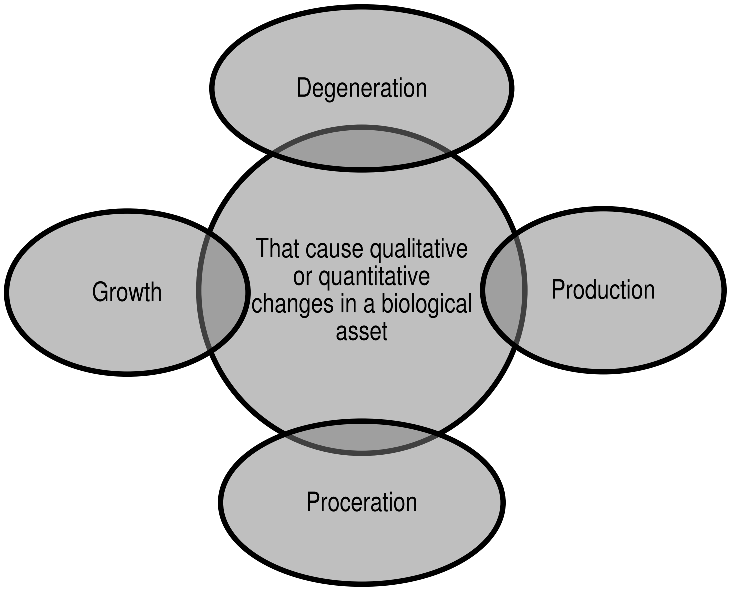
8.26.3 Agriculture Related Definitions

1. **Agricultural activity:**
   - Is the management by an entity of the biological transformation and harvest of biological asset.
   - for sale or for conversion into agricultural produce or into additional biological assets.

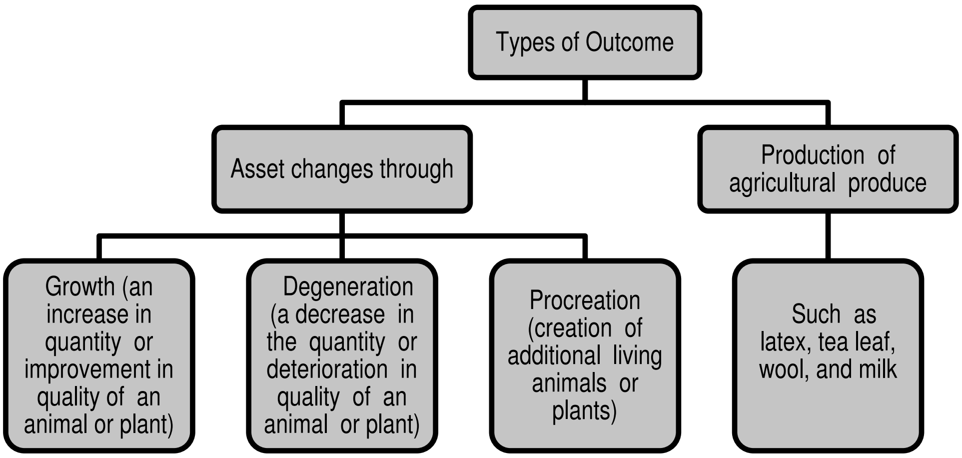
   Agricultural activity covers a diverse range of activities.



Biological transformation comprises the processes of:



Biological transformation results in the following types of outcomes:



2. A **biological asset** is a:
   - Living animal; **Or**
   - Plant.

   A group of biological assets is an aggregation of similar living animals or plants.
3. **Agricultural produce** is the harvested product of the entity's biological assets.
4. **Harvest** is the:
   - Detachment of produce from a biological asset; Or
   - The cessation of a biological asset's life processes.

5. A **bearer plant** is a living plant that:

- Is used in the production or supply of agricultural produce
- Is expected to bear produce for more than one period
- Has a remote likelihood of being sold as agricultural produce, except for incidental scrap sales

The following are **NOT** bearer plants:

Not Bearer Plant

- Plants cultivated to be harvested as agricultural produce
  - Example: Trees grown for use as lumber
- Annual crops
  - Example: Maize and wheat
- Plants cultivated to produce agricultural produce when there is more than a remote likelihood that the entity will also harvest and sell the plant as agricultural produce, other than as incidental scrap sales
  - Example: Trees that are cultivated both for their fruit and their lumber

When bearer plants are no longer used to bear produce they might be cut down and sold as scrap, for example, for use as firewood. Such incidental scrap sales would not prevent the plant from satisfying the definition of a bearer plant.

Produce growing on bearer plants is a biological asset.

8.26.4 Recognition and Measurement

An entity shall recognise a biological asset or agricultural produce when, and only when:

- The entity controls the asset as a result of past events
- It is probable that future economic benefits associated with the asset will flow to the entity
- The fair value or cost of the asset can be measured reliably

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Costs to sell are the incremental costs directly attributable to the disposal of an asset, excluding finance costs and income taxes. Costs to sell exclude transport and other costs necessary to get the asset to a market.

A biological asset shall be measured on initial recognition and at the end of each reporting period at its fair value less costs to sell, except for the case described in paragraph 30 where the fair value cannot be measured reliably.

Agricultural produce harvested from an entity's biological assets shall be measured at its fair value less costs to sell at the point of harvest. Such measurement is the cost at that date when applying Ind AS 2 'Inventories' or another applicable Standard.

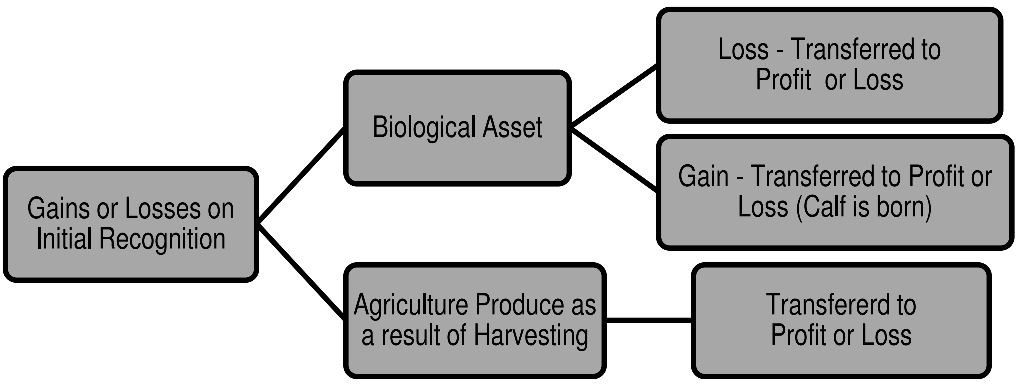
8.26.4.1 Gains and Losses

On Biological Asset: A gain or loss arising on initial recognition of a biological asset at fair value less costs to sell and from a change in fair value less costs to sell of a biological asset shall be included in profit or loss for the period in which it arises.

A loss may arise on initial recognition of a biological asset, because costs to sell are deducted in determining fair value less costs to sell of a biological asset. A gain may arise on initial recognition of a biological asset, such as when a calf is born.

On Agricultural Produce: A gain or loss arising on initial recognition of agricultural produce at fair value less costs to sell shall be included in profit or loss for the period in which it arises.

A gain or loss may arise on initial recognition of agricultural produce as a result of harvesting.



8.26.5 Government Grants

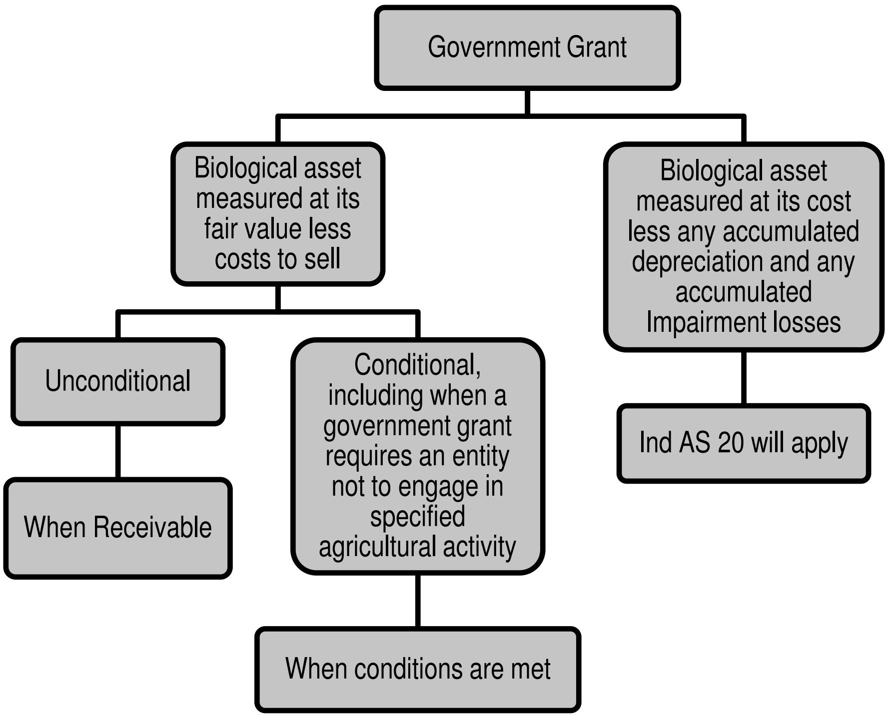
An unconditional government grant related to a biological asset measured at its fair value less costs to sell shall be recognised in profit or loss when, and only when, the government grant becomes receivable.

If a government grant related to a biological asset measured at its fair value less costs to sell is conditional, including when a government grant requires an entity not to engage in specified agricultural activity, an entity shall recognise the government grant in profit or loss when, and only when, the conditions attaching to the government grant are met.

For example: A grant may require an entity to farm in a particular location for five years and require the entity to return all of the grant if it farms for a period shorter than five years. In this case, the grant is not recognised in profit or loss until the five years have passed. However, if the terms of the grant allow part of it to be retained according to the time that has elapsed, the entity recognises that part in profit or loss as time passes.

If a government grant relates to a biological asset measured at its cost less any accumulated depreciation and any accumulated Impairment losses, Ind AS 20 is applied.

This Standard requires a different treatment from Ind AS 20, if a government grant relates to a biological asset measured at its fair value less costs to sell or a government grant requires an entity not to engage in specified agricultural activity. Ind AS 20 is applied only to a government grant related to a biological asset measured at its cost less any accumulated depreciation and any accumulated impairment losses.



8.27 Ind AS 101: First time Adoption of Indian Accounting Standards

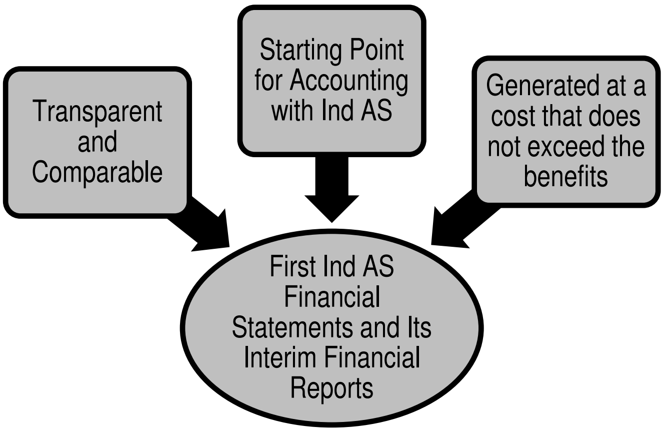
8.27.1 Objective

The objective of this Ind AS is to ensure that an entity's first Ind AS financial statements, and its interim financial reports for part of the period covered by those financial statements contain high quality information that:

(a) is transparent for users and comparable over all periods presented;

(b) provides a suitable starting point for accounting in accordance with Ind AS; and

(c) can be generated at a cost that does not exceed the benefits.



8.27.2 Scope

An entity shall apply this Ind AS in:

(a) its first Ind AS financial statements; and

(b) each interim financial report, if any, that it presents in accordance with Ind AS 34, 'Interim Financial Reporting', for part of the period covered by its first Ind AS financial statements.

An entity's first Ind AS financial statements are the first annual financial statements in which the entity adopts Ind AS, in accordance with Ind AS notified under the Companies Act, 2013 and makes ***an explicit and unreserved statement*** in those financial statements of compliance with Ind AS.

8.27.3 Recognition and Measurement

Opening Ind AS Balance Sheet: An entity shall prepare and present an opening Ind AS Balance Sheet at the date of transition to Ind AS. This is the starting point for its accounting in accordance with Ind AS.

An entity shall, in its opening Ind AS Balance Sheet:

(a) recognise all assets and liabilities whose recognition is required by Ind AS;

(b) not recognise items as assets or liabilities if Ind AS do not permit such recognition;

(c) reclassify items that it recognised in accordance with previous GAAP as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity in accordance with Ind AS; and

(d) apply Ind AS in measuring all recognised assets and liabilities.

Accounting Policies: An entity shall use the same accounting policies in its opening Ind AS Balance Sheet and throughout all periods presented in its first Ind AS financial statements. The accounting policies in opening Ind AS Balance Sheet may differ from those that it used for the same date using previous GAAP. The resulting adjustments arise from events and transactions before the date of transition to Ind AS shall be recognised directly in retained earnings.

Those accounting policies shall comply with each Ind AS effective at the end of its first Ind AS reporting period, subject to:

- Mandatory Exceptions
- Optional Exemptions

This Ind AS establishes two categories of exceptions to the principle that an entity's opening Ind AS Balance Sheet shall comply with each Ind AS:

- Ind AS 101 prohibit retrospective application of some specific aspects of other Ind AS.
- Ind AS 101 grant exemptions from some specific requirements of other Ind AS.

8.27.4 Exceptions to the Retrospective Application of Other Ind AS

This Ind AS prohibits retrospective application of some aspects of other Ind AS. These exceptions are as under:

8.27.4.1 Mandatory Exceptions

1. ***Estimates:*** An entity's estimates in accordance with Ind AS at the date of transition to Ind AS shall be consistent with estimates made for the same date in accordance with previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error.

2. ***Derecognition of Financial Assets or Financial Liabilities:*** A first-time adopter shall apply the derecognition requirements in Ind AS 109 prospectively for transactions occurring on or after the date of transition to Ind AS.

3. ***Hedge Accounting:*** An entity shall not reflect in its opening Ind AS Balance Sheet a hedging relationship of a type that does not qualify for hedge accounting in accordance with Ind AS 109.

4. ***Non-controlling Interests:*** A first-time adopter shall apply the following requirements of Ind AS 110 prospectively from the date of transition to Ind AS:

   (a) Total comprehensive income is attributed to the owners of the parent and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance;

(b) Accounting for changes in the parent's ownership interest in a subsidiary that do not result in a loss of control; and

(c) Accounting for a loss of control over a subsidiary, and the related requirements of paragraph 8A of Ind AS 105, *'Non-current Assets Held for Sale and Discontinued Operations'*.

5. ***Classification and Measurement of Financial Assets**:* An entity shall assess whether a financial asset meets the conditions in paragraph 4.1.2 or the conditions in paragraph 4.1.2A of Ind AS 109 on the basis of the facts and circumstances that exist at the date of transition to Ind AS.

6. ***Impairment of Financial Assets:*** An entity should seek to approximate the credit risk on initial recognition by considering all reasonable and supportable information that is available without undue cost or effort.

   An entity is not required to undertake an exhaustive search for information when determining, at the date of transition to Ind AS, whether there have been significant increases in credit risk since initial recognition. If an entity is unable to make this determination without undue cost or effort paragraph B8G of this Ind AS applies.

7. ***Embedded Derivatives:*** A first-time adopter shall assess whether an embedded derivative is required to be separated from the host contract and accounted for as a derivative on the basis of the conditions that existed at the later of the date it first became a party to the contract and the date of a reassessment.

8. ***Government Loans:*** A first-time adopter shall classify all government loans received as a financial liability or an equity instrument in accordance with Ind AS 32.

8.27.4.2 Optional Exemptions

1. ***Exemptions for Business Combinations:*** A first-time adopter may elect not to apply Ind AS 103 retrospectively to past business combinations (business combinations that occurred before the date of transition to Ind AS).

   However, if a first-time adopter restates any business combination to comply with Ind AS 103, it shall restate all later business combinations and shall also apply Ind AS 110 from that same date.

2. ***Share-based Payment Transactions:*** A first-time adopter is encouraged, but not required, to apply Ind AS 102 '*Share-based Payment'* to equity instruments that vested before date of transition to Ind AS.

3. ***Insurance Contracts:*** An entity shall apply Ind AS 104 *'Insurance Contracts'* for annual periods beginning on or after date of transition to Ind AS. Earlier application is encouraged. If an entity applies this Ind AS 104 for an earlier period, it shall disclose that fact.

4. ***Deemed Cost:*** An entity may elect to measure an item of property, plant and equipment or an intangible asset at the date of transition to Ind AS at its fair value and use that fair value as its deemed cost at that date.

A first-time adopter may elect to use a previous GAAP revaluation of an item of property, plant and equipment or an intangible asset at, or before, the date of transition to Ind AS as deemed cost at the date of the revaluation, if the revaluation was, at the date of the revaluation, broadly comparable to:

(a) fair value; or

(b) cost or depreciated cost in accordance with Ind AS, adjusted to reflect, for example, changes in a general or specific price index.

5. ***Leases:*** A first-time adopter may apply paragraphs 6-9 of the Appendix C of Ind AS 17 Determining whether an Arrangement contains a Lease to determine whether an arrangement existing at the date of transition to Ind AS contains a lease on the basis of facts and circumstances existing at the date of transition to Ind AS, except where the effect is expected to be not material.

6. ***Cumulative Translation Differences:*** Ind AS 21 requires an entity:

(a) to recognise some translation differences in other comprehensive income and accumulate these in a separate component of equity; and

(b) on disposal of a foreign operation, to reclassify the cumulative translation difference for that foreign operation (including, if applicable, gains and losses on related hedges) from equity to profit or loss as part of the gain or loss on disposal.

However, a first-time adopter need not comply with these requirements for cumulative translation differences that existed at the date of transition to Ind AS. If a first-time adopter uses this exemption:

(a) the cumulative translation differences for all foreign operations are deemed to be zero at the date of transition to Ind AS; and

(b) the gain or loss on a subsequent disposal of any foreign operation shall exclude translation differences that arose before the date of transition to Ind AS and shall include later translation differences.

7. ***Long-term Foreign Currency Monetary Items;*** A first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP.

8. ***Investments in Subsidiaries, Joint Ventures and Associates:*** When an entity prepares separate financial statements, Ind AS 27 requires it to account for its investments in subsidiaries, joint ventures and associates either:

(a) at cost; or

(b) in accordance with Ind AS 109.

If a first-time adopter measures such an investment at cost in accordance with Ind AS 27, it shall measure that investment at one of the following amounts in its separate opening Ind AS Balance Sheet:

(a) cost determined in accordance with Ind AS 27; or

(b) deemed cost. The deemed cost of such an investment shall be its:

(i) fair value at the entity's date of transition to Ind AS in its separate financial statements; or

(ii) previous GAAP carrying amount at that date.

A first-time adopter may choose either (i) or (ii) above to measure its investment in each subsidiary, joint venture or associate that it elects to measure using a deemed cost.

9. ***Assets and Liabilities of Subsidiaries, Associates and Joint ventures:*** If a subsidiary becomes a first-time adopter later than its parent, the subsidiary shall, in its financial statements, measure its assets and liabilities at either:

(a) the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to Ind AS, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary (this election is not available to a subsidiary of an investment entity, as defined in Ind AS 110, that is required to be measured at fair value through profit or loss); or

(b) the carrying amounts required by the rest of this Ind AS, based on the subsidiary's date of transition to Ind AS. These carrying amounts could differ from those described in (a):

(i) when the exemptions in this Ind AS result in measurements that depend on the date of transition to Ind AS.

(ii) when the accounting policies used in the subsidiary's financial statements differ from those in the consolidated financial statements. For example, the subsidiary may use as its accounting policy the cost model in Ind AS 16 *'Property, Plant and Equipment'*, whereas the group may use the revaluation model.

A similar election is available to an associate or joint venture that becomes a first-time adopter later than an entity that has significant influence or joint control over it.

10. ***Compound Financial Instruments:*** Ind AS 32 *'Financial Instruments: Presentation'* requires an entity to split a compound financial instrument at inception into separate liability and equity components. If the liability component is no longer outstanding, retrospective application of Ind AS 32 involves separating two portions of equity. The first portion is in retained earnings and represents the cumulative interest accreted on the liability component. The other portion represents the original equity component.

However, in accordance with this Ind AS, a first-time adopter need not separate these two portions if the liability component is no longer outstanding at the date of transition to Ind AS.

11. ***Designation of previously recognised Financial Instruments:*** Ind AS 109 permits a financial liability (provided it meets certain criteria) to be designated as a financial liability at fair value through profit or loss. Despite this requirement an entity is permitted to designate, at the date of transition to Ind AS, any financial liability as at fair value through profit or loss provided the liability meets the criteria in paragraph 4.2.2 of Ind AS 109 at that date.

12. ***Fair Value Measurement of Financial Assets or Financial Liabilities at Initial Recognition:*** Despite the requirements of paragraphs 7 and 9 of this Ind AS, an entity may apply the requirements of Ind AS 109 prospectively to transactions entered into on or after the date of transition to Ind AS.

13. ***Decommissioning Liabilities included in the Cost of Property, Plant and Equipment:*** A first-time adopter need not comply with these requirements for changes in such liabilities that occurred before the date of transition to Ind AS. If a first-time adopter uses this exemption, it shall:

    (a) measure the liability as at the date of transition to Ind AS in accordance with Ind AS 37;

    (b) to the extent that the liability is within the scope of Appendix A of Ind AS 16, estimate the amount that would have been included in the cost of the related asset when the liability first arose, by discounting the liability to that date using its best estimate of the historical risk-adjusted discount rate(s) that would have applied for that liability over the intervening period; and

    (c) calculate the accumulated depreciation on that amount, as at the date of transition to Ind AS, on the basis of the current estimate of the useful life of the asset, using the depreciation policy adopted by the entity in accordance with Ind AS.

14. ***Financial assets or intangible assets accounted for in accordance with Appendix A, Service Concession Arrangements to Ind AS 11:*** D22 A first-time adopter may apply the following provisions while applying the Appendix A to Ind AS 11:

    (a) Subject to paragraph (ii), changes in accounting policies are accounted for in accordance with Ind AS 8, i.e. retrospectively, except for the policy adopted for amortization of intangible assets arising from service concession arrangements related to toll roads recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP.

    (b) If, for any particular service arrangement, it is impracticable for an operator to apply this Appendix retrospectively at the date of transition to Ind AS, it shall:

        (i) recognise financial assets and intangible assets that existed at the date of transition to Ind AS;

        (ii) use the previous carrying amounts of those financial and intangible assets (however previously classified) as their carrying amounts as at that date; and

(iii) test financial and intangible assets recognised at that date for impairment, unless this is not practicable, in which case the amounts shall be tested for impairment as at the start of the current period.

(c) There are two aspects to retrospective determination: reclassification and remeasurement. It will usually be practicable to determine retrospectively the appropriate classification of all amounts previously included in an operator's Balance Sheet, but that retrospective remeasurement of service arrangement assets might not always be practicable. However, the fact should be disclosed.

15. ***Extinguishing Financial Liabilities with Equity Instruments:*** A first-time adopter may apply the Appendix E of Ind AS 109 Extinguishing Financial Liabilities with Equity Instruments from the date of transition to Ind AS.

16. ***Severe Hyperinflation:*** If an entity has a functional currency that was, or is, the currency of a hyperinflationary economy, it shall determine whether it was subject to severe hyperinflation before the date of transition to Ind AS. This applies to entities that are adopting Ind AS for the first time, as well as entities that have previously applied Ind AS.

17. ***Joint Ventures - Transition from Proportionate Consolidation to the Equity Method:*** When changing from proportionate consolidation to the equity method, an entity shall recognise its investment in the joint venture at transition date to Ind AS. That initial investment shall be measured as the aggregate of the carrying amounts of the assets and liabilities that the entity had previously proportionately consolidated, including any goodwill arising from acquisition. If the goodwill previously belonged to a larger cash-generating unit, or to a group of cash-generating units, the entity shall allocate goodwill to the joint venture on the basis of the relative carrying amounts of the joint venture and the cash-generating unit or group of cash-generating units to which it belonged.

18. ***Joint Operations—Transition from the Equity Method to Accounting for Assets and Liabilities:*** When changing from the equity method to accounting for assets and liabilities in respect of its interest in a joint operation, an entity shall, at the date of transition to Ind AS, derecognise the investment that was previously accounted for using the equity method and any other items that formed part of the entity's net investment in the arrangement in accordance with paragraph 38 of Ind AS 28 and recognise its share of each of the assets and the liabilities in respect of its interest in the joint operation, including any goodwill that might have formed part of the carrying amount of the investment.

19. ***Transition Provisions in an Entity's Separate Financial Statements:*** An entity that, in accordance with paragraph 10 of Ind AS 27, was previously accounting in its separate financial statements for its interest in a joint operation as an investment at cost or in accordance with Ind AS 109 shall:

(a) derecognise the investment and recognise the assets and the liabilities in respect of its interest in the joint operation at the amounts determined.

(b) provide a reconciliation between the investment derecognised, and the assets and liabilities recognised, together with any remaining difference adjusted in retained earnings, at the date of transition to Ind AS.

20. ***Stripping Costs in the Production Phase of a Surface Mine:*** A first-time adopter may apply the Appendix B of Ind AS 16 Stripping Costs in the Production Phase of a Surface Mine from the date of transition to Ind AS. As at transition date to Ind AS, any previously recognised asset balance that resulted from stripping activity undertaken during the production phase ('predecessor stripping asset') shall be reclassified as a part of an existing asset to which the stripping activity related, to the extent that there remains an identifiable component of the ore body with which the predecessor stripping asset can be associated. Such balances shall be depreciated or amortised over the remaining expected useful life of the identified component of the ore body to which each predecessor stripping asset balance relates. If there is no identifiable component of the ore body to which that predecessor stripping asset relates, it shall be recognised in opening retained earnings at the transition date to Ind AS.

21. ***Designation of Contracts to Buy or Sell a Non-financial Item:*** Ind AS 109 permits some contracts to buy or sell a non-financial item to be designated at inception as measured at fair value through profit or loss (Ind AS 109). Despite this requirement an entity is permitted to designate, at the date of transition to Ind AS, contracts that already exist on that date as measured at fair value through profit or loss but only if they meet the requirements of paragraph 2.5 of Ind AS 109 at that date and the entity designates all similar contracts.

22. ***Non-current Assets Held for Sale and Discontinued Operations:*** Ind AS 105 requires non-current assets (or disposal groups) that meet the criteria to be classified as held for sale, non-current assets (or disposal groups) that are held for distribution to owners and operations that meet the criteria to be classified as discontinued and carried at lower of its carrying amount and fair value less cost to sell on the initial date of such identification. A first time adopter can:

(a) measure such assets or operations at the lower of carrying value and fair value less cost to sell at the date of transition to Ind AS in accordance with Ind AS 105; and

(b) recognise directly in retained earnings any difference between that amount and the carrying amount of those assets at the date of transition to Ind AS determined under the entity's previous GAAP.

23. ***Transfers of Assets from Customers:*** An entity shall apply Appendix C of Ind AS 18 prospectively to transfers of assets from customers received on or after the transition date.

8.27.5 Presentation and Disclosure

The Standard does not provide exemptions from the presentation and disclosure requirements in other Ind AS. The Standard requires that an entity's first Ind AS financial statements shall include at least three Balance Sheets, two Statements of profit and loss, two Statements of cash flows and two Statements of changes in equity and related notes, including comparative information for all statements presented.

8.27.6 Explanation of Transition to Ind AS

The Standard requires that an entity shall explain how the transition from previous GAAP to Ind AS affected its reported balance sheet, financial performance and cash flows.

8.27.7 Reconciliation

An entity's first Ind AS financial statements shall include:

(a) reconciliations of its equity reported in accordance with previous GAAP to its equity in accordance with Ind AS for both of the following dates:

  (i) the date of transition to Ind AS; and

  (ii) the end of the latest period presented in the entity's most recent annual financial statements in accordance with previous GAAP.

(b) a reconciliation to its total comprehensive income in accordance with Ind AS for the latest period in the entity's most recent annual financial statements.

(c) if the entity recognised or reversed any impairment losses for the first time in preparing its opening Ind AS Balance Sheet, the disclosures that Ind AS 36, *'Impairment of Assets'*, would have required if the entity had recognised those impairment losses or reversals in the period beginning with the date of transition to Ind AS.

8.27.8 Major Changes in Ind AS 101 vis-à-vis IFRS 1

8.27.8.1 Resulting in Carve Outs

(i) *Definition of Previous GAAP under Ind AS 101*

***As per IFRS**:* IFRS 1 defines previous GAAP as the basis of accounting that a first-time adopter used immediately before adopting IFRS.

***Carve out**:* Ind AS 101 defines previous GAAP as the basis of accounting that a first-time adopter used for its reporting requirement in India immediately before adopting Ind AS. The changes made it mandatory for Indian entities to consider the financial statements prepared in accordance with existing notified Accounting Standards as was applicable to them as previous GAAP when it transitions to Ind AS.

***Reason**:* The change makes it mandatory for Indian companies to consider the financial statements prepared in accordance with existing Accounting Standards notified under the Companies (Accounting Standards) Rules, 2006 as previous GAAP when it transitions to Ind AS as the law prevailing in India recognises the financial statements prepared in accordance with the Companies Act.

(ii) *Allowing the use of Carrying Cost of Property, Plant and Equipment (PPE) on the Date of Transition of Ind AS 101.*

As per IFRS: IFRS 1 *First time adoption of International Accounting Standards* provides that on the date of transition either the items of Property, Plant and Equipment shall be determined by applying IAS 16 '*Property, Plant and Equipment'* retrospectively or the same should be recorded at fair value.

Carve out: Ind AS 101 provides an additional option to use carrying values of all items of property, plant and equipment on the date of transition in accordance with previous GAAP as an acceptable starting point under Ind AS.

Reason: In case of old companies, retrospective application of Ind AS 16 or fair values at the date of transition to determine deemed cost may not be possible for old assets. Accordingly, Ind AS 101 provides relief to an entity to use carrying values of all items of property, plant and equipment on the date of transition in accordance with previous GAAP as an acceptable starting point under Ind AS.

(iii) ***Long-term Foreign Currency Monetary Items***

As per IFRS: No provision in IFRS 1.

Carve out: Paragraph D13AA of Appendix D to Ind AS 101 provides that a first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP. Consequently, Ind AS 21 also provides that it does not apply to long-term foreign currency monetary items for which an entity has opted for the exemption given in paragraph D13AA of Appendix D to Ind AS 101. Such an entity may continue to apply the accounting policy so opted for such long-term foreign currency monetary items.

Reason: Para 46A of AS 11 provides an option to recognise long term foreign currency monetary items in the statement of profit and loss as a part of the cost of property, plant and equipment or to defer its recognition in the statement of profit and loss over the period of loan in case the loan is not related to acquisition of fixed assets. To provide transitional relief, such entities have been given an option to continue the capitalisation or deferment of exchange differences, as the case may be, on foreign currency borrowings obtained before the beginning of First IFRS reporting period.

8.27.8.2 Not Resulting in Carve Outs

1. ***First Financial Statements:*** Paragraph 3 of Ind AS 101 specifies that an entity's first Ind AS financial statements are the first annual financial statements in which the entity adopts Ind AS in accordance with Ind AS notified under the Companies Act, 2013 whereas IFRS 1 provides various examples of first IFRS financial statements.
2. ***Examples when an Entity does not apply IFRS 1:*** IFRS 1 provide various examples of instances when an entity does not apply this IFRS. Ind AS 101 does not provide the same.
3. ***Previous GAAP:*** IFRS 1 requires the first-time adopter shall exclude from its opening Ind AS Balance Sheet any item recognised in accordance with previous GAAP that does not qualify for recognition as an asset or liability under IFRS. The first-time adopter shall account for the resulting change in the retained earnings as at the transition date except in certain specific instances where it requires adjustment in the goodwill. In such specific instances where IFRS 1 allows adjustment in the goodwill, under Ind AS 101 it can be

adjusted with the Capital Reserve to the extent such adjustment amount does not exceed the balance available in Capital Reserve.

4. ***Optional Exemptions:*** IFRS 1 provides for various optional exemptions that an entity can seek while an entity transitions to IFRS from its previous GAAP. Similar provisions have been retained under Ind AS 101. However, there are few changes that have been made, which can be broadly categorized as follows:

   (a) *Elimination of Effective Dates Prior to Transition Date to Ind AS:* IFRS 1 provides for various dates from which a standard could have been implemented. For example, Paragraph D2 of IFRS 1 provides that an entity is encouraged, but not required, to apply IFRS 2 '*Share-based Payment'* to equity instruments that were granted on or before 7 November 2002 or to instruments that were granted after 7 November 2002 and vested before the later of (a) the date of transition to IFRS and (b) 1 January 2005. However, for Ind AS 101 purposes, all these dates have been changed to coincide with the transition date elected by the entity adopting these converged standards i.e. Ind AS.

   (b) *Deletion of Borrowing Cost Exemptions not relevant for India:* Paragraph D23 of IFRS 1 provides for transitional adjustment requiring companies to apply the provisions of IAS 23 prospectively after the transition date to IFRS. IAS 23 provided an option to expense out such borrowing cost. However, this paragraph has not been included in Appendix D of Ind AS 101 since this was considered as not relevant in Indian situation as existing Accounting Standard 16 always required an entity to capitalize borrowing costs.

5. ***Short-term Exemptions from IFRS:*** Appendix E of IFRS 1 provides for 'Short-term exemptions from IFRS', however Ind AS 101 does not provide the above said short-term exemption.

6. ***Consequential Amendments of Ind AS 109:*** The consequential amendments of Ind AS 109 '*Financial Instruments'*, which have been early adopted in India have been incorporated in all the Ind AS including Ind AS 101. Further, the transitional provisions of these Ind AS have also been appropriately incorporated in Ind AS 101.

7. ***Transitional Provisions:*** Paragraph D9AA of Ind AS 101 provides that when a lease includes both land and building elements, a first time adopter may assess the classification of each element as finance or an operating lease at the transition date to Ind AS on the basis of the facts and circumstances existing as at that date. If there is any land lease newly classified as finance lease then the first time adopter may recognise assets and liability at fair value on that date; any difference between those fair values is recognised in retained earnings.

8. ***Optional Exemptions relating to the Long-term Foreign Currency Monetary Items and Service Concession Arrangements relating to Toll Roads:*** Ind AS 101 in addition to exemptions provided under IFRS 1, also provides certain optional exemptions relating to the long-term foreign currency monetary items and service concession arrangements relating to toll roads.

9. ***Business Combinations:*** Under Ind AS 101, para C4(c) requires, the first-time adopter shall exclude from its opening Ind AS Balance Sheet any item recognised in accordance with previous GAAP that does not qualify for recognition as an asset or liability under Ind AS. The first-time adopter shall account for the resulting change in the retained earnings as at the transition date except in certain specific instances where it requires adjustment in the goodwill.

   In such specific instances where IFRS 1 allows adjustment in the goodwill, under Ind AS 101 it can be adjusted with the Capital reserve to the extent such adjustment amount does not exceed the balance available in Capital reserve.

10. ***Option to take Fair Value for Investment Property:*** Paragraph D7 (a) of IFRS 1 provides that option to take fair value at the date of transition to Ind AS or previous GAAP revalued amount may be exercised by a first item adopter for investment property. However, this option has not been provided under Ind AS 101, as Ind AS 40 permits only the cost model.

8.28 Ind AS 102 : Share-Based Payment

8.28.1 Objective

The objective of this Standard is to specify the financial reporting by an entity when it undertakes a share-based payment transaction. In particular, it requires an entity to reflect in its profit or loss and financial position the effects of share-based payment transactions, including expenses associated with transactions in which share options are granted to employees.

8.28.2 Scope

An entity shall apply this Standard in accounting for all share-based payment transactions, whether or not the entity can identify specifically some or all of the goods or services received, including:

- Equity-settled share-based payment transactions
- Cash-settled share-based payment transactions
- Transactions in which the entity receives or acquires goods or services and the terms of the arrangement provide either the entity or the supplier of those goods or services with a choice of whether the entity settles the transaction in cash (or other assets) or by issuing equity instruments

Not applicable to:

- Transactions in which the entity acquires goods as part of the net assets acquired in a business combination as defined by Ind AS 103, *'Business Combinations'*.

- This Standard does not apply to share-based payment transactions in which the entity receives or acquires goods or services under a contract within the scope of Ind AS 32, *'Financial Instruments: Presentation'*, Ind AS 109, *'Financial Instruments'*.

For the purposes of this Standard, a transaction with an employee (or other party) in his/her capacity as a holder of equity instruments of the entity is not a share-based payment transaction.

8.28.3 Share-based Payment Transaction

A transaction in which the entity:

(a) receives goods or services from the supplier of those goods or services (including an employee) in a share-based payment arrangement, or

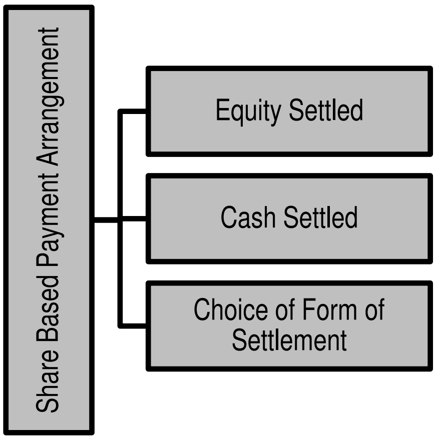
(b) incurs an obligation to settle the transaction with the supplier in a share-based payment arrangement when another group entity receives those goods or services.

Share-based Payment Arrangement

An agreement between the entity (or another group entity or any shareholder of any group entity) and another party (including an employee) that entitles the other party to receive:

(a) cash or other assets of the entity for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity, or

(b) equity instruments (including shares or share options) of the entity or another group entity, provided the specified vesting conditions, if any, are met.



1. **Equity-settled Share-based Payment Transaction:** A share-based payment transaction in which the entity:

   (a) receives goods or services as consideration for its own equity instruments (including shares or share options), or

   (b) receives goods or services but has no obligation to settle the transaction with the supplier.

2. **Cash-settled Share-based Payment Transaction:** A share-based payment transaction in which the entity acquires goods or services by incurring a liability to transfer cash or other assets to the supplier of those goods or services for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity.

8.28.4 Recognition

- An entity shall recognise the goods or services received or acquired in a share-based payment transaction when it obtains the goods or as the services are received.
- The entity shall recognise a corresponding increase in equity if the goods or services were received in an equity-settled share-based payment transaction, or a liability if the goods or services were acquired in a cash-settled share-based payment transaction.
- When the goods or services received or acquired in a share-based payment transaction do not qualify for recognition as assets, they shall be recognised as expenses.

8.28.5 Equity-settled Share-based Payment Transactions

For equity-settled share-based payment transactions, the entity shall measure the goods or services received, and the corresponding increase in equity, directly, at the fair value of the goods or services received, unless that fair value cannot be estimated reliably. If the entity cannot estimate reliably the fair value of the goods or services received, the entity shall measure their value, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted.

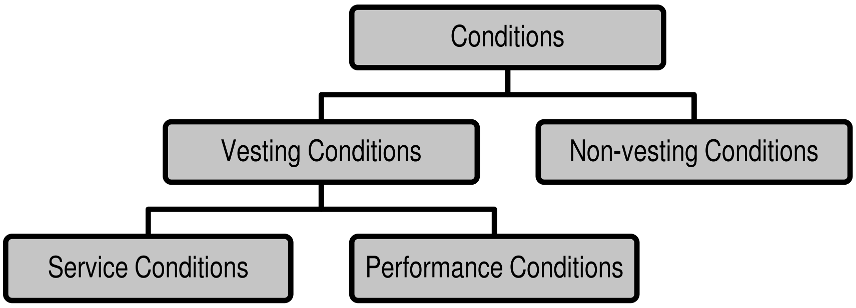
8.28.5.1 Transactions with Employees and Others providing similar Services

- The entity shall measure the fair value of the services received by reference to the fair value of the equity instruments granted, because typically it is not possible to estimate reliably the fair value of the services received.
- The fair value of those equity instruments shall be measured at grant date.

8.28.5.2 Transactions with Non-employees

- For equity-settled share-based payment transactions, the entity shall measure the goods or services received, and the corresponding increase in equity, directly, at the fair value of the goods or services received, unless that fair value cannot be estimated reliably. In other words, there shall be a rebuttable presumption that the fair value of the goods or services received can be estimated reliably.
- If the entity cannot estimate reliably the fair value of the goods or services received, the entity shall measure their value, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted.

8.28.6 Treatment of Vesting Conditions



8.28.6.1 Treatment of Vesting Conditions

- Vesting conditions, other than market conditions, shall not be taken into account when estimating the fair value of the shares or share options at the measurement date.
- Instead, vesting conditions shall be taken into account by adjusting the number of equity instruments included in the measurement of the transaction amount so that, ultimately, the amount recognised for goods or services received as consideration for the equity instruments granted shall be based on the number of equity instruments that eventually vest.

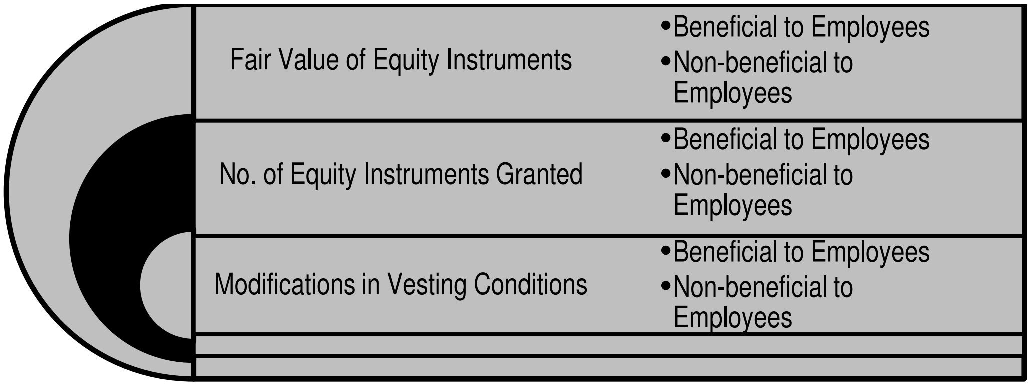
8.28.6.2 Treatment of Non-vesting Conditions

Similarly, an entity shall take into account all non-vesting conditions when estimating the fair value of the equity instruments granted.

Therefore, for grants of equity instruments with non-vesting conditions, the entity shall recognise the goods or services received from a counterparty that satisfies all vesting conditions that are not market conditions (e.g. services received from an employee who remains in service for the specified period of service), irrespective of whether those non-vesting conditions are satisfied.

8.28.7 Modifications to the Terms and Conditions on which Equity Instruments were granted, including Cancellations and Settlements

An entity might modify the terms and conditions on which the equity instruments were granted. For example, it might reduce the exercise price of options granted to employees (i.e. reprice the options), which increases the fair value of those options.



8.28.7.1 Fair Value

1. **Increases (Beneficial to Employees):** If the modification increases the fair value of the equity instruments granted (e.g. by reducing the exercise price), measured immediately before and after the modification, the entity shall include the incremental fair value granted in the measurement of the amount recognised for services received as consideration for the equity instruments granted. The incremental fair value granted is the difference between the fair value of the modified equity instrument and that of the original equity instrument, both estimated as at the date of the modification.
2. **Decreases (Non-beneficial to Employees):** If the modification reduces the fair value of the equity instruments granted, measured immediately before and after the modification, the entity shall not take into account that decrease in fair value and shall continue to measure the amount recognised for services received as consideration for the equity instruments based on the grant date fair value of the equity instruments granted.

8.28.7.2 Number of Equity Instruments Granted

1. **Increases (Beneficial to Employees):** If the modification increases the number of equity instruments granted, the entity shall include the fair value of the additional equity instruments granted, measured at the date of the modification, in the measurement of the amount recognised for services received as consideration for the equity instruments granted.
2. **Decreases (Non-beneficial to Employees):** If the modification reduces the number of equity instruments granted to an employee, that reduction shall be accounted for as a cancellation of that portion of the grant.

8.28.7.3 Vesting Conditions

1. **Increases (Beneficial to Employees):** If the entity modifies the vesting conditions in a manner that is beneficial to the employee, for example, by reducing the vesting period or by modifying or eliminating a performance condition (other than a market condition), the entity shall take the modified vesting conditions into account.
2. **Decreases (Non-beneficial to Employees):** If the entity modifies the vesting conditions in a manner that is not beneficial to the employee, for example, by increasing the vesting

period or by modifying or adding a performance condition (other than a market condition), the entity shall not take the modified vesting conditions into account.

8.28.7.4 Cancellation/Settlement: If a grant of equity instruments is cancelled or settled during the vesting period (other than a grant cancelled by forfeiture when the vesting conditions are not satisfied):

(a) the entity shall account for the cancellation or settlement as an acceleration of vesting, and shall therefore recognise immediately the amount that otherwise would have been recognised for services received over the remainder of the vesting period.

(b) any payment made to the employee on the cancellation or settlement of the grant shall be accounted for as the repurchase of an equity interest, i.e. as a deduction from equity, except to the extent that the payment exceeds the fair value of the equity instruments granted, measured at the repurchase date. Any such excess shall be recognised as an expense. However, if the share-based payment arrangement included liability components, the entity shall re-measure the fair value of the liability at the date of cancellation or settlement. Any payment made to settle the liability component shall be accounted for as an extinguishment of the liability.

(c) if new equity instruments are granted to the employee and, on the date when those new equity instruments are granted, the entity identifies the new equity instruments granted as replacement equity instruments for the cancelled equity instruments, the entity shall account for the granting of replacement equity instruments in the same way as a modification of the original grant of equity instruments.

    The incremental fair value granted is the difference between the fair value of the replacement equity instruments and the net fair value of the cancelled equity instruments, at the date the replacement equity instruments are granted.

    The net fair value of the cancelled equity instruments is their fair value, immediately before the cancellation, less the amount of any payment made to the employee on cancellation of the equity instruments that is accounted for as a deduction from equity. If the entity does not identify new equity instruments granted as replacement equity instruments for the cancelled equity instruments, the entity shall account for those new equity instruments as a new grant of equity instruments.

8.28.8 Cash-settled Share-based Payment Transactions

For cash-settled share-based payment transactions, the entity shall measure the goods or services acquired and the liability incurred at the fair value of the liability. Until the liability is settled, the entity shall re-measure the fair value of the liability at the end of each reporting period and at the date of settlement, with any changes in fair value recognised in profit or loss for the period.

8.28.9 Share-based Payment Transactions with Cash Alternatives

For share-based payment transactions in which the terms of the arrangement provide either the entity or the counterparty with the choice of whether the entity settles the transaction in cash (or other assets) or by issuing equity instruments, the entity shall account for that transaction, or the components of that transaction, as a cash-settled share-based payment transaction if, and to the extent that, the entity has incurred a liability to settle in cash or other assets, or as an equity-settled share-based payment transaction if, and to the extent that, no such liability has been incurred.

8.29 Ind AS 103: Business Combinations

8.29.1 Objective

The objective of this Indian Accounting Standard (Ind AS) is to improve the:

- Relevance
- Reliability
- Comparability

of the information that a reporting entity provides in its financial statements about a business combination and its effects.

To accomplish that, this Ind AS establishes principles and requirements for how the acquirer:

- Recognises and measures in its financial statements the identifiable assets acquired, the liabilities assumed and any non-controlling interest in the acquiree
- Recognises and measures the goodwill acquired in the business combination or a gain from a bargain purchase
- Determines what information to disclose to enable users of the financial statements to evaluate the nature and financial effects of the business combination

8.29.2 Scope

This Ind AS applies to a transaction or other event that meets the definition of a business combination. This Ind AS does not apply to:

1. The accounting for the formation of a joint arrangement in the financial statements of the joint arrangement itself.
2. The acquisition of an asset or a group of assets that does not constitute a business.
3. The requirements of this Standard do not apply to the acquisition by an investment entity, as defined in Ind AS 110, *'Consolidated Financial Statements'*, of an investment in a subsidiary that is required to be measured at fair value through profit or loss.

8.29.3 Variety of ways in which a Business Combination may be Structured

A business combination may be structured in a variety of ways for legal, taxation or other reasons, which include but are not limited to:

(a) one or more businesses become subsidiaries of an acquirer or the net assets of one or more businesses are legally merged into the acquirer;

(b) one combining entity transfers its net assets, or its owners transfer their equity interests to another combining entity or its owners;

(c) all of the combining entities transfer their net assets, or the owners of those entities transfer their equity interests, to a newly formed entity (sometimes referred to as a roll-up or put-together transaction); or

(d) a group of former owners of one of the combining entities obtains control of the combined entity.

8.29.4 Acquisition Method

An entity shall account for each business combination by applying the acquisition method. Applying the acquisition method requires:

Step I
- Identifying the Acquirer

Step II
- Determining the Acquisition date

Step III
- Recognising and Measuring the Identifiable Assets acquired, the Liabilities assumed and any Non-controlling Interest in the Acquiree

Step IV
- Recognising and Measuring any Goodwill or Bargain Purchase

The date on which the acquirer obtains control of the acquiree is generally the date on which the acquirer legally transfers the consideration, acquires the assets and assumes the liabilities of the acquire - the closing date. However, the acquirer might obtain control on a date that is either earlier or later than the closing date.

Recognition Principle

On the acquisition date, the acquirer shall recognise, separately from goodwill:

- The identifiable assets acquired
- The liabilities assumed
- Any non-controlling interest in the acquiree

Exceptions to the Recognition Principles

Contingent Liabilities

- the acquirer shall recognise if it is a present obligation that arises from past events and its fair value can be measured reliably

Measurement Principle

The acquirer shall measure the identifiable assets acquired and the liabilities assumed at their acquisition-date fair values.

<u>Exceptions to the Measurement Principles</u>

- Reacquired rights
    - ✓ measured at fair value based on remaining contractual term ignoring the fair value effect of renewal
- Share-based payment transactions
    - ✓ measured in accordance with Ind AS 102(Market Based Measure)
- Assets held for sale
    - ✓ measured in accordance with Ind AS 105 (i.e. fair value less costs to sell)

<u>Exceptions to the Recognition and Measurement Principles</u>

- Income taxes
    - ✓ deferred tax assets or liabilities arising from acquired assets or liabilities accounted for using Ind AS 12
- Employee benefits
    - ✓ accounted for using Ind AS 19
- Indemnification assets
    - ✓ Shall be measured and recognized on the basis of the indemnified item

Recognition and Measurement of Goodwill or Bargain Purchase

The acquirer shall recognise goodwill as of the acquisition date measured as the excess of (a) over (b) below:

(a) the aggregate of:

  (i) the consideration transferred, which generally requires acquisition-date fair value;

  (ii) the amount of any non-controlling interest in the acquiree; and

  (iii) in a business combination achieved in stages, the acquisition-date fair value of the acquirer's previously held equity interest in the acquiree.

(b) the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed.

In extremely rare circumstances, an acquirer will make a bargain purchase in a business combination, where the value of acquired identifiable assets and liabilities exceeds the consideration transferred; the acquirer shall recognize a gain (bargain purchase). The gain shall be recognized by the acquirer in Other Comprehensive Income on the acquisition date and accumulate the same in equity as capital reserve, if there exists a clear evidence of the underlying reasons for classifying the business combination as a bargain purchase.

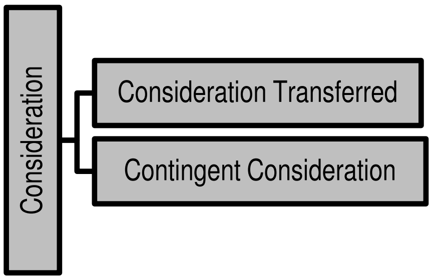
If there does not exist clear evidence of the underlying reasons for classifying the business combination as a bargain purchase, then the gain shall be recognised directly in equity as capital reserve.

<u>A Business Combination achieved in Stages (Step Acquisition):</u> In a business combination achieved in stages, the acquirer shall re-measure its previously held equity interest in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in profit or loss or other comprehensive income, as appropriate.

In prior reporting periods, the acquirer may have recognised changes in the value of its equity interest in the acquiree in other comprehensive income.

If so, the amount that was recognised in other comprehensive income shall be recognised on the same basis as would be required if the acquirer had disposed directly of the previously held equity interest.

8.29.5 Consideration



8.29.5.1 Consideration Transferred: The consideration transferred in a business combination shall be measured at fair value, which shall be calculated as the sum of:

- The acquisition-date fair values of the assets transferred by the acquirer
- The liabilities incurred by the acquirer to former owners of the acquire; and
- The equity interests issued by the acquirer.

8.29.5.2 Contingent Consideration

- The consideration the acquirer transfers in exchange for the acquiree includes any asset or liability resulting from a contingent consideration arrangement.
- The acquirer shall recognise the acquisition-date fair value of contingent consideration as part of the consideration transferred in exchange for the acquiree.

8.29.6 Reverse Acquisitions

A reverse acquisition occurs when the entity that issues securities (the legal acquirer) is identified as the acquiree for accounting. The entity whose equity interests are acquired (the legal acquiree) must be the acquirer for accounting purposes for the transaction to be considered a reverse acquisition.

8.29.7 Measurement Period

If the initial accounting for a business combination is incomplete by the end of the reporting period in which the combination occurs, the acquirer shall report in its financial statements provisional amounts for the items for which the accounting is incomplete.

During the measurement period, the acquirer shall retrospectively adjust the provisional amounts recognised at the acquisition date to reflect new information obtained about facts and circumstances that existed as of the acquisition date and, if known, would have affected the measurement of the amounts recognised as of that date.

During the measurement period, the acquirer shall also recognise additional assets or liabilities if new information is obtained about facts and circumstances that existed as of the acquisition date and, if known, would have resulted in the recognition of those assets and liabilities as of that date.

The measurement period ends as soon as the acquirer receives the information it was seeking about facts and circumstances that existed as of the acquisition date or learns that more information is not obtainable.

However, the measurement period shall not exceed one year from the acquisition date.

8.29.8 Acquisition Related Costs

Acquisition-related costs are costs the acquirer incurs to effect a business combination. The acquirer shall account for acquisition-related costs as expenses in the periods in which the costs are incurred and the services are received, with one exception. The costs to issue debt or equity securities shall be recognised in accordance with Ind AS 32 and Ind AS 109.

8.29.9 Subsequent Measurement and Accounting

In general, an acquirer shall subsequently measure and account for assets acquired, liabilities assumed or incurred and equity instruments issued in a business combination in accordance with other applicable Ind AS for those items, depending on their nature. However, Ind AS 103 provides guidance on subsequently measuring and accounting for the following assets acquired, liabilities assumed or incurred and equity instruments issued in a business combination:

(a) reacquired rights;

(b) contingent liabilities recognised as of the acquisition date;

(c) indemnification assets; and

(d) contingent consideration.

8.29.10 Business Combinations of Entities under Common Control

Common control business combination means a business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

Business combinations involving entities or businesses under common control shall be accounted for using the pooling of interests method.

The pooling of interest method is considered to involve the following:

(a) The assets and liabilities of the combining entities are reflected at their carrying amounts.

(b) No adjustments are made to reflect fair values, or recognise any new assets or liabilities. The only adjustments that are made are to harmonise accounting policies.

(c) The financial information in the financial statements in respect of prior periods should be restated as if the business combination had occurred from the beginning of the preceding period in the financial statements, irrespective of the actual date of the combination. However, if business combination had occurred after that date, the prior period information shall be restated only from that date.

(d) The balance of the retained earnings appearing in the financial statements of the transferor is aggregated with the corresponding balance appearing in the financial statements of the transferee. Alternatively, it is transferred to General Reserve, if any.

(e) The identity of the reserves shall be preserved and shall appear in the financial statements of the transferee in the same form in which they appeared in the financial statements of the transferor.

(f) The difference, if any, between the amounts recorded as share capital issued plus any additional consideration in the form of cash or other assets and the amount of share capital of the transferor shall be transferred to capital reserve and should be presented separately from other capital reserves with disclosure of its nature and purpose in the notes.

8.29.11 Major Change in Ind AS 103 vis-à-vis IFRS 3 Resulting in Carve Out

(A) Resulting in Carve Out

As per IFRS: IFRS 3 requires bargain purchase gain arising on business combination to be recognised in profit or loss as income.

Carve out: Ind AS 103 requires the bargain purchase gain to be recognised in other comprehensive income and accumulated in equity as capital reserve, unless there is no clear evidence for the underlying reason for classification of the business combination as a bargain purchase, in which case, it shall be recognised directly in equity as capital reserve. A similar carve-out is made in Ind AS 28, Investments in Associates and Joint Ventures

Reasons: At present, since bargain purchase gain occurs at the time of acquiring a business, these are considered as capital reserve. Recognition of such gains in profit or loss would result into recognition of unrealised gains, which may get distributed in the form of dividends. Moreover, such a treatment may lead to structuring through acquisitions, which may not be in the interest of the stakeholders of the company.

(B) Resulting in Carve-in

As per IFRS

IFRS 3 excludes from its scope business combinations of entities under common control.

Carve-in

Appendix C of Ind AS 103 Business Combinations gives guidance in this regard.

8.29.12 Major Changes in Ind AS 103 vis-à-vis Notified AS 14

(i) ***Scope**:* Ind AS 103 defines a business combination which has a wider scope whereas the existing AS 14 deals only with amalgamation ***and mergers***.

(ii) ***Methods for Accounting**:* Under the existing AS 14 there are two methods of accounting for amalgamation viz - the pooling of interest method and the purchase method. Ind AS 103 prescribes only the acquisition method for every business combination.

(iii) ***Assets and Liabilities**:* Under the existing AS 14, the acquired assets and liabilities are recognised at their existing book values or at fair values under the purchase method. Ind AS 103 requires the acquired identifiable assets liabilities and non-controlling interest to be recognised at fair value under acquisition method.

(iv) ***Minority / Non–controlling**:* Ind AS 103 requires that for each business combination, the acquirer shall measure any non-controlling interest in the acquiree either at fair value or at the non-controlling interest's proportionate share of the acquiree's identifiable net assets. On other hand, the existing AS 14 states that the minority interest is the amount of equity attributable to minorities at the date on which investment in a subsidiary is made and it is shown outside shareholders' equity.

(v) ***Amortisation of Goodwill**:* Under Ind AS 103, the goodwill is not amortised but tested for impairment on annual basis in accordance with Ind AS 36. The existing AS 14 requires that the goodwill arising on amalgamation in the nature of purchase is amortised over a period not exceeding five years.

(vi) ***Reverse Acquisitions**:* Ind AS 103 deals with reverse acquisitions whereas the existing AS 14 does not deal with the same.

(vii) ***Contingent Consideration**:* Ind AS 103 deals with the contingent consideration in case of business combination, i.e., an obligation of the acquirer to transfer additional assets or equity interests to the former owners of an acquiree as part of the exchange for control of the acquiree if specified future events occur or conditions are met. The existing AS 14 does not provide specific guidance on this aspect.

(viii) ***Bargain Purchase Gain**:* Ind AS 103 requires bargain purchase gain arising on business combination to be recognised in other comprehensive income and accumulated in equity as capital reserve, unless there is no clear evidence for the underlying reason for classification of the business combination as a bargain purchase, in which case, it shall be recognised directly in equity as capital reserve. Under existing AS 14 the excess amount is treated as capital reserve.

(ix) ***Accounting for Common Control Transactions**:* Appendix C of Ind AS 103 deals with accounting for common control transactions, which prescribes a method of accounting different from Ind AS 103. Existing AS 14 does not prescribe accounting for such transactions different from other amalgamations.

8.30 Ind AS 104: Insurance Contract

8.30.1 Objective

The objective of this Indian Accounting Standard (Ind AS) is to specify the financial reporting for insurance contracts by any entity that issues such contracts (described as an insurer).

In particular, this Ind AS requires:

(a) limited improvements to accounting by insurers for insurance contracts.

(b) disclosure that identifies and explains the amounts in an insurer's financial statements arising from insurance contracts and helps users of those financial statements understand the amount, timing and uncertainty of future cash flows from insurance contracts.

8.30.2 Scope

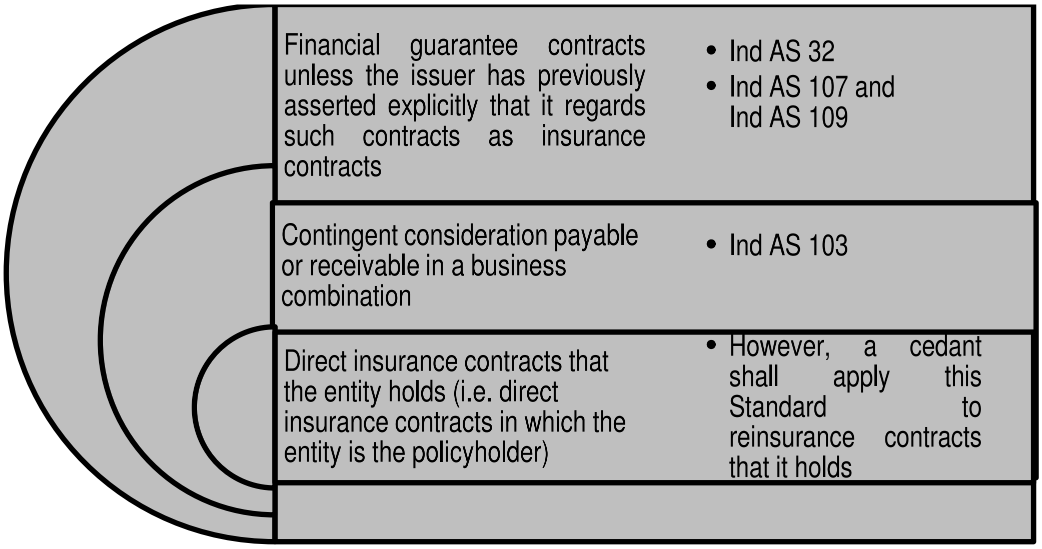
An entity shall apply this Ind AS to:

(a) insurance contracts (including reinsurance contracts) that it issues and reinsurance contracts that it holds.

(b) financial instruments that it issues with a discretionary participation feature.

An entity shall not apply this Ind AS to:

Product warranties issued directly by a manufacturer, dealer or retailer	• Ind AS 18 • Ind AS 37
Employers' assets and liabilities under employee benefit plans	• Ind AS 19 • Ind AS 102
Contractual rights or contractual obligations that are contingent on the future use of, or right to use, a non-financial item as well as a lessee's residual value guarantee embedded in a finance lease	• Ind AS 17 • Ind AS 18 and Ind AS 38



8.30.3 Insurance Contract

An insurance contract is a contract:

- under which one party (the insurer)
- accepts significant insurance risk
- from another party (the policyholder)
- by agreeing to compensate the policyholder
- if a specified uncertain future event (the insured event) adversely affects the policyholder.

8.30.4 Recognition and Measurement

The Ind AS exempts an insurer from some requirements of other Ind AS. Specifically, an insurer:

(a) shall not recognise as a liability any provisions for possible future claims, if those claims arise under insurance contracts that are not in existence at the end of the reporting period (such as catastrophe provisions and equalisation provisions).

(b) shall carry out the liability adequacy test.

(c) shall remove an insurance liability (or a part of an insurance liability) from its balance sheet when, and only when, it is extinguished — i.e. when the obligation specified in the contract is discharged or cancelled or expires.

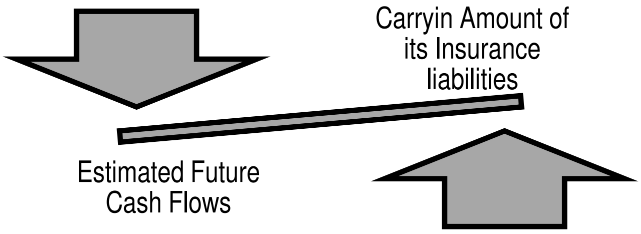
(d) shall not offset:

   i. reinsurance assets against the related insurance liabilities; or

   ii. income or expense from reinsurance contracts against the expense or income from the related insurance contracts.

(e) shall consider whether its reinsurance assets are impaired.

8.30.4.1 Liability Adequacy Test: An insurer shall assess at the end of each reporting period whether its recognised insurance liabilities are adequate, using current estimates of future cash flows under its insurance contracts. If that assessment shows that the carrying amount of its insurance liabilities (less related deferred acquisition costs and related intangible assets) is inadequate in the light of the estimated future cash flows, the entire deficiency shall be recognised in profit or loss.



8.30.4.2 Impairment of Reinsurance Assets: If a cedant's reinsurance asset is impaired, the cedant shall reduce its carrying amount accordingly and recognise that impairment loss in profit or loss.

A reinsurance asset is impaired if, and only if:

(a) there is objective evidence, as a result of an event that occurred after initial recognition of the reinsurance asset, that the cedant may not receive all amounts due to it under the terms of the contract; and

(b) that event has a reliably measurable impact on the amounts that the cedant will receive from the reinsurer.

8.30.5 Changes in Accounting Policies

An insurer may change its accounting policies for insurance contracts if, and only if, the change makes the financial statements more relevant to the economic decision-making needs of users and no less reliable, or more reliable and no less relevant to those needs. In particular, an insurer may continue any of the following practices, although it may continue using accounting policies that involve them:

(a) measuring insurance liabilities on an undiscounted basis.

(b) measuring contractual rights to future investment management fees at an amount that exceeds their fair value as implied by a comparison with current fees charged by other market participants for similar services.

(c) using non-uniform accounting policies for the insurance contracts of subsidiaries.

The Ind AS permits an insurer to change its accounting policies so that it re-measures designated insurance liabilities to reflect current market interest rates and recognises changes in those liabilities in profit or loss. Without this permission, an insurer would have been required to apply the change in accounting policies consistently to all similar liabilities.

The Ind AS requires disclosure to help users understand:

(a) the amounts in the insurer's financial statements that arise from insurance contracts.

(b) the nature and extent of risks arising from insurance contracts.

8.31 Ind AS 105: Non-current Assets Held for Sale and Discontinued Operations

8.31.1 Objective

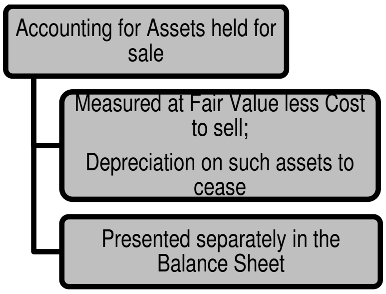
The objective of this Indian Accounting Standard (Ind AS) is to specify the accounting for assets held for sale, and the presentation and disclosure of discontinued operations.

In particular, this Ind AS requires:

(a) assets that meet the criteria to be classified as held for sale to be measured at the lower of carrying amount and fair value less costs to sell, and depreciation on such assets to cease; and

(b) assets that meet the criteria to be classified as held for sale to be presented separately in the balance sheet and

(c) the results of discontinued operations to be presented separately in the statement of profit and loss.



8.31.2 Scope

The classification and presentation requirements of this Ind AS apply to all recognised non-current assets and to all disposal groups of an entity.

The measurement provisions of this Ind AS do not apply to the following assets, which are covered by the Ind AS listed, either as individual assets or as part of a disposal group:

- Deferred tax assets (Ind AS 12, *'Income Taxes'*)
- Assets arising from employee benefits (Ind AS 19, *'Employee Benefits'*)
- Financial assets within the scope of Ind AS 109, *'Financial Instruments'*
- Non-current assets that are measured at fair value less costs to sell in accordance with Ind AS 41, *'Agriculture'*
- Contractual rights under insurance contracts as defined in Ind AS 104, *'Insurance Contracts'*

Additional disclosures about non-current assets (or disposal groups) classified as held for sale or discontinued operations may be necessary to comply with the general requirements of Ind AS 1.

8.31.3 Discontinued Operations

A component of an entity that either has been disposed of or is classified as held for sale and:

(a) represents a separate major line of business or geographical area of operations,

(b) is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations or

(c) is a subsidiary acquired exclusively with a view to resale.

Disposal Group: A group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. The group includes goodwill acquired in a business combination if the group is a cash-generating unit to which goodwill has been allocated in accordance with the requirements of Ind AS 36, *'Impairment of Assets'*, or if it is an operation within such a cash-generating unit.

8.31.4 Classification of Non-current Assets (or Disposal Groups) as Held for Sale or as Held for Distribution to Owners

An entity shall classify a non-current asset (or disposal group) as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use.

To be classified as held for sale/distribution the asset (or disposal group):

1. Must be available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets (or disposal groups) and
2. Its sale must be highly probable.

When the sale/distribution is considered highly probable?

For the sale to be highly probable:

1. The appropriate level of management must be committed to a plan to sell the asset (or disposal group).
2. An active programme to locate a buyer and complete the plan must have been initiated.
3. Further, the asset (or disposal group) must be actively marketed for sale at a price that is reasonable in relation to its current fair value.
4. In addition, the sale should be expected to qualify for recognition as a completed sale within one year from the date of classification.
5. The probability of shareholders' approval (if required in the jurisdiction) should be considered as part of the assessment of whether the sale is highly probable.

Exception to Point 5: Events or circumstances may extend the period to complete the sale beyond one year.

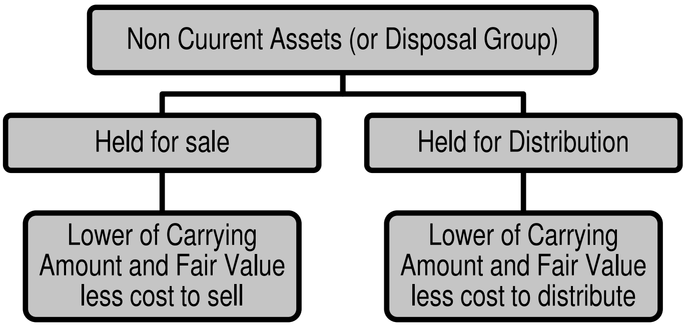
An extension of the period required to complete a sale does not preclude an asset (or disposal group) from being classified as held for sale if the delay is caused by events or circumstances beyond the entity's control and there is sufficient evidence that the entity remains committed to its plan to sell the asset (or disposal group).

An entity shall not classify as held for sale a non-current asset (or disposal group) that is to be abandoned.

8.31.5 Measurement of Non-current Assets (or Disposal Groups) Classified as Held for Sale or Held for Distribution

Measurement of a Non-current Asset (or Disposal Group)

- An entity shall measure a non-current asset (or disposal group) classified as held for sale at the lower of its carrying amount and fair value less costs to sell.
- An entity shall measure a non-current asset (or disposal group) classified as held for distribution to owners at the lower of its carrying amount and fair value less costs to distribute.



When the sale is expected to occur beyond one year, the entity shall measure the costs to sell at their present value. Any increase in the present value of the costs to sell that arises from the passage of time shall be presented in profit or loss as a financing cost.

8.31.6 Changes to a Plan of Sale or to a Plan of Distribution to Owners

If an entity has classified an asset (or disposal group) as held for sale or as held for distribution to owners, but the criteria specified are no longer met, the entity shall cease to classify the asset (or disposal group) as held for sale or held for distribution to owners (respectively).

If an entity reclassifies an asset (or disposal group) directly from being held for sale to being held for distribution to owners, or directly from being held for distribution to owners to being held for sale, then the change in classification is considered a continuation of the original plan of disposal. The entity:

(a) The entity shall apply the classification, presentation and measurement requirements in this Ind AS that are applicable to the new method of disposal.

(b) shall measure the non-current asset (or disposal group) either if reclassified as held for sale or if reclassified as held for distribution to owners, and recognise any reduction or increase in the fair value less costs to sell/costs to distribute of the non-current asset.

(c) shall not change the date of classification. This does not preclude an extension of the period required to complete a sale or a distribution to owners if the specified conditions are met.

The entity shall measure a non-current asset (or disposal group) that ceases to be classified as held for sale or as held for distribution to owners (or ceases to be included in a disposal group classified as held for sale or as held for distribution to owners) at the lower of:

(a) its carrying amount before the asset (or disposal group) was classified as held for sale or as held for distribution to owners, adjusted for any depreciation, amortisation or revaluations that would have been recognised had the asset (or disposal group) not been classified as held for sale or as held for distribution to owners, and

(b) its recoverable amount at the date of the subsequent decision not to sell or distribute.

8.31.7 Major Changes in Ind AS 105 vis-à-vis IFRS 5 Not Resulting in Carve Outs

1. ***Classification of a Non-current Asset****:* IFRS 5 prescribes the conditions for classification of a non-current asset (or disposal group) as held for sale. In Ind AS 105, a clarification has also been added that the non-current asset (or disposal group) cannot be classified as held for sale, if the entity intends to sell it in a distant future.

2. ***Non-current Assets accounted as per the Fair Value Model****:* IFRS 105 deals with non-current assets that are accounted for in accordance with the fair value model in IAS 40. Since Ind AS 40 prohibits the use of fair value model, this has not been included in Ind AS 105.

3. ***Presentation of Discontinued Operations****:* IFRS 5 requires presentation of discontinued operations in the separate income statement, where separate income statement is presented. This requirement is not provided in Ind AS 105 consequential to the removal of option regarding two statement approach in Ind AS 1. Ind AS 1 requires that the components of profit or loss and components of other comprehensive income shall be presented as a part of the statement of profit and loss.

4. ***Transitional Provisions****:* Ind AS 101 provides transitional relief, similar to the transitional provisions in IFRS 5, that while applying Ind AS 105, an entity may use the transitional date circumstances to measure such assets or operations at the lower of carrying value and fair value less cost to sell. This would facilitate smooth convergence with Ind AS.

8.31.8 Major Difference between Ind AS 105 vis a vis Notified AS 24

(i) ***Scope and Objective****:* Ind AS 105 specifies the accounting for non-current assets held for sale, and the presentation and disclosure of *discontinued operations*. The existing AS 24 establishes principles for reporting information about *discontinuing operations*. It does not deal with the non-current assets held for sale; fixed assets retired from active used and held for sale, are dealt in existing AS 10, '*Accounting for Fixed Assets'.*

(ii) ***Cash Flow Statement:*** In the existing AS 24, requirements related to cash flow statement are applicable when the enterprise presents a cash flow statement. Ind AS 105 does not mention so.

(iii) ***Discontinued vs Discontinuing Operations:*** Under Ind AS 105, a discontinued operation is a component of an entity that either has been disposed of or is classified as held for sale. In the existing AS 24, there is no concept of discontinued operations but it deals with discontinuing operations.

(iv) ***Time Period:*** As per Ind AS 105, the sale should be expected to qualify for recognition as a completed sale within one year from the date of classification with certain exceptions. The existing AS 24 does not specify any time period in this regard as it relates to discontinuing operations

(v) ***Initial Disclosure Event:*** The existing AS 24 specifies about the initial disclosure event in respect to a discontinuing operation. Ind AS 105 does not mention so as it relates to discontinued operation.

(vi) ***Measurement:*** Under Ind AS 105, non-current assets (disposal groups) held for sale are measured at the lower of carrying amount and fair value less costs to sell, and are presented separately in the balance sheet. The existing AS 24 requires to apply the principles set out in other relevant Accounting Standards, e.g., the existing AS 10 requires that the fixed assets retired from active use and held for disposal should be stated at the lower of their net book value and net realisable value and shown separately in the financial statements.

(vii) ***Abandonment of Assets:*** Ind AS 105 specifically mentions that abandonment of assets should not be classified as held for sale. In the existing AS 24, abandonment of assets is classified as a discontinuing operation; however, changing the scope of an operations or the manner in which it is conducted is not abandonment and hence not a discontinuing operation.

(viii) ***Guidance Regarding Measurement of Changes to a Plan of Change:*** Ind AS 105 provides guidance regarding changes to the plan to sell non-current assets (or disposal groups) which are classified as held for sale. The existing AS 24 does not give any specific guidance regarding this aspect.

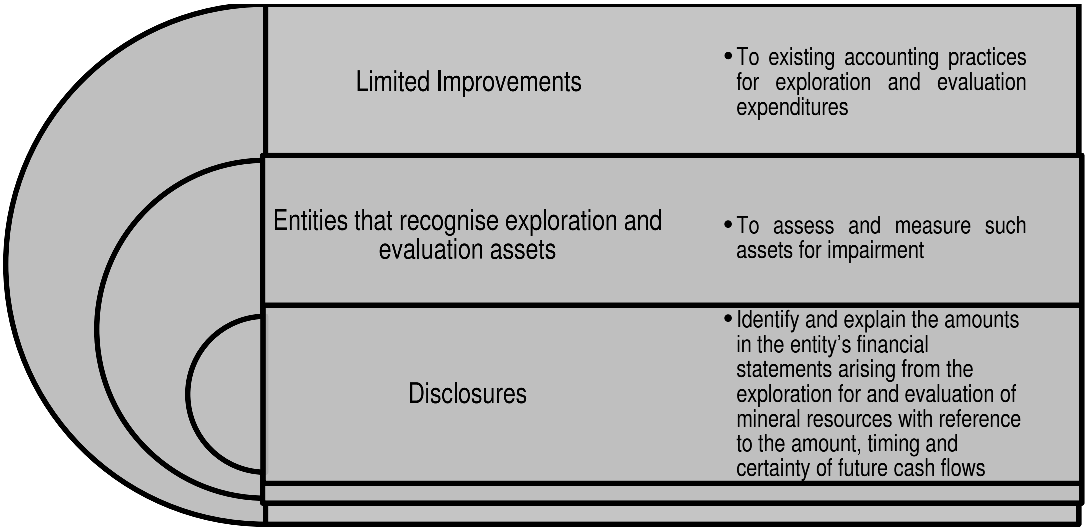
(ix) ***Definition:*** As per Ind AS 105, a discontinued operation is a component of an entity that represents a separate major line of business or geographical area, or is a subsidiary acquired exclusively with a view to resale. Under the existing AS 24, a discontinuing operation is a component of an entity that represents the major line of business or geographical area of operations and that can be distinguished operationally and for financial reporting purposes.

8.32 Ind AS 106: Exploration for and Evaluation of Mineral Resources

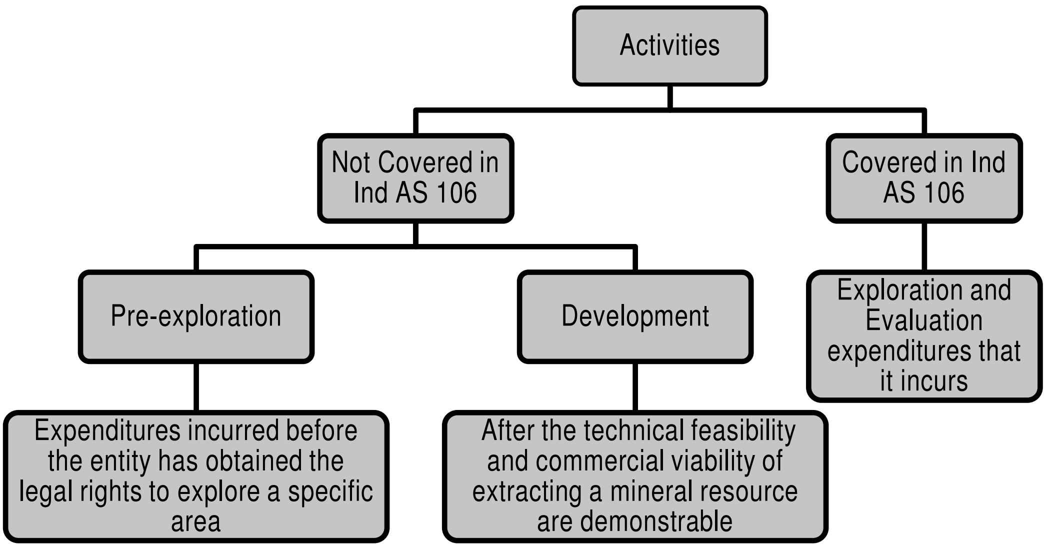
8.32.1 Objective

The objective of this Indian Accounting Standard (Ind AS) is to specify the financial reporting for the exploration for and evaluation of mineral resources.

In particular, the Ind AS requires:



8.32.2 Scope



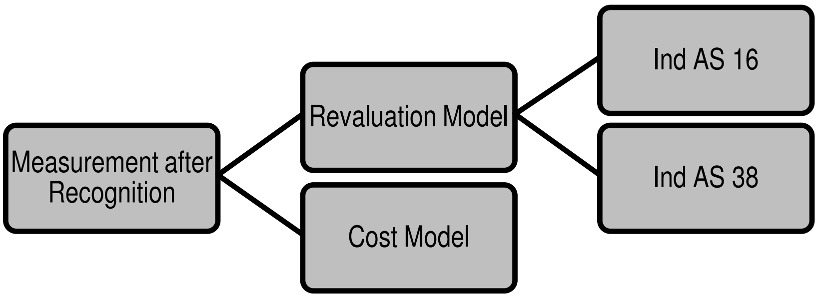
8.32.3 Measurement of Exploration and Evaluation of Assets

8.32.3.1 Measurement at Recognition: Exploration and evaluation assets shall be measured at cost.

8.32.3.2 Elements of Cost of Exploration and Evaluation of Assets: An entity shall determine an accounting policy specifying which expenditures are recognised as exploration and evaluation assets and apply the policy consistently.

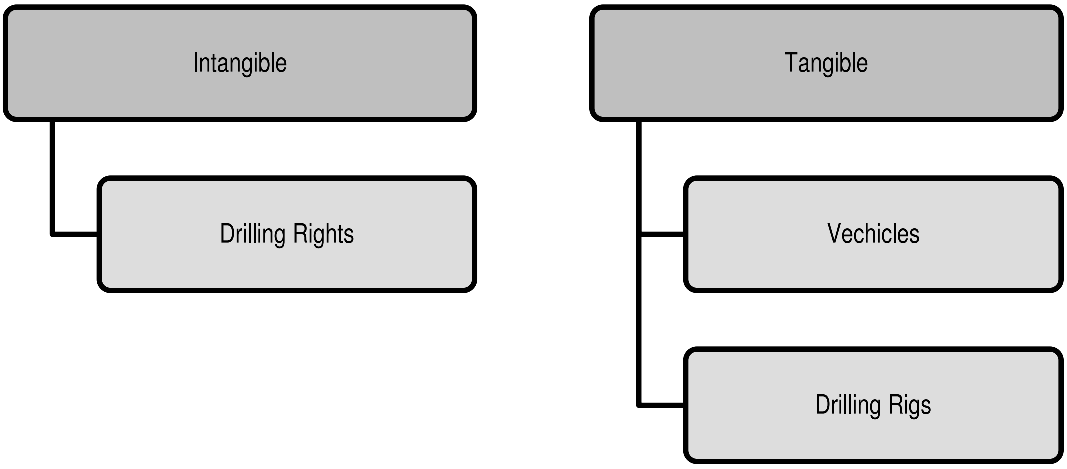
8.32.3.3 Measurement after Recognition: After recognition, an entity shall apply either the cost model or the revaluation model to the exploration and evaluation assets.

If the revaluation model is applied (either the model in Ind AS 16 *'Property, Plant and Equipment'* or the model in Ind AS 38) it shall be consistent with the classification of the assets.



8.32.4 Presentation

8.32.4.1 Classification of Exploration and Evaluation Assets: An entity shall classify exploration and evaluation assets as tangible or intangible according to the nature of the assets acquired and apply the classification consistently.



8.32.5 Impairment

Recognition and Measurement: Exploration and evaluation assets shall be assessed for impairment when facts and circumstances suggest that the carrying amount of an exploration and evaluation asset may exceed its recoverable amount.

When facts and circumstances suggest that the carrying amount exceeds the recoverable amount, an entity shall measure, present and disclose any resulting impairment loss in accordance with Ind AS 36

An entity shall determine an accounting policy for allocating exploration and evaluation assets to cash-generating units or groups of cash-generating units for the purpose of assessing such assets for impairment. Each cash-generating unit or group of units to which an exploration and evaluation asset is allocated shall not be larger than an operating segment determined in accordance with Ind AS 108, '*Operating Segments'*.

One or more of the following facts and circumstances indicate that an entity should test exploration and evaluation assets for impairment (the list is not exhaustive):

(a) the period for which the entity has the right to explore in the specific area has expired during the period or will expire in the near future, and is not expected to be renewed.

(b) substantive expenditure on further exploration for and evaluation of mineral resources in the specific area is neither budgeted nor planned.

(c) exploration for and evaluation of mineral resources in the specific area have not led to the discovery of commercially viable quantities of mineral resources and the entity has decided to discontinue such activities in the specific area.

(d) sufficient data exist to indicate that, although a development in the specific area is likely to proceed, the carrying amount of the exploration and evaluation asset is unlikely to be recovered in full from successful development or by sale.

An entity shall disclose information that identifies and explains the amounts recognised in its financial statements arising from the exploration for and evaluation of mineral resources.

8.33 Ind AS 107: Financial Instruments: Disclosures

8.33.1 Objective

The objective of this Indian Accounting Standard (Ind AS) is to require entities to provide disclosures in their financial statements that enable users to evaluate:

(a) the significance of financial instruments for the entity's financial position and performance; and

(b) the nature and extent of risks arising from financial instruments to which the entity is exposed during the period and at the end of the reporting period, and how the entity manages those risks.

8.33.2 Scope

This Ind AS shall be applied by all entities to all types of financial instruments, except:

(a) those interests in subsidiaries, associates or joint ventures that are accounted for in accordance with Ind AS 110 *'Consolidated Financial Statements'*, Ind AS 27 *'Separate Financial Statements'*, or Ind AS 28 *'Investments in Associates and Joint Ventures'*.

(b) employers' rights and obligations arising from employee benefit plans, to which Ind AS 19, *'Employee Benefits'*, applies.

(c) insurance contracts as defined in Ind AS 104, *'Insurance Contracts'*.

(d) financial instruments, contracts and obligations under share-based payment transactions to which Ind AS 102, *'Share-based Payment'*, applies.

(e) instruments that are required to be classified as equity instruments in accordance with paragraphs 16A and 16B or paragraphs 16C and 16D of Ind AS 32.

This Ind AS applies to recognised and unrecognised financial instruments.

Recognised financial instruments include financial assets and financial liabilities that are within the scope of Ind AS 109. Unrecognised financial instruments include some financial instruments that, although outside the scope of Ind AS 109, are within the scope of this Ind AS.

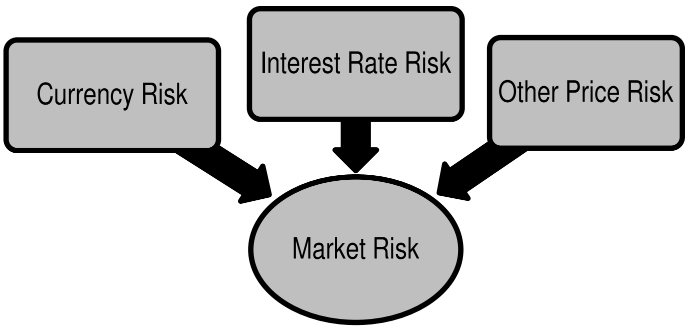
8.33.3 Credit Risk, Liquidity Risk and Market Risk

Credit Risk: The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.

Liquidity Risk: The risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset.

Market Risk: The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices.

Market risk comprises three types of risk:



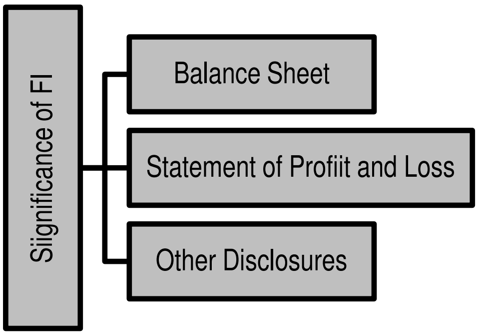
Interest Rate Risk: The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

Currency Risk: The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

Other Price Risk: The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer or by factors affecting all similar financial instruments traded in the market.

8.33.4 Significance of Financial Instruments for Financial Position and Performance

An entity shall disclose information that enables users of its financial statements to evaluate the significance of financial instruments for its financial position and performance.



8.33.4.1 Balance Sheet

Categories of Financial Assets and Financial Liabilities: The carrying amounts of each of the following categories, as specified in Ind AS 109, shall be disclosed either in the balance sheet or in the notes:

1. financial assets measured at fair value through profit or loss, showing separately
   - (i) those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 and
   - (ii) those mandatorily measured at fair value through profit or loss in accordance with Ind AS 109.
2. financial liabilities at fair value through profit or loss, showing separately
   - (i) those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 and
   - (ii) those that meet the definition of held for trading in Ind AS 109.
3. financial assets measured at amortised cost.
4. financial liabilities measured at amortised cost.
5. financial assets measured at fair value through other comprehensive income, showing separately
   - (i) financial assets that are measured at fair value through other comprehensive income in accordance with Ind AS 109; and
   - (ii) investments in equity instruments designated as such upon initial recognition in accordance with Ind AS 109.

Financial Assets or Financial Liabilities at Fair Value through Profit or Loss: If the entity has designated as measured at fair value through profit or loss a financial asset (or group of financial assets) that would otherwise be measured at fair value through other comprehensive income or amortised cost, it shall disclose:

(a) the maximum exposure to credit risk of the financial asset (or group of financial assets) at the end of the reporting period.

(b) the amount by which any related credit derivatives or similar instruments mitigate that maximum exposure to credit risk.

(c) the amount of change, during the period and cumulatively, in the fair value of the financial asset (or group of financial assets) that is attributable to changes in the credit risk of the financial asset determined either:

  (i) as the amount of change in its fair value that is not attributable to changes in market conditions that give rise to market risk; or

  (ii) using an alternative method the entity believes more faithfully represents the amount of change in its fair value that is attributable to changes in the credit risk of the asset.

(d) the amount of the change in the fair value of any related credit derivatives or similar instruments that has occurred during the period and cumulatively since the financial asset was designated.

Investments in Equity Instruments designated at Fair Value through Other Comprehensive Income

If an entity has designated investments in equity instruments to be measured at fair value through other comprehensive income, as permitted by Ind AS 109, it shall disclose:

(a) which investments in equity instruments have been designated to be measured at fair value through other comprehensive income.

(b) the reasons for using this presentation alternative.

(c) the fair value of each such investment at the end of the reporting period.

(d) dividends recognised during the period, showing separately those related to investments derecognised during the reporting period and those related to investments held at the end of the reporting period.

(e) any transfers of the cumulative gain or loss within equity during the period including the reason for such transfers.

Reclassification: An entity shall disclose if, in the current or previous reporting periods, it has reclassified any financial assets in accordance with Ind AS 109. For each such event, an entity shall disclose:

(a) the date of reclassification.

(b) a detailed explanation of the change in business model and a qualitative description of its effect on the entity's financial statements.

(c) the amount reclassified into and out of each category.

Collateral: An entity shall disclose:

(a) the carrying amount of financial assets it has pledged as collateral for liabilities or contingent liabilities, including amounts that have been reclassified in accordance with Ind AS 109; and

(b) the terms and conditions relating to its pledge.

Allowance Account for Credit Losses: The carrying amount of financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109 is not reduced by a loss allowance and an entity shall not present the loss allowance separately in the balance sheet as a reduction of the carrying amount of the financial asset. However, an entity shall disclose the loss allowance in the notes to the financial statements.

Compound Financial Instruments with Multiple Embedded Derivatives: If an entity has issued an instrument that contains both a liability and an equity component and the instrument has multiple embedded derivatives whose values are interdependent (such as a callable convertible debt instrument), it shall disclose the existence of those features.

Defaults and Breaches: For loans payable recognised at the end of the reporting period, an entity shall disclose:

(a) details of any defaults during the period of principal, interest, sinking fund, or redemption terms of those loans payable;

(b) the carrying amount of the loans payable in default at the end of the reporting period; and

(c) whether the default was remedied, or the terms of the loans payable were renegotiated, before the financial statements were approved for issue.

8.33.4.2 Statement of Profit and Loss

Items of Income, Expense, Gains or Losses: An entity shall disclose the following items of income, expense, gains or losses either in the statement of profit and loss or in the notes:

(a) net gains or net losses on:

(i) financial assets or financial liabilities measured at fair value through profit or loss, showing separately those on financial assets or financial liabilities designated as such upon initial recognition or subsequently in accordance with Ind AS 109, and those on financial assets or financial liabilities that are mandatorily measured at fair value through profit or loss in accordance with Ind AS 109 (e.g. financial liabilities that meet the definition of held for trading in Ind AS 109). For financial liabilities designated as at fair value through profit or loss, an entity shall show separately the amount of gain or loss recognised in other comprehensive income and the amount recognised in profit or loss.

(ii) financial liabilities measured at amortised cost.

(iii) financial assets measured at amortised cost.

(iv) investments in equity instruments designated at fair value through other comprehensive income in accordance with Ind AS 109.

(v) financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109, showing separately the amount of gain or loss recognised in other comprehensive income during the period and the amount reclassified upon derecognition from accumulated other comprehensive income to profit or loss for the period.

(b) total interest revenue and total interest expense (calculated using the effective interest method) for financial assets that are measured at amortised cost or that are measured at fair value through other comprehensive income in accordance with Ind AS 109 (showing these amounts separately); or financial liabilities that are not measured at fair value through profit or loss.

(c) fee income and expense (other than amounts included in determining the effective interest rate) arising from:

(i) financial assets and financial liabilities that are not at fair value through profit or loss; and

(ii) trust and other fiduciary activities that result in the holding or investing of assets on behalf of individuals, trusts, retirement benefit plans, and other institutions.

8.33.4.3 Other Disclosures

Accounting Policies: In accordance with Ind AS 1 *'Presentation of Financial Statements'*, an entity discloses its significant accounting policies, comprising the measurement basis (or bases) used in preparing the financial statements and the other accounting policies used that are relevant to an understanding of the financial statements.

Hedge Accounting: An entity shall apply the disclosure requirements for those risk exposures that an entity hedges and for which it elects to apply hedge accounting. Hedge accounting disclosures shall provide information about:

(i) an entity's risk management strategy and how it is applied to manage risk;

(ii) how the entity's hedging activities may affect the amount, timing and uncertainty of its future cash flows; and

(iii) the effect that hedge accounting has had on the entity's balance sheet, statement of profit and loss and statement of changes in equity.

Fair Value: For each class of financial assets and financial liabilities, an entity shall disclose the fair value of that class of assets and liabilities in a way that permits it to be compared with its carrying amount.

Disclosures of fair value are not required:

(a) when the carrying amount is a reasonable approximation of fair value, for example, for financial instruments such as short-term trade receivables and payables;

(b) for a contract containing a discretionary participation feature (as described in Ind AS 104) if the fair value of that feature cannot be measured reliably.

8.33.5 Nature and Extent of Risks arising from Financial Instruments

An entity shall disclose information that enables users of its financial statements to evaluate the nature and extent of risks arising from financial instruments to which the entity is exposed at the end of the reporting period.

Qualitative Disclosures: The qualitative disclosures describe management's objectives, policies and processes for managing those risks.

For each type of risk arising from financial instruments, an entity shall disclose:

(a) the exposures to risk and how they arise;

(b) its objectives, policies and processes for managing the risk and the methods used to measure the risk; and

(c) any changes in (a) or (b) from the previous period.

Quantitative Disclosures: The quantitative disclosures provide information about the extent to which the entity is exposed to risk, based on information provided internally to the entity's key management personnel.

For each type of risk arising from financial instruments, an entity shall disclose:

(a) summary quantitative data about its exposure to that risk at the end of the reporting period. This disclosure shall be based on the information provided internally to key management personnel of the entity (as defined in Ind AS 24, *'Related Party Disclosures'*), for example the entity's board of directors or chief executive officer.

(b) the disclosures required by paragraphs 36–42, to the extent not provided in accordance with (a).

(c) concentrations of risk if not apparent from the disclosures made in accordance with (a) and (b).

Together, these disclosures provide an overview of the entity's use of financial instruments and the exposures to risks they create.

The Ind AS applies to all entities, including entities that have few financial instruments (eg a manufacturer whose only financial instruments are accounts receivable and accounts payable) and those that have many financial instruments (eg a financial institution most of whose assets and liabilities are financial instruments).

When this Ind AS requires disclosures by class of financial instrument, an entity shall group financial instruments into classes that are appropriate to the nature of the information disclosed and that take into account the characteristics of those financial instruments. An entity shall provide sufficient information to permit reconciliation to the line items presented in the statement of financial position.

The principles in this Ind AS complement the principles for recognising, measuring and presenting financial assets and financial liabilities in Ind AS 32, '*Financial Instruments: Presentation'* and Ind AS 109, *'Financial Instruments'*.

8.33.6 Major Change in Ind AS 107 vis-à-vis IFRS 7 Not Resulting in Carve Out

Disclosure of description of Gains and Losses presented in the Separate Income Statement: IFRS 7 requires disclosure of description of gains and losses presented in the separate income statement, where separate income statement is presented. This requirement is not provided in Ind AS 107 consequential to the removal of option regarding two statement approach in Ind AS 1 as compared to IAS 1. Ind AS 1 requires that the components of profit or loss and components of other comprehensive income shall be presented as a part of the statement of profit and loss.

8.34 Ind AS 108: Operating Segments

8.34.1 Core Principle

An entity shall disclose information to enable users of its financial statements to evaluate the nature and financial effects of the **business activities** in which it engages and the **economic environments** in which it operates.

Accordingly, the objective of segment reporting is to provide financial information on the different business activities that an entity engages in and the different economic environments under which it operates to help users of financial statements to:

(a) better understand the entity's performance;

(b) better assess its prospects for future net cash flows;

(c) make more informed judgments about the entity as a whole.

8.34.2 Scope

This Accounting Standard shall apply to companies to which Indian Accounting Standards (Ind AS) notified under the Companies Act apply.

If an entity that is not required to apply this Ind AS chooses to disclose information about segments that does not comply with this Ind AS, it shall not describe the information as segment information.

If a financial report contains both the consolidated financial statements of a parent that is within the scope of this Indian Accounting Standard as well as the parent's separate financial statements, segment information is required only in the consolidated financial statements.

8.34.3 Operating Segments

An operating segment is a component of an entity:

(a) that engages in business activities from which it may earn revenues and incur expenses

(b) whose operating results are regularly reviewed by the entity's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance, and

(c) for which discrete financial information is available.

An operating segment may engage in business activities for which it has yet to earn revenues, for example, start-up operations may be operating segments before earning revenues. Not every part of an entity is necessarily an operating segment or part of an operating segment.

For example: A corporate headquarters or some functional departments may not earn revenues or may earn revenues that are only incidental to the activities of the entity and would not be operating segments. For the purposes of this Ind AS, an entity's post-employment benefit plans are not operating segments.

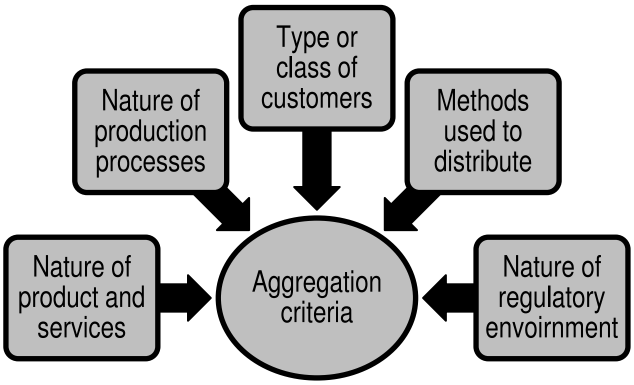
8.34.4 Reportable Segments

An entity shall report separately information about each operating segment that:

(a) has been identified or results from aggregating two or more of segments, and

(b) exceeds the quantitative thresholds as specified in the standard.

8.34.4.1 Aggregation Criteria: Operating segments often exhibit similar long-term financial performance if they have similar economic characteristics.



8.34.4.2 Quantitative Thresholds: An entity shall report separately information about an operating segment that meets any of the following quantitative thresholds:

(a) Its reported revenue, including both sales to external customers and intersegment sales or transfers, is 10 per cent or more of the combined revenue, internal and external, of all operating segments.

(b) The absolute amount of its reported profit or loss is 10 per cent or more of the greater, in absolute amount, of

(i) the combined reported profit of all operating segments that did not report a loss and

(ii) the combined reported loss of all operating segments that reported a loss.

(c) Its assets are 10 per cent or more of the combined assets of all operating segments.

Notes:

1. Operating segments that do not meet any of the quantitative thresholds may be considered reportable, and separately disclosed, if management believes that information about the segment would be useful to users of the financial statements.

2. An entity may combine information about operating segments that do not meet the quantitative thresholds with information about other operating segments that do not meet the quantitative thresholds to produce a reportable segment only if the operating segments have similar economic characteristics and share a majority of the aggregation criteria listed in paragraph 12.
3. If the total external revenue reported by operating segments constitutes less than 75 per cent of the entity's revenue, additional operating segments shall be identified as reportable segments (even if they do not meet the criteria in paragraph 13) until at least 75 per cent of the entity's revenue is included in reportable segments.

8.34.5 General Information

The Standard requires an entity to report a measure of operating segment profit or loss and of segment assets. It also requires an entity to report a measure of segment liabilities and particular income and expense items if such measures are regularly provided to the chief operating decision maker. It requires reconciliations of total reportable segment revenues, total profit or loss, total assets, liabilities and other amounts disclosed for reportable segments to corresponding amounts in the entity's financial statements.

The Standard requires an entity to report information about the revenues derived from its products or services (or groups of similar products and services), about the countries in which it earns revenues and holds assets, and about major customers, regardless of whether that information is used by management in making operating decisions. However, the Standard does not require an entity to report information that is not prepared for internal use if the necessary information is not available and the cost to develop it would be excessive.

The Standard also requires an entity to give descriptive information about the way the operating segments were determined, the products and services provided by the segments, differences between the measurements used in reporting segment information and those used in the entity's financial statements, and changes in the measurement of segment amounts from period to period.

8.34.6 Major Change in Ind AS 108 vis-à-vis IFRS 8 Not Resulting in Carve Out

Paragraph 2 of IFRS 8 requires that the standard shall apply to :

a) the separate or individual financial statements of an entity:
   i. whose debt or equity instruments are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets), or
   ii. that files, or is in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market; and
b) the consolidated financial statements of a group with a parent:
   i. whose debt or equity instruments are traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets), or

ii. that files, or is in the process of filing, the consolidated financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market.

The above have been deleted in the Ind AS 108 as the applicability or exemptions to the Indian Accounting Standards are governed by the Companies Act and the Rules made thereunder.

8.34.7 Major Changes in Ind AS 108 vis a vis Notified AS 17

(i) ***Identification of Segments**:* Identification of segments under Ind AS 108 is based on 'management approach' i.e. operating segments are identified based on the internal reports regularly reviewed by the entity's chief operating decision maker. Existing AS 17 requires identification of two sets of segments; one based on related products and services, and the other on geographical areas based on the risks and returns approach. One set is regarded as primary segments and the other as secondary segments.

(ii) ***Basis of Measurement for Amounts to be Reported in Segments**:* Ind AS 108 requires that the amounts reported for each operating segment shall be measured on the same basis as that used by the chief operating decision maker for the purposes of allocating resources to the segments and assessing its performance. Existing AS 17 requires segment information to be prepared in conformity with the accounting policies adopted for preparing and presenting the financial statements. Accordingly, existing AS 17 also defines segment revenue, segment expense, segment result, segment assets and segment liabilities.

(iii) ***Aggregation Criteria**:* Ind AS 108 specifies aggregation criteria for aggregation of two or more segments and also requires the related disclosures in this regard. Existing AS 17 does not deal specifically with this aspect.

(iv) ***Single Reportable Segment**:* An explanation has been given in the existing AS 17 that in case there is neither more than one business segment nor more than one geographical segment, segment information as per this standard is not required to be disclosed. However, this fact shall be disclosed by way of footnote. Ind AS 108 requires certain disclosures even in case of entities having single reportable segment.

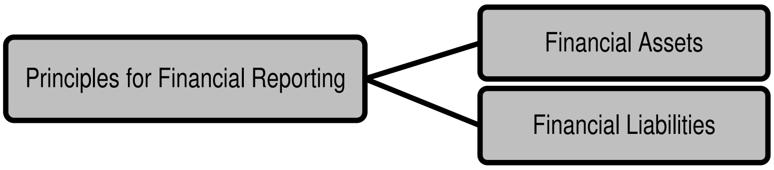
(v) ***Interest Expense**:* An explanation has been given in the existing AS 17 that interest expense relating to overdrafts and other operating liabilities identified to a particular segment should not be included as a part of the segment expense. It also provides that in case interest is included as a part of the cost of inventories and those inventories are part of segment assets of a particular segment, such interest should be considered as a segment expense. These aspects are specifically dealt with keeping in view that the definition of 'segment expense' given in AS 17 excludes interest. Ind AS 108 requires the separate disclosures about interest revenue and interest expense of each reportable segment, therefore, these aspects have not been specifically dealt with.

(vi) ***Disclosures**:* Ind AS 108 requires disclosures of revenues from external customers for each product and service. With regard to geographical information, it requires the disclosure of revenues from customers in the country of domicile and in all foreign countries, non-current assets in the country of domicile and all foreign countries. It also requires disclosure of information about major customers. Disclosures in existing AS 17 are based on the classification of the segments as primary or secondary segments. Disclosure requirements for primary segments are more detailed as compared to secondary segments.

8.35 Ind AS 109 : Financial Instruments

8.35.1 Objective

The objective of this Standard is to establish principles for the financial reporting of financial assets and financial liabilities that will present relevant and useful information to users of financial statements for their assessment of the amounts, timing and uncertainty of an entity's future cash flows.



8.35.2 Scope

This Standard shall be applied by all entities to all types of financial instruments except:

(a) those interests in subsidiaries, associates and joint ventures that are accounted for in accordance with the permission given by Ind AS 110, Ind AS 27 or Ind AS 28

(b) rights and obligations under leases to which Ind AS 17 'Leases' applies. However:

 (i) lease receivables recognised by a lessor are subject to the derecognition and impairment requirements of this Standard;

 (ii) finance lease payables recognised by a lessee are subject to the derecognition requirements of this Standard; and

 (iii) derivatives that are embedded in leases are subject to the embedded derivatives requirements of this Standard.

(c) employers' rights and obligations under employee benefit plans, to which Ind AS 19 'Employee Benefits' applies.

(d) financial instruments issued by the entity that meet the definition of an equity instrument in Ind AS 32 (including options and warrants)

(e) rights and obligations arising under

 (i) an insurance contract as defined in Ind AS 104 *'Insurance Contracts'*,

 (ii) a contract that is within the scope of Ind AS 104 because it contains a discretionary participation feature.

(f) any forward contract between an acquirer and a selling shareholder to buy or sell an acquiree that will result in a business combination within the scope of Ind AS 103 at a future acquisition date.

(g) loan commitments other than those which entity designates as financial liabilities at fair value through profit or loss, loan commitments that can be settled net in cash or by delivering or issuing another financial instrument and commitments to provide a loan at a below-market interest rate

(h) financial instruments, contracts and obligations under share-based payment transactions to which Ind AS 102 *'Share-based Payment'* applies.

(i) rights to payments to reimburse the entity for expenditure that it is required to make to settle a liability that it recognises as a provision in accordance with Ind AS 37 *'Provisions, Contingent Liabilities and Contingent Assets'*, or for which, in an earlier period, it recognised a provision in accordance with Ind AS 37.

(j) rights and obligations within the scope of Ind AS 11, Construction Contracts, and Ind AS 18, Revenue, that are financial instruments, except for those that Ind AS 11 and Ind AS 18 specify are accounted for in accordance with this Standard.

(k) Contracts to buy or sell a non-financial item which cannot be settled net in cash or another financial instrument, or by exchanging financial instruments.

8.35.3 Recognition

8.35.3.1 Initial Recognition: An entity shall recognise a financial asset or a financial liability in its balance sheet when, and only when, the entity becomes party to the contractual provisions of the instrument.

8.35.4 Derecognition

8.35.4.1 Derecognition of Financial Assets: A financial asset shall be derecognised when and only when:

(a) the contractual rights to the cash flows from the financial asset expire, or

(b) it transfers the financial asset and the transfer qualifies for derecognition.

On derecognition of a financial asset in its entirety, the difference between the carrying amount (measured at the date of derecognition) and the consideration received (including any new asset obtained less any new liability assumed) shall be recognised in profit or loss.

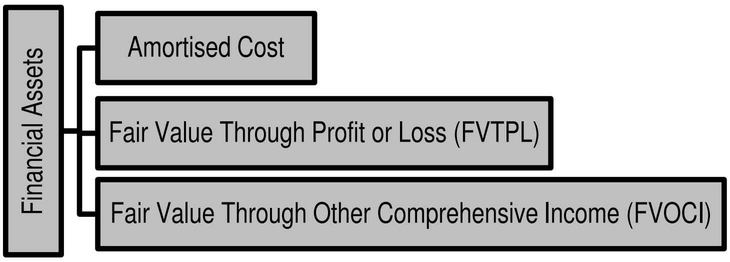
In case of partial derecognition of a financial asset, the previous carrying amount of the whole asset shall be allocated between the part that continues to be recognised and the part that is derecognised, on the basis of the relative fair values of those parts on the date of the transfer.

8.35.4.2 Derecognition of Financial Liabilities: A financial liability (or a part of a financial liability) shall be derecognised when, and only when, it is extinguished (obligation specified in the contract is discharged or cancelled or expires).

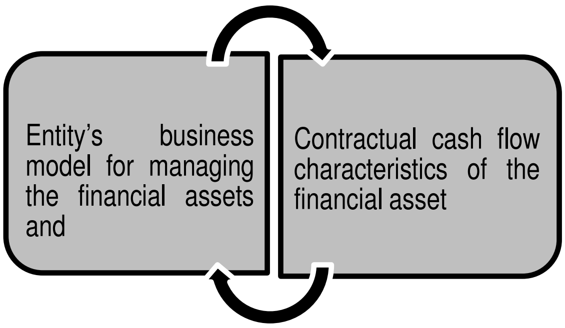
An entity shall account for a substantial modification of the terms of contracts as an extinguishment of the original financial liability and the recognition of a new financial liability. Any difference between the carrying amount of a financial liability extinguished or transferred and the consideration paid should be recognised in profit or loss.

8.35.5 Classification

8.35.5.1 Classification of Financial Assets



An entity shall classify financial assets as subsequently measured at amortised cost, fair value through other comprehensive income or fair value through profit or loss on the basis of both:

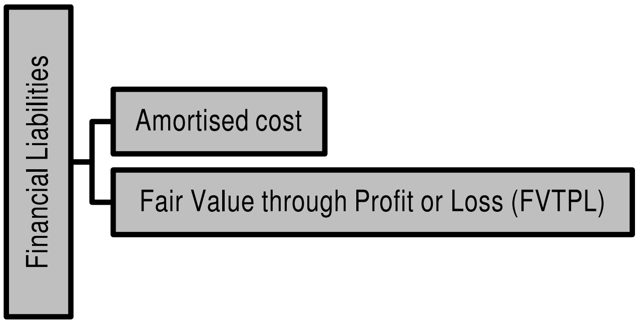


1. ***Amortised Cost*:** A financial asset shall be measured at amortised cost if both of the following conditions are met:
   (i) the financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows and
   (ii) the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.
2. ***Fair Value through Other Comprehensive Income (FVOCI)*:** A financial asset shall be measured at fair value through other comprehensive income if both of the following conditions are met:
   (i) the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets and
   (ii) the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.
3. ***Fair Value through Profit or Loss (FVTPL)*:** A financial asset shall be measured at fair value through profit or loss unless it is measured at amortised cost or at fair value through other comprehensive income.

However, an entity maymake an irrevocable election at initial recognition for particular investments in equity instruments that would otherwise be measured at fair value through profit or loss to present subsequent changes in fair value in other comprehensive income.

Option to designate a financial asset at fair value through profit or loss: An entity may, at initial recognition, irrevocably designate a financial asset as measured at fair value through profit or loss if doing so eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as an 'accounting mismatch') that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases.

8.35.5.2 Classification of Financial Liabilities: An entity shall classify all financial liabilities as subsequently measured at amortised cost, except for:



1. ***Amortised Cost*****:** An entity shall classify all financial liabilities as subsequently measured at amortised cost, except for those mentioned below to be measured at FVTPL.
2. ***Financial Liabilities at Fair Value through Profit or Loss*****:** Such liabilities, include
   - Derivatives that are liabilities, shall be subsequently measured at fair value through profit or loss.
   - Financial liabilities that arise when a transfer of a financial asset does not qualify for derecognition or when the continuing involvement approach applies.
   - Financial guarantee contracts.
   - Commitments to provide a loan at a below-market interest rate.
   - Contingent consideration recognised by an acquirer in a business combination to which Ind AS 103 applies. Such contingent consideration shall subsequently be measured at fair value with changes recognised in profit or loss.

Option to designate a financial liability at fair value through profit or loss: An entity may, at initial recognition, irrevocably designate a financial liability as measured at fair value through profit or loss

8.35.6 Reclassification

When and only when, an entity changes its business model for managing financial assets it shall reclassify all affected financial assets. An entity shall not reclassify any financial liability.

8.35.7 Measurement

8.35.7.1 Initial Measurement: At initial recognition, an entity shall measure a financial asset or financial liability at its fair value plus or minus, in the case of a financial asset or financial liability not at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability.

8.35.7.2 Subsequent Measurement of Financial Assets: After initial recognition, an entity shall measure a financial asset in accordance with its classification i.e.:

(i) amortised cost;

(ii) fair value through other comprehensive income; or

(iii) fair value through profit or loss.

An entity shall apply the impairment requirements to financial assets that are measured at amortised cost and to financial assets that are measured at fair value through other comprehensive income.

8.35.7.3 Subsequent Measurement of Financial Liabilities: After initial recognition, an entity shall measure a financial liability in accordance with amortised cost method using effective interest method.

8.35.7.4 Gains and Losses: An entity shall recognise a loss allowance for *expected credit losses* on a financial asset that is measured at FVTOCI and FV at amortised cost, a lease receivable, a *contract asset* or a loan commitment and a financial guarantee contract to which the impairment requirements of this standard applies.

An entity shall measure expected credit losses of a financial instrument in a way that reflects an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes; the time value of money; and reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions.

A gain or loss on a financial asset or financial liability that is measured at fair value shall be recognised in profit or loss unless:

(i) it is part of a hedging relationship;

(ii) it is an investment in an equity instrument and the entity has elected to present gains and losses on that investment in other comprehensive income;

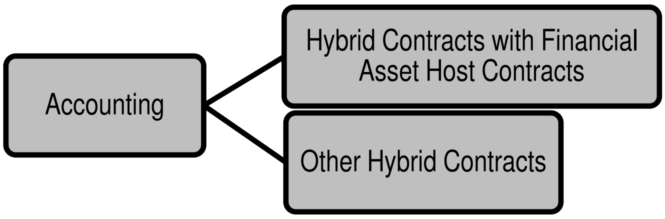
(iii) it is a financial liability designated as at fair value through profit or loss and the entity is required to present the effects of changes in the liability's credit risk in other comprehensive income; or

(iv) it is a financial asset measured at fair value through other comprehensive income and the entity is required to recognise some changes in fair value in other comprehensive income.

8.35.8 Embedded Derivatives

An embedded derivative is a component of a hybrid contract that also includes a non-derivative host—with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

An embedded derivative causes some or all of the cash flows that otherwise would be required by the contract to be modified according to a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract. A derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty, is not an embedded derivative, but a separate financial instrument.



8.35.8.1 Hybrid Contracts with Financial Asset Hosts: If a hybrid contract contains a host that is an asset within the scope of this Standard, an entity shall apply the requirements of this standard to the entire hybrid contract.

8.35.8.2 Other Hybrid Contracts: If a hybrid contract contains a host that is not an asset, an embedded derivative shall be separated from the host and accounted for as a derivative if, and only if:

(a) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;

(b) a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and

(c) the hybrid contract is not measured at fair value with changes in fair value recognised in profit or loss (i.e. a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

8.35.9 Hedge Accounting

8.35.9.1 Objective and Scope of Hedge Accounting: The objective of hedge accounting is to represent, in the financial statements, the effect of an entity's risk management activities that use financial instruments to manage exposures arising from particular risks that could affect profit or loss (or other comprehensive income, in the case of investments in equity instruments for which an entity has elected to present changes in fair value in other comprehensive income).

8.35.9.2 Hedging Instruments

Qualifying Items: A derivative measured at fair value through profit or loss may be designated as a hedging instrument, except for some written options.

A non-derivative financial asset or a non-derivative financial liability measured at fair value through profit or loss may be designated as a hedging instrument unless it is a financial liability designated as at fair value through profit or loss for which the amount of its change in fair value that is attributable to changes in the credit risk of that liability is presented in other comprehensive income.

For a hedge of foreign currency risk, the foreign currency risk component of a non-derivative financial asset or a non-derivative financial liability may be designated as a hedging instrument provided that it is not an investment in an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income.

Only contracts entered into by the entity with party external to the reporting entity can be designated as hedging instruments.

8.35.9.3 Designation of Hedging Instruments: A qualifying instrument must be designated in its entirety as a hedging instrument. The only exceptions permitted are:

(a) separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the change in intrinsic value of an option and not the change in its time value;

(b) separating the forward element and the spot element of a forward contract and designating as the hedging instrument only the change in the value of the spot element of a forward contract and not the forward element; similarly, the foreign currency basis spread may be separated and excluded from the designation of a financial instrument as the hedging instrument; and

(c) a proportion of the entire hedging instrument, such as 50 per cent of the nominal amount, may be designated as the hedging instrument in a hedging relationship. However, a hedging instrument may not be designated for a part of its change in fair value that results from only a portion of the time period during which the hedging instrument remains outstanding.

8.35.9.4 Hedged Items:

Qualifying Items: A hedged item can be a recognised asset or liability, an unrecognised firm commitment, a forecast transaction or a net investment in a foreign operation. The hedged item can be:

- a single item; or
- a group of items.

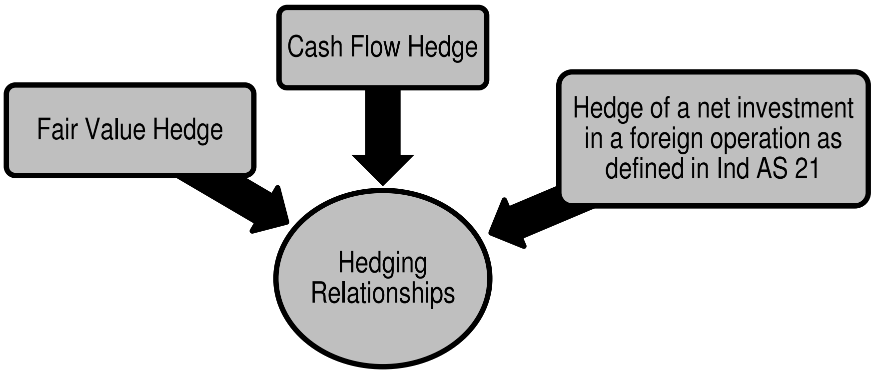
8.35.9.5 Types of Hedging Relationship: An entity applies hedge accounting to hedging relationships that meet the qualifying criteria (which include the entity's decision to designate the hedging relationship).

There are three types of hedging relationships:

(a) Fair Value Hedge: a hedge of the exposure to changes in fair value of a recognised asset or liability or an unrecognised firm commitment, or a component of any such item, that is attributable to a particular risk and could affect profit or loss.

(b) Cash Flow Hedge: a hedge of the exposure to variability in cash flows that is attributable to a particular risk associated with all, or a component of, a recognised asset or liability or a highly probable forecast transaction, and could affect profit or loss.

(c) **Hedge of a Net Investment in a Foreign Operation** as defined in Ind AS 21.



8.35.9.6 Qualifying Criteria for Hedge Accounting: A hedging relationship qualifies for hedge accounting only if all of the following criteria are met:

(a) the hedging relationship consists only of eligible hedging instruments and eligible hedged items.

(b) at the inception of the hedging relationship there is formal designation and documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge.

(c) the hedging relationship meets all of the following hedge effectiveness requirements:

  (i) there is an economic relationship between the hedged item and the hedging instrument;

  (ii) the effect of credit risk does not dominate the value changes that result from that economic relationship; and

  (iii) the hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the entity actually hedges and the quantity of the hedging instrument that the entity actually uses to hedge that quantity of hedged item.

However, that designation shall not reflect an imbalance between the weightings of the hedged item and the hedging instrument that would create hedge ineffectiveness (irrespective of whether recognised or not) that could result in an accounting outcome that would be inconsistent with the purpose of hedge accounting.

In case a hedging relationship ceases to meet the hedge effectiveness requirement relating to the hedge ratio but the risk management objective for that designated hedging relationship remains the same, an entity shall adjust the hedge ratio of the hedging relationship so that it meets the qualifying criteria again called as 'rebalancing'.

An entity shall discontinue hedge accounting prospectively only when the hedging relationship (or a part of a hedging relationship) ceases to meet the qualifying criteria (after taking into account any rebalancing of the hedging relationship, if applicable).

Ind AS 109 prescribes principles for hedge accounting and also requires detailed disclosures. These disclosures explain both the effect that hedge accounting has had on the financial statements and an entity's risk management strategy, as well as providing details about derivatives that have been entered into and their effect on the entity's future cash flows.

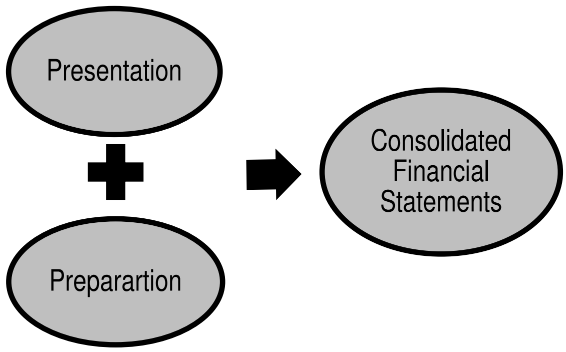
8.35.10 Major Change in Ind AS 109 vis-à-vis IFRS 9 Not Resulting in Carve Out

Fair Value Hedge: IFRS 9 provides an option to apply requirements of IAS 39 *'Financial Instruments: Recognition and Measurement'* for fair value hedge of the interest rate exposure of a portfolio of financial assets or financial liabilities. The said option has been removed in Ind AS 109.

8.36 Ind AS 110: Consolidated Financial Statements

8.36.1 Objective

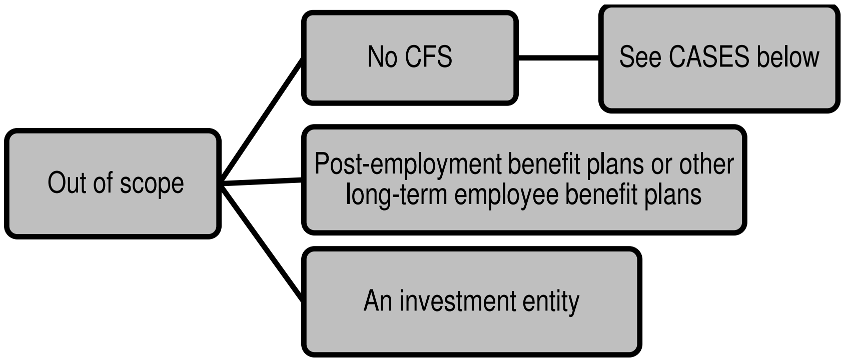
The objective of this Indian Accounting Standard (Ind AS) is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities.



This Ind AS does not deal with the accounting requirements for business combinations and their effect on consolidation, including goodwill arising on a business combination.

8.36.2 Scope

An entity that is a parent shall present consolidated financial statements. This Ind AS applies to all entities, except as follows:



(a) A parent need not present consolidated financial statements if it meets all the following conditions:

(i) it is a wholly-owned subsidiary or is a partially-owned subsidiary of another entity and all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to;

(ii) its debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets);

(iii) it did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market; and

(iv) its ultimate or any intermediate parent produces financial statements that are available for public use and comply with Ind AS, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with this Ind AS.

This Ind AS does not apply to post-employment benefit plans or other long-term employee benefit plans to which Ind AS 19, Employee Benefits, applies.

A parent that is an investment entity shall not present consolidated financial statements if it is required, to measure all of its subsidiaries at fair value through profit or loss.

8.36.3 Consolidated Financial Statements

The financial statements of a group in which the assets, liabilities, equity, income, expenses and cash flows of the parent and its subsidiaries are presented as those of a single economic entity.

8.36.4 Control

An investor, regardless of the nature of its involvement with an entity (the investee), shall determine whether it is a parent by assessing whether it controls the investee.

An investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

Thus, an investor controls an investee if and only if the investor has all the following:

- Power over an investee
- Exposure, or rights, to variable returns from its involvement with the investee
- The ability to use its power over the investee to affect the amount of the investor's returns

8.36.4.1 Power

- An investor has power over an investee when the investor has existing rights that give it the current ability to direct the relevant activities, i.e. the activities that significantly affect the investee's returns.
- Power arises from rights.
- Sometimes assessing power is straightforward, such as when power over an investee is obtained directly and solely from the voting rights granted by equity instruments such as shares
- Power may result from one or more contractual arrangements.

8.36.4.2 Returns

- An investor is exposed, or has rights, to variable returns from its involvement with the investee when the investor's returns from its involvement have the potential to vary as a result of the investee's performance.
- The investor's returns can be only positive, only negative or both positive and negative.
- Although only one investor can control an investee, more than one party can share in the returns of an investee. For example, holders of non-controlling interests can share in the profits or distributions of an investee.

8.36.4.3 Link between Power and Returns

- An investor controls an investee if the investor not only has power over the investee and exposure or rights to variable returns from its involvement with the investee, but also has the ability to use its power to affect the investor's returns from its involvement with the investee.
- An investor with decision-making rights shall determine whether it is a principal or an agent.
- An investor that is an agent does not control an investee when it exercises decision-making rights delegated to it.

A parent of an investment entity shall consolidate all entities that it controls, including those controlled through an investment entity subsidiary, unless the parent itself is an investment entity.

8.36.5 Accounting Requirements

A parent shall prepare consolidated financial statements using uniform accounting policies for like transactions and other events in similar circumstances.

Consolidation of an investee shall begin from the date the investor obtains control of the investee and cease when the investor loses control of the investee.

8.36.5.1 Non-controlling Interests

- A parent shall present non-controlling interests in the consolidated balance sheet within equity, separately from the equity of the owners of the parent.
- Changes in a parent's ownership interest in a subsidiary that do not result in the parent losing control of the subsidiary are equity transactions (i.e. transactions with owners in their capacity as owners).

8.36.5.2 Loss of Control

If a parent loses control of a subsidiary, the parent shall:

(a) derecognise the assets and liabilities of the former subsidiary from the consolidated balance sheet.

(b) recognise any investment retained in the former subsidiary at its fair value in accordance with relevant Ind AS.

(c) recognises the gain or loss associated with the loss of control attributable to the former controlling interest.

8.36.5.3 Consolidation Procedures

Consolidated financial statements:

(a) combine like items of assets, liabilities, equity, income, expenses and cash flows of the parent with those of its subsidiaries.

(b) offset (eliminate) the carrying amount of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary.

(c) eliminate in full intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between entities of the group (profits or losses resulting from intragroup transactions that are recognised in assets, such as inventory and fixed assets, are eliminated in full).

8.36.5.4 Uniform Accounting Policies: If a member of the group uses accounting policies other than those adopted in the consolidated financial statements for like transactions and events in similar circumstances, appropriate adjustments are made to that group member's financial statements in preparing the consolidated financial statements to ensure conformity with the group's accounting policies.

8.36.5.5 Measurement

- An entity includes the income and expenses of a subsidiary in the consolidated financial statements from the date it gains control until the date when the entity ceases to control the subsidiary.
- Income and expenses of the subsidiary are based on the amounts of the assets and liabilities recognised in the consolidated financial statements at the acquisition date.

For example: Depreciation expense recognised in the consolidated statement of profit and loss after the acquisition date is based on the fair values of the related depreciable assets recognised in the consolidated financial statements at the acquisition date.

8.36.5.6 Potential Voting Rights

- When potential voting rights, or other derivatives containing potential voting rights, exist, the proportion of profit or loss and changes in equity allocated to the parent and non-controlling interests in preparing consolidated financial statements is determined solely on the basis of existing ownership interests and does not reflect the possible exercise or conversion of potential voting rights and other derivatives.
- Ind AS 109 does not apply to interests in subsidiaries that are consolidated. When instruments containing potential voting rights in substance currently give access to the returns associated with an ownership interest in a subsidiary, the instruments are not subject to the requirements of Ind AS 109. In all other cases, instruments containing potential voting rights in a subsidiary are accounted for in accordance with Ind AS 109.

8.36.5.7 Reporting Date

- The financial statements of the parent and its subsidiaries used in the preparation of the consolidated financial statements shall have the same reporting date.
- When the end of the reporting period of the parent is different from that of a subsidiary, the subsidiary prepares, for consolidation purposes, additional financial information as of the same date as the financial statements of the parent to enable the parent to consolidate the financial information of the subsidiary, unless it is impracticable to do so.
- If it is impracticable to do so, the parent shall consolidate the financial information of the subsidiary using the most recent financial statements of the subsidiary adjusted for the effects of significant transactions or events that occur between the date of those financial statements and the date of the consolidated financial statements.
- In any case, the difference between the date of the subsidiary's financial statements and that of the consolidated financial statements shall be no more than three months, and the length of the reporting periods and any difference between the dates of the financial statements shall be the same from period to period.

8.36.6 Determining whether an Entity is an Investment Entity

A parent shall determine whether it is an investment entity. An investment entity is an entity that:

- Obtains funds from one or more investors for the purpose of providing those investor(s) with investment management services
- Commits to its investor(s) that its business purpose is to invest funds solely for returns from capital appreciation, investment income, or both
- Measures and evaluates the performance of substantially all of its investments on a fair value basis

A parent that either ceases to be an investment entity or becomes an investment entity shall account for the change in its status prospectively from the date at which the change in status occurred.

8.36.7 Investment Entities: Exception to Consolidation

- An investment entity shall not consolidate its subsidiaries or apply Ind AS 103 when it obtains control of another entity.
- Instead, an investment entity shall measure an investment in a subsidiary at fair value through profit or loss in accordance with Ind AS 109.
- If an investment entity has a subsidiary that is not itself an investment entity and whose main purpose and activities are providing services that relate to the investment entity's investment activities, it shall consolidate that subsidiary in accordance with this Ind AS and apply the requirements of Ind AS 103 to the acquisition of any such subsidiary.
- A parent of an investment entity shall consolidate all entities that it controls, including those controlled through an investment entity subsidiary, unless the parent itself is an investment entity.

8.36.8 Major Change in Ind AS 110 vis-à-vis IFRS 10 Not Resulting in Carve Out

Investment Properties: IFRS 10 requires all investments to be measured at fair value to qualify for the exemption from consolidation available to an investment entity. Ind AS 40 *'Investment Properties'* requires all investment properties to be measured at cost initially and cost less depreciation subsequently. Accordingly, the relevant paragraph of IFRS 10 has been deleted in Ind AS 110 as investment property measured at fair value is not relevant in the Indian context.

8.36.9 Major Changes in Ind AS 110 *vis-a-vis* Notified AS 21

(i) ***Mandatory preparation of Consolidated Financial Statements****:* Ind AS 110 makes the preparation of Consolidated Financial Statements mandatory for a parent. Existing AS 21 does not mandate the preparation of Consolidated Financial Statements by a parent.

(ii) ***Control****:* As per AS 21, control is the ownership of more than one-half of the voting power of an enterprise or control of the composition of the board of directors or governing body. However, unlike rule based definition given in AS 21, definition of control in

Ind AS 110 is principle based which states that, an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

(iii) ***Clarification regarding inclusion of Notes****:* Existing AS 21 provides clarification regarding inclusion of notes appearing in the separate financial statements of the parent and its subsidiaries in the consolidated financial statements. However, Ind AS 110 does not provide any clarification in this regard.

(iv) ***Clarification on more than one Parent of a Subsidiary****:* Under AS 21 there can be more than one parent of a subsidiary therefore existing AS 21 provides clarification regarding consolidation in case an entity is controlled by two entities. No clarification has been provided in this regard in Ind AS 110, keeping in view that as per the definition of control given in Ind AS 110, control of an entity could be with one entity only.

(v) ***Difference in Reporting Dates****:* As per AS 21, difference between the date of the subsidiary's financial statements and that of the consolidated financial statements shall not exceed 6 months. However, as per Ind AS 110 the difference shall not be more than three months.

(vi) ***Loss of Control****:* Ind AS 110 provides detailed guidance as compared to existing AS 21 regarding accounting in case of loss of control over subsidiary.

(vii) ***Uniform Accounting Policies****:* Both the existing AS 21 and Ind AS 110, require the use of uniform accounting policies. However, existing AS 21 specifically states that if it is not practicable to use uniform accounting policies in preparing the consolidated financial statements, that fact should be disclosed together with the proportions of the items in the consolidated financial statements to which the different accounting policies have been applied. However, Ind AS 110 does not recognise the situation of impracticability.

(viii) ***Presentation of Non-controlling Interest in CFS****:* As per existing AS 21 minority interest should be presented in the consolidated balance sheet separately from liabilities and equity of the parent's shareholders. However, as per Ind AS 110 non-controlling interests shall be presented in the consolidated balance sheet within equity separately from the parent shareholders' equity.

(ix) ***Potential Equity Shares****:* For considering share ownership, potential equity shares of the investee held by investor are not taken into account as per existing AS 21. However, as per Ind AS 110, potential voting rights that are substantive are also considered when assessing whether an entity has control over the subsidiary.

(x) ***Exclusion from Consolidation****:* As per existing AS 21, subsidiary is excluded from consolidation when control is intended to be temporary or when subsidiary operates under severe long term restrictions. Ind AS 110 does not give any such exemption from consolidation.

(xi) ***Explanations****:* Existing AS 21 explains where an entity owns majority of voting power because of ownership and all the shares are held as stock-in-trade, whether this amounts to temporary control. Existing AS 21 also explains the term 'near future'. However, Ind AS 110 does not explain the same, as these are not relevant.

8.37 Ind AS 111 : Joint Arrangements

8.37.1 Objective

The objective of this Ind AS is to establish principles for financial reporting by entities that have an interest in arrangements that are controlled jointly (i.e. joint arrangements).

The Standard requires an entity that is a party to a joint arrangement to determine the type of joint arrangement in which it is involved by assessing its rights and obligations and to account for those rights and obligations in accordance with that type of joint arrangement.

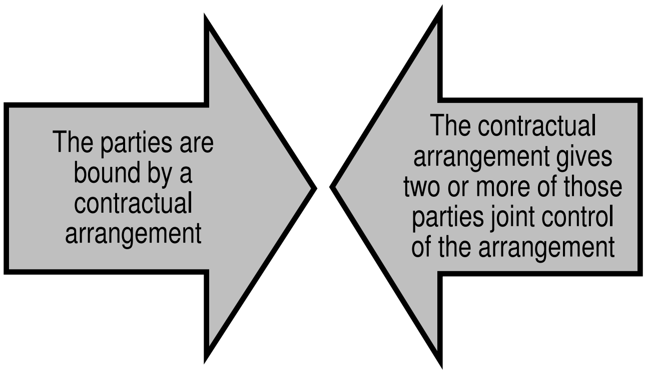
8.37.2 Scope

This Ind AS shall be applied by all entities that are a party to a joint arrangement.

8.37.3 Joint Arrangement and Joint Control

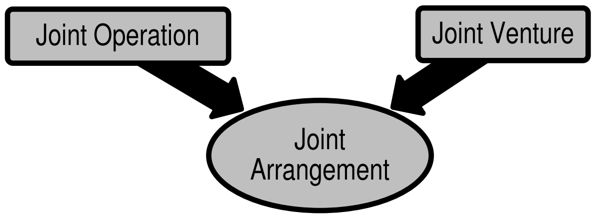
A joint arrangement is an arrangement of which two or more parties have ***joint control.***

A joint arrangement has the following characteristics:



Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

A joint arrangement is either a joint operation or a joint venture.



The classification of a joint arrangement as a joint operation or a joint venture depends upon the rights and obligations of the parties to the arrangement.

A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement. Those parties are called joint operators.

A joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement. Those parties are called joint venturers.

8.37.4 Financial Statements of Parties to a Joint Arrangement

8.37.4.1 Joint Operations: A joint operator shall recognise in relation to its interest in a joint operation:

(a) its assets, including its share of any assets held jointly;

(b) its liabilities, including its share of any liabilities incurred jointly;

(c) its revenue from the sale of its share of the output arising from the joint operation;

(d) its share of the revenue from the sale of the output by the joint operation; and

(e) its expenses, including its share of any expenses incurred jointly.

A joint operator shall account for the assets, liabilities, revenues and expenses relating to its interest in a joint operation in accordance with the Ind AS applicable to the particular assets, liabilities, revenues and expenses.

8.37.4.2 Joint Ventures: A joint venturer shall recognise its interest in a joint venture as an investment and shall account for that investment using the equity method in accordance with Ind AS 28, 'Investments in Associates and Joint Ventures', unless the entity is exempted from applying the equity method as specified in that standard.

A party that participates in, but does not have joint control of, a joint venture shall account for its interest in the arrangement in accordance with Ind AS 109, *'Financial Instruments'*, unless it has significant influence over the joint venture, in which case it shall account for it in accordance with Ind AS 28.

8.37.5 Separate Financial Statements

In its separate financial statements, a joint operator or joint venturer shall account for its interest in:

(a) a joint operation in accordance with this AS;

(b) a joint venture in accordance with Ind AS 27, *'Separate Financial Statements'*.

In its separate financial statements, a party that participates in, but does not have joint control of, a joint arrangement shall account for its interest in:

(a) a joint operation in accordance with this AS;

(b) a joint venture in accordance with Ind AS 109, unless the entity has significant influence over the joint venture, in which case it shall apply Ind AS 27.

8.37.6 Major Change in Ind AS 110 vis-à-vis IFRS 10 Not Resulting in Carve Out

Appendix C 'Business Combinations under Common Control' : Paragraph B33D refers to the accounting specified in Appendix C 'Business Combinations under Common Control' of Ind AS 103 for the acquisition of an interest in a joint operation when the parties sharing joint control, including the entity acquiring the interest in the joint operation, are under the common control of the same ultimate controlling party or parties both before and after the acquisition, and that control is not transitory. IFRS 11 scopes out the same as IFRS 3, Business Combinations, does not deal with business combinations under common control.

8.37.7 Major Differences between Ind AS 110 *vis-a-vis* Notified AS 21

(i) ***Types of Joint Arrangement/Joint Venture****:* Existing AS 27 recognises three forms of joint venture namely: a) jointly controlled operations, b) jointly controlled assets and c) jointly controlled entities. As per Ind AS 111, a joint arrangement is either a joint operation or a joint venture. Such classification of joint arrangement depends upon the rights and obligations of the parties to the arrangement and disregards the legal structure.

(ii) ***Joint Control****:* Existing AS 27 provides that in some exceptional cases, an enterprise by a contractual arrangement establishes joint control over an entity which is a subsidiary of that enterprise within the meaning of AS 21, '*Consolidated Financial Statements'*. In those cases, the entity is consolidated under AS 21 by the said enterprise, and is not treated as a joint venture. Ind AS 111 does not recognise such cases keeping in view the definition of control given in Ind AS 110.

(iii) ***Equity Method****:* Ind AS 111 provides that a venturer can recognise its interest in joint venture using only equity method as per Ind AS 28. Existing AS 27 prescribes the use of proportionate consolidation method only.

(iv) ***Interest in Jointly Controlled Entity****:* In case of separate financial statements under existing AS 27, interest in jointly controlled entity is accounted for as per AS 13, Accounting for Investments, i.e., at cost less provision for other than temporary decline in the value of investment. Ind AS 111 requires that the joint operator shall recognise its interest in joint operation and a joint venture in accordance with Ind AS 28, *'Investments in Associates and Joint Ventures'*.

(v) ***Near Future****:* An explanation has been given in existing AS 27 regarding the term 'near future' used in an exemption given from applying proportionate consolidation method, i.e., where the investment is acquired and held exclusively with a view to its subsequent disposal in the near future.

This explanation has not been given in the Ind AS 111, as such situations are now covered by Ind AS 105, '*Non-current Assets Held for Sale and Discontinued Operations'*.

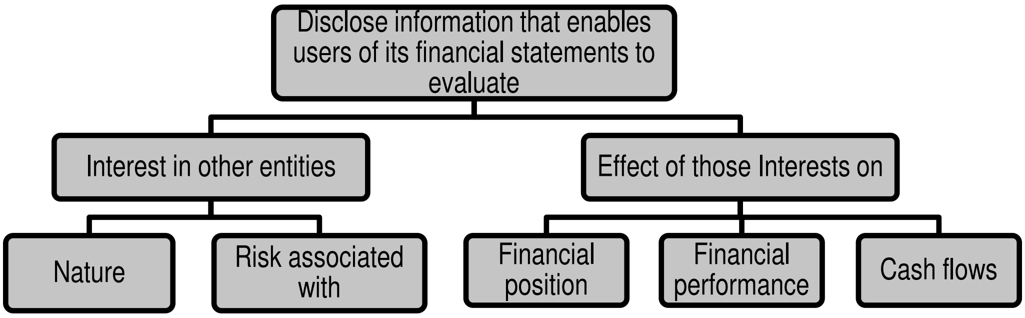
(vi) ***Application of the Proportionate Consolidation Method****:* Existing AS 27 requires application of the proportionate consolidation method only when the entity has subsidiaries and prepares Consolidated Financial Statements. Ind AS 111 requires application of equity method in financial statements other than separate financial statements in case of a joint venture, even if the venturer does not have any subsidiary in the financial statements

(vii) ***Disclosure of Venturer's Share in Post-acquisition Reserves***: Existing AS 21 provides clarification regarding disclosure of venturer's share in post-acquisition reserves of a jointly controlled entity. The same has not been dealt with in the Ind AS 111.

8.38 Ind AS 112: Disclosure of Interests in Other Entities

8.38.1 Objective

The objective of this Indian Accounting Standard (Ind AS) is to require an entity to disclose information that enables users of its financial statements to evaluate:



To meet the above objective, an entity shall disclose:

(a) the significant judgements and assumptions it has made in determining:

(i) the nature of its interest in another entity or arrangement;

(ii) the type of joint arrangement in which it has an interest;

(iii) that it meets the definition of an investment entity, if applicable; and

(b) information about its interests in:

(i) Subsidiaries;

(ii) Arrangements and Associates; and

(iii) Structured Entities that are not controlled by the entity (Unconsolidated Structured Entities).

If the disclosures required by this Ind AS, together with disclosures required by other Ind AS, do not meet the above objective, an entity shall disclose whatever additional information is necessary to meet that objective.

8.38.2 Scope

This Ind AS shall be applied by an entity that has an interest in any of the following:

- Subsidiaries
- Joint arrangements (i.e. Joint operations or Joint ventures)
- Associates
- Unconsolidated Structured Entities

This Ind AS does not apply to:

(a) post-employment benefit plans or other long-term employee benefit plans to which Ind AS 19, *'Employee Benefits'*, applies.

(b) an entity's separate financial statements to which Ind AS 27, *'Separate Financial Statements'*, applies. However:

(i) if an entity has interests in unconsolidated structured entities and prepares separate financial statements as its only financial statements, it shall apply the specified requirements when preparing those separate financial statements.

(ii) an investment entity that prepares financial statements in which all of its subsidiaries are measured at fair value through profit or loss in accordance with paragraph 31 of Ind AS 110 shall present the disclosures relating to investment entities required by this Ind AS.

(c) an interest held by an entity that participates in, but does not have joint control of, a joint arrangement unless that interest results in significant influence over the arrangement or is an interest in a structured entity.

(d) an interest in another entity that is accounted for in accordance with Ind AS 109, *'Financial Instruments'*. However, an entity shall apply this Ind AS:

(i) when that interest is an interest in an associate or a joint venture that, in accordance with Ind AS 28, *'Investments in Associates and Joint Ventures'*, is measured at fair value through profit or loss; or

(ii) when that interest is an interest in an unconsolidated structured entity.

8.38.3 Significant Judgements and Assumptions

An entity shall disclose information about significant judgements and assumptions it has made (and changes to those judgements and assumptions) in determining:

That it has control of another entity, i.e. an investee as described in Ind AS 110 *'Consolidated Financial Statements'*

That it has joint control of an arrangement or significant influence over another entity

The type of joint arrangement (i.e. joint operation or joint venture) when the arrangement has been structured through a separate vehicle

8.38.4 Investment Entity Status

When a parent determines that it is an investment entity in accordance with Ind AS 110, the investment entity shall disclose information about significant judgements and assumptions it has made in determining that it is an investment entity.

If the investment entity does not have one or more of the typical characteristics of an investment entity, it shall disclose its reasons for concluding that it is nevertheless an investment entity.

When an entity becomes, or ceases to be, an investment entity, it shall disclose the change of investment entity status and the reasons for the change. In addition, an entity that becomes an investment entity shall disclose the effect of the change of status on the financial statements for the period presented, including:

(a) the total fair value, as of the date of change of status, of the subsidiaries that cease to be consolidated;

(b) the total gain or loss, if any, calculated in accordance with Ind AS 110; and

(c) the line item(s) in profit or loss in which the gain or loss is recognised (if not presented separately).

8.38.5 Interests in Subsidiaries

An entity shall disclose information that enables users of its consolidated financial statements:

(a) to understand:

  (i) the composition of the group; and

  (ii) the interest that non-controlling interests have in the group's activities and cash flows; and

(b) to evaluate:

  (i) the nature and extent of significant restrictions on its ability to access or use assets, and settle liabilities, of the group;

  (ii) the nature of, and changes in, the risks associated with its interests in consolidated structured entities;

  (iii) the consequences of changes in its ownership interest in a subsidiary that do not result in a loss of control; and

  (iv) the consequences of losing control of a subsidiary during the reporting period.

8.38.6 Interests in Unconsolidated Subsidiaries (Investment Entities)

An investment entity that, in accordance with Ind AS 110, is required to apply the exception to consolidation and instead account for its investment in a subsidiary at fair value through profit or loss shall disclose that fact.

For each unconsolidated subsidiary, an investment entity shall disclose:

- Subsidiary's name
- Principal place of business (and Country of incorporation if different from the principal place of business) of the Subsidiary
- Proportion of ownership interest held by the Investment Entity and, if different, the proportion of voting rights held

If an investment entity is the parent of another investment entity, the parent shall also provide the above disclosures for investments that are controlled by its investment entity subsidiary.

An investment entity is required to make disclosures regarding the nature and extent of any significant restrictions on the ability of an unconsolidated subsidiary to transfer funds to the investment entity in the form of cash dividends or to repay loans or advances made to the unconsolidated subsidiary by the investment entity and any current commitments or intentions to provide financial or other support to an unconsolidated subsidiary, etc.

8.38.7 Interests in Joint Arrangements and Associates

An entity shall disclose information that enables users of its financial statements to evaluate:

(i) the nature, extent and financial effects of its interests in joint arrangements and associates, including the nature and effects of its contractual relationship with the other investors with joint control of, or significant influence over, joint arrangements and associates; and

(ii) the nature of, and changes in, the risks associated with its interests in joint ventures and associates.

8.38.8 Interests in Unconsolidated Structured Entities

An entity shall disclose information that enables users of its financial statements:

(i) to understand the nature and extent of its interests in unconsolidated structured entities; and

(ii) to evaluate the nature of, and changes in, the risks associated with its interests in unconsolidated structured entities.

8.39 Ind AS 113: Fair Value Measurement

8.39.1 Objective

- Defines fair value
- Sets out in a single Ind AS a framework for measuring fair value; and
- Requires disclosures about fair value measurements

Fair value is a market-based measurement, not an entity-specific measurement.

The objective of a fair value measurement is—

- To estimate the price
- At which an orderly transaction to sell the asset or to transfer the liability would take place
- Between market participants
- At the measurement date
- Under current market conditions

(i.e. an exit price at the measurement date from the perspective of a market participant that holds the asset or owes the liability).

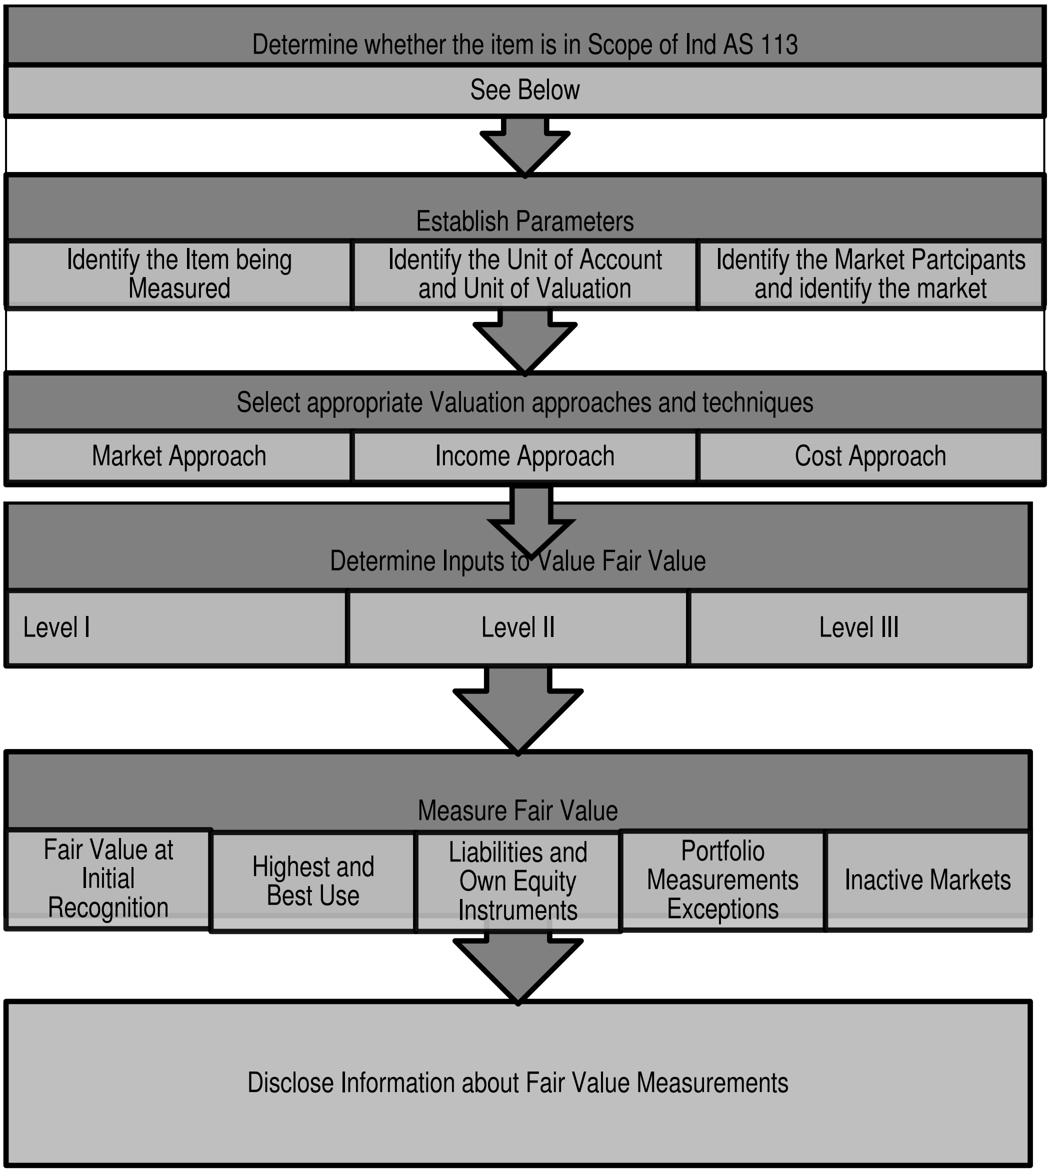
When a price for an identical asset or liability is not observable, an entity measures fair value using another valuation technique that:

- Maximises the use of relevant observable inputs and
- Minimises the use of unobservable inputs.

Because fair value is a market-based measurement, it is measured using the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk. As a result, an entity's intention to hold an asset or to settle or otherwise fulfil a liability is not relevant when measuring fair value.

The definition of fair value focuses on assets and liabilities because they are a primary subject of accounting measurement. In addition, this Ind AS shall be applied to an entity's own equity instruments measured at fair value.

Manner to proceed for the understanding of Ind AS 113:



8.39.2 Scope

This Ind AS applies when another Ind AS requires or permits:

- Fair value measurements or
- Disclosures about fair value measurements

The measurement and disclosure requirements of this Ind AS do not apply to the following:

Share-based payment transactions	• Within the scope of Ind AS 102 Share- based Payment
Leasing transactions	• Within the scope of Ind AS 17 Leases
Measurements that have some similarities to fair value but are not fair value	• Such as NRV in Ind AS 2; or • 'Value in use' in Ind AS 36

The disclosures required by this Ind AS are not required for the following:

- Plan assets measured at fair value in accordance with Ind AS 19
- Assets for which recoverable amount is fair value less costs of disposal in accordance with Ind AS 36

The fair value measurement framework described in this Ind AS applies to both initial and subsequent measurement if fair value is required or permitted by other Ind AS.

8.39.3 Measurement

Definition of fair value: This Ind AS defines fair value as:

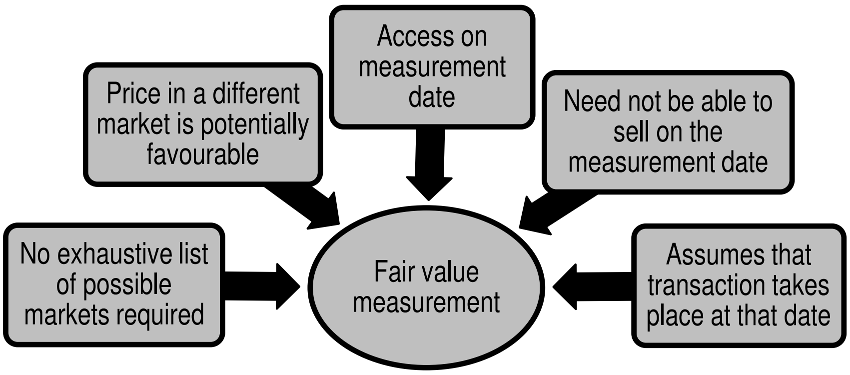
Fair Value			
The price that would be received to sell an asset or paid to transfer a liability	In an orderly transaction	Between market participants	At the measurement date

***Asset or liability*:** A fair value measurement is for a particular asset or liability. Therefore, when measuring fair value an entity shall take into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Such characteristics include, the condition and location of the asset; and restrictions, if any, on the sale or use of the asset.

***The transaction*:** A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date under current market conditions. A fair value measurement assumes that the transaction to sell the asset or transfer the liability takes place either, in the principal market for the asset or liability or in the absence of a principal market, in the most advantageous market for the asset or liability.

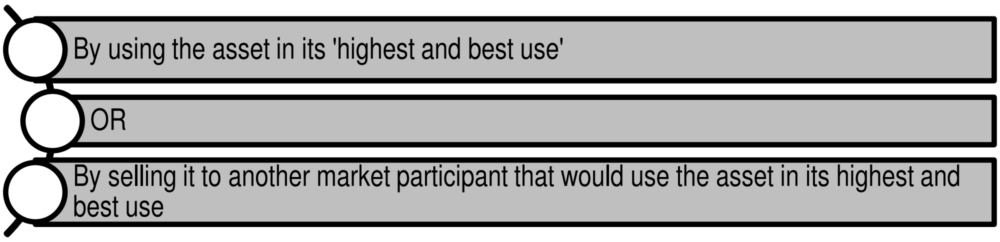
***Market participants*:** An entity shall measure the fair value of an asset or a liability using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their best economic interest.

***The price*:** Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date under current market conditions (ie an exit price) regardless of whether that price is directly observable or estimated using another valuation technique.



8.39.4 Application to Non-financial Assets

Highest and best use for non-financial assets: A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits:



The highest and best use of a non-financial asset takes into account the use of the asset that is physically possible, legally permissible and financially feasible.

8.39.5 Application to Liabilities and an Entity's Own Equity Instruments

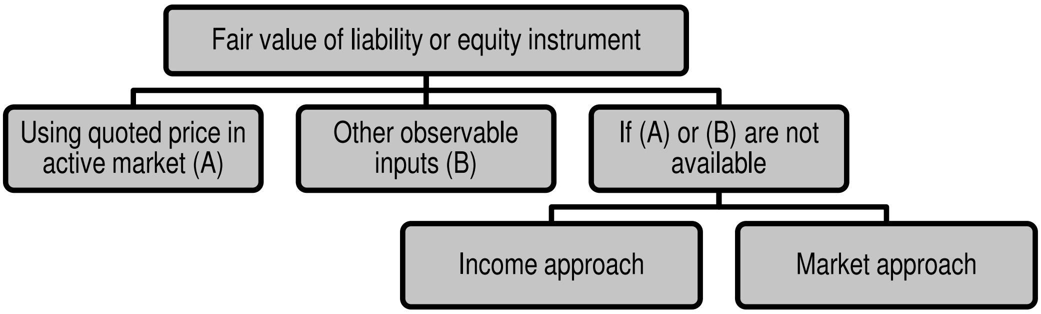
General Principles: A fair value measurement assumes that a financial or non-financial liability or an entity's own equity instrument (e.g. equity interests issued as consideration in a business combination) is transferred to a market participant at the measurement date. The transfer of a liability or an entity's own equity instrument assumes the following:

a) A liability would remain outstanding and the market participant transferee would be required to fulfil the obligation. The liability would not be settled with the counterparty or otherwise extinguished on the measurement date.

b) An entity's own equity instrument would remain outstanding and the market participant transferee would take on the rights and responsibilities associated with the instrument. The instrument would not be cancelled or otherwise extinguished on the measurement date.

8.39.5.1 Liabilities and equity instruments held by other parties as assets: When a quoted price for the transfer of an identical or a similar liability or entity's own equity instrument is not available and the identical item is held by another party as an asset, an entity shall measure the fair value of the liability or equity instrument from the perspective of a market participant that holds the identical item as an asset at the measurement date.

In such cases, an entity shall measure the fair value of the liability or equity instrument as follows:



8.39.5.2 Liabilities and Equity Instruments not held by Other Parties as Assets: When a quoted price for the transfer of an identical or a similar liability or entity's own equity instrument is not available and the identical item is not held by another party as an asset, an entity shall measure the fair value of the liability or equity instrument using a valuation technique from the perspective of a market participant that owes the liability or has issued the claim on equity.

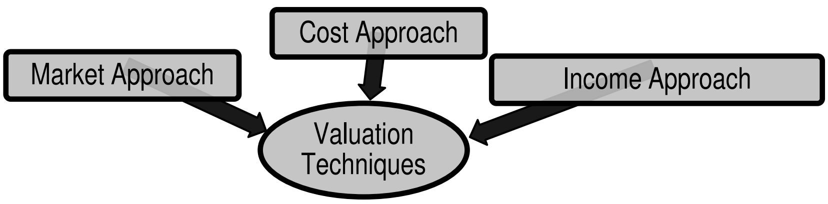
8.39.6 Valuation Techniques

An entity shall use valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value by

- Maximising the use of relevant observable inputs and
- Minimising the use of unobservable inputs

The objective of using a valuation technique is to estimate the price at which an orderly transaction to sell the asset or to transfer the liability would take place between market participants at the measurement date under current market conditions.

Three widely used valuation techniques are:



1. ***Income Approach*: ** The income approach converts future amounts (e.g. cash flows or income and expenses) to a single current (i.e. discounted) amount. When the income approach is used, the fair value measurement reflects current market expectations about those future amounts.

   Those valuation techniques include, for example, the following:

   - Present value techniques
   - Option pricing models, such as the Black-Scholes-Merton formula or a binomial model (i.e. a lattice model), that incorporate present value techniques and reflect both the time value and the intrinsic value of an option
   - The multi-period excess earnings method, which is used to measure the fair value of some intangible assets

2. ***Market Approach*: ** The market approach uses prices and other relevant information generated by market transactions involving identical or comparable (i.e. similar) assets, liabilities or a group of assets and liabilities, such as a business.

   For example, valuation techniques consistent with the market approach often use market multiples derived from a set of comparables. Multiples might be in ranges with a different multiple for each comparable. The selection of the appropriate multiple within the range requires judgement, considering qualitative and quantitative factors specific to the measurement.

   Valuation techniques consistent with the market approach include matrix pricing. Matrix pricing is a mathematical technique used principally to value some types of financial instruments, such as debt securities, without relying exclusively on quoted prices for the specific securities, but rather relying on the securities' relationship to other benchmark quoted securities.

An entity shall use valuation techniques consistent with one or more of those approaches to measure fair value.

8.39.7 Fair Value Hierarchy

To increase consistency and comparability in fair value measurements and related disclosures, this Ind AS establishes a fair value hierarchy that categorises into three levels, the inputs to valuation techniques used to measure fair value.

The fair value hierarchy gives the highest priority to quoted prices (unadjusted) in active markets for identical assets or liabilities (Level 1 inputs) and the lowest priority to unobservable inputs (Level 3 inputs).

In some cases, the inputs used to measure the fair value of an asset or a liability might be categorised within different levels of the fair value hierarchy. In those cases, the fair value measurement is categorised in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement. Assessing the significance of a particular input to the entire measurement requires judgement, taking into account factors specific to the asset or liability. Adjustments to arrive at measurements based on fair value, such as costs to sell when measuring fair value less costs to sell, shall not be taken into account when determining the level of the fair value hierarchy within which a fair value measurement is categorised.

The availability of relevant inputs and their relative subjectivity might affect the selection of appropriate valuation techniques. However, the fair value hierarchy prioritises the inputs to valuation techniques, not the valuation techniques used to measure fair value.

For example: A fair value measurement developed using a present value technique might be categorised within Level 2 or Level 3, depending on the inputs that are significant to the entire measurement and the level of the fair value hierarchy within which those inputs are categorised. If an observable input requires an adjustment using an unobservable input and that adjustment results in a significantly higher or lower fair value measurement, the resulting measurement would be categorised within Level 3 of the fair value hierarchy.

For example: If a market participant would take into account the effect of a restriction on the sale of an asset when estimating the price for the asset, an entity would adjust the quoted price to reflect the effect of that restriction. If that quoted price is a Level 2 input and the adjustment is an unobservable input that is significant to the entire measurement, the measurement would be categorised within Level 3 of the fair value hierarchy.

8.39.7.1 Level 1 Inputs: Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.

A quoted price in an active market provides the most reliable evidence of fair value and shall be used without adjustment to measure fair value whenever available.

A Level 1 input will be available for many financial assets and financial liabilities, some of which might be exchanged in multiple active markets (e.g. on different exchanges). Therefore, the emphasis within Level 1 is on determining both of the following:

- The principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability
- Whether the entity can enter into a transaction for the asset or liability at the price in that market at the measurement date

8.39.7.2 Level 2 Inputs

Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly.

If the asset or liability has a specified (contractual) term, a Level 2 input must be observable for substantially the full term of the asset or liability. Level 2 inputs include the following:

(a) quoted prices for similar assets or liabilities in active markets.

(b) quoted prices for identical or similar assets or liabilities in markets that are not active.

(c) inputs other than quoted prices that are observable for the asset or liability, for example:
   (i) interest rates and yield curves observable at commonly quoted intervals;
   (ii) implied volatilities; and
   (iii) credit spreads.
   (iv) market-corroborated inputs.

8.39.7.3 Level 3 Inputs

Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs shall be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, i.e. an exit price at the measurement date from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs shall reflect the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk.

Assumptions about risk include the risk inherent in a particular valuation technique used to measure fair value (such as a pricing model) and the risk inherent in the inputs to the valuation technique. A measurement that does not include an adjustment for risk would not represent a fair value measurement if market participants would include one when pricing the asset or liability.

For example: It might be necessary to include a risk adjustment when there is significant measurement uncertainty (e.g. when there has been a significant decrease in the volume or level of activity when compared with normal market activity for the asset or liability, or similar assets or liabilities, and the entity has determined that the transaction price or quoted price does not represent fair value).

8.39.8 Disclosure

An entity shall disclose information that helps users of its financial statements assess both of the following:

(a) for assets and liabilities that are measured at fair value on a recurring or non-recurring basis in the balance sheet after initial recognition, the valuation techniques and inputs used to develop those measurements.

(b) for recurring fair value measurements using significant unobservable inputs (Level 3), the effect of the measurements on profit or loss or other comprehensive income for the period.

8.39.9 Major Change in Ind AS 113 *vis-à-vis* IFRS 13 Not Resulting in Carve Out

Paragraph 7(b) of IFRS 13: Paragraph 7(b) of IFRS 13 refers to IAS 26 '*Accounting and Reporting by Retirement Benefit Plans*', which is not relevant for the companies. Hence the paragraph is deleted in Ind AS 113.

8.40 Ind AS 114 : Regulatory Deferral Accounts

8.40.1 Objective

The objective of this Standard is to specify the financial reporting requirements for regulatory deferral account balances that arise when an entity provides goods or services to customers at a ***price or rate that is subject to rate regulation.***

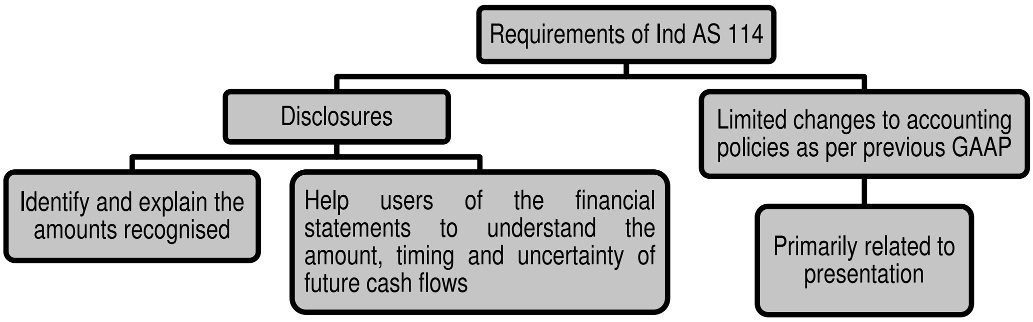
In meeting this objective, the Standard requires:

(a) limited changes to the accounting policies that were applied in accordance with previous generally accepted accounting principles (previous GAAP) for regulatory deferral account balances, which are primarily related to the presentation of these accounts; and

(b) disclosures that:

(i) identify and explain the amounts recognised in the entity's financial statements that arise from rate regulation; and

(ii) help users of the financial statements to understand the amount, timing and uncertainty of future cash flows from any regulatory deferral account balances that are recognised.

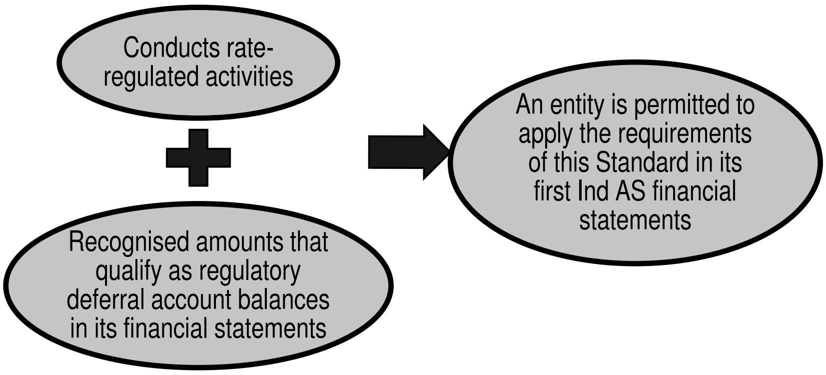


8.40.2 Scope

An entity is permitted to apply the requirements of this Standard in its first Ind AS financial statements if and only if it:

(a) conducts rate-regulated activities; and

(b) recognised amounts that qualify as regulatory deferral account balances in its financial statements in accordance with its previous GAAP.



1. An entity shall apply the requirements of this Standard in its financial statements for subsequent periods if and only if, in its first Ind AS financial statements, it recognised regulatory deferral account balances by electing to apply the requirements of this Standard.
2. This Standard does not address other aspects of accounting by entities that are engaged in rate-regulated activities.
3. An entity that is within the scope of, and that elects to apply, this Standard shall apply all of its requirements to all regulatory deferral account balances that arise from all of the entity's rate-regulated activities.

Regulatory Deferral Account Balance: A 'Regulatory Asset' or a 'Regulatory Liability' as defined in the *Guidance Note on Accounting for Rate Regulated Activities*.

Rate-Regulated Activities: An entity's activities that are subject to rate regulation.

Rate Regulation: 'Cost of Service Regulation' as defined in the Guidance Note on Accounting for Rate Regulated Activities.

8.40.3 Recognition, Measurement, Impairment and Derecognition

Temporary Exemption from paragraph 11 of Ind AS 8 '*Accounting Policies, Changes in Accounting Estimates and Errors'*

An entity that has rate-regulated activities and that is within the scope of, and elects to apply, this Standard shall apply paragraphs 10 and 12 of Ind AS 8 when developing its accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances.

8.40.3.1 Continuation of Existing Accounting Policies: On initial application of this Standard, an entity shall continue to apply previous GAAP accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances, except for any changes permitted by paragraphs 13–15. However, the presentation of such amounts shall comply with the presentation requirements of this Standard, which may require changes to the entity's previous GAAP presentation policies.

8.40.3.2 Changes in Accounting Policies: An entity shall not change its accounting policies in order to start to recognise regulatory deferral account balances. An entity may only change its accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances if the change makes the financial statements more relevant to the economic decision-making needs of users and no less reliable, or more reliable and no less relevant to those needs. An entity shall judge relevance and reliability using the criteria in paragraph 10 of Ind AS 8.

8.40.3.3 Interaction with Other Standards: Any specific exception, exemption or additional requirements related to the interaction of this Standard with other Standards are contained within this Standard. In the absence of any such exception, exemption or additional requirements, other Standards shall apply to regulatory deferral account balances in the same way as they apply to assets, liabilities, income and expenses that are recognised in accordance with other Standards.

8.40.4 Presentation

8.40.4.1 Classification of Regulatory Deferral Account Balances: An entity shall present separate line items in the balance sheet for:

(a) the total of all regulatory deferral account debit balances; and

(b) the total of all regulatory deferral account credit balances.

When an entity presents current and non-current assets, and current and non-current liabilities, as separate classifications in its balance sheet, it shall not classify the totals of regulatory deferral account balances as current or non-current. Instead, the separate line items shall be distinguished from the assets and liabilities that are presented in accordance with other Standards by the use of sub-totals, which are drawn before the regulatory deferral account balances are presented.

8.40.4.2 Classification of Movements in Regulatory Deferral Account Balances: An entity shall present, in the other comprehensive income section of the statement of profit and loss, the net movement in all regulatory deferral account balances for the reporting period that relate to items recognised in other comprehensive income. Separate line items shall be used for the net movement related to items that, in accordance with other Standards:

(a) will not be reclassified subsequently to profit or loss; and

(b) will be reclassified subsequently to profit or loss when specific conditions are met.

An entity shall present a separate line item in the profit or loss section of the statement of profit and loss, for the remaining net movement in all regulatory deferral account balances for the reporting period, excluding movements that are not reflected in profit or loss, such as amounts acquired. This separate line item shall be distinguished from the income and expenses that are presented in accordance with other Standards by the use of a sub-total, which is drawn before the net movement in regulatory deferral account balances.

8.40.5 Disclosures

An entity that elects to apply this Standard shall disclose information that enables users to assess:

(a) the nature of, and the risks associated with, the rate regulation that establishes the price(s) that the entity can charge customers for the goods or services it provides; and

(b) the effects of that rate regulation on its financial position, financial performance and cash flows.

8.40.6 Major Changes in Ind AS 114 *vis-à-vis* IFRS 14 Not Resulting in Carve Outs

1. ***Definition of previous GAAP:*** Appendix A 'Defined terms' of Ind AS 114 have been modified to clarify that *Guidance Note of Accounting for Rate Regulated Activities* would be considered as the previous GAAP for the purpose of Ind AS 114.
2. ***Application of requirements of previous GAAP:*** Under paragraph 6 of Ind AS 114, a footnote has been added to clarify the application of requirements of previous GAAP in the case of an entity subject to rate regulation coming into existence after Ind AS coming into force or an entity whose activities become subject to rate regulation as defined in this Ind AS subsequent to preparation and presentation of its first Ind AS financial statements.

3

Corporate Financial Reporting

1. Introduction

An understanding of the conceptual bases of the corporate financing reporting system and preparation of financial statements are essential prerequisites to be a good accountant or a financial analyst. This Chapter intends to explain the corporate financial reporting system and issues involved. Regulatory framework of corporate financial reporting in India and practices of Indian Companies are also covered. In the last section reporting issues relating to matters that are reported outside the general purpose financial statements are considered.

2. Corporate Financial Reporting System

This chapter discusses the conceptual issues of corporate financial reporting.

2.1 Concept of Corporate Financial Reporting

Financial reporting is the communication of financial information of an enterprise to the external world. Bedford conceptualizes the financial reporting process as consisting of four procedural steps:

1. Perception of the significant activity of the accounting entity or in the environment in which the entity performs. Implicit in the traditional perception is the belief that financial transactions represent the significant activities.
2. Symbolizing the perceived activities in such fashion that a database of the activities is available that can then be analyzed to grasp an understanding of the interrelationship of the mass of perceived activities. Conventionally, this symbolization has taken the form of recordings in accounts, journals, and ledgers using well-established bookkeeping and measurement procedures.
3. Analysis of the model of activities in order to summarize the interrelationships among activities and to provide a status picture or map of the entity. Traditionally, this analysis process has been viewed as one of developing accounting reports to provide insights into the nature or entity activities.
4. Communication (transmission) of the analysis to users of the accounting products to guide decision makers in directing future activities of the entity or in changing their relationship with the entity.

First two steps constitute the process of accounting **measurement,** the quantification of an entity's past, and present, or future economic phenomena on the basis of observations and rules. Implicit in this conception are the requirements that (a) there exist some attribute or feature of a business-related objects or event (e.g.; the value of an asset) worthy of measurement and (b) there exist a means of making the measurements (e.g., the use of exchange prices to value enterprise assets). Step 3 and 4 of the financial reporting process constitute **disclosure.** Hence, measurement and disclosure are two dimensions of reporting process and these two aspects are interrelated. Together, they give corporate reporting its substance.

Corporate financial reporting is a series of activities that allows companies to record operating data and report accurate accounting statements at the end of each month, quarter and year. Bookkeepers record operating data by debiting and crediting financial accounts. Accountants prepare financial statements in accordance with corporate policies, industry practices and regulatory guidelines.

As per Section 2(40) of the Companies Act, 2013, the Financial statements of the company include:

1. a balance sheet at the end of the financial year;
2. a profit and Loss account, or in the case of a company carrying on any activity not for profit, an income and expenditure account for the financial year;
3. cash flow statement for the financial year;
4. a statement of change in equity, if applicable; and
5. any explanatory note annexed to, or forming part of, any document referred to in sub-clause(i) to sub-clause (iv).

Provided that the financial statements, with respect to One Person Company, small company or dormant company, may not include the cash flow statement.

The financial statements, augmented by footnotes and supplementary data (often referred to as 'Notes to the Accounts') are intended to provide relevant, reliable and timely information essential for making investment, credit and similar decision. Such financial statements are called *general purpose financial statements*.

It may be mentioned that the term financial reporting is not restricted to information communicated through financial statements. Financial reporting includes other means of communicating information that relates, directly or indirectly to the information generated through accounting process. Information provided by means of financial reporting other than financial statements may take various forms and relate to various matters. Communication by means of financial reporting other than a formal financial statement is made due to regulatory requirements or customs. In a few occasions, management may communicate any matter voluntarily when it considers such communication is useful to the stakeholders outside the enterprise. Publication of unaudited financial results, news releases, management forecasts and description of future plans are examples of reports that are provided outside the general purpose financial statements.

2.2 Users of Financial Statements

Different classes of users use financial information for different purposes. Identification of the users and their classes is necessary in order to determine the purposes for which they use information. Identification of users helps in defining user group characteristics which influence both the specific type of information to be presented and the manner of presentation.

According to the Framework for the Preparation and Presentation of Financial Statements issued by the ICAI in 2000 (hereinafter referred to as 'ICAI Conceptual Framework') the users of financial statements include present and potential investors, employees, lenders, suppliers and other trade creditors, customers, governments and their agencies and the public.

The common characteristic of external users is their general lack of authority to prescribe the information they want from a company. It is also observed that some users have more resource and influence than others so that they can obtain more information about an enterprise than is generally available to others. These privileged users include managers, large scale equity investors etc. These different user groups have different objectives and diverse information needs. But, general purpose financial statements are prepared to meet the common needs of all types of users. However, all of the information needs of these users cannot be met by such a report. Multiplicity and conflicts of objectives of a wide variety of potential users for general purpose reports make it difficult to design a single set of published statements that can simultaneously provide all necessary information to all possible users.

Traditionally, investors (both existing and potential) are singled out as the dominant user-group of published financial statements. As providers of risk capital to the enterprise, investors need more comprehensive information than other users. The ICAI Conceptual Framework states that the provision of financial statements, which meet the investors' needs, will also meet most of the needs of other users. Also in practice, top priority is given to the information needs of the investors while deciding what items of information should be disclosed in general purpose financial statements.

2.3 Objectives of Corporate Financial Reporting

Corporate financing reporting is not an end in itself but is a means to certain objectives. There are debates regarding objective of financial reporting. However, some consensus has been developed on the objectives of financial reporting through the issuance of the conceptual framework. The conceptual framework provides the conceptual basis for generally accepted accounting principles (GAAP). It outlines the characteristics accounting information must possess to be useful in investment and other economic decisions. Like other standard setting bodies, paragraph 22 of the Framework states that the objective of financial statements is to provide information about financial position, performance and cash flows of an enterprise that is useful to a wide range of users in making economic decisions. The Framework specifies present and potential investors, employees, lenders, suppliers and other trade creditors, customers, governments and their agencies and the public as the users of financial statements.

In USA, the FASB has identified the following major objectives of financial reporting:

(i) Financial reporting should provide information that is useful to present and potential investors and creditors and other users in making rational investment, credit, and similar decisions.

(ii) Financial reporting should provide information to help investors, creditors, and others to assess the amount, timing and uncertainly of prospective net cash inflows to the related enterprise.

(iii) Financial reporting should provide information about the economic resources of an enterprise, the claims to those resources (obligations of the enterprise to transfer resources to other entities and owners' equity), and the effects of transactions, events and circumstances that change resources and claims to those resources.

(iv) Financial reporting should provide information about an enterprise's financial performance during a period.

(v) The primary focus of financial reporting is information about an enterprise's performance provided by measures of earnings and its components.

(vi) Financial reporting should provide information about how an enterprise obtains and spends cash, about its borrowing and repayment of borrowing, about its capital transactions, including cash dividends and other distributions of enterprise's resources to owners, and about other factors that may affect an enterprise's liquidity or solvency.

(vii) Financial reporting should provide information about how management of an enterprise has discharged its stewardship responsibility to owners (stockholders) for the use of enterprise resources entrusted to it.

(viii) Financial reporting should provide information that is useful to managers and directors in making decisions in the interest of owners.

Apart from investment decision making another objective of financial reporting is to provide information on management accountability. Management accountability is a broad concept that encompasses stewardship. The accountability relationship may be created by a constitution, a law, a contract an organization make, a custom or even by informal moral obligation. It is considered that management of an enterprise is periodically accountable to the owners not only for safekeeping of resources but also for their efficient and profitable use. Management accountability objective mainly emphasizes reliability aspect of accounting information. Accordingly, compared to relevance, verifiability through adequate documents, records and system is considered dominant consideration for inclusion of any piece of information in the financial statement.

Corporate financial reporting being user oriented and users' need of information being not same, the role of accounting and financial reporting may vary from country to country. But, financial reporting is central to the process of allocating financial resources in capital markets. Hence, primary purpose of providing useful information to all users, which help them in decision making, is common in all countries.

2.4 Capital Market and Non-Financial Influences on Corporate Financial Reporting

Till the quarter of the twentieth century, financial reporting was confined to the stewardship reporting, i.e., reporting of the wealth and income earned by the owners. With the growth in size, companies need large sums of money to finance extensive productions and distribution activities. Due to internal financial constraints, companies depend heavily on external capital markets to finance the capital needs. However, investors are seldom in a position to observe on a day-to-day basis, whether saving entrusted to the companies are utilized efficiently and effectively. Hence, investors expect and are provided with an accounting for the stewardship of monies entrusted to the company. Stewardship traditionally refers to the safe keeping of resources and the execution of plans for conserving and utilizing them. Modern concept of accountability of management extends beyond the element of stewardship and covers performance based issues. The managers of the companies accept the accountability phase of their stewardship, or at least recognize in self-interest that disclosure through financial reporting process delegates part of the responsibility for assessing the financial status of the company and its performance to the users of financial reporting but, with the growth of the capital market, the central focus of financial reporting has been shifted from stewardship reporting to decision-oriented financial reporting.

Further, the competition among the companies to obtain external financing at a relatively cheaper rate has impact on corporate disclosure. Companies are now making expanded disclosure to attract capital in domestic capital market and/or in international market and to reduce the firm's cost of capital. There are various research studies that establish that increased firm disclosure has definite impact a firm's overall cost of capital. Such reduction of cost of capital through expanded disclosure has linkage with the theory of behaviour of investors who take investment decision under uncertainty. Increased disclosure in financial reports improves the subjective probability distributions of a security's expected returns in the mind of an investor by reducing the uncertainty associated with that return stream.

Thus, capital market influences are having a major role in sharing the nature of corporate financing reporting that is now driven by the consideration of decision usefulness. The objective of decisional usefulness has formally been incorporated into the conceptual frameworks for the preparation and presentation of financial statements set out by the standard setting bodies of different countries as well as by the International Accounting Standards Committee.

Apart from accountability to shareholders, there is a growing worldwide trend of holding companies accountable to the public at large. Such a trend is responsible for changing the disclosure practice of companies to a considerable extent. Such a movement is creating companies aware about the disclosure needs of "non-financial shareholders" such as trade unions (interested in terms of employment), government (interested in the macroeconomic impact of operations of corporate sector) and general public (interested in social and environmental impact of corporate actions). Voluntary reporting of employee information, environmental information and other corporate social responsibility reports (e.g. social balance sheet) are example of disclosure arising from non-financial influences. Corporate response to such expanded disclosure requirements are mixed. However, it is desirable that financial reporting should cater needs of all type of users.

2.5 Qualitative Characteristics of Information in Financial Report

Qualitative characteristics are the attributes that make the information provided in the financial statement useful to the users. ICAI Conceptual Framework earmarks four principal qualitative characteristics viz., understandability, relevance, reliability and comparability. According to the ICAI Conceptual Framework, materiality is not a principal qualitative characteristic. A piece of information is considered to be material when its disclosure or non-disclosure would affect decision or would make a difference in the valuation of the firm. But, in the ICAI Conceptual Framework, materiality is considered as a threshold limit, which needs to be judged before referring to any other qualities of any information provided in financial statements. If any piece of information does not fulfill the threshold criteria, it need not be considered further.

2.5.1 Understandability

Information in annual reports should be presented in such a way that it is readily understandable by users. ICAI Conceptual Framework states that the criterion of understandability requires that the users have a reasonable knowledge of business and economic activities, accounting, and a willingness to study the information with reasonable diligence. It has also suggested that information, which is relevant to the economic decision-making needs of some of the users should not be excluded merely on the ground that it may be difficult to understand by others.

2.5.2 Relevance

The concept of relevance is directly related to the decision making needs of users. Information is said to be relevant if it can influence 'the economic decisions of users by helping them evaluate past, present or future events or confirming or correcting, their past evaluation. It is suggested that all those items of information, which may aid the users in making predictions or decisions, should be reported. Information, which does not assist users in making decisions is irrelevant and hence, should be omitted. Thus, relevance is the dominant criterion of taking decisions regarding information disclosure. *Timeliness* is an important aspect of relevance. Information loses value rapidly in the financial world. As time passes and the future becomes the present, past information became increasingly irrelevant.

2.5.3 Reliability

Information is reliable if it is free from material error and bias, and faithfully represents what it purports to represent. Information is reliable to the extent a user can depend upon it to represent the economic conditions or events that it aims to represent. Being free from bias implies impartial measurement and reporting by enterprise of its events and transactions.

2.5.4 Comparability

The ICAI Conceptual Framework emphasizes that users must be able to compare financial statements, of an enterprise through time in order to identify trends in its financial position, performance and cash flows, and of different enterprises in order to evaluate their relative financial position, performance and cash flows. For this purpose, the measurement and display of the financial effects of like transactions and other events must be carried out in a consistent way. The Framework indicates that the important implication of comparability is that users should be informed of the accounting policies employed in the preparation of financial statements, any changes of those policies and the effects of such changes. For achieving comparability, the Framework (paragraph 40) suggests compliance with relevant accounting standards including the disclosure of accounting policies used by the enterprise.

2.6 Theories of Disclosure

2.6.1 Concept of Disclosure

The concept of disclosure is of great significance to the accomplishment of the objectives of financial reporting. Financial reporting is the communication of financial information of an enterprise to the external world.

The theory is that a fully informed consumer would more likely make better choices. Knowing the true cost of everything would force consumers to be better educated and more informed.

Available disclosure literature suggests that disclosure is not only fundamental to financial reporting but is, at the same time, its most qualitative aspect and the nature and extent of disclosure needed in individual reporting situations is determinable only by expert professional judgment. Disclosure standards and practices are influenced by legal systems, source of finance, political and economic environments, education level and culture.

2.6.2 Motives behind Disclosure

It is argued that competition for capital is the major motivating force to disclose decision-oriented information to different user groups. Hence, market forces would ultimately shape the nature of corporate disclosure. Corporations not only compete among each other in the capital markets but also attempt to obtain capital at a lower cost. It is indicated by many researchers that there is relationship between a firm's capital cost and its level of disclosure in its annual report. Due to such linkage and decision usefulness of published financial statement, corporate financial reporting is perceived as a pre-requisite for the growth of capital markets. Apart from stock market considerations, there are varieties of considerations that may motivate management of a company to disclose information voluntarily and not wait for mandatory requirements. Some of these important considerations are:

- Political costs consideration
- Users' needs consideration, and
- Ideological goal consideration.

Political costs consideration: Fines, penalties, potential public hostility toward the company are the examples of political costs. It is now recognized that political costs may play an important role in decisions relating to additional disclosure in the form of social and environmental information. Disclosure of environmental information can be considered to reassure the public or the regulating agencies that companies were concerned about the environment and were doing everything possible to reduce the negative impact of their activities on the environment.

Users' needs consideration: Guthrie and Parker have argued that companies may disclose social information to meet the stakeholders' demand for such information. The argument is based on Users' Utility Model. Disclosure of additional information on a voluntary basis depends on the users' needs, and how these needs are perceived by management of companies.

Ideological goal consideration: It has been argued that companies would be motivated to disclose voluntarily additional information to serve their own political and ideological goals. Such disclosure would be guided by companies' agenda, ideologies and goals which are likely to be different for different companies even within the same industry. Consequently, disclosure of such information will vary from company to company.

2.6.3 Basic Problems of Disclosure

In disclosing information, business enterprises, particularly corporate entities, are confronted with certain basic problems, the solutions of which need answers to the following questions:

(i) Who are the users of information or for whom information should be disclosed?

(ii) What information should be disclosed?

(iii) How much information should be disclosed?

(iv) How should information be disclosed?

(v) When should information be disclosed?

The first question requires identification of users of information. The second question needs the identification of the purposes for which information will be used. The third question relates to the problem of determining quantum of information. The fourth and fifth questions concern the problems of deciding about the mode and timing of disclosure respectively.

Disclosure being the transmission of accounting measurement to the users group, corporate entities views it as a major policy issue. As the disclosure of accounting information is not costless, preparers of financial statement have to make judgments on the allocation of accounting information among various user groups.

From regulator's standpoints, leaving the decision about disclosure in the hand corporate management or market forces, has not been viewed favourably. It is possible for management to disclose information that is considered helpful to facilitate its external relations programmes and still withhold certain pieces of vital information that is useful for decision making by the users. Hence, greater control over corporate reporting is imposed whenever it is perceived that there is failure to adequately respond to express information needs of different stakeholders.

Thus, the scope of negative sanctions of regulatory controls over corporate disclosure increases when user groups perceive that there are deficiencies on the part of companies in providing adequate disclosure.

2.7 Role of Auditors

The audit of financial statements is a legal requirement. The audit provides an external and objective check on the measurement and disclosure aspects of corporate financial reporting. An auditor is appointed by the shareholders, but effectually his appointment is subject to will of management or promoter group. Nevertheless, the auditor is supposed to be independent of management and to serve the shareholders and other users of financial statements. Although, Management is responsible for the preparation of financial statement including the notes, the auditor through the auditor's report states whether financial statements presents fairly, in all material respects the financial position, the results of operations and the cash flows for the accounting period. The auditor is responsible for seeing that the financial statements issued conform with generally accepted accounting principles. Thus, the auditor must agree that accounting policies adopted by the management is appropriate and all estimates are reasonable. Any departure from generally accepted accounting principles (including non-compliance with the measurement and disclosure requirements of the accounting standards) would result in a qualified opinion. Auditor's report is an important accompaniment of financial statements. Because of boilerplate nature (ie. standard language) of these reports, there is tendency to skip over them while analyzing financial statements. However, such failure to give attention to the auditor's report may cause the user to miss significant information.

2.8 Quality of Financial Reporting

Ideally, financial statements should reflect an accurate picture of a company, its financial condition and performance. If the financial statements distort economic reality, capital will be deployed sub-optimally; resources will be misallocated; investors will pay a huge opportunity cost by investing in companies with unrealistic, inflated values and better investment opportunities may get bypassed. Regulations on financial reporting generally provides for penalties and other measures to deter accounting frauds. However, it may be pointed out that management has considerable discretion within the overall framework of generally accepted accounting principles. As results, there are scopes for management to "manipulate" the accounts. Such manipulations mainly relate to management of bottom line (profit or loss) and commonly referred to an earnings management. For an investor or a security analyst it is important to recognize that many opportunities exist for management to affect the quality of financial statements. Hence, reported earnings may not best represent economic reality or the future operating potential of a firm.

2.9 Mode of Financial Reporting

A number of documents and avenues of communication are available through which companies provide information about its state of affairs to the external users of such information, for example, annual report, interim report, employee report, environmental report, communications with analysts, letters to shareholders and debt holders, question and answer sessions held at annual general meeting, telephone conversations, speeches made by company officials at stock exchanges and so on.

Despite the existence of different sources of information, the annual report is regarded as the most important source of information about a company's affairs.

A typical corporate annual report usually contains a balance sheet, profit and loss account, cash flow and / funds flow statement, and directors' report. Besides, the details of information and additional information are provided in the schedules and notes on accounts, which form parts of financial statements. Annual reports often contain useful supplementary financial and statistical data as well as management comments. Many companies in India now include Management Discussion and Analysis (MD & A) report, corporate governance report, chairman's statement, historical summary, operating positions, highlights of important data etc.

3. Indian Financial Reporting System

India is a federal state with unitary bias. This is perhaps why, unlike in the USA, there is no separate company law for any state in India. Apart from professional regulation, corporate financial reporting in India is governed primarily by the Companies Act, 2013. Another body that has a major influence in reshaping Indian financial reporting is the Securities and Exchange Board of India (SEBI). The Companies Act, 2013 prescribes the financial reporting requirements for all the companies registered under it. The reporting requirements that are imposed by the SEBI through its Guidelines and through the Listing Agreement are in addition to those prescribed under the Companies Act. SEBI requirements are to be followed by the companies listed on the Indian stock exchanges. The Companies Act and the SEBI requirements together provide the legal framework of corporate reporting in India.

Role of the SEBI: The Securities and Exchange Board of India (SEBI) is the regulatory authority in India established under Section 3 of SEBI Act, 1992. SEBI Act, 1992 provides for establishment of Securities and Exchange Board of India (SEBI) with statutory powers for

(a) protecting the interests of investors in securities

(b) promoting the development of the securities market and

(c) regulating the securities market.

Its regulatory jurisdiction extends over corporates in the issuance of capital and transfer of securities, in addition to all intermediaries and persons associated with securities market. SEBI has been obligated to perform the aforesaid functions by such measures as it thinks fit. In particular, it has powers for

- Regulating the business in stock exchanges and any other securities markets
- Registering and regulating the working of stock brokers, sub-brokers etc.
- Promoting and regulating self-regulatory organizations
- Prohibiting fraudulent and unfair trade practices

- Calling for information, undertaking inspection, conducting inquiries and audits of the stock exchanges, intermediaries, self - regulatory organizations, mutual funds and other persons associated with the securities market.

SEBI has used its power to order changes in listing agreement and such changes are instrumental to bring about improvement in disclosure practices of listed companies in their annual reports. Listing agreement is the standard agreement between a company seeking listing of its securities and the stock exchange where listing is sought. Any stock exchange has power to alter the clauses of listing agreement unilaterally, and companies listed with that exchange are bound to accept such changes to enjoy the facility of listing. Thus, whenever the SEBI suggests any change, it is incumbent on the listed companies to follow such a change. In effect, the SEBI has power to direct the listed companies to follow any changed disclosure requirements.

SEBI has imposed a number of disclosures and other requirements through this route. Some important requirements are as follows:

- ♦ Dispatch of a copy of the complete & full annual report to the shareholders.
- ♦ Disclosure on the Y2K preparedness level.
- ♦ Disclosure of Cash Flow Statement.
- ♦ Disclosure of material developments and price sensitive information.
- ♦ Compliance with Takeover Code.
- ♦ Disclosure of interim unaudited financial result
- ♦ Disclosure regarding listing fee payment status and the name and address of each stock exchange where the company's securities are listed.
- ♦ Corporate governance report.
- ♦ Compliance with Accounting Standards issued by the ICAI.

The initiative to introduce the Cash Flow Statements (as a principal financial statement) in India was taken by the SEBI and it has used its power under section 11 of the SEBI Act, 1992 to direct all recognized stock exchange for a requirement of appending an audited Cash Flow Statement (CFS) (prepared only as per Indirect method as prescribed in AS 3 or Ind AS 7) as a part of annual accounts. As per the SEBI mandate, the requirement of providing a CFS is mandatory for listed companies from the financial year 1994-95 i.e., year ended 31st March 1995. When the SEBI mandate was issued, there was no accounting standard issued by the ICAI as regard preparation and presentation of a CFS. The ICAI issued a revised accounting standard (AS 3) on the subject by replacing its standard on Fund Flow Statement in March 1997. After introduction of ICAI standard the SEBI has directed a change in the Listing Agreement to provide that CFS shall be prepared in accordance with the ICAI standard. Earlier in the Companies Act, 1956, there was no requirement for preparing the cash flow statement. However, the new Companies Act, 2013 has mandated the Level I entities to prepare the Cash flow statement as one of the main part of its Financial Statements.

The process of the SEBI has resulted in a changed regime for imposition of financial disclosure requirements that is quick and does not require lengthy process of legislative changes. By virtue of the provisions contained in the Listing Agreement, listed companies are now under legal compulsion to comply with all the accounting standards issued by the ICAI.

The Companies Act, 2013: The Companies Act, 2013 lays down the detailed provisions regarding the maintenance of books of accounts and the preparation and presentation of annual accounts. The Act also prescribes the mechanism for issuance of accounting standards by National Financial Reporting Authority (NFRA)**. It specifies the roles and responsibilities of directors and also the matters to be reported upon by them in the annual reports of the companies. Under the provisions of the Act, audit of annual accounts is compulsory for all companies registered under it. The Act extensively deals with the qualification, appointment, removal, rights, duties and liabilities of auditors and provides contents of auditors' report. In case of delinquency/ default by the management or auditor, penal provisions are prescribed. However, despite providing for detailed requirements in respect of maintenance of books of account, preparation and presentation of financial statements and audit of annual accounts, the main thrust under the Companies Act is upon the presentation of a 'true and fair view' of the state of affairs and operating results of the reporting companies.

As the preparation of financial statements contained in annual reports presupposes the existence of a recording procedure of transactions of the reporting entities, the requirements as to the maintenance of books of accounts are also mentioned. As per Section 129 of the Companies Act, 2013, at the annual general meeting of a company, the Board of Directors of the company shall lay financial statements before the company:

Financial Statements as per Section 2(40) of the Companies Act, 2013, inter-alia include -

(i) a balance sheet as at the end of the financial year;

(ii) a profit and loss account, or in the case of a company carrying on any activity not for profit, an income and expenditure account for the financial year;

(iii) cash flow statement for the financial year;

(iv) a statement of changes in equity, if applicable; and

(v) any explanatory note annexed to, or forming part of, any document referred to in sub-clause (i) to sub-clause (iv):

Provided that the financial statement, with respect to One Person Company, small company and dormant company, may not include the cash flow statement.

** *Constitution of NFRA is prescribed under Section 132 of the Companies Act, 2013. However, this section has not been notified till 30th November, 2016.*

Requisites of Financial Statements

It shall give a true and fair view of the state of affairs of the company as at the end of the financial year.

Provisions Applicable

(1) Specific Act is Applicable

For instance any

(a) insurance company

(b) banking company or

(c) any company engaged in generation or supply of electricity* or

(d) any other class of company for which a Form of balance sheet or Profit and loss account has been prescribed under the Act governing such class of company

(2) In case of all other companies

Balance Sheet as per Form set out in Part I of Schedule III and Statement of Profit and Loss as per Part II of Schedule III.

Points to be kept in mind while preparing financial statements:

- Requirements of Schedule III to the Companies Act;
- Other statutory requirements;
- Accounting Standards issued by the Institute of Chartered Accountants of India on different accounting matters and notified by the Central Government (AS 1 to AS 32);
- Statements and Guidance Notes issued by the Institute of Chartered Accountants of India; which are necessary for understanding the accounting treatment / valuation / disclosure suggested by the ICAI.

Compliance with Accounting Standards

As per section 133 of the Companies Act, it is mandatory to comply with accounting standards notified by the Central Government from time to time.

Schedule III to the Companies Act, 2013

As per section 129 of the Companies Act, 2013, financial statements shall give a true and fair view of the state of affairs of the company or companies and comply with the accounting standards notified under section 133 and shall be in the form or forms as may be provided for different class or classes of companies in Schedule III under the Act.

The MCA on 6th April 2016, amended Schedule III to include general instructions for preparation of financial statements of a company whose financial statements are required to comply with Ind AS. The amendment divides Schedule III into two parts i.e. Division I and II:

** The Electricity Act, 2003 does not specify any format for presentation of Financial Statements. Therefore, Schedule III of the Companies Act, 2013 is followed by Electricity Companies in preparation of their financial statements.*

- Division I is applicable to a company whose financial statements are required to comply with the current accounting standards.
- Division II is applicable to a company whose financial statements are drawn up in compliance with Ind AS.

Schedule III to the Companies Act, 2013 has been given as Appendix at the end of the Module I of the Study Material. For full details, students are advised to refer the same.

The Financial Statements shall give a true and fair view of the state of affairs of the company or companies, comply with the accounting standards notified under section 133 of the companies Act, 2013 and shall be in the form of or forms as may be prescribed for different class or classes of companies in Schedule III. As per Section 133 of the Companies Act, 2013, the Central Government may prescribe the standards of accounting or any addendum thereto, as recommended by the Institute of Chartered Accountants of India, constituted under section 3 of the Chartered Accountants Act, 1949, in consultation with and after examination of the recommendations made by the National Financial Reporting Authority.

Section 135 of the Companies Act, 2013 deals with Corporate Social Responsibility obligations for the companies. As per provisions of this section, every company having net worth of rupees five hundred crore or more, or turnover of rupees one thousand crore or more or a net profit of rupees five crore or more during any financial year shall constitute a Corporate Social Responsibility Committee of the Board consisting of three or more directors, out of which at least one director shall be an independent director. The Board of every company shall ensure that the company spends, in every financial year, at least two per cent of the average net profits of the company made during the three immediately preceding financial years, in pursuance of its Corporate Social Responsibility Policy:

Provided that the company shall give preference to the local area and areas around it where it operates, for spending the amount earmarked for Corporate Social Responsibility activities:

The Corporate Social Responsibility Committee shall,

(a) formulate and recommend to the Board, a Corporate Social Responsibility Policy which shall indicate the activities to be undertaken by the company as specified in Schedule VII;

(b) recommend the amount of expenditure to be incurred on the activities referred to in clause (a); and

(c) monitor the Corporate Social Responsibility Policy of the company from time to time.

Provided further that if the company fails to spend such amount, the Board shall, in its report, specify the reasons for not spending the amount.

All companies covered u/s 135 of the Companies Act, 2013 are required to disclose amount of expenditure incurred on corporate social responsibility activities as note under heading 5 (k) in statement of profit and loss as per requirements of Schedule III.

Balance Sheet: The Companies Act requires that every Balance Sheet of a company shall give a true and fair view of the state of affairs of the company as at the end of the financial year. It shall be in the form set out in Part I of the Schedule III under the Companies Act, 2013). In preparing the Balance Sheet, the preparers should follow the general instruction for preparations of Balance Sheet under the heading 'Notes' at the end of the aforesaid Part of the Schedule.

Statement of Profit and Loss: Like Balance Sheet, every Profit and Loss Account of a company is required to exhibit a true and fair view of the profit or loss of the company for the financial year. The Profit and Loss Account is required to be prepared as per the requirements of Part II of the Schedule III under the Companies Act, 2013). Like Balance Sheet, Profit or loss is also prepared in the vertical form (in which items of income are shown first and items of expenses are reported as a deduction their form) as prescribed in Part II of the Schedule III. The main advantage of the vertical form of presentation is that it makes the Balance Sheet and Profit and Loss Account easily understandable to the users who may not have a basic knowledge of accounts.

The Profit and Loss Account has to disclose every material feature, including credits or receipts and debits or expenses in respect of non-recurring transactions or transactions of an exceptional nature. Accounting Standard 5 on *Net Profit or Loss for the Period, Prior Period Items and changes in Accounting Policies* states that when items of income and expense within profit or loss from ordinary activities are of such size, nature or incidence *that* their disclosure is relevant to explain the performance of the enterprise for the period, the nature and amount of such items should be disclosed separately. Schedule III also requires earnings per share to be given at the end of the Statement of Profit and Loss.

NOTE: For details, students are advised to refer Schedule III to the Companies Act, 2013 given at the end of Module I of the Study Material.

Narrative Disclosures: The narrative disclosures that are contained in published company accounts embrace both qualitative and quantitative information. In most cases narrative disclosures are presented in textual form wherein more emphasis is laid on words than on figures. Although most of the narratives disclosed in published company accounts relate to the items of basic financial statements, there are certain narrative disclosures, which focus on things that are not related to financial statement items.

In India requirements as to narrative disclosures stem from the provisions of the Companies Act and that of the accounting standards. These requirements are discussed under the following two broad heads:

A. Accounting Policies

B. Notes on Accounts

A. Accounting Policies: Accounting policies often contain a large volume of narratives that have a significant bearing on the financial health and performance of the company. Accounting Standard 1 on *Disclosure of Accounting Policies* issued by the ICAI deals with the disclosure of significant accounting policies followed in the preparation and presentation of financial statements. The purpose of this standard is to promote better understanding of financial statements by ensuring the disclosure of significant accounting policies in the financial statements in an orderly manner. Such disclosure would also facilitate a more meaningful comparison between financial statements of different enterprises.

B. Notes on Accounts: The section titled "Notes to the Accounts" or "Notes on Accounts" contains sizeable data. Notes on Accounts are integral part of the financial statements. Some of the disclosures made under Notes on Accounts are in fact the extensions of the items of the basic financial statements; while other notes may provide additional information. Disclosure through notes is done either to comply with statutory requirements or the company may voluntarily choose to provide details on certain items. Such notes provide information about the accounting methods, assumptions and estimates used by management to develop the data reported in the financial statement.

Cash Flow Statement: In a cash flow statement, cash flows are required to be classified in terms of the activities generating them. AS 3 prescribes three types of activities that generate cash flows for an enterprise. These are:

(i) cash flows generated by operating activities;

(ii) cash flows generated by investing activities; and

(iii) cash flows generated by financing activities.

Disclosure by Listed Companies

1. Balance Sheet, Profit and Loss Account and Directors' Report: Please, refer para given above.

2. Cash Flow Statement: Cash flow statements are prepared as per AS 3. Students are advised to refer AS 3 for details.

3. Related Party Disclosure: Transactions between related parties may not be at arm's length. Hence, companies are required to make appropriate disclosures in respect of such transactions so that users of financial statements can make their own assessment. Such disclosures have to be made in annual reports in compliance with the accounting standard on Related Party Disclosure (AS 18) issued by the ICAI.

4. Disclosure to be made by Holding Companies and Subsidiary Companies in respect of Loans, Advances and Investments: Disclosures are required as per section 129(3) of the Companies Act, 2013.

5. Management Discussion and Analysis Report: Management Discussion and Analysis (MD & A) report is a very important document through which management of a company can express its views and opinions on various aspects of a company like performance, success or failure, future plan of the company, forward looking information, etc.

The MD&A complements and supplements the financial statements, but does not form part of the financial statements. The objective in preparing the MD&A should be to improve the reporting company's overall financial disclosure by providing a balanced discussion of the results of operations and financial conditions. Although originally devised as a regulatory document to supplement financial statements, the MD&A report has the potential to be a foundational and integrative business reporting document that provides 'forward-looking information'.

The MD&A serves the laudable purpose of giving investors important disclosures about a company's operations. Although this section contains useful information, investors must heed caution, as the section is unaudited.

By virtue of the provisions contained in the Listing Agreement, the company has to provide a MD & A report to the shareholders. This report may be presented *as part of the directors' report* or *as an addition thereto*. It should include discussion on the following matters within the limits set by the company's competitive position:

(i) Industry structure and developments.

(ii) Opportunities and threats.

(iii) Segment-wise or product-wise performance.

(iv) Outlook.

(v) Risks and concerns.

(vi) Internal control systems and their adequacy.

(vii) Discussion on financial performance with respect to operational performance.

(viii) Material developments in Human Resources/ Industrial Relations front, including number of people employed.

6. Corporate Governance: In India the first attempt was made by the Confederation of Indian Industries (CII) to codify Corporate Governance. But the genesis of the provisions on Corporate Governance contained in the Listing Agreement is the Report of Kumar Mangalam Birla Committee. On 7th May 1999, the SEBI had set up a committee under the chairmanship of Sri Kumar Mangalam Birla to formulate the code of Corporate Governance. The SEBI in its meeting held on 25th January, 2000 accepted the recommendations made by the committee and suggested incorporation of certain matters in the Listing Agreement.

The following disclosures shall be made in the section on the corporate governance of the annual report.

(1) A brief statement on listed entity's philosophy on code of governance.

(2) Board of directors:

(3) Audit committee:

(4) Nomination and Remuneration Committee:

(5) Remuneration of Directors:

(6) Stakeholders' grievance committee:

(7) General body meetings

(8) Means of communication

(9) General shareholder information

(10) Other Disclosures:

4. Corporate Reporting Practices in India

There are few studies that deal with Indian practices of corporate financial reporting. The Institute of Chartered Accountants of India has made survey of corporate reporting practices in India from time to time. Other notable studies on financial reporting in India are Dasgupta Lal, Chakraborty and Banerjee. An analysis of the findings of these studies reveals that Indian corporate reporting practices are coping with changing needs of the economy and the society. Furthermore, the compliance with statutory disclosure requirement is a general phenomenon. However, in a recent study by Das reveals that there are cases of non-compliance with mandatory disclosure requirements. Thus, there is scope of improvement in the area of reporting of even mandatory disclosure items and role of management is important since the ultimate responsibility of providing information to the user rests on management. It may also be noted that there is a great amount of diversity in corporate reporting. The quality of information provided by the big companies has improved considerably and reports of some Indian companies are internationally competitive. With this brief introduction, we discuss in the following section the current reporting practices of Indian companies.

4.1 Published Financial Statements

Annual report is major vehicle through which Indian companies are publishing their financial statements. Like companies of any developed countries, Indian annual reports now include much more than the legal minimum requirements. Regarding elements of annual reports, the following are most common:

- Notice of annual general meeting
- Director's report
- Management discussion & analysis
- Risk Management Report
- Audited Standalone financial statements
- Audited Consolidated financial statements
- Corporate governance report
- Shareholders Information
- Auditor's report on financial statements
- C & AG's Comments on Accounts (in case of Government Companies)
- Business Responsibility Report*

- Information on human resources*
- Value added statement*
- Corporate social responsibility policy/report
- Environmental report*
- Information on Brand/ Intangibles*
- EVA report*

The marked elements are provided voluntarily. Regarding last few items disclosure is limited to large companies only. However, financial statements with respect to One Person Company, Small Company and Dormant Company may not include the cash flow statement.

4.2 Business Responsibility Report

SEBI recently mandated that the top 100 listed entities based on market capitalization of BSE and NSE should include 'business responsibility' reports in their annual report. Other listed entities may voluntarily disclose business responsibility reports. According to a SEBI circular, an entity's business responsibility performance will be assessed based on nine principles, business responsibility reporting is a step in the right direction, as it is expected to align Indian reporting requirements with global standards. Business responsibility reports can help entities demonstrate to key stakeholders – including investors, employees, the government and consumers – that their businesses are not detrimental to the environment, society or employees. This will positively impact brand reputation, attract, motivate and retain employees, provide access to global markets and attract foreign capital. To comply with the new reporting requirements, entities would need appropriate systems, mechanism and processes.

4.3 Corporate Social Responsibility Reporting

Every company having net worth of rupees five hundred crore or more, or turnover of rupees one thousand crore or more or a net profit of rupees five crore or more during any financial year shall constitute a Corporate Social Responsibility Committee of the Board. The Board's report under sub-section (3) of section 134 shall disclose the composition of the Corporate Social Responsibility Committee and disclose contents of such Policy in its report and also place it on the company's website, if any, in such manner as may be prescribed; and ensure that the activities as are included in Corporate Social Responsibility Policy of the company are undertaken by the company. If the company fails to spend the prescribed amount, the Board shall, in its report made under clause (o) of sub-section (3) of section 134, specify the reasons for not spending the amount.

5. Other Reports

Disclosure of Financial Information in Prospectus: Prospectus is an important offer document that is issued by a company for making public issue of securities. SEBI (Disclosure & Investor Protection) Guidelines provide contents of the prospectus. There are requirements to disclosure certain important pieces of financial information relating to the issuer company and group companies. The major aspect of disclosure of financial information relates to reporting of audited profits and losses and assets and liabilities of the issuer company for each of the five financial year immediately preceding the issue of the prospectus. The requirements of the SEBI Guidelines on audited financial statements are similar to that of Section 26 of the Companies Act, 2013. Requirements of Indian Companies Act are elaborated separately. Other financial information that is to be provided in the prospectus includes.

1. Capital structure of the company
2. Utilization of Issue Proceeds
3. Financial Information of group companies
4. Promise vis-à-vis performance
5. Accounting and other ratios to justify the basis of issue price. (Such ratios shall be based on the financial statements prepared on the basis of Indian Accounting Standards)

It may be noted that abovementioned items are disclosed without any audit / review by independent accountant.

SEBI Guidelines, now allow an issuer company, if it so desires, to include in the offer document, the financial statements prepared on the basis of more than one set of accounting standards (e.g. Indian standards and US GAAPs) subject to disclosure of the material differences arising because of differences in the accounting policies of two different accounting standards.

Requirements of the Indian Companies Act regarding disclosure of financial information in prospectus are discussed under two heads: Auditor's report in prospectus and Accountant's report in prospectus.

Unaudited Quarterly Results: All listed companies are now required to furnish unaudited quarterly results in the prescribed proforma within one month from the end of the quarter to the stock exchanges on which it is listed and publish the same within 48 hours of the conclusion of the board meeting in atleast one national newspaper and one regional language newspaper. The quarterly results are to be prepared on the basis of accrual accounting policy and in accordance with uniform accounting practices for all periods on quarterly basis. It incorporates a statement of segmentwise revenue; results and capital employed prepared as per AS 17 on Segment Reporting and also comply with AS 22 on Accounting for Taxes on Income as regards measurement of the requirements of deferred taxes.

6. Best Presented Accounts

For many years the ICAI has been awarding shields and plaques for best presented accounts. The aim is to encourage companies in presenting accounting information in the financial statements convincingly to serve the information needs of the users in the best possible manner.

6.1 Conditions for Entry to the Annual Competition for the Best Presented Accounts

I. From 2004-2005 onwards, ICAI started presenting the awards for Excellence in Financial Reporting in following seven categories:

Category I: Manufacturing and Trading enterprises (including processing, mining, plantation, oil and gas enterprises).

Category II: Finance sector (including NBFCs, mutual funds, investment bankers, HFCs etc.).

Category III: Service sector (including hotels consultancy, transport, stock exchanges, R & D, private hospitals).

Category IV: Banking, Insurance and Financial Institutions.

Category V: Information Technology, Communication and Entertainment enterprises.

Category VI: Infrastructure and Construction sector (including power generation and supply, port trusts, roads).

Category VII: Others (Section 8 companies, educational institutions, NGOs, charitable hospitals and other organisations).

Gold Shields and Silver Shields are presented, in all the seven categories, to the award winners for 'Excellence in Financial Reporting'.

II The accounts for entry to the competition should relate to the financial year ending on any day between 1st April and 31st March of next year.

III Six copies of the following documents (or such other similar documents as are prepared by the Organisation concerned) should be sent to the Secretary, Research Committee, the Institute of Chartered Accountants of India, Indraprastha Marg, New Delhi-110002, so as to reach him before the specified date.

(a) Balance Sheet

(b) Profit and Loss Account

(c) Directors' Report

(d) Chairman's statement or speech at the Annual General Meeting.

IV. No form has to be filled up and no fee is payable.

V. Cyclostyled copies of the Annual Report and Accounts are not accepted. This condition, however, does not apply to entities covered by Category IV.

VI In all matters concerning the competition, the decision of the panel of judges appointed by the Institute will be final.

6.2 Some Important Factors Generally Considered for the Award of Gold/ Silver Shields and Plaques for the Best Presented Accounts

1. Compliance with the legal requirements in the preparation and presentation of financial statements as specified by the relevant statute, e.g., the Companies Act, 2013, in case of companies.
2. Basic quality of accounts as judged from the qualifications in the auditor's report, notes to the accounts and compliance with the generally accepted accounting principles such as those enunciated in the Accounting Standards, Statements, Guidance Notes, etc., issued by the Council of the Institute of Chartered Accountants of India and its various Committees.
3. The nature and quality of information presented in the accounts to make the disclosure meaningful. For example:
   (i) Sufficient details of revenues/expenses for financial analysis, e.g., distinction between manufacturing cost, selling cost, administrative cost.
   (ii) Use of vertical form as against the conventional "T" form; judicious use of schedules; use of sub-totals; manner of showing comparative figures; ease of getting at figures.
   (iii) Extent to which additional financial information is provided to the readers through charts and graphs.
   (iv) Extent of clarity, lucidity and comprehensiveness of the information contained in the financial statements, in the context of a layman.
   (v) Financial highlights and ratios.
   (vi) Inclusion of one or more of the information like value added statement, break-up of operations, organisation chart, location of factories/branches, human resource accounting, inflation adjusted accounts, social accounts, etc.
4. The extent to which the (i) Reports of the Governing Body such as Board of Directors Report and/or (ii) Chairman's Statement, if any, are informative. The following aspects are generally considered relevant in this regard:
   (i) Availability of information regarding different segments and units of the entity, i.e., whether details about each product/service and units, and whether located in the same area or spread in different geographical locations, are given.
   (ii) Information regarding financial operations, capital raised during the year, financial requirements, borrowings, etc. In respect of multi-product/multi-unit organisations, whether details as per (i) above have been given for financial operations.
   (iii) Employee relations.

(iv) Industry problems and problems peculiar to the enterprise.

(v) Information regarding social concerns (e.g., contribution to conservation and development of environment and ecology).

(vi) Information on contribution to community development projects, (e.g., medical institutions, educational institutions, provision of sanitary and drinking water, etc.), particularly in areas around location of entity.

(vii) Post-balance sheet events not requiring adjustment in accounts but material enough to warrant disclosure and future plans, programmes, market conditions, profitability forecast, environment friendliness, etc.

(viii) Manner of review of performance, plans and prospects by the company.

(ix) Compliance report on the Corporate Governance, clearly indicating non-compliance with any of the mandatory requirements with the reasons therefor.

(x) Directors' Responsibility Statement required under section 134 of the Companies Act, 2013.

5. Layout of contents, general appearance, presentation and quality of printing.

6. Timeliness in presenting accounts based on the date of the notice of the Annual General Meeting in respect of which the Annual Report is circulated to the shareholders.

4

Accounting for Corporate Restructuring

1. Introduction

The dictionary meaning of the term 'restructuring' is 'give new structure to; rebuild, rearrange' (the Concise Oxford Dictionary).

Restructuring is the corporate management term for the act of reorganizing the legal, ownership, operational, or other structures of a company for the purpose of making it more profitable, or better organized for its present needs. Alternate reasons for restructuring include a change of ownership or ownership structure, demerger, or a response to a crisis or major change in the business such as bankruptcy, repositioning, or buyout. Restructuring may also be described as corporate restructuring, debt restructuring and financial restructuring.

The continuing corporate restructuring wave that began in the 80s has been mainly triggered off by a renewed commitment to deliver shareholder value. To that extent both shareholder value management and corporate restructuring are inseparable as the end and the important means to that end. In India, the process of economic liberalisation and globalisation has created its own impetus, due to which, business environment has become highly competitive. Corporates are now restructuring and repositioning their folios to meet the challenges and seize opportunities thrown open by the multilateral trade agenda and emergence of the World Trade Organisation (WTO).

Most of the diversified multi-product companies are restructuring their corporate operations into more homogenous units to achieve synergy in operations. This entails transfer of business units from one company to the other or breaking up of a large group into smaller ones. On the other hand, smaller companies are forming alliances and joint ventures for their survival and growth. The exercise involves strategic planning to cope with the complex changes in the ownership and control and comply with a variety of business laws.

The underlying object of corporate restructuring is efficient and competitive business operations by increasing the market share, brand power and synergies. In the emerging scenario, joint ventures, alliances, mergers, amalgamations and takeovers are becoming the easiest and quickest way to expand capacities and acquire dominance over the market.

While asset and capital restructuring can be termed as external, organisational restructuring may be referred to as internal; this is based on the significance and impact of the restructuring process on a company's internal or external stakeholders.

2. Methods

The different methods of restructuring and their implications are as under:

(1) External Restructuring

(a) Asset-based (portfolio) restructuring

(b) Financial or capital restructuring

(2) Internal Restructuring

(a) Portfolio restructuring (Cost reduction through closure of units, redundancy programmes etc.)

(b) Organisational restructuring (Management or organisational restructuring involving decentralisation, delayering, product-market based divisionalisation, matrix structure etc.)

(3) Amalgamation, absorption or external reconstruction.

3. Asset-based Restructuring

(i) Mergers and Acquisitions (M & A): Acquisition of companies/business units or merger with other companies has been one of the most common ways of carrying out restructuring. While acquisition of companies can be “friendly” or “hostile”, merger invariably involves friendly pooling of interest, undertaken by managements of companies of roughly comparable sizes. However, in the Indian context the term merger is used to denote consolidation of separate legal entities, not necessarily of similar sizes, into one through a statutory process of amalgamation. Since the motives of merger or acquisition are the same and both involve transfer of ownership and control of assets and the right to manage corporate cash flows and the difference between the two is very often only a matter of technical detail, the term mergers and acquisitions (M & A) is often used interchangeably.

Amalgamation has been dealt with in detail in separate chapter.

(ii) Sell-Off: A sell-off, also known as a divestiture, is the outright sale of a company subsidiary. Normally, sell-offs are done because the subsidiary doesn't fit into the parent company's core strategy. The market may be undervaluing the combined businesses due to a lack of synergy between the parent and subsidiary. As a result, management and the board decide that the subsidiary is better off under different ownership.

(iii) Demergers or Spin-offs: A spinoff occurs when a subsidiary becomes an independent entity. The parent firm distributes shares of the subsidiary to its shareholders through a stock dividend. Since this transaction is a dividend distribution, no cash is generated. Thus, spinoffs are unlikely to be used when a firm needs to finance growth or deals. Like the carve-out, the subsidiary becomes a separate legal entity with a distinct management and board.

In most cases, spinoffs unlock hidden shareholder value. For the parent company, it sharpens management focus. For the spinoff company, management doesn't have to compete for the parent's attention and capital. Once they are set free, managers can explore new opportunities.

Unlike in a divestiture, the "parent" company or group does not receive any proceeds from a demerger as the demerged company's shares are directly distributed to the "parent" company's shareholders.

The word Demerger has received statutory recognition in the Income-Tax Act, 1961 by the insertion of clause (*19AA*) in section 2 by the Finance Act, 1999, w.e.f. 1-4-2000. Section 2(19AA) says that "demerger", in relation to companies, means the transfer, pursuant to a scheme of arrangement under sections 391 to 394 of the Companies Act, 1956 (1 of 1956)*, by a demerged company of its one or more undertakings to any resulting company in such a manner that—

(i) all the property of the undertaking, being transferred by the demerged company, immediately before the demerger, becomes the property of the resulting company by virtue of the demerger;

(ii) all the liabilities relatable to the undertaking, being transferred by the demerged company, immediately before the demerger, become the liabilities of the resulting company by virtue of the demerger;

(iii) the property and the liabilities of the undertaking or undertakings being transferred by the demerged company are transferred at values appearing in its books of account immediately before the demerger;

(iv) the resulting company issues, in consideration of the demerger, its shares to the shareholders of the demerged company on a proportionate basis except where the resulting company itself is a shareholder of the demerged

(v) the shareholders holding not less than three-fourths in value of the shares in the demerged company (other than shares already held therein immediately before the demerger, or by a nominee for, the resulting company or, its subsidiary) become shareholders of the resulting company or companies by virtue of the demerger, otherwise than as a result of the acquisition of the property or assets of the demerged company or any undertaking thereof by the resulting company;

(vi) the transfer of the undertaking is on a going concern basis;

(vii) the demerger is in accordance with the conditions, if any, notified under sub-section (5) of section 72A of the Income Tax Act in this regard.

***Explanation 1.*—**For the purposes of this clause, "undertaking" shall include any part of an undertaking, or a unit or division of an undertaking or a business activity taken as a whole, but does not include individual assets or liabilities or any combination thereof not constituting a business activity.

***Explanation 2.*—**For the purposes of this clause, the liabilities referred to in sub-clause (*ii*), shall include—

(*a*) the liabilities which arise out of the activities or operations of the undertaking;

**Section 230 to 239 of the Companies Act, 2013 deal with the provisions related to restructuring of companies. It may be noted that these sections have not been notified till 31st December, 2016.*

(*b*) the specific loans or borrowings (including debentures) raised, incurred and utilised solely for the activities or operations of the undertaking; and

(*c*) in cases, other than those referred to in clause (*a*) or clause (*b*), so much of the amounts of general or multipurpose borrowings, if any, of the demerged company as stand in the same proportion which the value of the assets transferred in a demerger bears to the total value of the assets of such demerged company immediately before the demerger.

Explanation 3.—For determining the value of the property referred to in sub-clause (*iii*), any change in the value of assets consequent to their revaluation shall be ignored.

Explanation 4.—The splitting up or the reconstruction of any authority or a body constituted or established under a Central, State or Provincial Act, or a local authority or a public sector company, into separate authorities or bodies or local authorities or companies, as the case may be, shall be deemed to be a demerger if such split up or reconstruction fulfils such conditions as may be notified in the Official Gazette, by the Central Government**;**

Explanation 5.— For the purposes of this clause, the reconstruction or splitting up of a company, which ceased to be a public sector company as a result of transfer of its shares by the Central Government, into separate companies, shall be deemed to be a demerger, if such reconstruction or splitting up has been made to give effect to any condition attached to the said transfer of shares and other prescribed conditions.

As per section 2(*19AAA*) "demerged company" means the company whose undertaking is transferred, pursuant to a demerger, to a resulting company;

At the same time, the process of demerger is achieved only through the provisions of Sections 391 – 394 of the Companies Act 1956*, which deals with the subject of – "Compromise, Arrangements Reconstructions". In other words, every scheme of demerger as defined under the Income-Tax Act should necessarily be drawn through a scheme of arrangement which is subject to the approval of the National Company Law Tribunal constituted under Section 408 of the Companies Act, 2013. Briefly stated, in a demerger, ownership rights of shareholder are recognised vis-a-vis the assets of the company in such a way that the shareholder becomes, after the approval of the Tribunal is obtained, the owner of shares in certain new companies which are created for the purpose and transferring segregated business by telescoping them into these companies and allotting shares to the shareholders in a proportionate manner. To put it in nutshell, if X is a shareholder of A Limited, a company having two lines of businesses, it can split its two businesses into two companies, viz. A Limited and B Limited and allot to the same shareholders shares in both the companies in lieu of the shares in the original company.

4. Capital and Financial Restructuring

Needless to state that the distinction between, asset-based and purely financial-side restructuring is often blurred as acquisitions or divestiture has strong financial or capital structure consequences. Nonetheless, the distinction is made on the basis of the dominant

---

** Section 230 to 239 of the Companies Act, 2013 deal with the provisions related to restructuring of companies. It may be noted that these sections have not been notified till 31st December, 2016.*

motives behind a given restructuring transaction. This type of restructuring includes buy back of shares, debt to equity conversions etc. Sections 68 to 70 of the Companies Act, 2013 deals with buy back of securities. These sections have already been discussed in Chapter 4, Unit 1, Para 1.2 of Paper 5 'Advanced Accounting' Study Material at IIPC level

Illustration 1

The following is the draft Balance Sheet of Diverse Ltd. having an authorised capital of ₹ 1,000 crores as on 31st March, 2017:

		(₹ in crores)
I Equity and Liabilities		
*1 **Shareholders' funds:***		
a. Share capital		
Equity shares of 10 each fully paid up	*250*	
b. Reserves and surplus (Revenue)	*750*	*1,000*
*2. **Non-current Liabilities***		
Long term borrowings		
Secured against: (a) Fixed assets ₹ 300 Cr.		
(b) Working capital ₹ 100 Cr.	*400*	
Unsecured:	*600*	*1,000*
*3. **Current Liabilities***		*2,000*
		4,000
II. Assets		
*1. **Non –Current Assets***		
(a) Fixed assets:		
(i) Tangible Assets		
Gross block	*800*	
Less: Depreciation	*(200)*	*600*
(b) Investments at cost (Market value ₹ 1,000 Cr.)		*400*
*2. **Current assets***		*3,000*
		4,000

Capital commitments: ₹ 700 crores.

The company consists of 2 divisions:

(i) Established division whose gross block was ₹ 200 crores and net block was ₹ 30 crores; current assets were ₹ 1,500 crores and working capital was ₹ 1,200 crores; the entire amount being financed by shareholders' funds.

(ii) New project division to which the remaining fixed assets, current assets and current liabilities related.

The following scheme of reconstruction was agreed upon:

(a) Two new companies Sunrise Ltd. and Khajana Ltd. are to be formed. The authorised capital of Sunrise Ltd. is to be ₹ 1,000 crores. The authorised capital of Khajana Ltd. is to be ₹ 500 crores.

(b) Khajana Ltd. is to take over investments at ₹ 800 crores and unsecured loans at balance sheet value. It is to allot equity shares of ₹ 10 each at par to the members of Diverse Ltd. in satisfaction of the amount due under the arrangement.

(c) Sunrise Ltd. is to take over the fixed assets and net working capital of the new project division along with the secured loans and obligation for capital commitments for which Diverse Ltd. is to continue to stand guarantee at book values. It is to allot one crore equity shares of ₹ 10 each as consideration to Diverse Ltd. Sunrise Ltd. made an issue of unsecured convertible debentures of ₹ 500 crores carrying interest at 15% per annum and having a right to convert into equity shares of ₹ 10 each at par on 31.3.2019. This issue was made to the members of Sunrise Ltd. as a right who grabbed the opportunity and subscribed in full.

(d) Diverse Ltd. is to guarantee all liabilities transferred to the 2 companies.

(e) Diverse Ltd. is to make a bonus issue of equity shares in the ratio of one equity share for every equity share held by making use of the revenue reserves.

Assume that the above scheme was duly approved by the Honourable High Court and that there are no other transactions. Ignore taxation.

You are asked to:

(i) Pass journal entries in the books of Diverse Ltd., and

(ii) Prepare the balance sheets of the three companies after the scheme of arrangement.

Solution

Journal of Diverse Ltd.

	Total			340

Notes to Accounts

		(₹ in crores)	
1.	**Share Capital**		
	1. Authorised Capital		100
	2. Issued, Subscribed and Paid-up		
	200 lakhs Equity Shares of ₹ 10 each fully paid up		20
	(50 lakhs Equity Shares of ₹ 10 each have been bought back out of Securities Premium account at ₹ 50 per share and 12% 75 lakhs Redeemable Preference Shares of ₹ 100 each fully paid up, have been redeemed on 1st April, 2017)		
2.	**Reserves and Surplus**		
	(1) Capital Reserve		15

* *It may be noted that according to Securities and Exchange Board of India (Buy-back of Securities Amendment) Regulations, 2013, no offer of buy-back for fifteen per cent or more of the paid up capital and free reserves of the company shall be made from the open market by a listed company.*

	(2)	Capital Redemption Reserve		
		As per last account	–	
		Add: Transfer from Revenue Reserves (75 + 5)		80
	(3)	Securities Premium Reserve (25 - 20)		5
	(4)	Surplus (Profit and Loss A/c)		
		As per last account	260	
		Less: Transfer to Capital Redemption Reserve (75 + 5)	(80)	180
				280

Net asset value of an equity share

	(₹ in crores)
Investments (at market value)	400
Net current assets	200
Net assets available to equity shareholders	600
No. of equity shares : 2 crores	
Value of an equity share = $\frac{600 \text{ crores}}{2 \text{ crores}}$ = ₹ 300	

Note: As regards treatment of loss (profit) on buy-back, there is no authoritative pronouncement as to whether the difference between the nominal value and the amount paid should be treated as capital or revenue in nature. In the given case, the debit has been given to Securities premium account. Also, in the absence of any other information, it may be assumed that shares have been bought back out of free reserves. However, the securities premium account has restrictive use. Therefore, the companies may opt to utilize the securities premium account for buy back, if available, rather to use the free reserves which can be used for other purposes in future.

Further as per Section 52 of the Companies Act, 2013, Securities Premium account may be used for purchase of its own shares as per Section 68.

Illustration 4

Maxi Mini Ltd. has 2 divisions - Maxi and Mini. The draft Balance Sheet as at 31st October, 2017 was as under:

	Maxi division ₹	*Mini division ₹*	*Total (in crores) ₹*
Fixed assets:			
Cost	*600*	*300*	*900*
Depreciation	*(500)*	*(100)*	*(600)*
W.D.V. (A)	*100*	*200*	*300*

Current assets	*400*	*300*	*700*
Less: Current liabilities	*(100)*	*(100)*	*(200)*
(B)	*300*	*200*	*500*
Total (A+B)	*400*	*400*	*800*
Financed by :			
Loan funds (A)	*–*	*100*	*100*
(secured by a charge on fixed assets)			
Own funds:			
Equity capital			*50*
(fully paid up ₹ 10 shares)			
Reserves and surplus			*650*
(B)	*?*	*?*	*700*
Total (A+B)	*400*	*400*	*800*

It is decided to form a new company Mini Ltd. to take over the assets and liabilities of Mini division.

Accordingly Mini Ltd. was incorporated to take over at Balance Sheet figures the assets and liabilities of that division. Mini Ltd. is to allot 5 crores equity shares of ₹ 10 each in the company to the members of Maxi Mini Ltd. in full settlement of the consideration. The members of Maxi Mini Ltd. are therefore to become members of Mini Ltd. as well without having to make any further investment.

(a) You are asked to pass journal entries in relation to the above in the books of Maxi Mini Ltd. and Mini Ltd. Also show the Balance Sheets of the 2 companies as on the morning of 1st November, 2017, showing corresponding previous year's figures.

(b) The directors of the 2 companies ask you to find out the net asset value of equity shares pre and post demerger.

(c) Comment on the impact of demerger on "shareholders wealth".

Solution

Demerged Company: Mini Division of "Maxi Mini Ltd"

Resulting Company: "Mini Ltd."

(a) Journal of Maxi Mini Ltd. (Demerged Company)

		(₹ in crores)

	Less: Loss on reconstruction	(300)	–
		350	650
2.	Fixed Assets	600	900
	Less: Depreciation	(500)	(600)
		100	300

Note to Accounts : Consequent on reconstruction of the company and transfer of Mini division to newly incorporated company Mini Ltd., the members of the company have been allotted 5 crores equity shares of ₹ 10 each at part of Mini Ltd.

Mini Ltd.
Balance Sheet as at 1 November, 2017

		Note No.	*(₹ in crores)*	
I.	**Equity and liabilities**			
	(1) **Shareholder's funds**			
	(a) Share Capital	1	50	
	(b) Reserves and Surplus		250	300
	(2) **Non-current liabilities**			
	Secured loans			100
	(3) **Current liabilities**			100
	Total			500
II.	**Assets**			
	(1) **Non-current assets**			
	(a) Fixed assets			200
	(2) **Current assets**			300
	Total			500

Notes to Account

	(₹ in crores)
1. Share Capital : Issued and paid up : 5 crores Equity shares of ₹ 10 each fully paid up (All the above shares have been issued for consideration other than cash, to the members of Maxi Mini Ltd., on takeover of Mini division from Maxi Mini Ltd.)	50

(b) Net asset value of an equity share

	Pre-demerger	*Post-demerger*
Maxi Mini Ltd. :	$\frac{₹ 700 \text{ crores}}{5 \text{ crores}} = ₹\ 140$	$\frac{₹ 400 \text{ crores}}{5 \text{ crores}} = ₹\ 80$
Mini Ltd.:		$\frac{₹ 300 \text{ crores}}{5 \text{ crores}} = ₹\ 60$

(c) Demerger into two companies has had no impact on "net asset value" of shareholding. Pre-demerger, it was ₹ 140 per share. After demerger, it is ₹ 80 plus ₹ 60 i.e. ₹ 140 per original share.

It is only yield valuation that is expected to change because of separate focusing on two distinct businesses whereby profitability is likely to improve on account of demerger.

5. Amalgamation – Legal Aspects

5.1 Provisions under the Companies Act, 1956*

Section 390 to 396A in Chapter V is a complete code in itself. It provides the law and procedure to be complied with by the companies for Compromise, arrangement and reconstruction which are all part of restructuring. Section 391 of the Companies Act 1956* provides for all matters which the company court should consider and also the condition under which it has to exercise its power. Court for the purpose of section 391 to 394 of the Act* would mean the High Court having jurisdiction over the registered office of the company.

Sec 391 provides that where a compromise or arrangement is proposed between company and its Trade payables and any class of them or member or any class of them, an application is required to be submitted to the court. On the submission of the application the court may direct to hold the meeting of Account payables or member or class of them. The scheme must be approved in the meeting by majority in number representing 3/4 in value of the Account payables or members. The scheme must disclose all the material fact, financial position and auditors report on the account of the company. The order made by the court should be filled with the ROC within 30 days unless it will not become effective. The copy of the order is also required

** Section 230 to 239 of the Companies Act, 2013 deal with amalgamation aspects of companies. It may be noted that these sections have not been notified till 30th November, 2016.*

to attach with all the copy of memorandum of the company, if there is default the person will be liable to punished.

Section 392 empowers the court to give direction and make modification in the order to operate the scheme smoothly. The court has also power to order to wind up the company if it satisfies that the scheme cannot work satisfactory with or without modification.

Section 393 says that the scheme must disclose all the relative fact as per the prescribe rules otherwise the scheme should not be approved.

Section 394 says that it is necessary to have the report from the ROC in case the scheme involves that the company is being wound up and the report of the liquidator, in case the scheme involves dissolution of a company to ensure that the affairs of the company is not being conducted in a manner prejudicial to the interest of the member or public.

Section 395 provides that if 90% or more shareholders of a company approve a scheme of arrangement, then the same may be imposed on the remaining shareholders of the company. However, the dissenting shareholders shall have the right to file their objection with the Company Law Board. Unless the Company Law Board orders otherwise, the acquirer shall be entitled to acquire the shares of the target company.

5.2 Meaning of Reconstruction and Amalgamation

The terms amalgamation and reconstruction are not defined in the Companies Act. Generally the expression reconstruction", "reorganisation" or "scheme of arrangement" is used where only one company is involved and the rights of its shareholders and/or Trade payables are varied. The term amalgamation is used where two or more companies are involved or where one is merged with another or taken over by another. Neither reconstruction nor amalgamation has a precise meaning. Amalgamation is blending of two or more existing undertakings into one undertaking, the shareholders of each blending company becoming substantially the shareholders in the company which is to carry blended undertakings. There may be amalgamation either by the transfer of two or more undertakings to an existing company. The term amalgamation contemplates not only state of things in which two companies are so joined as to form a new company but also the absorption and blending of one by the other.

5.2.1 Dissenting Shareholders

Sections 395 and 396 of the Companies Act, 1956* deal with provisions of the Dissenting shareholders. Dissenting shareholders include shareholders who have not assented to the scheme or contract and any shareholder who has failed or refused to transfer his shares to the transferee company in accordance with the scheme or contract.

Where a scheme or contract involves transfer of shares or any class of shares of a transferee company to the transferor company, the transferee company has to make offer which should be approved by the holder of not less than nine-tenths in value of such shares on which transfer is involved within 4 months. After expiry of such 4 months period, and within two months' time

---

** Sections 235 and 236 of the Companies Act, 2013 deal with provisions relating to Dissenting shareholders. It may be noted that these sections have not been notified till 30th November, 2016.*

thereafter, the transferee company may give notice in the prescribed manner to any dissenting shareholder that it desires to acquire their shares. When such a notice is given, the transferee company shall, excepting the case where an application has been made by the dissenting shareholders within 1 month from the date on which the notice was given to the court and the court orders otherwise, be entitled and bound to acquire those shares. If there is no court order in response to the application made by the dissenting shareholder, the transferee company must transmit a copy of the notice to the transferor company together with an instrument of transfer executed on behalf of the shareholder by any person appointed by the transferor along with the amounts or other considerations representing price payable to the dissenting shareholders. Any such sum received by the transferee company representing the price of the shares of the dissenting shareholders shall be paid into a separate bank account. The price of shares will be at such rates which have been agreed upon as per the scheme of amalgamation and payable to the other shareholders.

There have however been some instances when shareholders holding a small number of shares, have made frivolous objections against the scheme, just with the objective of deferring the implementation of the scheme. The courts have, on a number of occasions, overruled their objections. But companies had to bear the consequences in the form of time and cost over-runs.

6 Amalgamation – Accounting Aspects

6.1 Purchase Consideration

The consideration paid for the purpose of amalgamation is termed as Purchase Consideration (PC). PC includes any benefit passed on to the members of the transferee company from the transferor company in any form i.e. Equity shares, Preference shares, Debentures, Cash etc. There are no such restriction with the pricing of the securities issued, it can be at par, premium or at discount. Usually intrinsic value of share is taken into consideration for the said purpose.

Para 3 (g) of AS 14 on Accounting for Amalgamations (explained in para 14 & 15) issued by ICAI defines the term ‘consideration’ as ‘the aggregate of the shares and other securities issued and the payment made in the form of cash or other assets by the transferee company to the shareholders of the transferor company.

As per para 14 of AS 14, consideration may be in the form of

- Securities
- Cash
- Other Assets

Determination of Value

Consideration	Valuation
Securities	Value fixed by statutory authorities
Other Assets	a. Fair value with reference to market value or b. Fair Value may be respective net book values

Examination Approach

In the problem information for PC will be available in two ways:

A. List of the various consideration paid is given

B. On the basis of valuation of assets and liabilities taken over

A. List of the various considerations paid

In this case one should take care to add only those items paid to the members of the company and not to any outsider. Please, note that debenture holders are outsiders. Following are few such examples:

A List of the various considerations paid

Case I: A Ltd. take over B Ltd. and discharges consideration for the business as follows:

(i) Issued 42,000 fully paid equity shares of ₹ 10 each at par to the equity shareholders of B Ltd.

(ii) Issued fully paid up 15% preference shares of ₹ 100 each to discharge the preference shareholders worth ₹ 1,00,000 of B Ltd. at a premium of 10%.

(iii) It is agreed that the debentures of B Ltd. will be converted into equal number and amount of 13% debentures of A Ltd.

In the above case, our PC will be

For Equity Shareholders (42,000 shares X ₹ 10)	₹ 4,20,000
For Preference Shareholders (₹ 1,00,000 X 110 %)	₹ 1,10,000
Total Purchase Consideration	₹ 5,30,000

Payment to debenture holders is not to be considered as they are not the shareholders of the transferor company.

B. On the basis of valuation of assets and liabilities taken over

Case II: Where net assets taken over is directly given

A Ltd. takes over B Ltd.'s net assets worth ₹ 2,00,000 at an agreed price of ₹ 2,60,000. A Ltd discharges the PC by allotment of 20,000 equity shares of ₹ 10 each at an agreed value of ₹ 12 each of A Ltd. and by the payment of the balance in cash.

Purchase Consideration = ₹ 2,60,000 i.e. the agreed price.

The payment shall be done as under

Equity shares (20,000 x ₹ 12) = ₹ 2,40,000

Cash ₹ (2,60,000 – 2,40,000) = ₹ 20,000

Case III Given below is the summarized Balance Sheet of AB Ltd. as on 31.12.2017 on which date its assets and liabilities are taken over by CD Ltd.

Equity and Liabilities	*₹ '000*	*Assets*	*₹ '000*
Shareholders' funds		Non-current assets	
Share Capital		Fixed assets	
Equity Shares of ₹ 10 each fully paid up	52,00	Plant and Machinery	26,00
General Reserve	650	Furniture	12,00
12% Debentures	13,50	Inventory	24,00
Trade payables and		Trade receivables	7,50
Other current Liabilities	7,50	Cash	10,00
	79,50		79,50

CD Ltd. agreed to issue 12% Debentures to the debenture holders of AB Ltd. at par.

(1) **Assets and liabilities taken over at book values:** If all the assets and liabilities are takenover at par then determination of purchase consideration is very simple.

	₹ '000	*₹ '000*
Gross Assets taken over as per Balance Sheet		
Plant and Machinery		26,00
Furniture		12,00
Inventory		24,00
Trade receivables		7,50
Cash		10,00
		79,50
Less: Liabilities taken over		
12% Debentures	13,50	
Trade payables and other current liabilities	7,50	(21,00)
Value of net assets taken over		58,50

Thus, purchase consideration is ₹ 58,50 thousands.

(2) **Assets and liabilities taken over at valuation:** Suppose that CD Ltd. agreed to take over the asset of AB Ltd. at current values:

Plant and Machinery	30% depreciation
Furniture	20% depreciation
Inventory	+20% revaluation
Trade receivables	10% discount

Purchase consideration is to be determined as follows:

	₹ '000
Value of assets taken over:	
Plant and Machinery	18,20
Furniture	9,60
Inventory	28,80
Trade receivables	6,75
Cash	10,00
	73,35
Less : liabilities taken over	(21,00)
Purchase Consideration	52,35

Case IV: Where Intrinsic value of shares is calculated

Step 1 : Calculate the net worth of the business taken over at revalued figures

Step 2 : Divide net worth by the nos. of shares to get intrinsic value

Intrinsic Value = Net worth / No. of shares

In the example above, intrinsic value at book value =

	Book Value	*After Revaluation*
Net worth	₹ 58,50,000	₹ 52,35,000
No. of shares	5,20,000	5,20,000
Intrinsic Value per share	₹ 11.25 per share	₹ 10.07 per share

(3) When payments are more or less than value of net assets : Often the transferee pays more or less than the value of net assets taken over. Take for example, that CD Ltd. in case issued 600 thousand equity shares of ₹ 10 each at par to the equity shareholders of the transferor company AB Ltd. Then purchase consideration is ₹ 60,00 thousand, not ₹ 58,50 thousand. The difference ₹ 150 thousand is goodwill paid by CD Ltd. It is purchased goodwill.

Also take for example that CD Ltd. issued 565 equity shares of ₹ 10 each to the equity shareholders of AB Ltd. Here purchase consideration becomes ₹ 56,50 thousand, not ₹ 60,00 thousand. The difference ₹ 200 thousand is capital reserve to CD Ltd.

Let us suppose that CD Ltd. agreed to discharge 12% Debentures @ 110 by issuing its own debentures and to issue 550 thousand equity shares to the equity shareholders at a premium of ₹ 2 per share.

	₹ '000	*₹ '000*
Value of assets taken over:		
as per Balance Sheet value		79,50

Less: Liabilities taken over		
12% Debentures	14,85	
Trade payables and other Liabilities	7,50	(22,35)
Book Value of Net Assets		57,15
Purchase Consideration :		
550 thousand equity shares ₹ 10 each at a premium of ₹ 2		66,00
Goodwill paid ('000 ₹)		8,85

As per AS 14, consideration for the amalgamation means the aggregate of the shares and other securities issued and the payment made in the form of cash or other assets by the transferee company to the shareholders of the transferor company. The payment to debenture holders is not the part of purchase consideration. It is a mode of settling the liability which the transferee company is taking over in the scheme of amalgamation. Therefore correct amount of purchase consideration is ₹ 66,00,000).

6.2 Discharge of Purchase Consideration

As discussed earlier in this unit, the purchase consideration in the case of amalgamation is payable to the shareholders, both preference and equity, of the transferor company. This may be discharged by issuing preference and/or equity shares of the transferee company and partly by cash. Often the transferee company discharges claims of the preference shareholders of the transferor company at a premium or at a discount by issuing preference shares. Similarly, claims of the equity shareholders of the transferor company may also be discharged by issuing equity shares of the transferee company either at par or at premium or at discount.

Given below is an example stating the computational procedure of determining number of shares of the transferee company to be issued in discharge of the purchase consideration.

Example 1

Summarised Balance Sheet of PX Ltd. as on 31.12.2017

Equity and Liabilities	*₹ in '000*	*Assets*	*₹ in '000*
Share Capital:		Fixed Assets	50,00
Equity shares of ₹ 10 each	50,50	Inventory	20,00
8% Preference shares	9,50	Trade receivables	10,00
12% Debentures	15,00	Cash & Bank	5,00
Trade payables & Other Liabilities	10,00		
	85,00		85,00

ZX Ltd. agreed to take over PX Ltd. by issuing requisite number of preference shares of ₹ 10 each at 5% discount to the preference shareholders of PX Ltd. and requisite number of equity shares of ₹ 10 each at par to the equity shareholders of PX Ltd. Purchase consideration is settled as per book value of the assets and the debentures will be taken over by ZX Ltd. on the agreement that such will be paid off at 10% premium after one year. Debenture-holders of PX

Ltd. will accept 12% debentures of ZX Ltd.

Purchase Consideration:		*₹ in '000*
Book Value of assets taken over		85,00
Less : Liabilities taken over:		
Debentures	15,00	
Add: Premium on redemption of debentures (1,500 × 10 %)	1,50	
	16,50	
Trade payables & Other Liabilities	10,00	(26,50)
Purchase Consideration		58,50

To be discharged by 8% preference shares and equity shares of ZX Ltd.

Computation of number of shares to be issued:

1) Preference shares to be issued: $\frac{950 \text{ thousand}}{₹\,9.5 \text{ (i.e} ₹\,10 - 5\% \text{ discount)}}$ = 100 thousand

Balance of purchase consideration: ₹ 58,50 thousand - ₹ 950 thousand = ₹ 49,00 thousand

2) Equity shares to be issued $\frac{₹\,49{,}00 \text{ thousand}}{₹\,10}$ = 490 thousand

Example 2

Given below is the summarized Balance Sheet of LMN Ltd. as on 31.12.2017 at which date the company was taken over by PQR Ltd.

Equity and Liabilities	*₹ in '000*	*Assets*	*₹ in '000*
Share Capital		Fixed assets	80,00
Equity Shares	70,00	Current assets	42,00
Preference shares	12,00		
12% Debentures	25,00		
Trade payables	15,00		
	122,00		122,00

Decided that fixed assets of LMN Ltd. will be taken over at a valuation of ₹ 102,00 thousand. 8% preference shareholders of LMN Ltd. are to be discharged by issuing 8% preference shares of the transferee company to the extent of 50% and the balance in cash. Claims of the equity shareholders to be discharged by issuing equity shares of the transferee company to the extent of 60% and the balance in cash. The transferee company will issue preference shares at par but equity shares of ₹ 10 each at a premium of 20%

Purchase Consideration:

	₹ in '000
Value of assets taken over	
Fixed assets	102,00

Current assets	42,00
	144,00
Less: Liabilities taken over:	(40,00)
Purchase Consideration	104,00
To be discharged by:	
Preference shares (12,00 x 50%)	6,00
Equity shares	55,20
Cash	42,80
	104,00

Number of shares to be issued:

Preference Share holders

Preference Shareholders of LMN Ltd.	₹ 12,00,000
50% by 8% Preference Shares of PQR Ltd.	₹ 6,00,000
Balance by Cash	₹ 6,00,000
No. of Preference Shares (₹ 10 each)	60,000 shares

Equity Shareholders

	₹
Total Purchase Consideration	1,04,00,000
Less : Preference Shareholders portion	(12,00,000)
Equity Shareholders portion	92,00,000
60% by Equity shares of PQR Ltd (₹ 10 + 20 % premium = ₹ 12 per share)	55,20,000
Balance By Cash	36,80,000
No. of equity shares 4,60,000 shares (5,520 thousand / ₹ 12)	

Example 3

Given below are summarized Balance Sheets of A Ltd. & B Ltd. as on 31st Dec. 2017 at which date the companies were amalgamated and a new company C Ltd. was formed.

Balance Sheets of A Ltd. & B Ltd.

Equity and Liabilities	*A Ltd.*	*B Ltd.*	*Assets*	*A Ltd.*	*B Ltd*
	(₹ in '000s)			*(₹ in '000s)*	
Equity Shares of			Fixed Assets	85,00	70,00
₹ 10 each	70,00	60,00	Current assets	20,00	30,00
Reserve	20,00	30,00			
Trade payables &					

Other current liabilities	15,00	10,00			
	105,00	100,00		105,00	100,00

Agreed that fixed assets of A Ltd. would be valued at ₹ 100,00 thousand and that of B Ltd. at ₹ 95,00 thousand. C Ltd. would issue requisite number of equity shares of ₹ 10 each at 10% premium to discharge claim of the equity shareholders of A Ltd. & B Ltd. Let us see how many shares of C Ltd. should be issued to take over the businesses of A Ltd. & B Ltd.

Purchase Consideration:

	A Ltd.	*B Ltd.*
Value of assets taken over	₹ in '000s	₹ in '000s
Fixed assets	100,00	95,00
Current assets	20,00	30,00
	120,00	125,00
Less: Liabilities taken over	(15,00)	(10,00)
Purchase Consideration	105,00	115,00

Total Purchase Consideration = 220,00 thousand (105,00 of A + 115,00 of B)
Number of equity shares to be issued by C Ltd.

$$\frac{₹\,22{,}000 \text{ thousand}}{₹\,11\ (₹\,10 + 10\%\ \text{premium})} = 2{,}000 \text{ thousand equity shares}$$

So, C Ltd. will be formed with the paid up capital of ₹ 200,00 thousand and share premium of ₹ 20,00 thousand.

6.3 Types of Amalgamation

The Institute has issued in October, 1994, AS 14 on 'Accounting for Amalgamations'. AS 14 is mandatory in nature and is applicable in respect of accounting periods commencing on or after 1/4/1995. AS 14 deals with accounting for amalgamations and the treatment of any resultant goodwill or reserve. Amalgamations fall into two broad categories.

1. Amalgamations in the nature of merger; and
2. Amalgamations in the nature of purchase

In the first category are those amalgamations where there is a genuine pooling not merely of the assets and liabilities of the amalgamated companies but also of the shareholders' interest and of the businesses of these companies. Such amalgamations are called 'amalgamations in the nature of merger'. The basic conditions of these amalgamations are:

(a) All the assets and liabilities of the transferor company become, after amalgamation, the assets and liabilities of the transferee company.

(b) Shareholders holding not less than 90% of the face value of the equity shares of the transferor company (other than the equity shares already held therein, immediately before the amalgamation, by the transferee company or its subsidiaries or their nominees) become equity shareholders of the transferee company by virtue of the amalgamation.

(c) The consideration for the amalgamation receivable by those equity shareholders of the transferor company who agree to become equity shareholders of the transferee company is discharged by the transferee company wholly by the issue of equity shares in the transferee company, except that cash may be paid in respect of any fractional shares.

(d) The business of the transferor company is intended to be carried on, after the amalgamation, by the transferee company.

(e) No adjustment is intended to be made to the book values of the assets and liabilities of the transferor company when they are incorporated in the financial statements of the transferee company except to ensure uniformity of accounting policies.

In the second category are those amalgamations which are in effect a mode by which one company acquires another company and, as a consequence, the shareholders of the company which is acquired normally do not have a proportionate share in the equity of the combined company or the business of the company which is acquired is not intended to be continued. Such amalgamations are called 'amalgamations in the nature of purchase'. In short, those amalgamations which do not satisfy any one or more of the conditions specified in (a) through (e) above are known as amalgamations in the nature of purchase.

6.4 Methods of Accounting for Amalgamation

There are two main methods of accounting for amalgamations:

(a) The Pooling of Interests Methods and

(b) The Purchase Method.

The first method is applied in case of amalgamation in the nature of merger and the second method in case of amalgamation in the nature of purchase.

♦ **The Pooling of Interests Method:** Under this method the assets, liabilities and all reserves of the transferor company are recorded by transferee company at their existing carrying amounts unless the carrying amounts are to be adjusted to follow a uniform set of accounting policies. The effects on the financial statements of the transferee company of any changes in accounting policies are to be reported in accordance with AS 5. The balance of the profit and loss account of the transferor company should be aggregated with the corresponding balance of the transferee company or transferred to general reserve, if any.

  The difference between the amount recorded as share capital issued (plus any additional consideration in the form of cash or other assets) and the amount of share capital of transferor company should be adjusted in reserves.

  No goodwill is recognized under the pooling of interest method as there is no acquistion.

  'Transferor company' means the company which is amalgamated into another company.

'Transferee company' means the company into which a transferor company is amalgamated.

♦ **The Purchase Method :** Here the assets and liabilities of the transferor company should be incorporated in the transferee company's financial statements in either of the following two ways:

(i) at their existing carrying amounts; or

(ii) the purchase consideration should be allocated to individual identifiable assets and liabilities on the basis of their fair values at the date of amalgamation.

The reserves of the transferor company, other than statutory reserves, should not be included in the financial statements of the transferee company. In case of statutory reserves (i.e., Development Allowance Reserve, Investment Allowance Reserve etc.) where the maintenance of such reserves for a specific period is required by statute, these should be recorded in the financial statements of the transferee company with the help of the following entry:

Amalgamation Adjustment Reserve A/c Dr.

To Statutory Reserves A/c

In the Balance Sheet, 'Amalgamation Adjustment Reserve' shall be presented as a separate line item. When the identity of the statutory reserves is no longer required to be maintained, both the reserves and the aforesaid account are reversed.

The Standard gives a title, which reads as "Reserve". This gives rise to following requirements:

1. The corresponding debit is "also" to a Reserve Account
2. That Reserve account will show a negative balance
3. But it has to be shown as a separate line item - Which implies, that this debit "cannot be set off against Statutory reserve taken over"
4. So the presentation will be as follows

Reserves

Description	Amount (Current year)	Amount (Previous Year)
Statutory Reserve (taken over from transferor company)		
General Reserve		
Retained Earnings		
Amalgamation Adjustment Reserve (negative balance)	(--)	(--)

Any excess of the amount of purchase consideration over the acquired net assets of the transferor company should be recognised in the transferee company's financial statements as goodwill arising on amalgamation. On the other hand if the amount of purchase consideration falls short of the value of net assets acquired, such shortfall should be recognised as capital reserve.

6.5 Treatment of Goodwill arising on Amalgamation

Goodwill on amalgamation can arise only if 'The Purchase Method' is followed.

The goodwill arising on amalgamation should be amortised to income on a systematic basis over its useful life. The amortisation period should not exceed five years unless a somewhat longer period can be justified.

6.6 Amalgamation after the Balance Sheet Date

When an amalgamation is effected after the balance sheet date but before the issuance of the financial statements of either party to the amalgamation, disclosure is made in accordance with AS 4, 'Contingencies and Events Occurring after the Balance Sheet Date', but the amalgamation is not incorporated in the financial statements.

Illustration 5

AX Ltd. and BX Ltd. amalgamated on and from 1st January 2017. A new Company ABX Ltd. was formed to take over the businesses of the existing companies.

Summarized Balance Sheet as on 31-12-2017

Equity and Liabilities	*AX Ltd. ₹ '000*	*BX Ltd. ₹ '000*	*Assets*	*AX Ltd. ₹ '000*	*BX Ltd. ₹ '000*
Share Capital			*Fixed*		
Equity Shares of			*Assets*	*85,00*	*75,00*
₹ 10 each	*60,00*	*70,00*	*Investment*	*10,50*	*5,50*
General Reserve	*15,00*	*20,00*	*Inventory*	*12,50*	*27,50*
P & L A/c	*10,00*	*5,00*	*Trade receivables*	*18,00*	*40,00*
Investment Allowance			*Cash & Bank*	*4,50*	*4,00*
Reserve	*5,00*	*1,00*			
Export Profit Reserve	*50*	*1,00*			
12% Debentures	*30,00*	*40,00*			
Trade payables	*10,00*	*15,00*			
	130,50	*152,00*		*130,50*	*152,00*

ABX Ltd. issued requisite number of shares to discharge the claims of the equity shareholders of the transferor companies.

Prepare a note showing purchase consideration and discharge thereof and draft the Balance Sheet of ABX Ltd.

Solution: (Assumption: Amalgamation is in the nature of merger)

(1) Calculation of Purchase Consideration

		AX Ltd. ₹ '000		BX Ltd. ₹ '000
Assets taken over:				
Fixed assets		85,00		75,00
Investments		10,50		5,50
Inventory		12,50		27,50
Trade receivables		18,00		40,00
Cash & Bank		4,50		4,00
Gross Assets		130,50		152,00
Less : Liabilities				
12% Debentures	30,00		40,00	
Trade payables	10,00	(40,00)	15,00	(55,00)
Net Assets taken over		90,50		97,00
Less: Reserves and Surplus:				
General Reserve	15,00		20,00	
P & L A/c	10,00		5,00	
Investment Allowance Reserve	5,00		1,00	
Export Profit Reserve	50	(30,50)	1,00	(27,00)
Purchase Consideration		60,00		70,00

Total Purchase Consideration = 130,00 (60,00 of AX Ltd. & 70,00 of BX Ltd.)

2. Discharge of Purchase Consideration

No. of shares to be issued to AX Ltd = $\frac{\text{Net Assets taken over of AX Ltd.}}{\text{Net Assets taken over of AX Ltd. and BX Ltd.}}$ x Purchase Consideration

No. of shares to be issued to BX Ltd = $\frac{\text{Net Assets taken over of BX Ltd.}}{\text{Net Assets taken over of AX Ltd. and BX Ltd.}}$ x Purchase Consideration

	AX Ltd. ₹'000	BX Ltd. ₹ '000
$130{,}00 \times \frac{90{,}50}{187{,}50} = 6{,}27{,}500$ * Equity shares of ₹ 10 each	62,75	

* The total purchase consideration is to be discharged by ABX Ltd. in such a way that the rights of the shareholders of AX Ltd. and BX Ltd. remain unaltered in the future profits of ABX Ltd.

$130,00 \times \frac{97,00}{187,50} = 6,72,500$ Equity shares of ₹ 10 each		67,25

Balance Sheet of ABX Ltd. as on 1.1.2017

Particulars	*Note No.*	*(₹ 000)*
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
(a) Share Capital	1	130,00
(b) Reserves and Surplus	2	57,50
(2) **Non-Current Liabilities**		
Long-term borrowings	3	70,00
(3) **Current Liabilities**		
(a) Trade payables (10,00 + 15,00)		25,00
Total		282,50
II. **Assets**

Capital Reserve	*300*	*200*	*Inventory*	*325*	*269*

Investment Allowance	*50*	*30*	*Trade receivables*	*330*	*270*
Reserve			*Cash and Bank*	*385*	*251*
P & L Account	*15*	*12*			
Secured Loans:					
13% Debentures					
(₹ 100 each)	*50*	*28*			
Unsecured Loan:					
Public deposits	*25*	*—*			
Current Liabilities					
and Provisions:					
Trade payables	*165*	*75*			
	19,00	*13,25*		*19,00*	*13,25*

Other information

(i) 13% Debenture holders of Long Ltd. and Short Ltd. are discharged by Moderate Ltd. by issuing such number of its 15% Debentures of ₹ 100 each so as to maintain the same amount of interest.

(ii) Preference Shareholders of the two companies are issued equivalent number of 15% preference shares of Moderate Ltd. at a price of ₹ 125 per share (face value ₹ 100)

(iii) Moderate Ltd. will issue 4 equity shares for each equity share of Long Ltd. and 3 equity shares for each equity share of Short Ltd. The shares are to be issued @ ₹ 35 each, having a face value of ₹ 10 per share.

(iv) Investment allowance reserve is to be maintained for two more years.

Prepare the balance sheet of Moderate Ltd. as on 1st April, 2017 after the amalgamation has been carried out on the basis of the following assumption:

(a) Amalgamation is in the nature of merger.

(b) Amalgamation is in the nature of purchase.

Solution

Para 3 (g) of AS 14 defines the term 'consideration' as the value of shares, other securities and any payment made in the form of cash or other assets by the transferee company to the shareholders of transferor company. Therefore, payments made to debenture holders should not be construed as part of consideration.

Computation of Purchase consideration (Payment Basis)

			(₹ in lakhs)
		Long Ltd.	***Short Ltd.***
(1)	Preference Shareholders:		
	3,20,000 shares @ ₹ 125 each	400.00	
	1,75,000 shares @ ₹ 125 each		218.75

(2)	Equity Shareholders:		
	(4 × 8,50,000) = 34,00,000 equity shares @ ₹ 35 each	1190.00	
	(3 × 7,25,000) = 21,75,000 equity shares @ ₹ 35 each		761.25
		15,90.00	9,80.00

The Massive Company Ltd. was incorporated on 1st July 2017 for the purpose of acquiring North Ltd., South Ltd., and West Ltd.

The summarized balance sheets of these companies as on 30th June 2017 are as follows :

	North Ltd. ₹	*South Ltd.* ₹	*West Ltd.* ₹
Assets			
Tangible fixed assets –at cost less depreciation	*5,00,000*	*4,00,000*	*3,00,000*

Goodwill	*Nil*	*60,000*	*Nil*
Other assets	*2,00,000*	*2,80,000*	*85,000*
	7,00,000	*7,40,000*	*3,85,000*

	North Ltd. ₹	*South Ltd.* ₹	*West Ltd.* ₹
Liabilities			
Issued ordinary share capital shares of ₹ 10 each	*4,00,000*	*5,00,000*	*2,50,000*
P & L A/c	*1,50,000*	*1,10,000*	*60,000*
10% Debentures	*70,000*	*Nil*	*40,000*
Trade payables	*80,000*	*1,30,000*	*35,000*
	7,00,000	*7,40,000*	*3,85,000*
	₹	₹	₹
Average annual profits before			
Debentures interest (July 2016 to June 2017 inclusive)	*90,000*	*1,20,000*	*50,000*
Professional valuation of tangible assets on			
30th June 2017	*6,20,000*	*4,80,000*	*3,60,000*

(1) The directors in their negotiations agreed that: (i) the recorded goodwill of South Ltd. is valueless; (ii) the "Other assets" of North Ltd. are worth ₹ 30,000; (iii) the valuation of 30th June 2017 in respect of tangible fixed assets should be accepted, (iv) these adjustments are to be made by the individual company before the completion of the acquisition.

(2) The acquisition agreement provides for the issue of 12 per cent unsecured Debentures to the value of the net assets of companies North Ltd., South Ltd., and West Ltd., and for the issuance of ₹ 10 nominal value ordinary shares for the capitalized average profit of each acquired company in excess of net assets contributed. The capitalisation rate is established at 10 per cent.

You are required to calculate purchase consideration and show the purchase consideration as discharged.

Solution

Smith Ltd. is considering buying the business of B Ltd., the final accounts of which for the last three years were as follows:

Draft Profit and Loss Accounts for the years ended 31st Dec.

	2015 ₹	*2016* ₹	*2017* ₹
Sales	*2,00,000*	*1,90,000*	*2,24,000*
Less: Material consumed	*1,00,000*	*95,000*	*1,12,000*
Business expenses	*80,000*	*80,000*	*82,000*

Depreciation	*12,000*	*13,000*	*14,000*
Net Profit	*8,000*	*2,000*	*16,000*

Draft Balance Sheets as at 31st Dec.

	2014 ₹	2015 ₹	2016 ₹	2017 ₹
Fixed Assets, at cost	1,00,000	1,20,000	1,40,000	1,80,000
Less : Depreciation	(70,000)	(82,000)	(95,000)	(1,09,000)
	30,000	38,000	45,000	71,000
Inventory-in-trade	16,000	17,000	18,500	21,000
Trade receivables	21,000	24,000	26,000	28,000
Cash in hand and at Bank	32,000	11,000	28,000	13,200
Prepaid Expenses	1,000	500	2,000	1,000
	1,00,000	90,500	1,19,500	1,34,200
Equity Capital	50,000	50,000	70,000	70,000
Securities Premium	—	—	5,000	5,000
General Reserve	16,000	24,000	26,000	42,000
Debentures	20,000	—	—	—
Trade payables	11,000	13,000	14,000	14,000
Accrued Business Expenses	3,000	3,500	4,500	3,200
	1,00,000	90,500	1,19,500	1,34,200

Smith Ltd. wishes the offer to be based upon trading cash flows rather than book profits. By trading cash flow is meant cash received from Trade receivables less cash paid to Trade payables and for business expenses (excluding depreciation), together with an allowance for average annual expenditure on fixed assets of ₹ 15,000 per year.

The actual expenditure on fixed assets is to be ignored, as is any cash received or paid out on the issue or redemption of shares or debentures.

Smith Ltd. wishes the trading cashflow to be calculated for each of the years 2015, 2016 and 2017, and for these to be combined using weighting of 20% for 2015, 30% for 2016 and 50% for 2017 to give an average annual trading cashflow.

Smith Ltd. considers that the average annual trading cashflow should show a return of 10% on its investment.

You are required to calculate:

(a) the trading cashflow for each of the years 2015, 2016 and 2017;

(b) the weighted average annual trading cashflow

(c) the price which Smith Ltd. should offer for the business.

Solution

(a) **Trading Cash Flows of B Ltd.**

	2015 ₹	2016 ₹	2017 ₹
Profit earned during the years	8,000	2,000	16,000
Add : Depreciation (As given in P & L Statement)	12,000	13,000	14,000
Increase in Trade payables	2,000	1,000	—
Increase in Accrued Business Expenses	500	1,000	—
Decrease in Prepaid Expenses	500	—	1,000
(A)	23,000	17,000	31,000
Less :Increase in Inventory	1,000	1,500	2,500
Increase in Trade receivables	3,000	2,000	2,000
Increase in Prepaid Expenses	—	1,500	—
Decrease in Accrued Business Expenses	—	—	1,300
(B)	4,000	5,000	5,800
Gross Trading Cash flow (A)–(B)	19,000	12,000	25,200
Less : Adjustment for allowance for average expenditure in fixed assets	(15,000)	(15,000)	(15,000)
Trading Cash Flow	4,000	(3,000)	10,200

(b) **Weighted average annual trading Cash flow**

Year	*Trading cash flow*	*Weight*	*Weighted Trading Cash flow*
2015	4,000	20%	800
2016	(3,000)	30%	(900)
2017	10,200	50%	5,100
Total	11,200		5,000

(c) **Price Smith Ltd. should offer for the business**

Return on Investment = 10%

Weighted Average annual cash flow = ₹ 5,000

Therefore, the price to be offered will be=

$$\frac{\text{Average Annual Cash Flow}}{\text{Return on Investment}} = \frac{₹\ 5{,}000}{10\%} = ₹\ 50{,}000$$

Illustration 10

Batliboi & Co. Ltd. carried on manufacturing business. Its products were sold to wholesalers and the company had its own retail shop. Adhikary & Co., Private Ltd. carried on similar manufacturing business, but all goods produced were sold through the company's own retail shops.

The summarised balance sheets of the two companies as at 31st March, 2017 were as follows:

	Batliboi & Co. Ltd. ₹	Adhikary & Co. (P) Ltd. ₹		Batliboi & Co. Ltd. ₹	Adhikary & Co. (P) Ltd. ₹
Share Capital			Fixed Assets :		
Authorised Equity			Freehold Properties		
Shares of ₹ 10	40,00,000	6,00,000	at cost	10,00,000	2,50,000
Issued & fully paid up	25,00,000	6,00,000	Plant & Machinery at		
P & L A/c	3,40,000	90,000	cost less depreciation	13,00,000	1,00,000
Trade payables	4,20,000	70,000	Total Fixed Assets	23,00,000	3,50,000
			Current Assets :		
			Inventory	4,80,000	1,20,000
			Trade receivables	2,30,000	80,000
			Bank	2,50,000	2,10,000
	32,60,000	7,60,000		32,60,000	7,60,000

The original cost of Plant and Machinery was:

Batliboi & Co. Ltd.	₹ 26,00,000
Adhikary & Co. (P) Ltd.	₹ 2,00,000

The following arrangements were made and carried out on April 1, 2017:

(1) *Batliboi & Co. Ltd purchased from the shareholders of Adhikary & Co. (P) Ltd. all the issued shares @ ₹ 14 per share.*

(2) *The shareholders of Adhikary & Co. (P) Ltd. took over one of the freehold properties of Adhikary & Co. (Private) Ltd. for ₹ 60,000, at the book value of the same. It was agreed that the amount should be set off against the amount due to them under (1) above and the balance due to them to be satisfied by the issue of an appropriate number of equity shares in Batliboi & Co. Ltd. at ₹ 19.50 per share*

The necessary transfer in regard to the setting off the price of the property taken over by the shareholders against the amount due to them from Batliboi & Co. Ltd. were made in the books of the two companies.

(3) *All manufacturing was to be carried on by Batliboi and Co. Ltd. and all retail business is to be carried on by Adhikary & Co. (Private) Ltd. in this connection.*

(i) *Batliboi & Co. Ltd. purchased the whole of Adhikary & Co. (P) Ltd.'s plant and machinery for ₹ 1,50,000 and certain of their free-hold property (cost ₹ 1,00,000) at ₹ 1,20,000.*

(ii) Adhikary & Co. (P) Ltd. purchased Batliboi & Co. Ltd's. freehold retail shop buildings (cost to Batliboi &. Co. Ltd, ₹ 75,000) at ₹ 60,000 and took over the retail inventory at ₹ 80,000 at the book value.

(4) Batliboi & Co. Ltd. drew a cheque in favour of Adhikary & Co. (P) Ltd. for the net amount due, taking into account all the matters mentioned above.

(5) Immediately after the transfer of shares in (1) above, Adhikary & Co. (P) Ltd. declared and paid a dividend of ₹ 60,000 (ignore Dividend Distribution Tax).

You are required to prepare the Balance Sheets of Batliboi & Co. Ltd. and Adhikary & Co. (P) Ltd. immediately after the completion of the above transaction.

Solution

Balance Sheet of Batliboi & Co as on 31st March, 2017

Particulars	*Note No.*	*(₹)*
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
(a) Share Capital	1	29,00,000
(b) Reserves and Surplus	2	7,05,000
(2) **Current Liabilities**		
Trade Payables		4,20,000
Total		40,25,000
II. **Assets**		
(1) **Non-current assets**		
(a) Fixed assets		
(b) Tangible assets	4	24,95,000
(c) Non-current Investments	5	7,80,000
(2) **Current assets**		
(a) Inventories		4,00,000
(b) Trade Receivables		2,30,000
(c) Cash & Cash equivalents		1,20,000
Total		40,25,000

Notes to Accounts

		(₹)	*(₹)*
1.	**Share Capital**		
	2,90,000 Shares of ₹10 each fully paid up of which 40,000 shares were issued pursuant to a contract without payment being received in cash		29,00,000
2.	**Reserves and surplus**		
	Securities Premium Account	3,80,000	
	Profit & Loss Account	3,25,000	7,05,000

3.	**Tangible Assets**			
	Freehold Properties			
	As per last balance sheet	10,00,000		
	Addition during the year	1,20,000		
		11,20,000		
	Less: Sold during the year	(75,000)	10,45,000	
	Plant & Machinery			
	As per last balance sheet	13,00,000		
	Addition during the year	1,50,000	14,50,000	24,95,000
4.	**Non-current Investment**			
	Shares in subsidiary company			7,80,000

Working Notes :

(1) Calculation of shares to be issued by Batliboi & Co Ltd. to the shareholders of Adhikary & Co. (P) Ltd. [Basis Point (1) and (2) of the question]

	₹
60,000 shares @ ₹ 14 per share	8,40,000
Less : Value of freehold property	(60,000)
Net amount due	7,80,000
No of shares issued 7,80,000 / ₹ 19.5 = 40,000 shares	
Amount credited to Share Capital	4,00,000
Amount credited to Securities Premium	3,80,000
	7,80,000

(2) Net Amount Payable to Adhikary & Co. (P) Ltd.

Particulars	Amount
Assets taken over by Batliboi & Co. Ltd.	
Plant & Machinery	₹ 1,50,000
Free-hold Property	₹ 1,20,000
Total (A)	₹ 2,70,000
Assets sold to Adhikary & Co. (P) Ltd.	
Freehold Retail shop building	₹ 60,000
Retail Stock	₹ 80,000
Total (B)	₹ 1,40,000
Net Payable (A-B)	₹ 1,30,000
Add : Freehold properties taken over by the shareholders of Adhikary & Co. (P) Ltd. (Para 2 of point 2)	₹ 60,000
Net Amount Payable	₹ 1,90,000

(3) ₹ 15,000 loss on the sale of Building to Adhikary & Co. (P) Ltd., has been debited to the Profit & Loss Account of Batliboi & Co.

(4) Investment A/c has been credited by dividend received ₹ 60,000 out of pre-acquisition profit from Adhikary & Co.

(5) Cash Balance:

As given	2,50,000
Add : Dividend received	60,000
	3,10,000
Less : Paid to Adhikary & Co. Ltd. including ₹ 60,000 for assets taken over by its erstwhile shareholders	(1,90,000)
	1,20,000

Balance Sheet of Adhikary & Co. (P) Ltd. as on 31st March, 2017

Particulars	*Note No.*	*(₹)*
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
(a) Share Capital	1	6,00,000
(b) Reserves and Surplus	2	1,00,000
(2) **Current Liabilities**		
Trade Payables		70,000
Total		7,70,000
II. **Assets**		
(1) **Non-current assets**		
Fixed assets		
Tangible assets	4	1,50,000
(2) **Current assets**		
(a) Inventories		2,00,000

Rich Ltd. and Poor Ltd. decided to amalgamate their business with a view to a public share issue. A holding company, Mix Ltd., is to be incorporated on 1st May 2017 with all authorised capital of ₹ 60,000,000 in ₹ 10 ordinary shares. The company will acquire the entire ordinary share capital of Rich Ltd. and of Poor Ltd. in exchange for an issue of its own shares.

The consideration for the acquisition is to be ascertained by multiplying the estimated profits available to *the ordinary shareholders by agreed price earnings ratio. The following relevant figures are given:*

	Rich Ltd. ₹	*Poor Ltd.* ₹
Issued share capital		
Ordinary shares of ₹ 10 each	*30,00,000*	*12,00,000*
6% Cumulative Preference shares of ₹ 100 each	*—*	*10,00,000*
5% Debentures, redeemable in 2018		*8,00,000*
Estimated annual maintainable profits, before deduction of debenture interest & taxation	*6,00,000*	*2,40,000*
Price/earning ratio	*15*	*10*

The shares in the holding company are to be issued to members of the subsidiaries on 1st June 2017, at a premium of ₹ 2.50 a share and thereafter these shares will be marketable on the Stock Exchange.

It is anticipated that the merger will achieve significant economics but will necessitate additional working capital. Accordingly, it is planned that on 31st December 2017, Mix Ltd. will make a further issue of 60,000 ordinary shares to the public for cash at the premium of ₹ 3.75 a share. These shares will not rank for dividends until 31st December 2017.

In the period ending 31st December 2017, bank overdraft facilities will provide funds for the payment of management etc. expenses estimated at ₹ 6,000.

It is further assumed that interim dividends on ordinary shares, relating to the period from 1st June to 31st December 2017 will be paid on 31st December 2017 by Mix Ltd. at 3½ %, by Rich Ltd. at 5% and by Poor Ltd. at 2%.

You are required to project, as on 31st December 2017 for Mix Ltd., (a) the Balance Sheet as it would appear immediately after fully subscribed share issue, and (b) the Profit and Loss Account for the Period ending 31st December 2017.

Assume the rate of corporation tax to be 40%. You can make any other assumption you consider relevant.

Solution

Projected Balance Sheet of Mix Ltd. as on December 31, 2017

Particulars	*Note No.*	*(₹)*
I. **Equity and Liabilities**		
(1) **Shareholder's Funds**		
(a) Share Capital	1	54,00,000
(b) Reserves and Surplus	2	14,25,000
Total		68,25,000
II. **Assets**		
(1) **Non-current assets**		
Non-current Investments	3	60,00,000

(2) **Current assets**		
Cash & Cash equivalents		8,25,000
Total		68,25,000

Projected Profit and Loss Account for the Period ending December 31, 2017

Particulars		*Note No.*	*(₹)*
I. Other Income		4	1,74,000
II. Total Revenue	(A)		1,74,000
I. Expenses			
Management Expenses			6,000
II. Total Expenses	(B)		6,000
Net Profit before Tax (A-B)			1,68,000

Notes to Accounts

		(₹)	*(₹)*
1.	**Share Capital**		
	Authorised : 6,00,000 Equity shares of ₹10 each		60,00,000
	Issued : 5,40,000 (WN1) Equity shares of ₹ 10 each	54,00,000	54,00,000
2.	Reserves and surplus		
	Securities Premium Account (WN 1)		14,25,000
	Profit and Loss	1,68,000	
	Deduct Dividend WN 3	(1,68,000)	-
			14,25,000
3.	**Non-current Investments**		
	Subsidiary Companies shares at cost		60,00,000
4.	**Other Income**		
	Dividend Received		
	Rich Ltd. (30,00,000 X 5 %)	1,50,000	
	Poor Ltd. (12,00,000 X 2 %)	24,000	1,74,000

Working Notes:

1. Share Capital

	Rich Ltd.	*Poor Ltd.*
Estimated annual maintainable profits before deduction	₹	₹
of debenture interest and taxation	6,00,000	2,40,000
Deduct Debenture interest	-	(40,000)
	6,00,000	2,00,000
Deduct Corporation tax 40 percent	(2,40,000)	(80,000)

	3,60,000	1,20,000
Deduct Preference dividend	–	(60,000)
Profit for equity shareholders	3,60,000	60,000
P/E Ratio	15	10
Total consideration (Profit x P.E. Ratio)	54,00,000	6,00,000
Share Issue Price (₹ 10 + ₹ 2.5 Premium)	₹ 12.5	₹ 12.5
Number of shares to be issued	4,32,000 shares	48,000 shares
Share capital (₹ 10 x no. of shares to be issued)	43,20,000	4,80,000
Securities premium (₹ 2.50 x no. of shares to be issued)	10,80,000	1,20,000

Total Shares Issued to Rich Ltd. and Poor Ltd. = 4,32,000 + 48,000 = 4,80,000

Shares issued to public = 60,000

Total Shares issued as on 31st Dec 2017 = 5,40,000

Securities Premium Balance

From shares issued to Rich & Poor Ltd. = 4,80,000 x 2.5 = ₹ 12,00,000

From shares issued to public = 60,000 x 3.75 = ₹ 2,25,000

Total Securities Premium = ₹ 14,25,000

(2) Bank Account

	₹		₹
To Shares issued (Dec.31, 2017)		By Management expenses	6,000
60,000 shares at ₹ 13.75 each	8,25,000	By Dividend paid (WN 3)	1,68,000
To Dividends received:		By Balance c/d	8,25,000

Trade payables	*1,00,000*		
	10,00,000		*10,00,000*

The consideration was agreed to be paid as follows:

(a) A payment in cash of ₹ 5 per share in B Ltd. and

(b) The issue of shares of ₹ 10 each in A Ltd., on the basis of 2 Equity Shares (valued at ₹ 15) and one 10% cumulative preference share (valued at ₹ 10) for every five shares held in B Ltd.

The whole of the share capital consists of shareholdings in exact multiple of five except the following holding.

Chopra	*116*	
Karki	*76*	
Amar Singh	*72*	
Malhotra	*28*	
Other individuals	*8*	*(eight members holding one share each)*
	300	

It was agreed that A Ltd. will pay in cash for fractional shares equivalent at agreed value of shares in B Ltd. i.e. ₹ 65 for five shares of ₹ 50 paid.

Prepare a statement showing the purchase consideration receivable in shares and cash.

Solution

(a) Schedule of Fraction

	Holding of Shares (A)	*Exchangeable in nearest multiple of five (B)*	*Exchange in equity (C) = (B) / 5 X 2*	*Preference Exchangeable (D) = (B) / 5 X 1*	*Non (E) = (A) – (B)*
Chopra	116	115	46	23	1
Karki	76	75	30	15	1
Amarsingh	72	70	28	14	2
Malhotra	28	25	10	5	3
Others	8	-	-	-	8
	300	285	114	57	15

(b) Shares Exchangeable: Equity Shares in A Ltd.

		No.		No.
(i)	80,000–300 (Total A above)	79,700	2/5 there of	31,880
	300-15 (Total E Above)	285	2/5 there of	114
		79,985		31,994

Shares Exchangeable: Preference Shares in A Ltd.

Shares held			
as in b (i)	79,700	1/5 there of	15,940
as in b (ii)	285	1/5 there of	57
	79,985		15,997

(c) There are 15 shares in B Ltd. which are not capable of exchange into equity and preference shares of A Ltd. they will be paid $150 \times \frac{65}{50} =$ ₹ 195

Purchase Consideration	₹
31,994 Equity Shares @ ₹ 15 each	4,79,910
15,997 Preference shares @ ₹ 10 each	1,59,970
Cash on 79,985 @ ₹ 5 each	3,99,925
	10,39,805
Add: Cash for 15 shares	195
	10,40,000

Illustration 13

The summarized Balance Sheets of Big Ltd. and Small Ltd. as on 31.03.2017 were as follows:

	Big Ltd.	Small Ltd.		Big Ltd.	Small Ltd.
	(₹)	(₹)		(₹)	(₹)
Equity Share Capital (₹ 10)	*8,00,000*	*3,00,000*	*Building*	*2,00,000*	*1,00,000*
10% Preference Share Capital (₹ 100)	–	*2,00,000*	*Machinery*	*5,00,000*	*3,00,000*
			Furniture	*1,00,000*	*60,000*
General reserve	*2,50,000*	*70,000*	*Investment:*		
Profit and Loss Account	*2,00,000*	*1,00,000*	*6,000 shares of Small Ltd.*	*60,000*	–
Trade payables	*2,00,000*	*3,00,000*			
			Inventory	*1,50,000*	*1,90,000*
			Trade receivables	*3,50,000*	*2,50,000*

			Cash and Bank	90,000	70,000
	14,50,000	9,70,000		14,50,000	9,70,000

Big Ltd. has taken over the entire undertaking of Small Ltd. on 30.09.2017, on which date the position of current assets except Cash and Bank balances and Current Liabilities were as under:

	Big Ltd. (₹)	Small Ltd. (₹)
Inventory	*1,20,000*	*1,50,000*
Trade receivables	*3,80,000*	*2,50,000*
Trade payables	*1,80,000*	*2,10,000*

Profits earned for the half year ended on 30.09.2017 after charging depreciation at 5% on building, 15% on machinery and 10% on furniture, are:

Big Ltd.	*₹ 1,02,500*
Small Ltd.	*₹ 54,000*

On 30.08.2017 both Companies have declared 15% dividend for 2016-17.

Goodwill of Small Ltd. has been valued at ₹ 50,000 and other Fixed assets at 10% above their book values on 31.03.2017. Preference shareholders of Small Ltd. are to be allotted 10% Preference Shares of Big Ltd. and equity shareholders of Small Ltd. are to receive requisite number of equity shares of Big Ltd. valued at ₹ 15 per share in satisfaction of their claims.

Show the Balance Sheet of Big Ltd. as of 30.09.2017 assuming absorption is through by that date.

Solution

Balance Sheet of Big Ltd.

As at 30th September, 2017

Particulars	Note No.	(₹)
I. **Equity and Liabilities**

Ram Limited and Shyam Limited carry on business of a similar nature and it is agreed that they should amalgamate. A new company, Ram and Shyam Limited, is to be formed to which the assets and liabilities of the existing companies, with certain exception, are to be transferred. On 31st March, 2017, the Balance Sheets of the two companies were as under:

Ram Limited

Balance Sheet as at 31st March, 2017

Liabilities	*₹*	*Assets*	*₹*
Issued and Subscribed		*Freehold Property, at cost*	*2,10,000*
Share capital:		*Plant and Machinery, at cost less*	
30,000 Equity shares of ₹ 10		*depreciation*	*50,000*
each, fully paid	*3,00,000*	*Motor Vehicles, at cost*	
General Reserve	*1,60,000*	*less depreciation*	*20,000*
Profit and Loss Account	*40,000*	*Inventory*	*1,20,000*
Trade payables	*1,50,000*	*Trade receivables*	*1,64,000*
		Cash at Bank	*86,000*
	6,50,000		*6,50,000*

Shyam Limited
Balance Sheet as at 31st March, 2017

Liabilities	*₹*	*Assets*	*₹*
Issued and Subscribed		*Freehold Property, at cost*	*1,20,000*
Share Capital:		*Plant and Machinery, at cost less*	
16,000 Equity shares of ₹ 10		*depreciation*	*30,000*
each, fully paid	*1,60,000*	*Inventory*	*1,56,000*
Profit and Loss Account	*40,000*	*Trade receivables*	*42,000*
6% Debentures	*1,20,000*	*Cash at Bank*	*36,000*
Trade payables	*64,000*		
	3,84,000		*3,84,000*

Assets and Liabilities are to be taken at book-value, with the following exceptions:

(a) Goodwill of Ram Limited and of Shyam Limited is to be valued at ₹ 1,60,000 and ₹ 60,000 respectively.

(b) Motor Vehicles of Ram Limited are to be valued at ₹ 60,000.

(c) The debentures of Shyam Limited are to be discharged by the issue of 6% Debentures of Ram and Shyam Limited at a premium of 5%.

(d) The trade receivables of Shyam Ltd. realized fully and bank balance of Shyam Ltd, are to be retained by the liquidator and the trade payables of Shyam Ltd. are to be paid out of the proceeds thereof.

You are required to:

(i) Compute the basis on which shares in Ram and Shyam Limited will be issued to the shareholders of the existing companies assuming that the nominal value of each share in Ram and Shyam Limited is ₹ 10.

(ii) Draw up a Balance Sheet of Ram and Shyam Limited as of 1st April, 2017, the date of completion of amalgamation.

(iii) Write up journal entries, including bank entries, for closing the books of Shyam Limited.

Consolidated Financial Statements of Group Companies

UNIT 1 : INTRODUCTION

1.1 Concept of Group, Holding Company and Subsidiary Company

It is an era of business growth. Many organizations are growing into large corporations by the process of acquisition, mergers, gaining control by one company over the other company, restructuring etc. Acquisition and mergers ultimately leads to either cost reduction or controlling the market or sharing the material supplies or product diversification or availing tax benefits or synergy. Whatever the motto behind these ventures is, the ultimate result is the large scale corporation. Formation of holding company is the most popular device for achieving these objectives.

Group of companies: Many a times, company expands by keeping intact their separate corporate identity. In this situation, a company (holding company) gains control over the other company (subsidiary company). This significant control is exercised by one company over the other by-

1. Purchasing specified number of shares or
2. Exercising control over the board of directors or on voting power of that company.

Unit of companies connected in these ways is collectively called a **Group of Companies.**

Holding Company and Subsidiary Company have been defined in Section 2 of the Companies Act, 2013.

Holding company:

As per Clause 46 of Section 2 of the Companies Act, 2013,

"Holding company", in relation to one or more other companies, means a company of which such companies are subsidiary companies.

It may be defined as one, which has one or more subsidiary companies and enjoys control over them. Legally a holding company and its subsidiaries are distinct and separate entities. However, in substance holding and subsidiary companies work as a group. Accordingly, users of holding company accounts need financial information of subsidiaries to understand the performance and financial position of the holding company.

Subsidiary Company:

Section 2(87) of the Companies Act, 2013 defines "subsidiary company" as a company in which the holding company -

(i) controls the composition of the Board of Directors; or

(ii) exercises or controls more than one-half of the total share capital either at its own or together with one or more of its subsidiary companies:

A company shall be deemed to be a subsidiary company of the holding company even if there is indirect control through the subsidiary company (ies).

The control over the composition of a subsidiary company's Board of Directors means exercise of some power to appoint or remove all or a majority of the directors of the subsidiary company.

'Total share capital', as defined in section 2(87) (ii) above, has been further clarified by the Rule 2(1)(r) of the Companies (Specification of Definitions Details) Rules, 2016. As per the Rule, total share capital includes

(a) paid up equity share capital

(b) convertible preference share capital.

Section 19 of the Companies Act, 2013 prohibits a subsidiary company from holding shares in the holding company. According to this section, no company shall, either by itself or through its nominees, hold any shares in its holding company and no holding company shall allot or transfer its shares to any of its subsidiary companies and any such allotment or transfer of shares of a company to its subsidiary company shall be void.

However, a subsidiary may continue to be a member of its holding company when

(a) the subsidiary company holds such shares as the legal representative of a deceased member of the holding co.

(b) the subsidiary company holds such shares as a trustee; or

(c) the subsidiary company is a shareholder even before it became a subsidiary company of the holding company.

The subsidiary company shall have a right to vote at a meeting of the holding company only in respect of the shares held by it as a legal representative or as a trustee,

In case (c) mentioned above, the subsidiary shall not have any voting rights in respect of the shares held.

1.2 Wholly Owned and Partly Owned Subsidiaries

S.No.	Wholly owned subsidiary company	Partly owned subsidiary company
1.	A wholly owned subsidiary company is one in which all the shares are owned by the holding	In a partly owned subsidiary, all the shares of subsidiary company are not acquired by the holding company i.e.

	company.	only the majority of shares (i.e., more than 50%) are owned by the holding company.
2.	100% voting rights are vested by the holding company.	Voting rights of more than 50% but less than 100% are vested by the holding company.
3.	There is no minority interest because all the shares with voting rights are held by the holding company.	There is a minority interest because less than 50% shares with voting rights are held by outsiders other than the holding company.

1.3 Purpose of Preparing the Consolidated Financial Statements

Section 129 (Clause 3) of the Companies Act, 2013 mandated the companies having one or more subsidiaries, to prepare Consolidated Financial Statements. According to this section, where a company has one or more subsidiaries, it shall, in addition to separate financial statements will prepare a consolidated financial statement of the company and of all the subsidiaries in the same form and manner as that of its own. It shall also attach along with its financial statements, a separate statement containing the salient features of the financial statement of its subsidiary or subsidiaries in the prescribed form. For the purpose of section 129, 'subsidiary' includes 'Associate company' and 'Joint venture'.

Also as per the AS 21, where an enterprise does not have a subsidiary but has an associate and/or a joint venture such an enterprise should also prepare consolidated financial statements in accordance with Accounting Standard (AS) 23, Accounting for Associates in Consolidated Financial Statements, and Accounting Standard (AS) 27, Financial Reporting of Interests in Joint Ventures respectively.

Consolidated financial statements are the financial statements of a 'group' presented as those of a single enterprise, where a 'group' refers to a parent and all its subsidiaries. Parent company needs to inform the users about the financial position and results of operations of not only of their enterprise itself but also of the group as a whole. For this purpose, consolidated financial statements are prepared and presented by a parent/holding enterprise to provide financial information about a parent and its subsidiary(ies) as a single economic entity.

Consolidated Financial Statements are intended to show the financial position of the group as a whole - by showing the economic resources controlled by them, by presenting the obligations of the group and the results the group achieves with its resources.

Where a company is required to prepare Consolidated Financial Statements, i.e., consolidated balance sheet and consolidated statement of profit and loss, the company shall mutatis mutandis follow the requirements of the Schedule III as applicable to a company in the preparation of balance sheet and statement of profit and loss. In addition, the consolidated financial statements shall disclose the information as per the requirements specified in the applicable Accounting Standards including the following:

(i) Profit or loss attributable to "minority interest" and to owners of the parent in the statement of profit and loss shall be presented as allocation for the period.

(ii) "Minority interests" in the balance sheet within equity shall be presented separately from the equity of the owners of the parent.

Schedule III to the Companies Act, 2013 contains the 'General Instructions for Preparation of Consolidated Financial Statements'. Students are advised to refer the same from Schedule III which has been given as appendix at the end of the Study Material (Module I).

Accounting Standard (AS) 21 also lays down the accounting principles and procedures for preparation and presentation of consolidated financial statements.

1.4 Exclusion from Preparation of Consolidated Financial Statements

As per AS 21, a subsidiary should be excluded from consolidation when:

(a) control is intended to be temporary because the subsidiary is acquired and held exclusively with a view to its subsequent disposal in the near future; or

(b) it operates under severe long-term restrictions which significantly impair its ability to transfer funds to the parent.

In consolidated financial statements, investments in such subsidiaries should be accounted for in accordance with AS 13 'Accounting for Investments'. The reasons for not consolidating a subsidiary should be disclosed in the consolidated financial statements.

However, if the relevant investment is acquired without an intention to its subsequent disposal in near future, and subsequently, it is decided to dispose off the investments, such an investment is not excluded from consolidation, until the investment is actually disposed off.

Conversely, if the relevant investment is acquired with an intention to its subsequent disposal in near future, but, due to some valid reasons, it could not be disposed off within that period, the same will continue to be excluded from consolidation, provided there is no change in the intention.

Exclusion of a subsidiary from consolidation on the ground that its business activities are dissimilar from those of the other enterprises within the group is not justified because better information is provided by consolidating such subsidiaries and disclosing additional information in the consolidated financial statements about the different business activities of subsidiaries. For example, the disclosures required by AS 17 'Segment Reporting', help to explain the significance of different business activities within the group.

1.5 *Consolidation of its subsidiary which is a Limited Liability Partnership (LLP) or a partnership firm*

As per rule 6 of Companies (Accounts) Rules, 2014, under the heading 'Manner of consolidation of accounts' it is provided that consolidation of financial statements of a company shall be done in accordance with the provisions of Schedule III to the Companies Act, 2013 and the applicable Accounting Standards.

It is noted that relevant Indian Accounting Standard i.e., Ind AS 110, Consolidated Financial Statements provides that where an entity has control on one or more other entities, the controlling entity is required to consolidate all the controlled entities. Since, the word 'entity' includes a company as well as any other form of entity, therefore, LLPs and partnership firms are required to be consolidated. Similarly, under Accounting Standard (AS) 21, as per the definition of subsidiary, an enterprise controlled by the parent is required to be consolidated. The term 'enterprise' includes a company and any enterprise other than a company. Therefore, under AS also, LLPs and partnership firms are required to be consolidated.

Accordingly, in the given case, holding company is required to consolidate its subsidiary which is an LLP or a partnership firm.

1.6 Consolidation of Limited Liability Partnership (LLP) which is an associate or joint venture

If LLP or a partnership firm is an associate or joint venture of holding company, even then the LLP and the partnership firm need to be consolidated in accordance with the requirements of applicable Accounting Standards.

UNIT 2: CONSOLIDATED FINANCIAL STATEMENTS

2.1 Advantages of Consolidated Financial Statements

As per AS 21, "Consolidated financial statements are the financial statements of a group presented as those of a single enterprise". The main advantages of consolidation are given below:

(i) **Single Source Document:** From the consolidated financial statements, the users of accounts can get an overall picture of the holding company and its subsidiaries. Consolidated Profit and Loss Account gives the overall profitability of the group

(ii) **Intrinsic value of share:** Intrinsic share value of the holding company can be calculated directly from the Consolidated Balance Sheet.

(iii) **Return on Investments in Subsidiaries:** The holding company controls its subsidiary. So its return on investments in subsidiaries should not be measured in terms of dividend alone. Consolidated Financial Statements provide information for identifying revenue profit for determining return on investment.

(iv) **Acquisition of Subsidiary:** The Minority Interest data of the Consolidated Financial Statement indicates the amount payable to the outside shareholders of the subsidiary company at book value which is used as the starting point of bargaining at the time of acquisition of a subsidiary by the holding company.

(v) **Evaluation of Holding Company in the market:** The overall financial health of the holding company can be judged using Consolidated Financial Statements. Those who want to invest in the shares of the holding company or acquire it, need such consolidated statement for evaluation.

2.2 Components of Consolidated Financial Statements

Accounting Standard 21, 'Consolidated Financial Statements' should be applied in the preparation and presentation of consolidated financial statements for a group of enterprises under the control of a parent.

As per AS 21, consolidated financial statements normally include

- Consolidated Balance Sheet
- Consolidated Statement of Profit and Loss Account
- Consolidated Cash Flow Statement (in case parent presents cash flow statement)
- Notes and statements and explanatory schedules that form the integral part thereof.

The consolidated financial statements are presented to the extent possible in the same format as that adopted by the parent for its separate financial statements.

All the notes appearing in the separate financial statements of the parent enterprise and its subsidiaries need not be included in the notes to the consolidated financial statement. For preparing consolidated financial statements, the following principles may be observed in respect of notes and other explanatory material that form an integral part thereof:

(a) Notes which are necessary for presenting a true and fair view of the consolidated financial statements are included in the consolidated financial statements as an integral part thereof.

(b) Only the notes involving items which are material need to be disclosed. Materiality for this purpose is assessed in relation to the information contained in consolidated financial statements. In view of this, it is possible that certain notes which are disclosed in separate financial statements of a parent or a subsidiary would not be required to be disclosed in the consolidated financial statements when the test of materiality is applied in the context of consolidated financial statements.

(c) Additional statutory information disclosed in separate financial statements of the subsidiary and/or a parent having no bearing on the true and fair view of the consolidated financial statements need not be disclosed in the consolidated financial statements.

Illustrative list of 'Notes to the separate financial statements' of the parent and/or the subsidiary, which in general should need not be included in the consolidated financial statements are given at the end of AS 21 for better understanding.

2.3 Consolidation Procedures

Rule 6 of the Companies (Accounts) Rules, 2014 states that the manner of consolidation of financial statements of the company shall be in accordance with the provisions of Schedule III of the Act and the applicable accounting standards. AS 21, lays down the procedure for consolidation of financial statements of the companies within the group.

When preparing consolidated financial statements, the individual balances of the parent and its subsidiaries are aggregated on a line-by-line basis, and then certain consolidation adjustments are made.

For example, the cash, trade receivables and prepayments of the parent and each subsidiary are added together to arrive at the cash, trade receivables and prepayments of the group, before consolidation adjustments are made.

The objective is that the consolidated financial statements should present the information contained in the consolidated financial statements of a parent and its subsidiaries as if they were the financial statements of a single economic entity.

In order that the consolidated financial statements present financial information about the group as that of a single enterprise, the following steps are then taken:

1. the carrying amount of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary are eliminated. In case cost of acquisition exceeds or is less than the acquirer's interest, goodwill or capital reserve is calculated retrospectively.
2. intragroup transactions, including sales, expenses and dividends, are eliminated, in full;
3. unrealised profits resulting from intragroup transactions that are included in the carrying amount of assets, such as inventory and fixed assets, are eliminated in full;
4. unrealised losses resulting from intragroup transactions that are deducted in arriving at the carrying amount of assets are also eliminated unless cost cannot be recovered;

5. minority interest in the net income of consolidated subsidiaries for the reporting period are identified and adjusted against the income of the group in order to arrive at the net income attributable to the owners of the parent; and
6. minority interests in the net assets of consolidated subsidiaries are identified and presented in the consolidated balance sheet separately from liabilities and the parent shareholders' equity.

2.4 Calculation of Goodwill/Capital Reserve (Cost of Control)

As on the date of investment, the cost of investment and the equity in the subsidiary needs to be calculated. AS 21 defines equity as the 'residual interest in the assets of an enterprise after deducting all its liabilities.' In other words, it is equal to the net worth of the enterprise.

Once the above is calculated, goodwill or capital reserve is calculated as under:

Goodwill = Cost of Investment - Parent's share in the equity of the subsidiary on date of investment

Capital Reserve = Parent's share in the equity of the subsidiary on date of investment – Cost of investment

The parent's portion of equity in a subsidiary, at the date on which investment is made, is determined on the basis of information contained in the financial statements of the subsidiary as on the date of investment.

However, if the financial statements of a subsidiary as on the date of investment are not available and if it is impracticable to draw the financial statements of the subsidiary as on that date, financial statements of the subsidiary for the immediately preceding period are used as a basis for consolidation.

Adjustments are made to these financial statements for the effects of significant transactions or other events that occur between the date of such financial statements and the date of investment in the subsidiary.

It may be mentioned that positive or negative differential is separately recognised only in purchase method. This differential calculated as cost of control is shown in the consolidated balance sheet.

Example:

1. H Ltd. acquires 70% of the equity shares of S Ltd. on 1st January, 2017. On that date, paid up capital of S Ltd. was 10,000 equity shares of ₹ 10 each; accumulated reserve balance was ₹ 1,00,000. H Ltd. paid ₹ 1,60,000 to acquire 70% interest in the S Ltd. Assets of S Ltd. were revalued on 1.1.2017 and a revaluation loss of ₹ 20,000 was ascertained. The book value of shares of S Ltd. is calculated as shown below:

	₹
70% of the Equity Share Capital ₹ 1,00,000	70,000
70% of Accumulated Reserve ₹ 1,00,000	70,000

70% of Revaluation Loss ₹ 20,000	(14,000)
	1,26,000

So, H Ltd. paid a positive differential of ₹ 34,000 i.e ₹ (1,60,000 – 1,26,000). This differential is also called goodwill and is shown in the balance sheet under the head intangibles.

2. A Ltd. acquired 70% interest in B Ltd. on 1.1.2017. On that date, B Ltd. had paid-up capital of ₹ 1,00,000 consisting of 10,000 equity shares of ₹ 10 each and accumulated balance in reserve and surplus of ₹ 1,00,000. On that date, assets and liabilities of B Ltd. were also revalued and revaluation profit of ₹ 20,000 were calculated. A Ltd. paid ₹ 1,30,000 to purchase the said interest.

   In this case, the book value of Shares of B Ltd. is calculated as shown below:

	₹
70% of the Equity Share Capital ₹ 1,00,000	70,000
70% of Reserves and Surplus ₹ 1,00,000	70,000
70% of Revaluation Profit ₹ 20,000	14,000
	1,54,000

   So, H Ltd. enjoyed negative differential of ₹ 24,000 i.e. (1,54,000 – 1,30,000).

Illustration 1

Exe Ltd. acquires 70% of equity shares of Zed Ltd. as on 31st March, 2017 at a cost of ₹ 70 lakhs. The following information is available from the balance sheet of Zed Ltd. as on 31st March, 2017:

	₹ in lakhs
Fixed Assets	*120*
Investments	*55*
Current Assets	*70*
Loans & Advances	*15*
15% Debentures	*90*
Current Liabilities	*50*

The following revaluations have been agreed upon (not included in the above figures):

Fixed Assets	*Up by 20%*
Investments	*Down by 10%*

Zed Ltd. declared and paid dividend @ 20% on its equity shares as on 31st March, 2017. Exe Ltd. purchased the shares of Zed Ltd. @ ₹ 20 per share.

Calculate the amount of goodwill/capital reserve on acquisition of shares of Zed Ltd.

Solution

Revalued net assets of Zed Ltd. as on 31st March, 2017

	₹ in lakhs	*₹ in lakhs*
Fixed Assets [120 X 120%]		144.0
Investments [55 X 90%]		49.5
Current Assets		70.0
Loans and Advances		15.0
Total Assets after revaluation		278.5
Less: 15% Debentures	90.0	
Current Liabilities	50.0	(140.0)
Equity / Net Worth		138.5
Exe Ltd.'s share of net assets (70%)		96.95
Exe Ltd.'s cost of acquisition of shares of Zed Ltd.		
(₹ 70 lakhs – ₹ 7 lakhs*)		63.00
Capital reserve		33.95

* Total Cost of 70 % Equity of Zed Ltd	₹ 70 lakhs
Purchase Price of each share	₹ 20
Number of shares purchased [70/20]	3.5 lakhs
Dividend @ 20 % i.e. ₹ 2 per share	₹ 7 lakhs

Since dividend received is for pre-acquisition period, it has been reduced from the cost of investment in the subsidiary company**.**

Illustration 2

Variety Ltd. holds 46% of the paid-up share capital of VR Ltd. The shares were acquired at a market price of ₹ 17 per share. The balance of shares of VR Ltd. are held by a foreign collaborating company. A memorandum of understanding has been entered into with the foreign company providing for the following:

(a) The shares held by the foreign company will be sold to Variety Ltd. The price per share will be calculated by capitalising the yield at 15%. Yield, for this purpose, would mean 40% of the average of pre-tax profits for the last 3 years, which were ₹ 30 lakhs, ₹ 40 lakhs and ₹ 65 lakhs.

(b) The actual cost of the shares to the foreign company was ₹ 5,40,000 only. The profit that would accrue to them would be taxable at an average rate of 30%. The tax payable will be deducted from the proceeds and Variety Ltd. will pay it to the Government.

(c) Out of the net consideration, 50% would be remitted to the foreign company immediately and the balance will be an unsecured loan repayable after two years.

The above agreement was approved by all concerned for being given effect to on 1.4.2017. The total assets of VR Ltd. as on 31st March, 2017 was ₹ 1,00,00,000. It was decided to write down fixed assets by ₹ 1,75,000. Current liabilities of VR Ltd. as on the same date were ₹ 20,00,000. The paid-up share capital of VR Ltd. was ₹ 20,00,000 divided into 2,00,000 equity shares of ₹ 10 each.

Find out goodwill/capital reserve to Variety Ltd. on acquiring wholly the shares of VR Ltd.

Solution

(1) Computation of purchase consideration:

(a)	Yield of VR Ltd.: $\left[\frac{40}{100} \times \frac{30+40+65}{3}\right]$	₹ 18 Lakhs
(b)	Price per share of VR Ltd.	
	Capitalised yield $\left[\frac{18\,\text{lakhs}}{0.15}\right]$	₹ 120 lakhs
	Number of shares	2,00,000
	Price per share	₹ 60
(c)	Purchase consideration for 54% shares in VR Ltd. 2,00,000 × $\frac{54}{100}$ × ₹ 60	₹ 64.80
(d)	Discharge of purchase consideration:	
	Tax deducted at source (₹ 64.80 lakhs–₹ 5.40 lakhs) × $\frac{30}{100}$	₹ 17.82
	50% of purchase consideration (net of tax) in cash ₹(64.80–17.82)x50%	₹ 23.49
	Balance – Unsecured Loan	₹ 23.49

(2) Goodwill/Capital Reserve to Variety Ltd.:

		₹ in lakhs
Total Assets		100.00
Less: Reduction in value of Fixed Assets		(1.75)
		98.25
Less: Current Liabilities		(20.00)
Net Assets		78.25
Purchase consideration	64.80	
Investments [2,00,000 X 46 % X ₹ 17]	15.64	(80.44)
Goodwill		2.19

2.5 Minority Interests

Minority interest is that part of the net results of operations and of net assets of a subsidiary attributable to interests which are not owned, directly or indirectly through subsidiaries, by the holding (parent) company.

In short, minority interest represents the claims of the outside shareholders of a subsidiary. Minority interests in the net income of consolidated subsidiaries for the reporting period are identified and adjusted against the income of the group in order to arrive at the net income attributable to the shareholders of the holding company.

Minority interest in the income of the group should be separately presented.

The losses applicable to the minority in a consolidated subsidiary may exceed the minority interest in the equity of the subsidiary. The excess, and any further losses applicable to the minority, are adjusted against the majority interest except to the extent that the minority has a binding obligation to, and is able to make good the losses. If the subsidiary subsequently reports profit, all such profits are allocated to the majority interest until the minority's share of losses previously absorbed by the majority has been recovered.

As per para 13(e) of AS 21, minority interest in the net assets of consolidated subsidiaries should be identified and presented in the consolidated balance sheet separately from liabilities and the equity of the parent's shareholders. Minority interest in the net assets consist of:

(i) the amount of equity attributable to minorities at the date on which investment in a subsidiary is made; and

(ii) the minorities share of movements in equity since the date the parent-subsidiary relationship came in existence.

2.6 Profit or Loss of Subsidiary Company

The losses applicable to the minority in a consolidated subsidiary may exceed the minority interest in the equity of the subsidiary. The excess, and any further losses applicable to the minority, are adjusted against the majority interest except to the extent that the minority has a binding obligation to, and is able to, make good the losses. If the subsidiary subsequently reports profits, all such profits are allocated to the majority interest until the minority's share of losses previously absorbed by the majority has been recovered.

For the purpose of consolidated balance sheet preparation, all reserves and profits (or losses) of subsidiary company should be classified into **pre and post-acquisition reserves and profits (or losses).**

Profits (or losses) earned (or incurred) by subsidiary company upto the date of acquisition of the shares by the holding company are pre acquisition or capital profits (or loss).

Similarly, all reserves of subsidiary company upto the date of acquisition are capital reserves from the view point of holding company. If the holding interest in subsidiary is acquired during the middle or some other period of the current year, pre-acquisition profit should be calculated accordingly.

The minority interest in the reserves and profits (or losses) of subsidiary company should be transferred to minority interest account which will also include share capital of subsidiary company held by outsiders / minority shareholders.

Minority Interest:
= Share Capital of subsidiary related to outsiders + Minority interest in reserves and profits of subsidiary company

The holding company's interest in the pre-acquisition reserves and profits (or losses) should be adjusted against cost of control to find out goodwill or capital reserve on consolidation. The balance of reserves and profits (or loss) of subsidiary company, representing holding company's interest in post-acquisition or revenue reserves and profits (or losses), should be added to the balances of reserves and profits (or losses) of holding company.

Illustration 3

A Ltd. acquired 70% of equity shares of B Ltd. on 1.4.2010 at cost of ₹ 10,00,000 when B Ltd. had an equity share capital of ₹ 10,00,000 and reserves and surplus of ₹ 80,000. In the four consecutive years, B Ltd. fared badly and suffered losses of ₹ 2,50,000, ₹ 4,00,000, ₹ 5,00,000 and ₹ 1,20,000 respectively. Thereafter in 2014-13, B Ltd. experienced turnaround and registered an annual profit of ₹ 50,000. In the next two years i.e. 2015-16 and 2016-17, B Ltd. recorded annual profits of ₹ 1,00,000 and ₹ 1,50,000 respectively. Show the minority interests and cost of control at the end of each year for the purpose of consolidation.

Solution

As per para 26 of AS 21 "Consolidated Financial Statements", the losses applicable to the minority in a consolidated subsidiary may exceed the minority interest in the equity of the subsidiary. The excess, and any further losses applicable to the minority, are adjusted against the majority interest except to the extent that the minority has a binding obligation to, and is able to, make good the losses. If the subsidiary subsequently reports profits, all such profits are allocated to the majority interest until the minority's share of losses previously absorbed by the majority has been recovered. Accordingly,

Year	*Profit/(Loss)*	*Minority Interest (30%)*	*Additional Consolidated P & L (Dr.) Cr.*	*Minority's Share of losses borne by A Ltd.*		*Cost of Control*
				₹	*Balance*	
At the time of acquisition in 2010		3,24,000 (W.N.)	-			
2010-11	(2,50,000)	(75,000)	(1,75,000)			2,44,000 (W.N.)
		2,49,000				
2011-12	(4,00,000)	(1,20,000)	(2,80,000)			2,44,000
	-	1,29,000				
2012-13	(5,00,000)	(1,50,000)				2,44,000
		(21,000)	(3,50,000)			
	Loss of minority borne	21,000	(21,000)	21,000	21,000	

	by Holding Co.					
		Nil	(3,71,000)			
2013-14	(1,20,000)	- (on application of para 26 of AS 21)	(1,20,000)	36,000	57,000	2,44,000
		Nil				
2014-15	50,000	- (on application of para 26 of AS 21)	50,000	(15,000)	42,000	2,44,000
		Nil				
2015-16	1,00,000	- (on application of para 26 of AS 21)	1,00,000	(30,000)	12,000	2,44,000
		Nil				
2016-17	1,50,000	45,000	1,05,000	(12,000)	Nil	2,44,000
		(12,000) (application of para 26)	12,000			
		33,000	1,17,000			

Working Note:

Calculation of Minority interest and Cost of control on 1.1.2010

		Share of Holding Co.	*Minority Interest*
	100%	*70%*	*30%*
	(₹)	*(₹)*	*(₹)*
Share Capital	10,00,000	7,00,000	3,00,000
Reserve	80,000	56,000	24,000
		7,56,000	3,24,000
Less: Cost of investment		(10,00,000)	
Goodwill		2,44,000	

2.7 Revaluation of Assets of Subsidiary Company

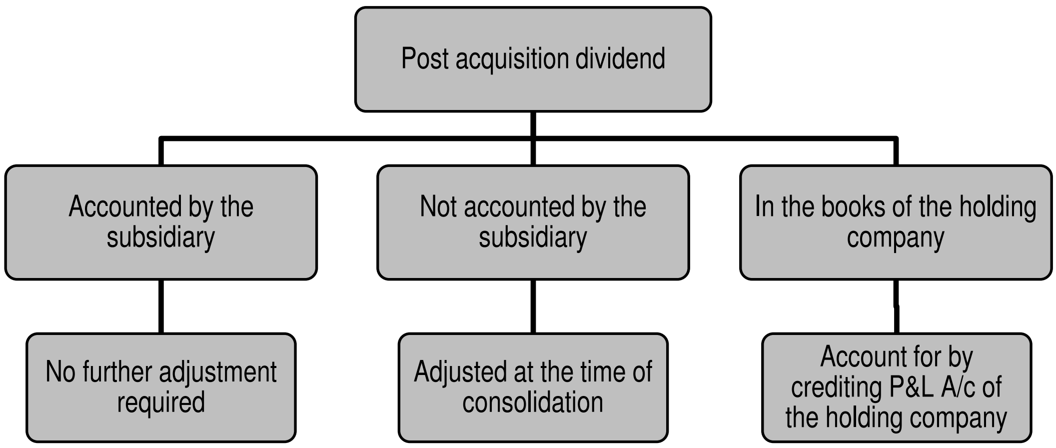
Profit or loss on revaluation of fixed assets of subsidiary should also be treated as capital profit or loss. But if the fall in the value of the asset occurs after the date of acquisition, the loss should be treated as revenue loss. Adjustment for depreciation would be made in the profit and loss account of the subsidiary.

Depreciation on changed value of the assets shall be given effect to. Depreciation on revalued assets will be taken as capital or revenue depending on the period for which the depreciation belongs

2.8 Dividend Received From Subsidiary Companies

The holding company, when it receives a dividend from a subsidiary company, must distinguish between the part received out of capital profits and that out of revenue profits - the former is credited to Investment Account, it being a capital receipt, and the later is adjusted as revenue income for being credited to the Profit & Loss Account. It must be understood that the term 'capital profit', in this context, apart from the generic meaning of the term, connotes profit earned by the subsidiary company till the date of acquisition. As a result, profits which may be of revenue nature for the subsidiary company may be capital profits so far as the holding company is concerned. If the controlling interest was acquired during the course of a year, profit for that year must be apportioned into the pre-acquisition and post-acquisition portions, on the basis of time in the absence of information on the point.

Treatment in case of post-acquisition dividend



Treatment in case of pre-acquisition dividend

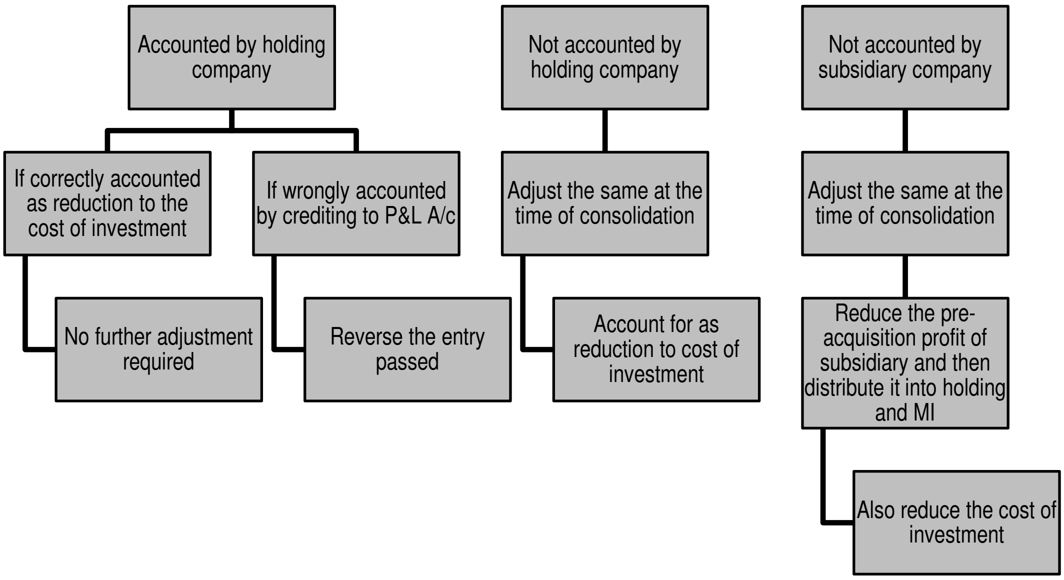


Illustration 4

H Ltd. acquired 3,000 shares in S Ltd., at a cost of ₹ 4,80,000 on 1st August, 2016. The capital of S Ltd. consisted of 5,000 shares of ₹ 100 each fully paid. The Profit & Loss Account of this company for 2016 showed an opening balance of ₹ 1,25,000 and profit for the year of ₹ 3,00,000. At the end of the year, it declared a dividend of 40%. Record the entry in the books of H Ltd., in respect of the dividend.

Solution

The profits of S Ltd., have to be divided between capital and revenue profits from the point of view of the holding company.

	Capital Profit ₹		*Revenue Profit* ₹
Balance on 1.1.2016	1,25,000	—	
Profit for 2016 (3,00,000 × 7/12)	1,75,000	(3,00,000×5/12)	1,25,000
Total	3,00,000		1,25,000
Proportionate share of H Ltd. (3/5)	1,80,000		75,000

Total Dividend Declared = ₹ 5,00,000 X 40 % = ₹ 2,00,000

H Ltd's share in the dividend = ₹ 2,00,000 X 3/5 = ₹ 1,20,000

The treatment of the dividend of ₹ 1,20,000 received by H Ltd., will depend on the character of profits which have been utilised by S Ltd., to pay the dividend. There are four possibilities:

(1) Earlier profits, included in the profit brought forward from the previous year have been used up first.

In that case, the dividend of ₹ 1,20,000 would be paid wholly out of capital or pre-acquisition profits. The entry in that case will be:

		₹	₹
Bank Account	Dr.	1,20,000	
To Investment Account			1,20,000

(2) The profit for 2016 alone has been utilised to pay the dividend, and no part of the profit brought forward has been utilised for the purpose. The share of H Ltd., in profit for the first seven months of S Ltd., is ₹ 1,05,000 i.e., ₹ 1,75,000 × 3/5 and that the profit for the remaining five months is ₹ 75,000. The dividend of ₹ 1,20,000 will be adjusted in this ratio: ₹ 70,000 out of profits up to the 1st August and ₹ 50,000 out of profits after that date. The dividend out of profits subsequent to August 1st will be revenue income and that out of earlier profits capital receipt. Hence the entry:

		₹	₹
Bank	Dr.	1,20,000	
To Investment Account			70,000
To Profit and Loss Account			50,000

(3) Later profits have been utilised first and then pre- acquisition profits. In such a case, the whole of ₹ 75,000 (share of H Ltd. in profits of S Ltd., after 1st August) would be received and treated as revenue income; the remaining dividend, ₹ 45,000 (₹ 1,20,000 less ₹ 75,000) would be capital receipt. The entry would be:

		₹	₹
Bank	Dr.	1,20,000	
To Investment Account			45,000
To Profit & Loss Account			75,000

(4) The two profits, pre-and post-acquisition, have been used up proportionally. The ratio would be ₹ 1,80,000 : 75,000; 1,20,000 × $\frac{75,000}{2,55,000}$ would be revenue receipt and the remaining capital. The entry would be:

		₹	₹
Bank	Dr.	1,20,000	
To Investment Account			84,706
To Profit & Loss Account			35,294

Notes:

(1) Points (3) and (4) above can arise only if there is definite information about the profits utilised; in practice such treatment is rare.

(2) The treatment outlined above in fact is not peculiar to holding companies-dividends received out of profits earned before purchase of investments normally also are credited to the Investment Account.

For instance, if shares in X Ltd., are purchased in January, 2016 and in April X Ltd., declares a dividend in respect of 2015, the dividend received by the holder of the shares correctly should not be treated as income but as capital receipt, and credited to Investment Account.

(3) The holding company, like other holders, records no entry on issue of bonus shares by the subsidiary company - only the number of shares held is increased.

Illustration 5

From the following data, determine in each case:

(1) Minority interest at the date of acquisition and at the date of consolidation.

(2) Goodwill or Capital Reserve.

(3) Amount of holding company's profit in the consolidated Balance Sheet assuming holding company's own Profit & Loss Account to be ₹ 2,00,000 in each case

Case	Subsidiary Company	% shares owned	Cost	Date of acquisition		Consolidation Date	
				1.1.2016		31.12.2016	
				Share Capital	Profit & Loss Account	Share Capital	Profit & Loss Account
			₹	₹	₹	₹	₹
Case 1	A	90%	1,40,000	1,00,000	50,000	1,00,000	70,000
Case 2	B	85%	1,04,000	1,00,000	30,000	1,00,000	20,000
Case 3	C	80%	56,000	50,000	20,000	50,000	20,000
Case 4	D	100%	1,00,000	50,000	40,000	50,000	55,000

Solution

(1) Minority Interest = Equity Attributable to minorities

Equity is the residual interest in the assets of an enterprise after deducting all its liabilities i.e. in this given case Share Capital + Profit & Loss A/c

	Minority % Shares Owned [E]	Minority interest as at the date of acquisition [E] x [A + B] ₹	Minority interest as at the date of consolidation [E] X [C + D] ₹
Case 1 [100-90]	10 %	15,000	17,000
Case 2 [100-85]	15 %	19,500	18,000
Case 3 [100-80]	20 %	14,000	14,000
Case 4 [100-100]	NIL	Nil	Nil

(2) Calculation of Goodwill or Capital Reserve

	Shareholding % [F]	*Cost [G]*	*Total Equity [A] + [B] = [H]*	*Parent's Portion of equity [F] x [H]*	*Goodwill ₹ [G] – [H]*	*Capital Reserve ₹ [H] – [G]*
Case 1	90 %	1,40,000	1,50,000	1,35,000	5,000	—
Case 2	85 %	1,04,000	1,30,000	1,10,500	—	6,500
Case 3	80 %	56,000	70,000	56,000	Nil	Nil
Case 4	100 %	1,00,000	90,000	90,000	10,000	—

(3) The balance in the Profit & Loss Account on the date of acquisition (1.1.2016) is Capital Profit, as such the balance of Consolidated Profit & Loss Account shall be equal to Holding Co.'s Profit.

On 31.12.2016 in each case the following amount shall be added or deducted from the balance of holding Co.'s Profit & Loss Accounts.

	% Share holding [K]	P & L as on 31.12.2016 [L]	P & L as on consolidation date [M]	P & L post acquisition [N] = [M]-[L]	Amount to be added / (deducted) from holding's P & L [O] = [K] x [N]
1	90 %	50,000	70,000	20,000	18,000
2	85 %	30,000	20,000	(10,000)	(8,500)
3	80 %	20,000	20,000	NIL	NIL
4	100 %	40,000	55,000	15,000	15,000

Illustration 6

XYZ Ltd. purchased 80% shares of ABC Ltd. on 1st January, 2016 for ₹ 1,40,000. The issued capital of ABC Ltd., on 1st January, 2016 was ₹ 1,00,000 and the balance in the Profit & Loss Account was ₹ 60,000.

For the year ending on 31st December, 2016 ABC Ltd. has earned a profit of ₹ 20,000 and at the same time, declared and paid a dividend of ₹ 30,000.

Show by an entry how the dividend should be recorded in the books of XYZ Ltd.

What is the amount of minority interest as on 1st January, 2016 and 31st December, 2016?

Solution

Total Dividend Paid = ₹ 30,000

Out of post-acquisition profit = ₹ 20,000

Out of pre-acquisition profit = ₹ 10,000

Hence, 2/3rd of dividend received by XYZ will be credited to P & L and 1/3rd will be credited to Investments.

XYZ Ltd.'s share of dividend = ₹ 30,000 X 80% = ₹ 24,000

In the books of XYZ Ltd.

	₹	₹	₹
Bank A/c Dr.	24,000		
To Profit & Loss A/c		16,000	
To Investments in ABC Ltd.		8,000	
(Dividend received from ABC Ltd. 1/3 credited to investment A/c being out of capital profits – as explained above)			
Goodwill on Consolidation:		₹	₹
Cost of shares less dividend out of capital profits			1,32,000
Less: Face value of capital		80,000	
Add: Share of capital profits [60,000-10,000 (dividend portion)] X 80 %		40,000	(1,20,000)
Goodwill			12,000
Minority interest on: 1st January, 2016: 20% of ₹ 1,60,000 [1,00,000 + 60,000]			32,000
31st December, 2016: 20% of ₹ 1,50,000 [1,00,000 + 60,000 + 20,000 – 30,000]			30,000

Illustration 7

The following balances appear in the books of a Holding Co. and its subsidiary on the dates stated:

	Jan. 1 2014	*Dec. 31 2014*	*Dec. 31 2015*	*Dec. 31 2016*
Holding Company	₹	₹	₹	₹
Investments in Subsidiary	*1,28,000*	*1,28,000*	*1,19,000*	*1,40,000*
Profit & Loss Account				
(Balance)	*1,35,000*	*1,60,000*	*1,48,000*	*1,55,000*
Subsidiary Company				
Share Capital	*1,00,000*	*1,00,000*	*1,00,000*	*1,00,000*
Profit & Loss Account				
(Balance before providing				
for dividend)	*50,000*	*62,000*	*70,000*	*80,000*

Subsidiary's issued capital consisted of 1,000 equity shares of ₹ 100 each. The Holding Co. purchased 800 shares on 1st January, 2014. It sold 50 shares on 1st January, 2015 and purchased 100 shares on 1st January, 2016. The Investment Account was debited with the cost of shares purchased and credited with the sale proceeds. The holding Co. has made no other entries in the Investment Account and credited all dividends received to the Profit & Loss Account. The subsidiary company paid a dividend of 15% in March each year in respect of the previous year.

Prepare a statement showing the amount of goodwill/cost of control and minority interest at the end of each year.

Solution:

Statement showing Goodwill or Cost of Control as on

	31st Dec. 2014 ₹	*31st Dec.* 2015 ₹		*31st Dec. 2016* ₹
Number of Shares held	800	750		850
% of Holding Co's shareholding	80 %	75 %		85 %
Cost of investment	1,28,000	1,16,000		1,08,750
Less: Dividend out of Capital Profit received on 31st March 2014	(12,000)			
	1,16,000			
Less: Cost of investment sold on 1st Jan 2015 $\left[\frac{50}{800} \times 1,16,000\right]$	—	(7,250)		
Add: Cost of investment purchased			21,000	
Less: Capital Dividend			(1,500)*	19,500
(A)	1,16,000	1,08,750		1,28,250
Nominal Value of Shares	80,000	75,000		85,000
Capital Profit	28,000	26,250		31,750**
	[50,000 × 80 % - 12,000]	[50,000 – 15,000 (dividend of last year) × 75 %]		[50,000 – 15,000] × 75 % + [70,000 – 15,000] × 10 %
(B)	1,08,000	1,01,250		1,16,750
Goodwill (A-B)	8,000	7,500		11,500

Note: In 2016, ₹ 21,000 must have been spent since by that amount the book value of investment has gone up. [1,40,000 – 1,19,000]

Minority interest		*Capital & Profits*		
		₹	₹	₹
31st Dec. 2014	20%	20,000	12,400 [62,000 X 20 %]	= 32,400
31st Dec. 2015	25%	25,000	17,500 [70,000 X 25 %]	= 42,500
31st Dec. 2016	15%	15,000	12,000 [80,000 X 15%]	= 27,000

* Dividend out of Capital Profits

** Alternative Calculation:

10% of 20,000 i.e. profit earned and not yet distributed after Jan., 2014 till 31st Dec. 2015 (55,000-35,000) plus 85% of ₹ 35,000 profit remaining undistributed out of profits as on 1.1.2014

In a particular situation it may so happen that the losses applicable to the minority in a consolidated subsidiary exceed the minority interest in the equity of the subsidiary. Such excess and any further losses should be charged against majority interest. If the subsidiary company subsequently reports profits, such profits should be allocated to majority interest unless the minority's share of losses previously absorbed has been recovered.

Illustration 8

A Ltd. acquired 70% of equity shares of B Ltd. as on 1st January, 2010 at a cost of ₹ 10,00,000 when B Ltd. had an equity share capital of ₹ 10,00,000 and reserves and surplus of ₹ 80,000. Both the companies follow calendar year as the accounting year. In the four consecutive years B Ltd. fared badly and suffered losses of ₹ 2,50,000, 4,00,000, ₹ 5,00,000 and ₹ 1,20,000 respectively. Thereafter in 2014, B Ltd. experienced turnaround and registered an annual profit of ₹ 50,000. In the next two years i.e. 2015 and 2016, B Ltd. recorded annual profits of ₹ 1,00,000 and ₹ 1,50,000 respectively.

Show the minority interests and cost of control at the end of each year for the purpose of consolidation.

Solution

	Minority Interest (30%) ₹	*Holding Interest (70%) ₹*	
Share of net assets of B Ltd. as on 1.1.2010	3,24,000	7,56,000	
Cost of acquisition	—	10,00,000	
	3,24,000	2,44,000	(goodwill)
Minority's share of losses of B Ltd: year ended 31.12.2010	75,000		
Minority interest as on 31.12.2010	2,49,000		
Minority's share of losses of B Ltd.:			
year ended 31.12.2011	1,20,000		
Minority interest as on 31.12.2011	1,29,000		
Minority's share of losses of B Ltd.			
year ended 31.12.2012	1,29,000*		
Minority interest as on 31.12.2012	Nil		
Minority's share of losses for 2013	Nil		
Minority's share of profits of B Ltd. for 2014	Nil		
Minority's share of profit for 2015	Nil		
Minority's share of profit for 2016 (₹ 45,000 – ₹ 12,000)	33,000*		
Minority interest as on 31.12.2016	33,000		

* In the year 2012, the minority's share of losses actually comes to ₹ 1,50,000. But since minority interest as on 31.12.2011 was less than the share of loss, the excess of loss of ₹ 21,000 is to be added to A Ltd.'s share of losses. Similarly, for the year 2013, the entire loss of B Ltd. is to be adjusted against A Ltd.'s profits for the purpose of consolidation. Therefore, upto 2013, the minority's share of B Ltd.'s losses of ₹ 57,000 are to be borne by A Ltd. Thereafter, the entire profits of B Ltd. will be allocated to A Ltd. unless the minority's share of losses previously absorbed (₹57,000) has been recovered. Such recovery is fully made in 2016 and therefore minority interest of ₹ 33,000 is shown after adjusting fully the share of losses of minority previously absorbed by A Ltd.

2.9 Preparation of Consolidated Balance Sheet

While preparing the consolidated balance sheet, assets and outside liabilities of the subsidiary company are merged with those of the holding company. Share capital and reserves and surplus of subsidiary company are apportioned between holding company and minority shareholders. These items, along with investments of holding company in shares of subsidiary company are not separately shown in consolidated balance sheet. The net amounts resulting from various computations on these items, shown as (a) minority interest (b) cost of control (c) holding company's share in post-acquisition profits of the subsidiary company (added to appropriate concerned account of the holding company) are entered in consolidated balance sheet. The method of calculation of these items with detailed treatment of other relevant issues has been dealt with in various paras separately.

As per para 15 of AS 21, if an enterprise makes two or more investments in another enterprise at different dates and eventually obtain control of the other enterprise the consolidated financial statements are presented only from the date on which holding-subsidiary relationship comes in existence.

If two or more investments are made over a period of time, the equity of the subsidiary at the date of investment for the purposes of paragraph 13 of AS 21, is generally determined on a step-by-step basis; however, if small investments are made over a period of time and then an investment is made that results in control, the date of the latest investment, as a practicable measure, may be considered as the date of investment.

Illustration 9

From the following summarized balance sheets of H Ltd. and its subsidiary S Ltd. drawn up at 31st March, 2017, prepare a consolidated balance sheet as at that date, having regard to the following:

(i) Reserves and Profit and Loss Account of S Ltd. stood at ₹ 25,000 and ₹ 15,000 respectively on the date of acquisition of its 80% shares by H Ltd. on 1st April, 2016.

(ii) Machinery (Book-value ₹ 1,00,000) and Furniture (Book value ₹ 20,000) of S Ltd. were revalued at ₹ 1,50,000 and ₹ 15,000 respectively on 1.4.2016 for the purpose of fixing the price of its shares. [Rates of depreciation: Machinery 10%, Furniture 15%.]

Summarised Balance Sheet of H Ltd. as on 31st March, 2017

	H Ltd.	S. Ltd.	Assets	H Ltd.	S Ltd.
	₹	₹		₹	₹
Equity and Liabilities			Non-current assets		
Shareholders' funds			Fixed assets

5.	**Other non-current assets**			
	H Ltd.		4,40,000	
	S Ltd.		1,50,000	5,90,000

Working Notes:

1.	**Pre-acquisition profits and reserves of S Ltd.**	₹
	Reserves	25,000
	Profit and Loss Account	15,000
		40,000
	H Ltd.'s = 4/5 × 40,000	32,000
	Minority Interest= 1/5 × 40,000	8,000
2.	**Profit on revaluation of assets of S Ltd.**	
	Profit on Machinery ₹ (1,50,000 – 1,00,000)	50,000
	Less: Loss on Furniture ₹ (20,000 – 15,000)	5,000
	Net Profit on revaluation	45,000
	H Ltd.'s share 4/5 × 45,000	36,000
	Minority Interest 1/5 × 45,000	9,000
3.	**Post-acquisition reserves of S Ltd.**	
	Post-acquisition reserves = ₹ (75,000 – 25,000)	50,000
	H Ltd.'s share 4/5 × 50,000	40,000
	Minority interest 1/5 × 50,000	10,000
4.	**Post -acquisition profits of S Ltd.**	
	Post-acquisition profits ₹ (25,000 – 15,000)	10,000
	Add: Excess depreciation charged furniture @ 15%	

on ₹ 5,000 i.e. (20,000 – 15,000)	750
	10,750
Less: Under depreciation on machinery @ 10%	
on ₹ 50,000 i.e. (1,50,000 – 1,00,000)	(5,000)
Adjusted post-acquisition profits	5,750
H Ltd.'s share 4/5 × 5,750	4,600
Minority Interest 1/5 × 5,750	1,150
5. Minority Interest	
Paid-up value of (1,000 – 800) = 200 shares	
held by outsiders i.e. 200 × ₹ 100	20,000
Add: 1/5th share of pre-acquisition profits and reserves	8,000
1/5th share of profit on revaluation	9,000
1/5th share of post-acquisition reserves	10,000
1/5th share of post-acquisition profit	1,150
	48,150
6. Cost of Control or Goodwill	
Paid-up value of 800 shares held by H Ltd. i.e. 800 × ₹ 100	80,000
Add: 4/5th share of pre-acquisition profits and reserves	32,000
4/5th share of profit on the revaluation	36,000
Intrinsic value of shares on the date of acquisition	1,48,000
Price paid up by H Ltd. for 800 shares	1,60,000
Less: Intrinsic value of the shares	(1,48,000)
Cost of control or Goodwill	12,000

2.10 Elimination of Intra-Group Transactions

In order to present financial statements for the group in a consolidated format, the effect of transactions between group enterprises should be eliminated. Para 16 of AS 21 states that intragroup balances and intragroup transactions and resulting unrealised profits should be eliminated in full. Unrealised losses resulting from intragroup transactions should also be eliminated unless cost cannot be recovered.

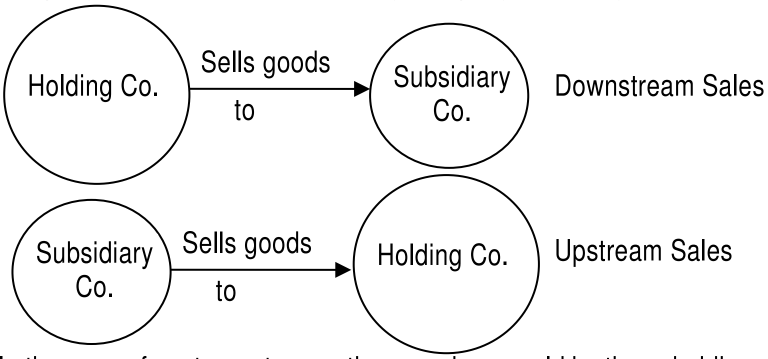
Liabilities due to one group enterprise by another will be set off against the corresponding asset in the other group enterprise's financial statements; sales made by one group enterprise to another should be excluded both from turnover and from cost of sales or the appropriate expense heading in the consolidated statement of profit and loss.

To the extent that the buying enterprise has further sold the goods in question to a third party, the eliminations to sales and cost of sales are all that is required, and no adjustments to consolidated profit or loss for the period, or to net assets, are needed. However, to the extent that the goods in question are still on hand at year end, they may be carried at an amount that is in excess of cost to the group and the amount of the intra-group profit must be eliminated, and assets are reduced to cost to the group.

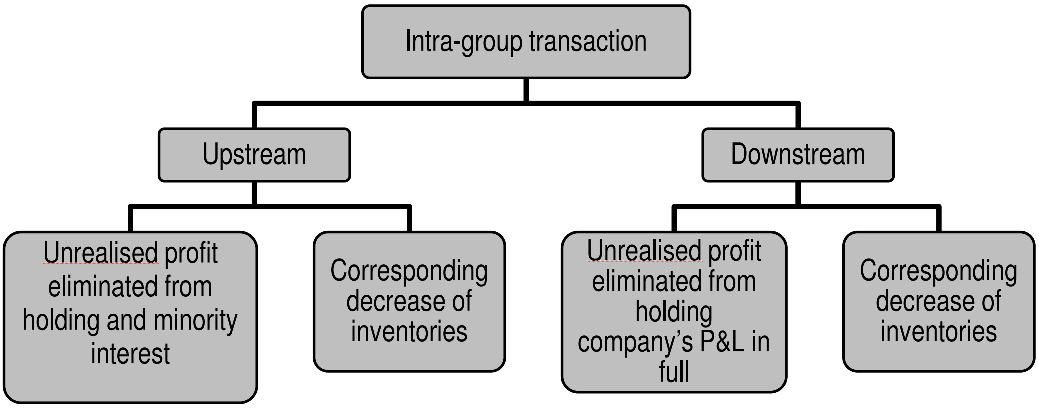
For transactions between group enterprises, unrealized profits resulting from intra-group transactions that are included in the carrying amount of assets, such as inventories and tangible fixed assets, are eliminated in full. The requirement to eliminate such profits in full applies to the transactions of all subsidiaries that are consolidated – even those in which the group's interest is less than 100%.

Unrealised profit in inventories: Where a group enterprise sells goods to another, the selling enterprise, as a separate legal enterprise, records profits made on those sales. If these goods are still held in inventory by the buying enterprise at the year end, however, the profit recorded by the selling enterprise, when viewed from the standpoint of the group as a whole, has not yet been earned, and will not be earned until the goods are eventually sold outside the group. On consolidation, the unrealized profit on closing inventories will be eliminated from the group's profit, and the closing inventories of the group will be recorded at cost to the group.

Here, the point to be noted is that one has to see whether the intragroup transaction is "upstream" or "down-stream". **Upstream transaction** is a transaction in which the subsidiary company sells goods to holding company. While in the **downstream transaction** holding company is the seller and subsidiary company is the buyer.



In the case of upstream transaction, goods are sold by the subsidiary to holding company; profit is made by the subsidiary company, which is ultimately shared by the holding company and the minority shareholders. In such a transaction, if some goods remain unsold at the balance sheet date, the unrealized profit on such goods should be eliminated from minority interest as well as from consolidated profit on the basis of their share-holding besides deducting the same from unsold Inventory. But in the case of downstream transaction the whole profit is earned by the holding company, therefore whole unrealized profit should be adjusted from unsold Inventory account and consolidated profit and loss account only irrespective of the percentage of the shares held by the parent



Unrealised profit on transfer of non-current asset: Similar to the treatment described above for unrealized profits in inventories, unrealized inter-company profits arising from intra-group transfers of fixed assets are also eliminated from the consolidated financial statements.

Unrealised losses: Unrealised losses resulting from intra-group transactions that are deducted in arriving at the carrying amount of assets are also eliminated **unless cost cannot be recovered.**

2.11 Preparation of Consolidated Profit and Loss Account

Preparation of Consolidated Profit and Loss Account of holding company and its subsidiaries is not very difficult.

All the revenue items are to be added on line by line basis and from the consolidated revenue items inter-company transactions should be eliminated.

For example, a holding company may sell goods or services to its subsidiary, receives consultancy fees, commission, royalty etc. These items are included in sales and other income of the holding company and in the expense items of the subsidiary. Alternatively, the subsidiary may also sell goods or services to the holding company. These inter-company transactions are to be eliminated in full.

If there remains any unrealised profit in the Inventory of good, of any of the Group Company, such unrealised profit is to be eliminated from the value of Inventory to arrive at the consolidated profit.

Illustration 10

Given below are the Profit & Loss Account of H Ltd. and its subsidiary Ltd. for the year ended 31st March, 2017:

	H Ltd. (*₹ in lacs*)	*S Ltd.* (*₹ in lacs*)
Incomes:		
Sales and other income	*5,000*	*1,000*
Increase in Inventory	*1,000*	*200*
	6,000	*1,200*

Expenses:		
Raw material consumed	*800*	*200*
Wages and Salaries	*800*	*150*
Production expenses	*200*	*100*
Administrative Expenses	*200*	*100*
Selling and Distribution Expenses	*200*	*50*
Interest	*100*	*50*
Depreciation	*100*	*50*
	2,400	*700*
Profit before tax	*3,600*	*500*
Provision for tax	*1,200*	*200*
Profit after tax	*2,400*	*300*
Dividend paid	*1,200*	*150*
Balance of Profit	*1,200*	*150*

Other Information:

H Ltd. sold goods to S Ltd. of ₹ 120 lacs at cost plus 20%. Inventory of S Ltd. includes such goods valuing ₹ 24 lacs. Administrative Expenses of S Ltd. include ₹ 5 lacs paid to H Ltd. as consultancy fees. Selling and Distribution expenses of H Ltd. include ₹ 10 lacs paid to S Ltd. as commission.

H Ltd. holds 80% of equity share capital of ₹ 1,000 lacs in S Ltd. before 2015-2016. H Ltd. took credit to its Profit and Loss Account, the proportionate amount of dividend declared and paid by S Ltd. for the year 2015-2016.

Solution

Consolidated Profit & Loss Account of H Ltd. and its subsidiary S Ltd.
for the year ended on 31st March, 2017

	Particulars	Note No.	₹ in Lacs
I.	Revenue from operations	1	5,865
II.	Total revenue		5,865

2	Cost of Materials Purchased/Consumed		
	H Ltd.	5,00,000	
	S Ltd.	6,00,000	
	Total	11,00,000	
	Less : Intra-group sales (H sold to S)	(60,000)	10,40,000

Working Note

Profit of Subsidiary

Revenue from Operations		9,50,000
Less : Expenses		
Cost of Material purchased/Consumed	6,00,000	
Changes of Inventories of finished goods		
Employee benefit expense	1,50,000	
Finance cost	12,000	
Depreciation and amortization expense	79,000	
Other expenses	60,000	

* Capital Reserve is made up of 3 month's profit upto 1.4.2016 i.e. ¼ x 35,000 x 80/100.

Total expenses		(9,01,000)
Profit Before Tax		49,000
Preference Dividend		7,000
Preference Dividend Payable		7,000
Profit available for shareholders		35,000
Minority Share (20%)		7,000

2.12 Preparation of Consolidated Cash Flow Statement

A holding company has to prepare a consolidated cash flow statement if it is required to prepare cash flow statement.

Same as Consolidated Profit and Loss account, the preparation of consolidated Cash flow statement is also not difficult. All the items of Cash flow from operating activities, investing activities and financing activities are to be added on line by line basis and from the consolidated items, inter-company transactions should be eliminated. Below given is the Consolidated Cash Flow Statement with hypothetical figures:

Consolidated Cash Flow Statement

			(₹ in million)
	A Company	*B Company*	*Total*
Cash Flow from Operating Activities			
Change in Reserve	8	2	10
Change in P & L A/c	0	1	1
Dividend Paid	22		22
Tax Provision	20	1	21
Depreciation	10	5	15
Interest	-10	10	0
	50	19	69
Less: Tax payment	-20	-1	-21
	30	18	48
Working Capital Adjustment	-13	12	-1
(A)	17	30	47
Cash Flow from Investment Activities			
Sale of fixed assets	30	0	30
Purchase of fixed assets	-30	-20	-50
(B)	0	-20	-20
Cash Flow from Financing Activities (C)	-22	-10	-32
Net cash flows (A+B+C)	-5	0	-5

2.13 Acquisition of Interest in Subsidiary at Different Dates

Often a holding company acquires a subsidiary in steps. As per para 15 of AS 21, "If an enterprise makes two or more investments in another enterprise at different dates and eventually obtains control of the other enterprise, the consolidated financial statements are presented only from the date on which holding-subsidiary relationship comes in existence. If two or more investments are made over a period of time, the equity of the subsidiary at the date of investment, is generally determined on a step-by-step basis; however, if small investments are made over a period of time and then an investment is made that results in control, the date of the latest investment, as a practicable measure, may be considered as the date of investment.

If two or more investments are made at different dates and eventually obtains control of the other enterprise,

Then the consolidated financial statements are presented only from the date on which holding-subsidiary relationship comes in existence

If two or more investments are made over a period of time and holding subsidiary relationship came into existence from the first acquisition

Then the equity of the subsidiary at the date of investment, is generally determined on a step-by-step basis

If small investments are made over a period of time and then an investment is made that results in control

Then the date of the latest investment, as a practicable measure, may be considered as the date of investment

If two or more investments are made over a period of time and Lot 1 acquisition resulted in controlling interest, then steps to solve the question:

1. Take lot 1 date of acquisition as a base date
2. Classify the reserves and surplus into pre and post-acquisition
3. The revenue portion on the date of lot 1 along with any increase thereon till the date of acquisition of Lot 2 is capital profit for Lot 2
4. Deduct this figure from share of revenue profit of holding company
5. And add to the share of capital profit of holding company.

Illustration 12

'HIM' Limited is a company carrying on the business of beauty products and is having a subsidiary 'SIM' Limited. Their Balance-sheets as on 31st March 2016 were as under:

Equity and Liabilities	*HIM Limited (₹)*	*SIM Limited (₹)*
Shareholders' Funds		
Share Capital	*25,00,000*	*5,80,000*
Reserves and Surplus		

General Reserves		2,00,000	1,20,000
Profit and Loss Account		3,12,500	2,05,000
Current Liabilities			
Trade Payable		4,55,000	2,35,500
Bills Payable		28,000	83,000
	Total	34,95,500	12,23,500
Assets			
Non-Current Assets			
Fixed Assets		21,70,000	6,25,000
Investments			
4060 Shares in SIM Limited		5,10,000	-
Current Assets			
Inventories		4,80,000	3,19,200
Trade Receivable		1,80,000	1,64,000
Bills Receivable		68,000	1,00,000
Cash and Bank Balance		87,500	15,300
	Total	34,95,500	12,23,500

HIM Limited has also given the following information:

(i) *HIM Limited has acquired the shares in SIM Limited in two lots on two different dates. The relevant information at the time of acquisition of shares was as under:*

No. of shares acquired	Balance in General Reserve	Balance in Profit and Loss Account
1st acquisition 3480	80,000	25,000
2nd acquisition 580	85,000	1,02,000

(ii) *Bills Receivable of HIM Limited includes ₹15,000 being acceptance from SIM Limited.*

(iii) *Both the companies have declared dividends of 10% on 31st March 2016, but it has not been provided in the books of account.*

(iv) *SIM Limited's inventory includes stock of ₹ 1,45,000 purchased from HIM Limited. HIM Limited sells goods at mark up of 25% on its cost.*

Prepare the Consolidated Balance Sheet of HIM Limited along with 'Notes to accounts'.

Answer

Consolidated Balance Sheet of Him Ltd. and its subsidiary Sim Ltd.
as on 31st March, 2016

Particulars	Note No.	₹
I. Equity and Liabilities		
(1) Shareholder's Funds		

	Share Capital	1	25,00,000
	Reserves and Surplus	2	3,79,300
(2)	**Minority Interest (W.N.2)**		2,54,100
(3)	**Current Liabilities**

Less: Accumulated Depreciation	*(100)*	*(30)*
Net Block	*700*	*320*
Investments	*190*	
Current Assets	*20*	*12*
Applications	***910***	***332***

Solution

In this case goodwill paid in acquiring cost of control should be computed step by step basis:

₹ in million

Goodwill	*1-7-2016*	*1-10-2016*	*1-11-2016*	*Total*	*Minority Interest*
Cost of investments (A)	50	60	80	190	
Book Value of Investments:					
Equity Share Capital	40 (200 X 20 %)	40 (200 X 20 %)	40 (200 X 20 %)	120.00	80 (200-120)
General Reserve 1-4-2016	12 (60 X 20 %)	12 (60 X 20 %)	12 (60 X 20 %)	36.00	24 (60-36)
Pre-acquisition profit of 2016-2017 WN 1	3.6	7.2	8.40	19.20	
(B)	55.6	59.2	60.40	175.20	
Cost of Control (A-B)	-5.60	0.80	19.60	14.80	
40% of post-acquisition reserve and profit					28.80
					132.80

Consolidated Profit & Loss a/c					
Balance of P & L A/c of H Ltd.					10
Share of current reserve [72 x 60 % - 19.2]					24
					34

Working Note:

Total Profit from 1-4-2016 to 31-03-2017 = 120 + 12 – 60 = 72 Million

Acquisition Date	*Pre-acquisition Period*	*Pre-acquisition Duration [A]*	*% Holding [B]*	*Profit amount 72 x [A]/12 X [B]*
1-7-2016	1-4-2016 to 1-7-2016	3 Months	20	3.6
1-10-2016	1-4-2016 to 1-10-2016	6 Months	20	7.2
1-11-2016	1-4-2016 to 1-11-2016	7 Months	20	8.4

Consolidated Balance Sheet of H Ltd. and its Subsidiary S Ltd. as at 31st March, 2017

Particulars	*Note No.*	*(₹ in million)*
I. Equity and Liabilities		
(1) **Shareholder's Funds**		
(a) Share Capital		500.00
(b) Reserves and Surplus	1	434.00
(2) **Minority Interest**		132.80
Total		1,066.80
II. Assets		
(1) **Non-current assets**		
(a) Fixed assets		
(i) Tangible assets	2	1,020.00
(ii) Intangible assets (Goodwill)		14.80
(2) **Current assets (**20 + 12**)**		32.00
Total		1,066.80

Notes to Accounts

			(₹ in million)
1.	Reserves and Surplus		
	General reserve	400	
	Profit and Loss A/c [As calculated above]	34	434.00
2.	Tangible assets		
	Gross Block		1,150.0

Less: Accumulated Depreciation		(130.0)
Net Block		1,020.0

Another situation may be that a parent company increases or decreases its stake in the subsidiary.

For example, H Ltd. acquired 70% of the equity shares in S Ltd. It further acquires 10% of the equity shares subsequently or sells 10% of the equity shares. In both the cases step by step method should be followed for measuring goodwill/capital reserve.

2.14 Uniform Accounting Policies

Para 20 of AS 21 mentions that consolidated financial statements shall be prepared using uniform accounting policies for like transactions and other events in similar circumstances

If any company in the same group uses accounting policies other than those adopted in consolidated financial statements for like transactions and events in similar circumstances, appropriate adjustments should be made.

If it is not practicable to use uniform accounting policies in preparing the consolidated financial statements, the fact should be disclosed together with the proportions of items to which different accounting policies have been applied.

For example, if the subsidiary company follows LIFO method for valuation of inventories and the holding company follows FIFO method, the financial statement of subsidiary company should be restated by adjusting the value of inventories to bring the same in line with the valuation procedure adopted by the holding company. Then only consolidation can be considered.

Illustration 14

Consider the following summarized balance sheets of subsidiary B Ltd.:

	2015 ₹	2016 ₹		2015 ₹	2016 ₹
Share-Capital			*Fixed Assets*		
Issued & subscribed			*Cost*	*3,20,000*	*3,20,000*
5,000 equity shares			*Less: Accumulated*		
of ₹ 100 each	*5,00,000*	*5,00,000*	*depreciation*	*(48,000)*	*(96,000)*
Reserves & Surplus				*2,72,000*	*2,24,000*
Revenue reserves	*2,86,000*	*7,14,000*	*Investments*		
Current Liabilities &			*at cost*	*—*	*4,00,000*
Provisions:			*Current Assets:*		
Trade Payables	*4,90,000*	*4,94,000*	*Inventory*	*5,97,000*	*7,42,000*
Bank overdraft	*—*	*1,70,000*	*Trade Receivables*	*5,94,000*	*8,91,000*
Provision for taxation	*3,10,000*	*4,30,000*	*Prepaid Expenses*	*72,000*	*48,000*
			Cash at Bank	*51,000*	*3,000*
	15,86,000	*23,08,000*		*15,86,000*	*23,08,000*

Consider also the following information:

(a) B Ltd. is a subsidiary of A Ltd. Both the companies follow calendar year as the accounting year.

(b) A Ltd. values inventory on LIFO basis while B Ltd. used FIFO basis. To bring B Ltd.'s values in line with those of A Ltd. its value of inventory is required to be reduced by ₹ 12,000 at the end of 2015 and ₹ 34,000 at the end of 2016.

(c) Both the companies use straight-line method of depreciation. However, A Ltd. charges depreciation @ 10%.

(d) B Ltd. deducts 1% from Trade Receivables as a general provision against doubtful debts.

(e) Prepaid expenses in B Ltd. include advertising expenditure carried forward of ₹ 60,000 in 2015 and ₹ 30,000 in 2016, being part of initial advertising expenditure of ₹ 90,000 in 2015 which is being written off over three years. Similar amount of advertising expenditure of A Ltd. has been fully written off in 2015.

Restate the balance sheet of B Ltd. as on 31st December, 2016 after considering the above information, for the purpose of consolidation. Such restatement is necessary to make the accounting policies adopted by A Ltd. and B Ltd. uniform:

Solution

Adjusted revenue reserves of B Ltd.:

	₹	₹
Revenue reserves as given		7,14,000
Add: Depreciation over charged (₹ 16,000 × 2)	32,000	—
Provision for doubtful debts [8,91,000 / 99 X 1]	9,000	41,000
		7,55,000
Less: Reduction in value of Inventory	34,000	
Advertising expenditure to be written off	30,000	(64,000)
Adjusted revenue reserve		6,91,000

Restated Balance Sheet of B Ltd.
as at 31st December, 2016

Particulars	Note No.	(₹)
I. Equity and Liabilities		
(1) Shareholder's Funds		
(a) Share Capital		5,00,000
(b) Reserves and Surplus	1	6,91,000
(2) Current Liabilities		
(a) Short term borrowings	2	1,70,000
(b) Trade Payables		4,94,000
(c) Short-term provision	3	4,30,000
Total		22,85,000
II. Assets		
(1) Non-current assets		

(a) Fixed assets		
Tangible assets	4	2,56,000
(b) Non-current Investment		4,00,000
(2) Current assets		
(a) Inventories		7,08,000
(b) Trade Receivables		9,00,000
(c) Cash & Cash Equivalents		3,000
(d) Other current assets	5	18,000
Total		22,85,000

Notes to Accounts

			₹
1.	**Reserves and Surplus**		
	Revenue Reserve		6,91,000
2.	**Short term borrowings**

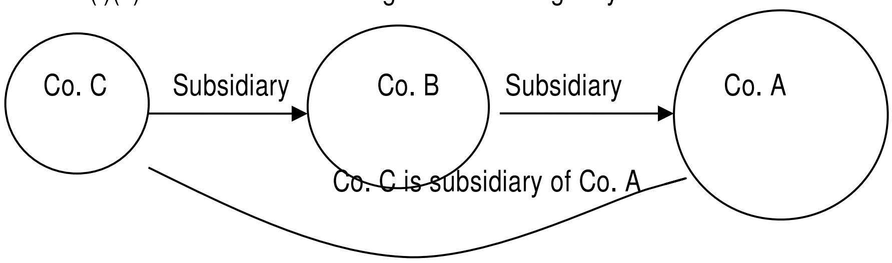
	Less: Depreciation to date	(64,000)	2,56,000
5.	**Other current assets**		
	Prepaid expenses		18,000

2.15 Chain Holding

Suppose that Company B is subsidiary of Company A and Company C is subsidiary of Company B.

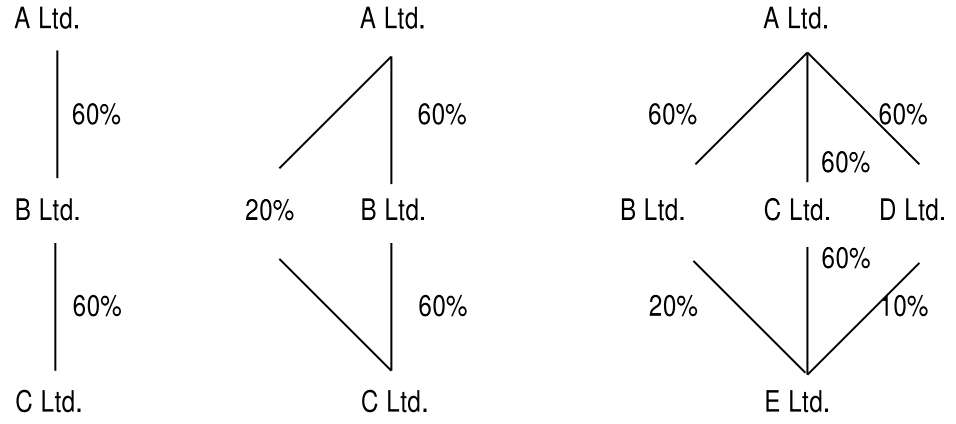
By virtue of Section 2 (86) of the Companies Act, 2013* C becomes subsidiary of Company A. Popularly, Company C is called sub-subsidiary of Company A and the type of holding mentioned in Section 4(l)(c) is called chain holding. Chain holding may take various forms



Chain Holding

* Section 4(1)(c) of the Companies Act, 1956.

In Type 1 the parent company does not hold any share in the sub-subsidiary. In Type 2 both the parent and subsidiary hold shares of sub-subsidiary. In Type 3 more than one subsidiaries of the parent company hold shares in the sub-subsidiary. There may be different other types of chain holding.



Type 1 **Type 2** **Type 3**

Treatment of Capital Profit of Sub-subsidiary in the Consolidation Process: There are two approaches, namely, **direct method and indirect method.** Capital Profit of the sub-subsidiary should be firstly apportioned between minority interest and group interest. The group interest should be taken directly for calculation of goodwill/capital reserve. This is called direct method.

Let us take an example. A Ltd.; holds 60% shares of B Ltd. and 20% shares of C Ltd.; B Ltd. holds 60% shares of C Ltd. Total profit of C Ltd. is ₹ 1,00,000 of which pre-acquisition profit is ₹ 40,000.

As per direct method capital profit (i.e., pre-acquisition profit in this case) should be apportioned as follows:

₹ 40,000 × $\frac{20}{100}$ = ₹ 8,000 to minorities of C Ltd.

₹ 40,000 × $\frac{80}{100}$ = ₹ 32,000 to the group which is to be considered for calculating goodwill or capital reserve.

For computation of goodwill / capital reserve for the purpose of consolidation, cost of group investments is compared to their face value. Cost of investments should be arrived at after adjusting pre-acquisition profit/loss relating to such investments. So direct approach appears to be more logical.

In the indirect approach, pre-acquisition profit/loss is apportioned among minorities of the sub-subsidiaries and to the respective group companies. From the shares of respective group companies, their minority interests are deducted and the parent company gets its indirect shares. In the example given above A Ltd.'s direct shares to C Ltd.; is to the extent of 20% and indirect through B Ltd. is 60% of 60% i.e. 36%. So while computing goodwill or capital reserve for the purpose of consolidation (only 20% + 36%) i.e. 56% of the capital profit of C Ltd. is considered. In other words, the calculation will be as follows:

$$₹\ 40,000 \times \frac{20}{100} = ₹\ 8,000 \text{ to minorities of C Ltd.}$$

$$₹\ 40,000 \times \frac{20}{100} = ₹\ 8,000 \text{ to A Ltd.}$$

$$₹\ 40,000 \times \frac{60}{100} = ₹\ 24,000 \text{ to B Ltd.}$$

Out of B Ltd.'s share of ₹ 24,000 A Ltd. will get 60%. This means A Ltd.'s indirect share in capital profit of C Ltd. is ₹ 24,000 × 60% i.e. ₹ 14,400. In total ₹ 22,400 (14,400 + 8,000) is to be taken for computation for goodwill/capital reserve. This comes to 56% of ₹ 40,000.

Illustration 15

Prepare the Consolidated Balance Sheet as on December 31, 2016 of group of companies A Ltd., B Ltd. and C Ltd. Their summarized balance sheets on that date are given below:

Liabilities	*A Ltd.* ₹	*B Ltd.* ₹	*C Ltd.* ₹
Share Capital (share of ₹ 100 each)	*1,25,000*	*1,00,000*	*60,000*
Reserves	*18,000*	*10,000*	*7,200*
Profit & Loss A/c	*16,000*	*4,000*	*5,000*
Trade Payables	*7,000*	*3,000*	—
A Ltd.	—	*7,000*	—
C Ltd.	*3,300*	—	—
Total	*1,69,300*	*1,24,000*	*72,200*
Assets			
Fixed Assets	*28,000*	*55,000*	*37,400*
Investments in shares-			
B Ltd.	*85,000*	—	—
C Ltd.	—	*53,000*	—
Inventory	*22,000*	*6,000*	—
B Ltd.	*8,000*	—	—
Trade Receivables	*26,300*	*10,000*	*31,500*
A Ltd.	—	—	*3,300*
Total	*1,69,300*	*1,24,000*	*72,200*

Other information:

(i) A Ltd. holds 750 shares in B Ltd. and B Ltd. holds 400 shares in C Ltd. These holdings were acquired on 30th June, 2016

(ii) On 1st January, 2016 the following balances stood in the books of B Ltd. and C Ltd.

	B Ltd. ₹	*C Ltd.* ₹
Reserves	*8,000*	*6,000*
P & L Account	*1,000*	*1,000*

(iii) C Ltd., sold goods costing ₹ 2,500 to B Ltd. for ₹ 3,100. These goods still remain unsold.

Solution

Workings Notes:

Shareholding Pattern

	B Ltd.	*C Ltd.*
Total Number of Shares	1,000	600
A Ltd's Holding	750	NA
B Ltd's Holding	NA	400
Minority Holding	250	200
Minority %	25 %	33.33%

(1) Analysis of Profits:

	Capital Profit ₹	*Revenue Reserve* ₹	*Revenue Profit* ₹
C Ltd.			
Reserve on 1.1.2016	6,000	—	—
Additional Reserve created in 2016 [7,200 – 6,000] = 1,200	600 [1,200 X ½]	600 [1,200 X ½]	—
P & L A/c, Balance on 1.1.2016	1,000	—	—
Profit for 2016 [5,000 – 1,000] = 4,000	2,000 [4,000 X ½]	—	2,000 [4,000 X ½]
	9,600	600	2,000
Due to outsiders, 1/3	3,200	200	667
Share of B Ltd. (2/3)	6,400	400	1,333

B Ltd.			
From C Ltd.	6,400*	400	1,333
Reserve on 1.1.2016	8,000	—	—
Additional Reserve created in 2016 [10,000-8,000] = 2,000	1,000 [2,000 X ½]	1,000 [2,000 X ½]	—
Profit and Loss A/c:			
Balance on 1.1.2016	1000	—	—
Profit during 2016 [4,000-1,000] = 3,000	1,500 [3,000 X ½]	—	1,500 [3,000 X ½]
	17,900	1,400	2,833
Due to outsiders (1/4)	4,475	350	708
Share of A Ltd.	13,425	1,050	2,125
A Ltd.		18,000	16,000
			18,125
Less: Inventory Reserve (2/3)			(400)
		19,050	17,725

Notes:

(i) During 2016, ₹ 1,200 has been added to the Reserves of C Ltd., and ₹ 2,000 to the Reserves of B Ltd. The profit must have been earned during the whole of the year; hence, half of these figures (i.e., up to 30.6.2016) must be considered as capital pre-acquisition and the remaining revenue.

(ii) Total unrealised profit is ₹ 600, i.e., ₹ 3,100 less ₹ 2,500.

(2) Minority Interest: [From the calculations above]

	B Ltd. ₹	*C Ltd.* ₹
Share Capital	25,000	20,000
Share of Capital Profits	4,475	3,200
Share of Revenue Reserves	350	200
Share of Revenue Profits	708	667
Less: Inventory reserve		(200)
Total	30,533	23,867
Grand Total		54,400

*This problem has been solved by following 'indirect approach'. All subsequent illustrations are solved by following 'direct approach'.

(3) Cost of Control:

Amount paid:		
A Ltd.	85,000	
B Ltd.	53,000	1,38,000
Less: Par value of shares in:		
B Ltd.	75,000	
C Ltd.	40,000	
Capital Profits*	13,425	(1,28,425)
Cost of Control*/ Goodwill		9,575

(4) Since X Ltd. shows ₹ 8,000 against B Ltd. whereas B Ltd., shows only ₹ 7,000 in favour of A Ltd., it must be assumed that B Ltd., has remitted ₹ 1,000 to A Ltd.; not yet received by A Ltd. The amount is in transit.

(5) If capital profit is increased by ₹ 1,600 cost of control will be ₹ 7,975.

Consolidated Balance Sheet of A Ltd.
and its subsidiaries B Ltd. and C Ltd.,
as on 31st December, 2016

Particulars	*Note No.*	*(₹)*
I. Equity and Liabilities		
(1) Shareholder's Funds		
(a) Share Capital		1,25,000
(b) Reserves and Surplus	1	36,775
(2) Minority Interest (W.N 2)		54,400
(3) Current Liabilities		
Trade Payables	2	10,000
Total		2,26,175
II. Assets		
(1) Non-current assets		
Fixed assets		
(i) Tangible assets	3	1,20,400
(ii) Intangible assets	4	9,575

* The whole of this amount may preferably be adjusted against cost of control, instead of being added to the profits of B Ltd. Consequently, capital profits will increase by ₹ 1,600 with a corresponding reduction in Minority interest.

(2)	**Current assets**		
	(a) Inventories	5	27,400
	(b) Trade receivables	6	67,800
	(c) Cash & Cash equivalents	7	1,000
	Total		2,26,175

Notes to Accounts

	B Ltd.	10,000	
	C Ltd.	31,500	67,800
7	**Cash & Cash equivalents**		
	Cash in transit		1,000

2.16 Treatment of Subsidiary Company having Preference Share Capital

If the holding company has some investments in the preference shares of subsidiary, the carrying amount of such investments along with carrying amount of investments in equity shares of subsidiary company should be set off against the holding company's share in the equity of such subsidiary. The difference is treated as goodwill or capital reserve. The interest of minority shareholders of the subsidiary company will then include such portion of preference share capital of the subsidiary company which is not held by holding company.

However, if a subsidiary company has cumulative preference shares which are partly held outside the group, the holding company should compute its share of profits or losses of subsidiary after adjusting for the subsidiary's preference dividend attributable to minority shareholders, whether or not such dividends have been declared. By comparison, dividends in respect of non-cumulative shares are only recognized when declared.

2.17 Inter-Company Holdings

It is possible that the subsidiary company may also hold shares in the holding company. As per the proviso of section 19 of the Companies Act, 2013, the law would permit this if either the subsidiary company had already acquired the shares before the holding company acquired the shares in the subsidiary or it holds such shares as a trustee; or it holds such shares as the legal representative of a deceased member of the holding company. However, the subsidiary company would have **no voting rights at a meeting** of its holding company on the shares it acquired before the holding company acquired the shares in the subsidiary.

In such a situation, the calculation of the minority interest would have to be based on the fact that the subsidiary also has a claim on the profits of the holding company. The calculation will have to be made separately for revenue and capital profits since, otherwise, cost of control cannot be ascertained correctly.

For the purpose, such profits of the holding company as existed when the subsidiary company acquired the shares should be treated as capital profits. The calculation of the minority interest would involve an algebraical equation.

Illustration 15

You are given below the summarized balance sheets of two companies A Ltd. and B Ltd. as at 31-12-2016. Prepare their consolidated Balance Sheet.

Liabilities	*A Ltd. ₹*	*B Ltd. ₹*	*Assets*	*A Ltd. ₹*	*B Ltd. ₹*
Share Capital:			*Investment:*		
(₹ 100 each)	*5,00,000*	*2,00,000*	*1,600 shares*		
Profits:			*in B Ltd.*	*2,20,000*	
Capital profit	*1,00,000*	*80,000*	*1,000 shares*		
Revenue profit	*3,00,000*	*50,000*	*in A Ltd.*		*1,50,000*
Trade Payables	*1,50,000*	*60,000*	*Sundry Assets*	*8,30,000*	*2,40,000*
	10,50,000	*3,90,000*		*10,50,000*	*3,90,000*

Solution

A holds 1,600 shares out of 2,000 shares of B Ltd. i.e. 4/5th of B Ltd.

B holds 1,000 shares out of 5,000 shares of A Ltd. i.e. 1/5th of A Ltd.

Suppose:

A = Revenue Profits of A Ltd., and

B = Revenue Profits of B Ltd.

Then,

$$A = 3,00,000 + \frac{4}{5}B$$

$$B = 50,000 + \frac{1}{5}A$$

$$B = 50,000 + \frac{1}{5}(3,00,000 + \frac{4}{5}B) \text{ [Substituting for A]}$$

$$B = 50,000 + 60,000 + \frac{4}{25}B$$

$$B = 1,10,000 + \frac{4}{25}B$$

$$25B = 27,50,000 + 4B$$

$$21B = 27,50,000 \text{ or } B = 1,30,952$$

Minority interest in Revenue profits is 1/5 of ₹ 1,30,952 or ₹ 26,190. Total revenue profits being ₹ 3,50,000 [3,00,000 + 50,000] for A Ltd. and B Ltd together, ₹ 3,23,810 [3,50,000 – 26,190] remains for the group.

Capital Profits:

$$A = 1,00,000 + \frac{4}{5}B$$

$$B = 80,000 + \frac{1}{5}A$$

$$B = 80,000 + \frac{1}{5}(1,00,000 + \frac{4}{5}B)$$

$$B = 80,000 + 20,000 + \frac{4}{25}B$$

$$B = 1,00,000 + \frac{4}{25}B$$

$$25B = 25,00,000 + 4B$$

$$21B = 25,00,000$$

$$B = 1,19,048$$

Minority Interest @1/5 would be ₹ 23,810.

Total being ₹ 1,80,000 for the group it would be ₹ 1,56,190

Total Minority interest:

	₹
Shares held by outsiders [2,00,000 X 1/5]	40,000
Revenue Profit	26,190
Capital Profit	23,810
	90,000

Cost of control:

		(₹)
Amount paid by both companies		3,70,000
Less: Face Value:		
Shares in B Ltd.	1,60,000	
Shares in A Ltd.	1,00,000	
Capital Profits (₹ 1,19,048 – ₹ 23,810)	95,238	(3,55,238)
Goodwill		14,762

Alternative working note:

	A Ltd. ₹	*B Ltd.* ₹
Capital Profits	1,00,000	80,000
Less: Transfer to make B's Capital Profit ₹ 1,19,048	(39,048)	+39,048
	60,952	1,19,048
Minority Interest		(23,810)
Share of A Ltd.		95,238
Revenue Profits	3,00,000	50,000
Less: Transfer to make B's Profit ₹ 1,30,952	(80,952)	+80,952
	2,19,048	1,30,952
Less: Minority Interest		(26,190)
Share of A Ltd.	1,04,762	
	3,23,810	1,04,762

Consolidated Balance Sheet of A Ltd. and its subsidiary B Ltd.
as on 31st December, 2016

2.18 Different Reporting Dates

For the purposes of preparing consolidated financial statements, the financial statements of all subsidiaries should, wherever practicable, be prepared:

- To the same reporting date; and
- For the same reporting period as of the parent.

When the reporting dates are different, the subsidiary often prepares, for consolidation purposes, statements as at the same date as that of the parent.

(Reference: Para 18 & 19 of AS 21)

When it is impracticable to do this, financial statements drawn up to different reporting dates may be used provided that difference in reporting dates is not more than six months.

However, adjustments should be made for the effects of significant transactions or other events that occur between the date of the subsidiary's financial statements and the date of the parent's financial statements. The length of the reporting periods and any difference in the reporting dates should be the same from period to period.

AS 21 does not define 'significant events and transactions', but they may include business combinations, asset impairments, and the crystallization of contingent liabilities. A potentially significant transaction or other event requires a careful analysis of the relevant facts and circumstances to determine if an adjustment is required.

2.19 Investment in the Debentures of the Subsidiary Company

For the purposes of preparing consolidated financial statements, debentures of subsidiary held by the holding company should be eliminated. Profit or loss arising on elimination shall be adjusted against Profit and Loss account of the holding company. No goodwill or capital reserve will be ascertained.

Consider the following summarised balance sheets:

	A Ltd. (As on 31.3.2017)	*B Ltd. (As on 31.12.2016)*		*A Ltd. (As on 31.3.2017)*	*B Ltd. (As on 31.12.2016)*
	₹	₹		₹	₹
Share Capital (Shares			*Fixed Assets*	*6,50,000*	*4,05,000*
of ₹ 10 each)	*10,00,000*	*5,00,000*	*Investment:*		
Reserves and Surplus	*4,50,000*	*2,05,000*	*40,000 Shares*		
Secured Loan:			*in B Ltd.*	*8,00,000*	—
13% Debentures			*1,000 Debentures*		
(₹ 100 each)	—	*3,00,000*	*in B Ltd.*	*1,50,000*	—
Current Liabilities:			*Current Assets:*		

Trade payables	*3,80,000*	*80,000*	*Inventory*	*2,00,000*	*3,50,000*
Other liabilities	*2,00,000*	*40,000*	*Trade Receivables*	*1,50,000*	*2,65,000*
			Cash and Bank	*80,000*	*1,05,000*
	20,30,000	*11,25,000*		*20,30,000*	*11,25,000*

On 5th January 2017, certain inventory of B Ltd. costing ₹ 20,000 were completely destroyed by fire. The insurance company paid 75% of the claim.

On 20th January, 2017, A Ltd. sold goods to B Ltd. costing ₹ 1,50,000 at an invoice price of cost plus 20%.

50% of those goods were resold by B Ltd. to A Ltd. within 31st March, 2017 (these were then sold by A Ltd. to a third party before 31st March, 2017). As on 31st March, 2017, B Ltd. owes ₹ 60,000 to A Ltd. in respect of those goods. Pre-acquisition profits of B Ltd. were ₹ 75,000. Prepare consolidated balance sheet as on 31st March, 2017 after making necessary adjustments in the balance sheet of B Ltd.

Solution

Consolidated Balance Sheet of A Ltd. and its subsidiary B Ltd.
As on 31st March, 2017

Particulars	*Note No.*	*(₹)*
I. Equity and Liabilities

	5,74,000
Less: Unrealised profit on Inventory $\left[\frac{1}{6} \times ₹\ 90{,}000\right]$	(15,000)
Loss on elimination of debentures acquired	(50,000)
	5,09,000

2.20 Miscellaneous Illustrations

Illustration 17

A Ltd. acquired 1,600 ordinary shares of ₹ 100 each of B Ltd. on 1st July 2016. On December 31, 2016 the summarised Balance Sheets of the two companies were as given below:

Liabilities	*A Ltd.* ₹	*B Ltd.* ₹	*Assets*	*A Ltd.* ₹	*B Ltd.* ₹
Capital (Shares of			*Land & Buildings*	*1,50,000*	*1,80,000*
₹ 100 each fully			*Plant & Machinery*	*2,40,000*	*1,35,000*
paid)	*5,00,000*	*2,00,000*	*Investment in B Ltd.*		
Reserves	*2,40,000*	*1,00,000*	*at cost*	*3,40,000*	—
Profit & Loss A/c	*57,200*	*82,000*	*Inventory*	*1,20,000*	*36,400*
Bank Overdraft	*80,000*	—	*Trade Receivable*	*59,800*	*40,000*
Trade Payable	*47,100*	*17400*	*Cash*	*14,500*	*8,000*
	9,24,300	*3,99,400*		*9,24,300*	*3,99,400*

The Profit & Loss Account of B Ltd. showed a credit balance of ₹ 30,000 on 1st January, 2016 out of which a dividend of 10% was paid on 1st August; A Ltd. has credited the dividend received to its Profit & Loss Account. The Plant & Machinery which stood at ₹ 1,50,000 on 1st January, 2016 was considered as worth ₹ 1,80,000 on 1st July, 2016; this figure is to be considered while consolidating the Balance Sheets. The rate of depreciation on plant & machinery is 10%.

Prepare consolidated Balance Sheet as on December 31, 2016.

Solution

Consolidated Balance Sheet of A Ltd. and its subsidiary, B Ltd.
as on 31st December, 2016

Particulars	**Note No.**	**(₹)**
I. Equity and Liabilities		
(1) Shareholder's Funds		

	(a)	Share Capital	1	5,00,000
	(b)	Reserves and Surplus	2	3,08,800
(2)	**Minority Interest (W.N 5)**			83,600

		Total		10,36,900
II.	**Assets**			
(1)	**Non-current assets**			
		Fixed assets		
		(i) Tangible assets	5	7,41,000
		(ii) Intangible assets	6	17,200
(2)	**Current assets**			
	(a)	Inventories	7	1,56,400
	(b)	Trade receivables	8	99,800
	(c)	Cash & Cash equivalents (Cash)	9	22,500
		Total		10,36,900

Notes to Accounts

				₹
1.	**Share Capital**			
	5,000 shares of ₹ 100 each			5,00,000
2.	**Reserves and Surplus**			
	Reserves		2,40,000	
	Profit & loss (W.N.8)		68,800	3,08,800
3.	**Trade Payables**			
	A Ltd.	47,100		
	B Ltd.	17,400		64,500
4.	**Short term borrowings**			
	Bank overdraft			80,000
5.	**Tangible Assets**			
	Land and building (1,50,000 + 1,80,000)		3,30,000	
	Plant & Machinery (W.N 7)		4,11,000	7,41,000
6.	**Intangible assets**			
	Goodwill (W.N 6)			17,200

7.	**Inventories**			
	A Ltd.		1,20,000	
	B Ltd.		36,400	1,56,400
8	**Trade Receivables**			
	A Ltd.	59,800		
	B Ltd.	40,000		
				99,800
9	**Cash & Cash equivalents**			
	Cash			
	A Ltd.		14,500	
	B Ltd.		8,000	22,500

Share holding Pattern

Total Shares of B Ltd	2,000 shares
Shares held by A Ltd	1,600 shares i.e. 80 %
Minority Shareholding	400 shares i.e. 20 %

Working Notes:

1. The dividend @ 10% on 1,600 shares, ₹ 16,000 received by A Ltd. should have been credited to the investment A/c, being out of pre-acquisition profits. A Ltd., must pass a correcting entry, viz.

Profit & Loss Account	Dr. ₹ 16,000	
To investment		₹ 16,000

2. The Plant & Machinery of B Ltd. would stand in the books at ₹ 1,42,500 on 1st July, 2016, considering only six months' depreciation on ₹ 1,50,000 total depreciation being ₹ 15,000. The value put on the assets being ₹ 1,80,000 there is an appreciation to the extent of ₹ 37,500.

3. **Capital profits of B Ltd.**

	₹	₹
Reserve on 1.1.2016		1,00,000
Profit & Loss Account Balance on 1.1.2016	30,000	
Less: Dividend paid	(20,000)	10,000
Profit for 2016: Total ₹ 82,000 less ₹ 10,000		
i.e. ₹ 72,000; upto 1.7.2016		36,000
Appreciation in value of Plant & Machinery		37,500
		1,83,500
Less: 20% due to outsiders		(36,700)
Holding company's share		1,46,800

4. Revenue profits of B Ltd.:

Profit after 1.7.2016 [82,000 – 10,000] x ½	36,000
*Less:*10% depreciation on ₹ 1,80,000 for 6 months less depreciation already	
Charged for 2nd half year on 1,50,000 (9,000 – 7,500)	(1,500)
	34,500
Less: 1/5 due to outsiders	(6,900)
Share of A Ltd.	27,600

5. Minority interest:

Par value of 400 shares	40,000
Add: 1/5 Capital Profits [WN 3]	36,700
1/5 Revenue Profits [WN 4]	6,900
	83,600

6. Cost of Control:

Amount paid for 1,600 shares	3,40,000	
Less: Dividend out of pre-acquisition profits	(16,000)	3,24,000
Par value of shares	1,60,000	
Capital Profits –share of A Ltd. [WN 3]	1,46,800	(3,06,800)
Cost of Control or Goodwill		17,200

7. Value of plant & Machinery:

A Ltd.		2,40,000
B Ltd.	1,35,000	
Add: Appreciation on 1.7.2016 [1,80,000 – (1,50,000 – 7,500)]	37,500	
	1,72,500	
Add: Deprecation for 2nd half charged on pre-revalued value	7,500	
Less: Depreciation on ₹ 1,80,000 for 6 months	(9,000)	1,71,000
		4,11,000

8. Profit & Loss Account (Consolidated):

A Ltd. as given	57,200	
Less: Dividend transferred to Investment A/c	(16,000)	41,200
Share of A Ltd. in revenue profits of B Ltd. (WN 4)		27,600
		68,800

Illustration 18

The summarised balance sheets of three companies, A Ltd., B Ltd., C Ltd., as on 31st December, 2016 are given below:

Liabilities:	A Ltd. ₹	B Ltd. ₹	C Ltd. ₹
Share Capital (shares of ₹ 100 each)	1,50,000	1,00,000	60,000
Reserves	20,000	10,000	7,500
Profit & Loss A/c	50,000	30,000	25,000
Trade Payables	20,000	25,000	15,000
A Ltd.	—	10,000	8,000
	2,40,000	1,75,000	1,15,500
Assets	**A Ltd. ₹**	**B Ltd. ₹**	**C Ltd. ₹**
Goodwill	20,000	15,000	10,000
Fixed Assets	70,000	50,000	60,000
Shares in B Ltd. (750 shares)	90,000	—	—
In C Ltd. (100 shares)	15,000	—	—
In C Ltd. (350 shares)	—	52,000	—
Due from: B Ltd.	12,000		
C Ltd.	8,000		
Current Assets	25,000	58,000	45,500
	2,40,000	1,75,000	1,15,500

All shares were acquired on 1st July, 2016. On 1st Jan., 2016, the balances were:

	A Ltd.	B Ltd.	C Ltd.
Reserves	10,000	10,000	5,000
Profit & Loss A/c	5,000	5,000(Dr.)	3,000

Profits during 2016 were earned evenly over the year.

In August, 2016 each company declared and paid an interim dividend of 10% p.a. for six months. A Ltd. and B Ltd., have credited their Profit & Loss Account with the dividends received. During 2016, C Ltd. fabricated a machine costing ₹ 10,000 which it sold to B Ltd. for ₹ 12,000, B Ltd. then sold the machine to A Ltd., for ₹ 13,000, the transactions being completed on 31st December, 2016.

Prepare the consolidated Balance Sheet of the group as on 31st December, 2016.

Solution

Consolidated Balance Sheet of A Ltd. and its Subsidiaries B Ltd. & C Ltd., as on 31st December, 2016

Particulars	*Note No.*	*(₹)*
I. Equity and Liabilities		
(1) Shareholder's Funds		
(a) Share Capital	1	1,50,000
(b) Reserves and Surplus	2	85,402
(2) Minority Interest [W.N (iv)]		59,691
(3) Current Liabilities		
(a) Trade Payables	3	60,000
Total		3,55,093
II. Assets		
(1) Non-current assets		
Fixed assets		
(i) Tangible assets	4	1,77,000
(ii) Intangible assets	5	47,593
(2) Current assets	6	1,30,500
Total		3,55,093

Notes to Accounts

				₹
1.	Share Capital			
	1,500 shares of ₹ 100 each			1,50,000
2.	Reserves and Surplus			
	Reserves of A Ltd	20,000		
	Add: Share in C Ltd. [WN (i)]	208		
	Add: Share in B Ltd. [WN (ii)]	548	20,756	
	Profit & loss[W.N.(v)]		64,646	85,402
3.	Trade Payables

The following condensed balance sheets of H Ltd. and S Ltd. were prepared as on 31st December, 2016:

Assets	***H Ltd.*** ₹	***S Ltd.*** ₹
Goodwill	*1,12,000*	*40,000*
Plant & Machinery	*95,000*	*50,400*
Furniture	*7,000*	*4,600*
9,000 ordinary shares in S Ltd.	*1,20,000*	—
2,000 ordinary shares in H Ltd.	—	*24,000*
Inventory-in-trade	*48,000*	*1,14,000*
Trade Receivables	*70,000*	*45,000*
Cash at Bank	*17,000*	*13,000*
	4,69,000	*2,91,000*
Liabilities		
Share Capital		
Ordinary shares of 10 each	*1,80,000*	*1,00,000*
7½% Pref. shares of ₹ 10 each	*1,50,000*	*80,000*
Premium on ordinary shares	*36,000*	—
Reserves	*26,000*	*30,000*
Trade Payables	*17,000*	*61,000*
Profit & Loss Account	*60,000*	*20,000*
	4,69,000	*2,91,000*

Trade Payables of H Ltd. include ₹ 15,000 due to S Ltd. for goods supplied since the acquisition of the shares. These goods are charged at 10% above cost. The Inventory of H Ltd. include goods costing ₹ 33,000 purchased from S Ltd.

H Ltd. acquired the shares of S Ltd. on 1st July, 2016. As at the date of last preceding balance sheet of S Ltd., viz., 31st Dec., 2015; the plant and machinery stood in the books at ₹ 56,000, the reserve at ₹ 30,000 and the profit and loss account at ₹ 8,000. The plant was revalued by H Ltd. on the date of acquisition of the share of S Ltd. at ₹ 60,000 but no adjustments were made in the books of S Ltd. On 31st Dec., 2015, the debit balance of profit and, loss account was ₹ 22,750 in the books of H Ltd.

Both the companies have provided depreciation on all their fixed assets at 10% per annum. You are required to prepare a consolidated balance sheet on 31st Dec., 2016 and supporting schedule for computation.

Solution

Note: It is assumed that Preference shares given in the question are non-convertible in nature.

Consolidated Balance Sheet or H Ltd., and its subsidiary S Ltd., as on 31st December, 2016

Particulars	Note No.	(₹)
I. Equity and Liabilities		

(1) Shareholder's Funds		
(a) Share Capital	1	3,10,000
(b) Reserves and Surplus	2	1,01,116
(2) Minority Interest	3	1,02,545
(3) Current Liabilities		
(a) Trade Payables	4	63,000
(b) Other current liabilities (Pref. dividend of H Ltd.)		11,250
Total		5,87,911
II. Assets

6.	**Intangible assets**			
	Goodwill (Given in balance sheet)		1,52,000	
	Add: On consolidation of S ltd. in H Ltd. (W.N. vi)		4,000	
			1,56,000	
	Less : Capital Reserve (W.N vi)		(20,689)	1,35,311

Working Notes:

(i) (a) Analysis of profits of S Ltd. (Pre-allocation)

	Capital Profit ₹	*Revenue Profit* ₹
Reserves	30,000	
Profit and Loss Account 1.1.2016	8,000	
Profit for the year after		
Pref. Div. ₹ (12,000 – 6,000)	3,000	3,000
Profit on Revaluation		
₹ (60,000 – 53,200)	6,800	
Additional Depreciation [3,000-2,800]		(200)
	47,800	2,800

(b) Analysis of Profits of H Ltd.

	Capital Profit ₹	*Revenue Profit* ₹
Reserves	13,000	13,000
Profit and Loss Account on 1.1.2016	(22,750)	
Profit for the year after preference dividend ₹ (82,750 – 11,250 =71,500)	35,750	35,750
	26,000	48,750

(ii) Capital profits of H Ltd. & S Ltd. (post allocation)

Suppose capital profits of H Ltd. = *a*
and capital profits of S Ltd. = *b*

Total Capital profits of H Ltd. $= 26{,}000 + \frac{9}{10} b$

Total Capital profits of S Ltd. $= 47{,}800 + \frac{1}{9} a$

$a = 26{,}000 + \frac{9}{10}\left[47{,}800 + \frac{1}{9}a\right]$

$a = 76{,}689$

$b = 47{,}800 + \frac{1}{9}(76{,}689)$

$b = 56{,}321$

	₹
Minority Interest in Capital profits of S Ltd.	5,632
Share of holding Co. H Ltd.	50,689
	56,321

(iii) Revenue profits of H Ltd. and S Ltd. (post allocation)

Assume revenue profits of H Ltd. = *x*
and revenue profits of S Ltd. = *y*

Total Revenue profits of H Ltd. $= 48{,}750 + \frac{9}{10} y$

Total Revenue profits of S Ltd. $= 2{,}800 + \frac{1}{9} x$

or $x = 48{,}750 + \frac{9}{10}\left(2{,}800 + \frac{1}{9}x\right)$

or $\frac{81}{90} x = 51{,}270$

or $x = 56{,}967$

$y = 2{,}800 + \frac{1}{9}(56{,}967)$

$y = 9{,}130$

		H Ltd. ₹	S Ltd. ₹

Illustration 23

Able Ltd. made an offer to acquire all the shares of Baker Ltd. at a price of ₹ 25 per share, to be satisfied by the allotment of five shares in Able Ltd. for every four shares in Baker Ltd.

By the date of expiration of the offer, which was on 1st January, 2017, share-holders owning 75% of the shares in Baker Ltd. accepted the offer and the acquisition was effective from that date.

The accounting date of Baker Ltd. was on 31st March in each year, but to conform to Able Ltd., accounts were prepared to 30th June, 2017, covering the fifteen months to the date.

The draft summarised accounts of the companies on 30th June, 2017 which do not include any entries regarding the acquisition of shares in Baker Ltd., were as follows:

Balance Sheet as on 30th June, 2017

Equity and Liabilities *Shareholders' funds*	₹	*Able Ltd.* ₹	₹	*Baker Ltd.* ₹
Share Capital –				
Equity shares of ₹ 10 each				
Authorised :		*3,00,000*		*75,000*
Issued & fully paid:		*1,50,000*		*60,000*

Reserves & Surplus:				
General Reserve	55,000			
Surplus Profit & Loss Account	62,000	1,17,000		20,000
Trade Payables		27,000		7,000
Provision for taxation		33,000		6,000
		3,27,000		93,000
Assets				
Non-current assets				
Tangible assets				
Freehold property, at cost		2,00,000		38,000
Plant & Machinery at cost	50,000		12,000	
Less: Depreciation	18,000	32,000	3,000	9,000
Quoted Investment at Cost		7,000		—
Current assets				
Inventory at Cost		32,000		21,000
Trade Receivables		41,000		17,000
Balance at Bank		15,000		8,000
		3,27,000		93,000

Draft Profit & Loss Account for the period ended on 30th June, 2017

	Able Ltd. One Year ₹	Baker Ltd. 15 months ₹
Balance brought forward	14,000	12,000
Profit for the period	80,000	18,000
	94,000	30,000
Taxation for the period	32,000	6,000
Interim Dividend paid, 30th Nov., 2016	—	4,000
Balance carried forward	62,000	20,000
	94,000	30,000

The Directors of Able Ltd. recommended and declared a final dividend of 20% to the shareholders on register as on 30th June, 2017. The Directors of Baker Ltd., declared a final dividend of 12½% payable on 30th September, 2017.

You are required to prepare the consolidated Balance Sheet of Able Ltd. and Baker Ltd. on 30th June, 2017.

Solution

Consolidated Balance Sheet of Able Ltd. and its subsidiary Baker Ltd. as on 30th June, 2017

Particulars	*Note No.*	*(₹)*
I. Equity and Liabilities		
(1) Shareholder's Funds		
(a) Share Capital	1	2,06,250
(b) Reserves and Surplus	2	1,63,725

	Balance in Consolidated P & L A/c		3,600
	Total of (v) and (vi)		24,350

Note: It is assumed that whole of the dividend of ₹ 41,250 declared by Able Ltd. will be appropriated from revenue, although part of that dividend is due to the ex-shareholders of Baker Ltd.

Illustration 24

In preparing the consolidated balance sheet of H Ltd. as on 31st March, 2017 you are required to show clearly what amount, if any, you would include in respect of W Ltd. with regard to:

(a) Cost of control/reserve;

(b) Profit or loss; and

(c) Minority interest.

under each of the following assumptions :

(i) 48,000 of the shares then in issue of W Ltd. were acquired at a cost of ₹ 75,000 on 1st June, 2014 H Ltd. participated in the dividend of ₹ 8,000.

(ii) 40,000 of the shares then in issue of W Ltd. were acquired at a cost of ₹ 60,000 on 31st March, 2015; H Ltd. participated in the bonus issue but not in the dividend of ₹ 9,000.

(iii) 60,000 of the shares then in issue of W Ltd. were acquired at a cost of ₹ 80,000 on 1st October, 2016; H Ltd. did not participate in the dividend of ₹ 6,000.

The balance sheet of W Ltd. as on 31st March, 2017 showed:

	₹
Share Capital, Authorised & Issued of ₹ 1 each	*80,000*
Undistributed profits	*24,000*
7% Debentures	*40,000*

The Profit & Loss Appropriation Accounts, for four years ended 31st December, 2016 were as follows:

	2013-2014 ₹	*2014-2015* ₹	*2015-2016* ₹	*2016-2017* ₹
Balance at the beginning of the year	*16,000*	*22,000*	*43,000*	*28,000*
Bonus issue of one for four				

- 1st April, 2015			*16,000*	
			27,000	
Profit for the year(loss)	*14,000*	*30,000*	*7,000*	*4,000*
	30,000	*52,000*	*34,000*	*24,000*
Dividends	*8,000*	*9,000*	*6,000*	*Nil*
Balance carried forward	*22,000*	*43,000*	*28,000*	*24,000*

Solution

Amounts to be included in the Consolidated Balance Sheet of H Limited as on 31st March, 2017 in respect of W Limited:

Share Capital before bonus issue $\frac{80,000}{5} \times 4 =$ ₹ 64,000 or ₹ 80,000 – ₹ 16,000

(i) *(a) Goodwill / Cost of Control:*

	₹	₹
Cost of 48,000 shares on 1st June, 2014		75,000
Less: Dividends from pre-acquisition profits:		
$\frac{48}{64} \times 8,000$	6,000	
$\frac{48}{64} \times \frac{2}{12} \times 9,000$	1,125	(7,125)
Cost of Investment	(a)	67,875
Nominal value of shares		48,000
Proportion of pre-acquisition profit as at 31st March, 2014	22,000	
Earned in 2014-2015 less dividend $\left[\frac{2}{12} \times 21,000\right]$	3,500	
	25,500	
H Ltd.'s share ₹ 25,500 × $\frac{48}{64}$		19,125
	(b)	67,125
Goodwill ₹ (67,875 – 67,125)		750

(b) Consolidated Profit & Loss balance

	₹	₹	₹
Profit & Loss Account as per Balance Sheet			24,000
Minority Interest: $\frac{20}{80} \times 24,000$		6,000	
Capital Profit:			

Pre-acquisition profit	25,500		
Less: Capitalised for bonus issue	(16,000)		
	9,500		
Share of H Ltd.: $\frac{60}{80} \times 9,500$		7,125	13,125
Balances for Consolidation			10,875

(c) *Minority Interest*

Share Capital (1/4)	20,000
Profit & Loss Account	6,000
	26,000

This answer assumes that 2/12th of the dividends for 2014-2015 and capitalisation for the bonus issue both came from pre-acquisition profits.

(ii) (a) *Cost of Control / Goodwill.*

	₹	₹
Cost of 40,000 shares - 31st March, 2015		60,000
Nominal value of shares purchased	40,000	
Pre-acquisition profits $\frac{40}{64} \times 43,000$	26,875	66,875
Capital Reserve		6,875
Shares held by the holding company after bonus issue will be 50,000.		
(b) Profits & Loss Account - as per Balance Sheet	24,000	
Minority Interest: $\frac{30}{80}$ x 24,000	9,000	
Pre-acquisition Profit: $\frac{50}{80} \times (43,000 - 16,000)$	16,875	
		25,875
Balance for Consolidation $\left[3,000 \times \frac{5}{8}\right]$		Dr. 1,875
(c) Minority Interest : $\frac{30}{80} \times 1,04,000$		39,000

(iii) Cost of Control/Goodwill

(a)	*Cost of 60,000 shares - 1st October, 2016*		80,000

	Nominal value of shares when purchased		60,000
	Pre-acquisition profit:		
	at 31st March, 2016	28,000	
	Less: $\frac{6}{12} \times 4{,}000$	(2,000)	
		26,000	
	H Ltd.'s shares : $\frac{60}{80} \times 26{,}000$	19,500	
			79,500
	Goodwill (80,000 – 79,500)		500
(b)	*Profit and Loss Account- as per Balance sheet*		24,000
	Minority Interest : $\frac{20}{80}$ x 24,000		6,000
	Pre-acquisition Profit		19,500
			25,500
	Balance for Consolidation		Dr.1,500
(c)	*Minority Interest:* $\frac{20}{80} \times 1{,}04{,}000$		26,000

Illustration 25

The Balance Sheet of A Ltd., B Ltd. and C Ltd. on 31st March, 2017 contained the following items relating to the profits and losses of the companies:

	A Ltd. ₹	*B Ltd.* ₹	*C Ltd.* ₹
Net Profit (or loss) for year	*800*	*1,800*	*Dr. 480*
Add : Balance forward	*1,500*	*Loss 800*	*Profit 1,920*
	2,300	*1,000*	*1,440*

A Ltd. acquired 75% of the share capital of B Ltd. on 1st November, 2015. B Ltd. was incorporated on 1st April, 2015.

A Ltd. acquired 10% of the share capital of C Ltd. on 1st March, 2017.

B Ltd. acquired 80% of the share capital of C Ltd. on 1st December, 2016.

Prepare draft schedule of consolidated profit and loss account of the group showing the amount to be transferred to other essential accounts to be included in the consolidated balance sheet, i.e., the credit total of ₹ 4,740.

Solution

(i) Analysis of profit of C Ltd.

	Capital Profit ₹	*Revenue Profit* ₹
Balance brought forward	1,920	
Profit/Loss for the year pre-post 8 : 4	–320	–160
	1,600	–160
Shares of Minority Interest (10%)	160	16
Balance	1,440	–144
Share of A Ltd.	160	16*
Share of B Ltd.	1,280	–128

(ii) Analysis of profit of B Ltd.

	Capital Profit ₹	*Revenue Profit* ₹
Balance brought forward		
divided in the ratio of 7:5		
i.e., Capital upto 31st October

2.21 Disposal of a Subsidiary

The results of operations of a subsidiary with which parent-subsidiary relationship ceases to exist are included in the consolidated statement of profit and loss until the date of cessation of the relationship.

Calculation of gain or loss on disposal

On disposal of a subsidiary, the gain or loss on disposal is recognized in the consolidated statement of profit and loss, and is calculated as the aggregate of:

The difference between the proceeds of disposal of the subsidiary and the carrying amount of its assets less liabilities as of the date of disposal;

The cumulative amount of any exchange differences that relate to the subsidiary (non-integral operations) recognized in equity, in accordance with "AS 11 The Effect of Changes in Foreign Exchange Rates".

For the purposes of the disposal calculation, the carrying amount of the subsidiary would include any amount of goodwill carried on the balance sheet in respect of the subsidiary.

Partial disposals

When part of an investment in a subsidiary is sold during the reporting period, the status of the investment immediately after the disposal should determine the accounting. For example:

- If a parent sells a portion of its investment in a subsidiary but still retains a controlling interest, the consolidated financial statements at the end of the period should include the assets, liabilities and operations of the subsidiary and reflect the new minority interest from the date of the transaction: The profit or loss on disposal should be transferred to profit and loss account of holding company.
- If the parent sells a controlling interest in the subsidiary but still retains significant influence over the enterprise, that remaining investment should be reflected in the balance sheet at the end of the period as a single line item using the equity method in accordance with AS 23 Accounting for Investments in Associates in the Consolidated Financial Statements. The subsequent results of operations should also be reported using the equity method. If the disposal qualifies as discontinuing operation, presentation of the discontinuing operation should follow AS 24 Discontinuing Operations; and
- When almost all of a subsidiary is sold (except for an interest which does not allow the parent to exert significant influence over the subsidiary) and if the sale of the subsidiary

qualifies as a discontinuing operation, presentation of the discontinuing operation should follow AS 24 Discontinuing Operations.

In a parent's separate financial statement, an investment in subsidiaries should be accounted for in accordance with Accounting Standard (AS) 13, Accounting for Investments, from the date the enterprise ceases to be a subsidiary and does not become an associate*.

The carrying amount of the investment at the date it ceases to be a subsidiary is regarded as cost thereafter.

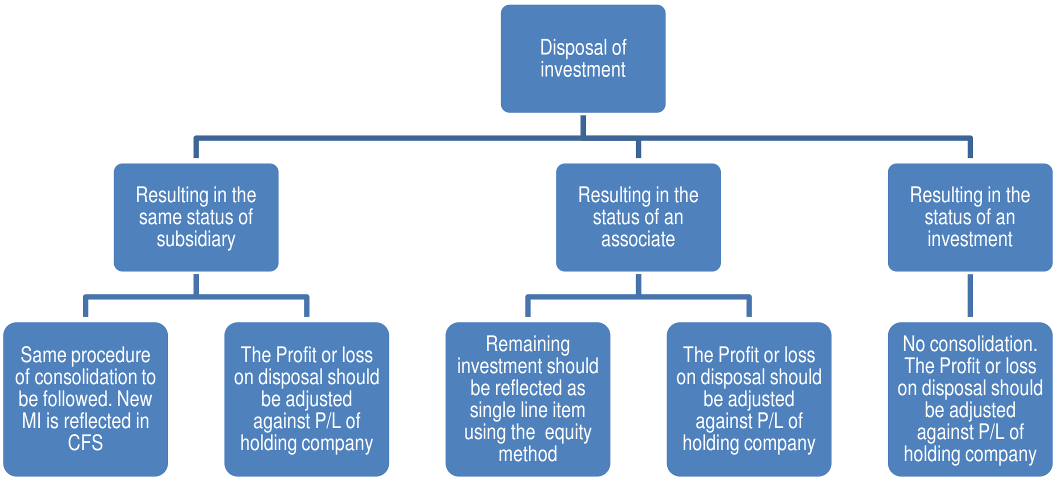

Illustration 27

From the following summarised Balance Sheets of A Ltd. and its subsidiary B Ltd., prepare a consolidated Balance Sheet as on 31st March, 2017.

Equity and Liabilities	*A Ltd. ₹*	*B Ltd. ₹*	*Assets*	*A Ltd. ₹*	*B Ltd. ₹*
Share Capital			*Sundry Assets*	*93,000*	*32,000*

H Ltd.'s share of capital profits in respect of 7,500 shares purchased on 31.3.2014 as calculated above	2,62,500
Total	3,17,500

2.22 Foreign Subsidiaries

For consolidating foreign subsidiaries, the first step is to convert the figures of foreign subsidiary into reporting currency on the basis of rules as prescribed by AS 11 (revised 2003), "The Effects of Changes in Foreign Exchange Rates". The amount of exchange difference is calculated as the balancing figure, which is accounted for as post-acquisition profit/loss. After such conversion, the consolidation is done in usual manner.

UNIT 3: TREATMENT OF INVESTMENT IN ASSOCIATES IN CONSOLIDATED FINANCIAL STATEMENTS

3.1 Meaning of Associates

As per Accounting Standard 23, an associate is an enterprise in which an investor has significant influence and which is neither a subsidiary nor a joint venture of the investor. 'Significant influence' means the power to participate in the financial and operating policy decisions of the investee, but the investor does not have control over those policies.

However, Section 2(6) of the Companies Act, 2013 states that 'associate company', in relation to another company, means a company in which that other company has a significant influence, but which is not a subsidiary company of the company having such influence and not includes a joint venture company. 'Significant influence' means control of atleast twenty percent of total share capital (paid-up equity share capital and convertible preference share capital), or of business decisions under an agreement.

Indicators of significant influence

Significant influence may be gained by the investor by virtue of share ownership, statute or agreement.

When an investor exercises significant influence over the investee, one or more of the following indicators is usually present:

- representation on the board of directors or corresponding governing body of the investee;
- participation in policy making processes;
- material transactions between the investor and the investee;
- interchange of managerial personnel; or
- provision of essential technical information.

Significant Influence - Holding 20% or more of voting power

As a general rule, significant influence is presumed to exist when an investor holds, directly or indirectly through subsidiaries, 20% or more of the voting power of the investee.

As with the classification of any investment, the substance of the arrangement in each case will need to be considered. If it can be clearly demonstrated that an investor holding 20% or more of the voting power of the investee does not have significant influence, the investment will not be accounted for as an associate.

As substantial or majority ownership by another investor does not necessarily preclude an investor from having significant influence.

If the investor holds, directly or indirectly through subsidiaries, less than 20% of the voting power of the investee, it is presumed that the investor does not have significant influence, unless such influence can be clearly demonstrated. The presence of one or more of the indicators as above may indicate that an investor has significant influence over a less than 20% owned corporate investee.

Similarly, the definition of an associate in the 2013 Act is based on control of business decisions as compared to the concept of power to participate under AS 23. The 2013 Act sets a threshold of 20 percent ownership of total share capital and hence does not consider influence over voting power, or any other manner in which significant influence may be established. AS 23 envisages situations in which significant influence may be demonstrated without meeting the 20 percent threshold which are not addressed in the 2013 Act.

3.2 Accounting Method for Associates

AS 23 suggests equity method of accounting for investments in associates. Under equity method of accounting investment is initially recorded at cost, identifying any goodwill/ capital reserve arising at the time of acquisition. The carrying amount of the investment is adjusted thereafter for the post-acquisition change in investor's share of net assets in the investee. Distributions received from the investee reduce the carrying amount of the investment. The investor's share in the operational result of the investee is reflected in the consolidated statement of profit and loss.

The following procedure should be followed:

- Investment is initially recorded at cost. Subsequently, the carrying amount is increased on the basis of share of profit or decreased on the basis of share of loss in the associate.
- Step (1): Find out value of investments on the basis of proportionate value of net assets of the investee;
- Step (2): Find out goodwill or capital reserve arising out of the purchase consideration. If the purchase price is above the value of investments determined in step (1) then there is goodwill and if the purchase price is less than the value of the investments determined in step (1) then there is capital reserve.
- Step (3): Goodwill or capital reserve as determined in step (2) should be included in the carrying amount of the investments with a separate disclosure. On the contrary, investments are recognised at purchase price as per AS 13 without disclosing goodwill/capital reserve.

  Goodwill/capital reserve can be disclosed within bracket below the "Investments in Associates" in the following style and accumulated income which was not earlier recognized should be added to value of investments for first time consolidation with corresponding credit to consolidated reserve.

Investments

Long Term Investments in Associates –	**...... ₹ at original cost**

[including ₹..... goodwill/capital reserve (previous year ₹.....)
arising on acquisition of associates]

Add: Accumulated income from Associates.

- Unrealised profit or loss resulting from transactions between the investor (and its consolidated subsidiary) and the associate should be eliminated to the extent of interest of the investor in the associate.

- The carrying amount of investment in an associate is reduced to recognise decline in the value of investments computed in terms of proportionate net assets of the investee.
- Applying the logic of consolidation unrealized profit arising out of intra-group transactions should be eliminated.

3.3 Non-application of Equity Method

The general rule is that investments in associates are accounted for using the equity method of accounting. If, however, any of the two conditions under-mentioned are fulfilled, the investment is not accounted for using the equity method but is accounted for in accordance with AS 13 'Accounting for Investments' with disclosure of the reasons for not applying the equity method in accounting for investments;

(1) when an investment is acquired for the purpose of disposal in the near future, i.e., as short term investments; and

(2) there is severe long term restriction on fund transfer by the associate to the investor.

3.4 Treatment of Change in Equity of Associate not arising out of Profit and Loss Account

The situation may arise that change in equity of the associate which are not through profit and loss account.

For example, the associate may revalue its fixed assets and create revaluation reserve. In such cases, increase/decrease in the value of investments should be directly added to/subtracted from the carrying amount of investments with corresponding credit/debit to the balance of the consolidated profit and loss account in the balance sheet. This adjustment should not be routed through consolidated profit and loss account.

Illustration 1

The draft consolidated balance sheet of Helpful Ltd. group as at 31.03.2017 is given below:

Liabilities	*₹ in 000*	*Assets*	*₹ in 000*
Share Capital	*1,200*	*Fixed Assets*	*3,000*
Capital Reserve	*30*	*Investment in Need Ltd.*	*180*
Profit & Loss A/c	*875*	*Investment in Desire Ltd.*	*375*
Minority Interest	*450*	*Current Assets*	*500*
Non- current liabilities	*900*		
Current Liabilities	*600*		
	4,055		*4,055*

Helpful Ltd. acquired 25% stake in Need Ltd. for ₹ 1.80 lakh and 40% stake in joint venture Desire Ltd. for ₹ 3.75 lakh on 01.01.2016. Profit & Loss A/c balances of Need Ltd. and Desire Ltd. on that date were ₹ 2 lakh and ₹ 3 lakh respectively.

Summarised balance Sheets of Need Ltd. and Desire Ltd. as at 31.12.2016 are given below:

Liabilities	*Need Ltd.* ₹ *in 000*	*Desire Ltd.* ₹ *in 000*	*Assets*	*Need Ltd.* ₹ *in 000*	*Desire Ltd.* ₹ *in 000*
Share Capital	*500*	*600*	*Fixed Assets*	*600*	*800*
Profit & Loss A/c	*300*	*400*	*Current Assets*	*400*	*700*
Non-current Liabilities	*100*	*150*			
Current Liabilities	*100*	*350*			
	1,000	*1,500*		*1,000*	*1,500*

Earnings of Need Ltd. for the first quarter 2017 was ₹ 32,000. There were no changes in long term assets and liabilities. Current assets and liabilities increased during the period by ₹ 27,000 and ₹ 18,000 respectively.

In first quarter of 2017, Desire Ltd. redeemed debentures of ₹ 1 lakh at par (standing in the books as non-current liability) and earned ₹ 40,000. Current assets and liabilities increased during the period by ₹ 38,000 and ₹ 25,000 respectively.

Adjust the draft consolidated balance sheet if necessary.

Solution

Consolidated Balance Sheet as at 31.03.2017

Particulars	*Note No.*	*(₹ in 000)*

Current Assets A/c	Dr.	266		40% of 665
To Non-current Liabilities			20	40% of 50
To Current Liabilities			150	40% of 375
To Investment in Desire Ltd.			416	40% of 1,040

UNIT 4: TREATMENT OF INVESTMENT IN JOINT VENTURES IN CONSOLIDATED FINANCIAL STATEMENTS

Joint venture is defined as a contractual arrangement whereby **two or more parties undertake an economic activity, which is subject to joint control.**

Business entities, in their process to achieve improved performance and to provide value addition to stakeholders, exert themselves in establishing various forms of business relationships to have either access or control over the economic resources of other business entities. Joint ventures are one of such form of business relationship. Such relations are made either to promote trade, or to gain access to new markets.

Joint venture is controlled by two or more venturers. Additionally, there can also be investors who do not have control. By joint venture, its co-venturers who expect to achieve some common purpose or benefit. In India, Accounting Standard 27 on "Financial Reporting of interests in Joint Ventures" deals with both separate financial statements and also with consolidated financial statements.

4.1 Scope Under AS 27

AS 27 should be applied in accounting for interests in joint ventures and the reporting of joint venture assets, liabilities, income and expenses in the financial statements of venturers and investors, regardless of the structures or forms under which the joint venture activities take place.

The requirements relating to accounting for joint ventures in consolidated financial statements, contained in AS 27 are applicable only where consolidated financial statements are prepared and presented by the venturer.

4.2 Forms of Joint Venture

AS 27 identifies three broad types of Joint Ventures-

- jointly controlled operations,
- jointly controlled assets and
- jointly controlled entities.

4.2.1 Jointly Controlled Operations

No separate establishment: The operation of some joint ventures involves the use of the assets and other resources of the venturers rather than the establishment of a corporation, partnership or other entity, or a financial structure that is separate from the venturers themselves.

Each venture uses its own assets and liabilities: Each venturer uses its own fixed assets and carries its own inventories. It also incurs its own expenses and liabilities and raises its own finance, which represent its own obligations.

Own employees: The joint venture's activities may be carried out by the venturer's employees alongside the venturer's similar activities.

Sharing of common expenses and revenues: The joint venture agreement usually provides means by which the revenue from the jointly controlled operations and any expenses incurred in common are shared among the venturers.

An example of a jointly controlled operation is when two or more venturers combine their operations, resources and expertise in order to manufacture, market and distribute, jointly, a particular product, such as an aircraft. Different parts of the manufacturing process are carried out by each of the venturers.

Each venturer bears its own costs and takes a share of the revenue from the sale of the aircraft, such share being determined in accordance with the contractual arrangement.

4.2.2 Jointly Controlled Assets

Some joint ventures involve the joint control, and often the joint ownership, by the venturers of one or more assets contributed to, or acquired for the purpose of, the joint venture and dedicated to the purposes of the joint venture.

The assets are used to obtain economic benefits for the venturers. Each venturer may take a share of the output from the assets and each bears an agreed share of the expenses incurred.

An example of a jointly controlled asset is an oil pipeline jointly controlled and operated by a number of oil production companies.

Each venturer uses the pipeline to transport its own product in return for which it bears an agreed proportion of the expenses of operating the pipeline.

Another example of a jointly controlled asset is when two enterprises jointly control a property, each taking a share of the rents received and bearing a share of the expenses.

4.2.3 Jointly Controlled Entities

A jointly controlled entity is a joint venture which is established as a separate legal entity which can be in form of a corporation, partnership or other entity in which each venturer has an interest.

The entity operates in the same way as other enterprises, except that a contractual arrangement between the venturers establishes joint control over the economic activity of the entity.

4.3 Accounting Treatment

4.3.1 Jointly Controlled Operations

As per para 13 of AS 27, in respect of its interests in jointly controlled operations, a venturer should recognise in its separate financial statements and consequently in its consolidated financial statements:

(a) the assets that it controls and the liabilities that it incurs; and

(b) the expenses that it incurs and its share of the income that it earns from the joint venture.

Because the assets, liabilities, income and expenses are already recognised in the separate financial statements of the venturer, and consequently in its consolidated financial statements, no adjustments or other consolidation procedures are required in respect of these items when the venturer presents consolidated financial statements.

The only accounting issue that arises is that the output from the project is to be shared among the venturers and, therefore, there must be some mechanism for specifying the allocation of the proceeds and the sharing of any joint expenses.

4.3.2 Jointly Controlled Assets

As per para 19 of AS 27, in respect of its interest in jointly controlled assets, a venturer should recognise, in its separate financial statements, and consequently in its consolidated financial statements:

(a) its share of the jointly controlled assets, classified according to the nature of the assets;

(b) any liabilities which it has incurred;

(c) its share of any liabilities incurred jointly with the other venturers in relation to the joint venture;

(d) any income from the sale or use of its share of the output of the joint venture, together with its share of any expenses incurred by the joint venture; and

(e) any expenses which it has incurred in respect of its interest in the joint venture.

Because the assets, liabilities, income and expenses are already recognised in the separate financial statements of the venturer, and consequently in its consolidated financial statements, no adjustments or other consolidation procedures are required in respect of these items when the venturer presents consolidated financial statements.

4.3.3 Jointly Controlled Entities

A jointly controlled entity maintains its own accounting records and prepares and presents financial statements in the same way as other enterprises in conformity with the requirements of AS 27 applicable to that jointly controlled entity.

Separate Financial Statements of a Venturer

In a venturer's separate financial statements, interest in a jointly controlled entity should be accounted for as an investment in accordance with Accounting Standard (AS) 13, Accounting for Investments.

Consolidated Financial Statements of a Venturer

In its consolidated financial statements, a venturer should report its interest in a jointly controlled entity using proportionate consolidation except

(a) an interest in a jointly controlled entity which is acquired and held exclusively with a view to its subsequent disposal in the near future; and

(b) an interest in a jointly controlled entity which operates under severe long-term restrictions that significantly impair its ability to transfer funds to the venturer.

Interest in such a jointly controlled entity should be accounted for as an investment in accordance with Accounting Standard (AS) 13, Accounting for Investments.

An interesting feature of Schedule III (that provides general instructions for preparation of financial statements) is that it requires disclosure, for each joint venture, of amounts 'as per proportionate consolidation/investment as per the equity method', whereas AS 27 on Accounting for Joint Ventures does not permit accounting for jointly controlled entities as per equity method.

4.4 Proportionate Consolidation Method

Separate line Items: AS 27 defines proportionate consolidation as a method of accounting and reporting whereby a venturer's share of each of the assets, liabilities, income and expenses of a jointly controlled entity is reported as separate line items in the venturer's financial statements.

Balance sheet and profit & loss account to include share of venturer: The application of proportionate consolidation means that the balance sheet of the venture includes its share of the assets that it controls jointly, and its share of the liabilities for which it is jointly responsible. The statement of profit and loss of the venture includes its share of the income and expenses of the jointly controlled entity.

4.4.1 Steps for Proportionate Consolidation

All the steps are similar to those of consolidation of Subsidiary except that when Consolidated Balance sheet is prepared; the venturer's (Investor) proportionate share of each asset and liability is added.

Step 1: Ascertain the date of Investment of venturer in Jointly Controlled Entities (JCE).

Step 2: Ascertain venturer's share of Interest in the Jointly Controlled Entities.

Step 3: Analyse profits of the Jointly Controlled Entities as pre-acquisition and post-acquisition with reference to date of acquisition.

Step 4: Ascertain the venturer's share of both pre-acquisition and post-acquisition profits of Jointly Controlled Entities analysed above.

Step 5: Ascertain Goodwill/Capital Reserve

A)	Cost of Investment		
	Amount invested *Less:* Pre acquisition dividend	XXX XXX	 XXX
B)	*Less:* Venturer's share of net assets in JCE as at date of acquisition represented by venturer's share of: (i) Share Capital (ii) Pre acquisition profits	XXX XXX	 XXX
C)	Goodwill/Capital Reserve (Difference between A & B)		XXX

Steps 6: Elimination of Inter Company transactions.

Elimination of unrealized profit on unsold Inventory forming part of intra group transactions to be eliminated to the extent of venturer's stake.

Step 7: Reserves for Consolidated Balance Sheet

a)	Aggregate reserves for Consolidated Balance Sheet of holding company and subsidiaries as per AS 21 and AS 23 where applicable.	XXX
b)	*Add:* Venturer's share of post-acquisition profit (Step 4)	XXX
c)	*Less:* Venturer's share of unrealized profit (Step 6A)	(XXX)
		XXX

Step 8: Prepare Consolidated Balance Sheet

Liabilities

	Parents	*Subsidiary (Say 80%)₹*	*Associate*	*JCE (Say 50%)*	*Adj.*	*Consolidated*

Miscellaneous Expenditure to the extent not written off	100%	-	-	-	-	XXX
						XXX
						XXX

4.5 Different Reporting Dates

- The financial statements of the jointly controlled entity used in applying proportionate consolidation are usually drawn up to the same date as the financial statements of the venturer.
- When the reporting dates are different, the jointly controlled entity often prepares, for applying proportionate consolidation, statements as at the same date as that of the venturer.
- When it is impracticable to do this, financial statements drawn up to different reporting dates - may be used provided the difference in reporting dates is not more than six months. In such a case, adjustments are made for the effects of significant transactions or other events that occur between the date of financial statements of the jointly controlled entity and the date of the venturer's financial statements.
- The consistency principle requires that the length of the reporting periods, and any difference in the reporting dates, are consistent from period to period.

4.6 Uniform Accounting Policies

- The venturer usually prepares consolidated financial statements **using uniform accounting policies** for the like transactions and events in similar circumstances.
- In case a jointly controlled entity uses accounting policies other than those adopted for the consolidated financial statements for like transactions and events in similar circumstances, **appropriate adjustments are made** to the financial statements of the jointly controlled entity when they are used by the venturer in applying proportionate consolidation.
- If it is not practicable to do so, that **fact is disclosed** together with the proportions of the items in the consolidated financial statements to which the different accounting policies have been applied.

4.7 Offsetting of Assets and Liabilities

While giving effect to proportionate consolidation, it is inappropriate to offset any assets or liabilities by the deduction of other liabilities or assets or any income or expenses by the deduction of other expenses or income, unless a legal right of set-off exists and the offsetting represents the expectation as to the realisation of the asset or the settlement of the liability.

4.8 Goodwill or Capital Reserve

Any excess of the cost to the venturer of its interest in a jointly controlled entity over its share of net assets of the jointly controlled entity, at the date on which interest in the jointly controlled entity is acquired, is recognised as goodwill, and separately disclosed in the consolidated financial statements. When the cost to the venturer of its interest in a jointly controlled entity is less than its share of the net assets of the jointly controlled entity, at the date on which interest in the jointly controlled entity is acquired, the difference is treated as a capital reserve in the consolidated financial statements. Where the carrying amount of the venturer's interest in a jointly controlled entity is different from its cost, the carrying amount is considered for the purpose of above computations.

4.9 Discontinuance of Proportionate Consolidation Method

A venturer should discontinue the use of proportionate consolidation from the date that:

(a) it ceases to have joint control over a jointly controlled entity but retains, either in whole or in part, its interest in the entity; or

(b) the use of the proportionate consolidation is no longer appropriate because the jointly controlled entity operates under severe long-term restrictions that significantly impair its ability to transfer funds to the venturer.

From the date of discontinuing the use of the proportionate consolidation, interest in a jointly controlled entity should be accounted for:

(a) in accordance with Accounting Standard (AS) 21, Consolidated Financial Statements, if the venturer acquires unilateral control over the entity and becomes parent within the meaning of that Standard; and

(b) in all other cases, as an investment in accordance with Accounting Standard (AS) 13, Accounting for Investments, or in accordance with Accounting Standard (AS) 23, Accounting for Investments in Associates in Consolidated Financial Statements, as appropriate. For this purpose, cost of the investment should be determined as under:

    (i) the venturer's share in the net assets of the jointly controlled entity as at the date of discontinuance of proportionate consolidation should be ascertained, and

(ii) the amount of net assets so ascertained should be adjusted with the carrying amount of the relevant goodwill/capital reserve (see paragraph 37) as at the date of discontinuance of proportionate consolidation.

4.10 Joint Venture cum Subsidiary

When an enterprise establishes joint control over an Entity, which is also a subsidiary of that enterprise as per AS 21, such entity is treated as subsidiary company as per AS 21 and should be accounted accordingly. However, the consolidation of such entity does not preclude other venturers from treating such entity as a Joint Venture under AS 27.

Accounting and Reporting of Financial Instruments

1. Introduction

During the last few years, a number of new financial instruments have assumed significance in the Indian economy. With rapid globalisation, this trend is likely to accelerate in future. Derivatives are financial instruments whose values change in response to the change in an underlying which can be specified interest rates, security prices, commodity prices, index of prices or rates, or similar variables. Typical examples of derivatives are futures and forward contracts, swaps and option contracts.

The Institute of Chartered Accountants of India came out with the Accounting Standards 30, 31, 32 for recognition, measurement, presentation and disclosures of financial instruments in the year 2009. However, they were not notified by the Ministry of Corporate Affairs and hence not made mandatory. Earlier, these standards were to be made mandatory for Level I Entities only. Now, since the Ind ASs have been notified, the same would be applicable in respect of Level I Entities w.e.f 1.4.2016 and Level II entities w.e.f. 1.4.2017 and 1.4.2018, as the case may be. Consequently, AS 30, 31 and 32 are no longer relevant to corporate entities. For non-corporate entities also, the status of AS 30, 31 and 32 is only "encouraged to be followed". Therefore, AS 30, 31 and 32 had been removed from the syllabus and in place of it Ind AS 32, Ind AS 107 and Ind AS 109 have been made applicable.

Accordingly, this chapter has been revised on the basis of the provisions of Ind AS 32 "Financial Instruments: Presentation", Ind AS 107 "Financial Instruments: Disclosures" and Ind AS 109 "Financial Instruments".

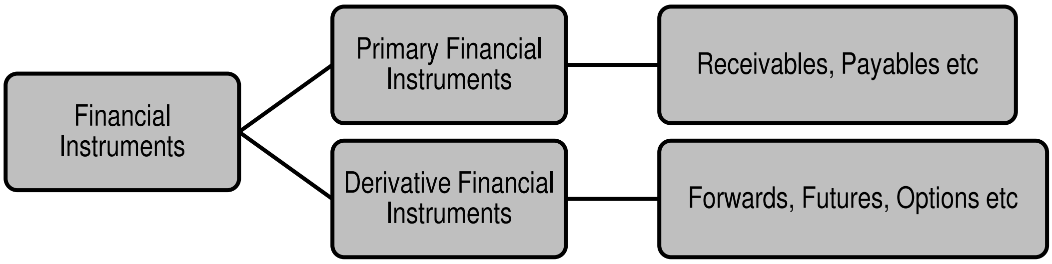
2. Meaning of Financial Instrument

A financial instrument is any ***contract*** that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

'Contract' and 'contractual' refer to an agreement between two or more parties that has clear economic consequences that the parties have little, if any, discretion to avoid, usually because the agreement is enforceable by law.

Contracts, and thus financial instruments, may take a variety of forms and need not be in writing.

Financial Instruments may be classified as primary and derivative financial instruments. The classifications can be shown as:



2.1 Meaning of Financial Asset

A financial asset is any asset that is:

(a) cash;

> 1. Currency (cash) is a financial asset because it represents the medium of exchange and is therefore the basis on which all transactions are measured and recognised in financial statements.
> 2. A deposit of cash with a bank or similar financial institution is a financial asset because it represents the contractual right of the depositor to obtain cash from the institution or to draw a cheque or similar instrument against the balance in favour of a creditor in payment of a financial liability.

(b) an equity instrument of another entity;

(Example: Investment in equity shares of another company)

(c) a contractual right to:

(i) receive

- cash or
- another financial asset from another entity; or

> Common examples of financial assets representing a contractual right to receive cash in the future and corresponding financial liabilities representing a contractual obligation to deliver cash in the future are:
>
> (a) trade accounts receivable and payable;
>
> (b) notes receivable and payable;
>
> (c) loans receivable and payable; and
>
> (d) bonds receivable and payable.
>
> In each case, one party's contractual right to receive (or obligation to pay) cash is matched by the other party's corresponding obligation to pay (or right to receive).
>
> Another type of financial instrument is one for which the economic benefit to be received or given up is a financial asset other than cash. There can be chain of financial instruments that give right to receive financial asset. However, the chain

should always end with a financial asset that gives rise to contractual right to receive case to one party and contractual obligation to pay cash or issue equity to another party.

For example: A note payable in government bonds gives the holder the contractual right to receive and the issuer the contractual obligation to deliver government bonds, not cash. The bonds are financial assets because they represent obligations of the issuing government to pay cash. The note is, therefore, a financial asset of the note holder and a financial liability of the note issuer.

(ii) to exchange financial assets or financial liabilities with another entity under conditions that are ***potentially favourable*** to the entity; or

(d) a contract that ***will or may be*** settled in the entity's ***own equity instruments*** and is:

(i) a ***non-derivative*** for which the entity is or may be obliged to receive a ***variable number*** of the entity's own equity instruments; or

(ii) a ***derivative*** that will or may be settled ***other than by*** the exchange of a fixed amount of cash or another financial asset for a ***fixed number*** of the entity's own equity instruments. For this purpose, the entity's own equity instruments do not include puttable financial instruments, instruments that impose on the entity an obligation to deliver to another party a pro-rata share of the net assets of the entity only on liquidation or instruments that are contracts for the future receipt or delivery of the entity's own equity instruments if such instruments are classified as equity instruments.

2.2 Meaning of Financial Liability

A financial liability is any liability that is:

(a) A contractual obligation:

(i) to deliver

- cash or
- **another financial asset** to another entity; or

(ii) to exchange financial assets or financial liabilities with another entity under conditions that are **potentially unfavourable** to the entity; or

(b) a contract that **will or may be** settled in the entity's own equity instruments and is:

i. a non-derivative for which the entity is or may be obliged to deliver a **variable** number of the entity's own equity instruments; or

ii. a **derivative** that will or may be settled **other than** by the exchange of a fixed amount of cash or another financial asset for a **fixed number** of the entity's own equity instruments.

For this purpose, it excludes rights, options or warrants used to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency since they are equity instruments if the entity offers the rights, options or warrants pro-rata to all of its existing owners of the same class of its own non-derivative equity instruments.

Points to remember

1. A contractual right or contractual obligation to receive, deliver or exchange financial instruments is itself a financial instrument.
2. A ***chain*** of contractual rights or contractual obligations meets the definition of a financial instrument if it will ***ultimately lead to the receipt or payment of cash*** or to the acquisition or issue of an equity instrument.
3. The ability to exercise a contractual right or the requirement to satisfy a contractual obligation may be absolute or contingent on the occurrence of a future event.
4. A contingent right and obligation meet the definition of a financial asset and a financial liability, even though such assets and liabilities are not always recognised in the financial statements. Some of these contingent rights and obligations may be insurance contracts within the scope of Ind AS 104.

For example: A financial guarantee is a contractual right of the lender to receive cash from the guarantor, and a corresponding contractual obligation of the guarantor to pay the lender, if the borrower defaults. Here the financial guarantee may actualize in contingent circumstances therefore, it shall be constituted as financial instrument as per Ind AS 32.

Illustration 1 (Exchange of Financial Liability at Unfavourable terms)

A company borrowed ₹ 50 lacs @ 12% p.a. Tenure of the loan is 10 years. Interest is payable every year and the principal is repayable at the end of 10th year. The company defaulted in payment of interest for the year 4, 5 and 6.

A loan reschedule agreement took place at the end of 7th year. As per the agreement the company is required to pay ₹ 90 lacs at the end of 8th year. Calculate the additional amount to be paid on account of rescheduling and also the book value of loan at the end of 8th year when reschedule agreement took place.

Solution

Assumption: Interest is compounded in case of default.

Outstanding Amount at the end of 8th year = ₹ 50,00,000 x 1.12 x 1.12 x 1.12 x 1.12 x 1.12

= ₹ 88,11,708 (i.e. adding interest for 4th to 8th year)

Rescheduled amount to be paid at the end of the 8th year = ₹ 90,00,000

Additional amount to be paid on rescheduling = ₹ 90,00,000 - ₹ 88,11,7081 = ₹ 1,88,291

Illustration 2

Entity A holds an option to purchase equity shares in a listed entity B for ₹ 100 per share at the end of a 90 day period. Evaluate the contract whether a financial asset or a financial liability? What if the entity A has written the option and the price of the share on the expiry date is ₹ 120?

Solution

The above call option gives entity A, a contractual right to exchange cash of ` 100 for an equity share in another entity and will be exercised if the market value of the share exceeds `100 at the end of the 90 day period. If the market value of a share will be such that the entity A will gain on the exercise date, it will exercise the call option.

Since entity A stands to gain if the call option is exercised, the exchange is potentially favourable to the entity. Also, the determination of whether the option is a derivative is dependent on whether it satisfies all the following conditions as contained in the definition of derivative and not whether the contract is potentially favourable or unfavourable:

1. Its value changes on the basis of the change in some variable. If the variable is a non-financial variable, it is not specific to a party to the contract
2. It requires no or little initial net investment
3. It is settled at a future date.

Therefore, the option is a derivative financial asset from the time the entity becomes a party to the option contract.

On the other hand, if entity A writes an option under which the counterparty can force the entity to sell equity shares in the listed entity B for ` 100 per share at any time (if it is an American option*) in the next 90 days, then entity A will be said to have a contractual obligation to exchange its equity shares to another entity for cash of ₹ 100 per share on potentially unfavourable** terms i.e. if the holder exercises the option, on account of the market price per share being above the exercise price of ₹ 100 per share at the end of the 90 day period.

Since entity A, the writng party will have to buy shares from the market at ₹ 120 and sell those to the purchasing party at ₹ 100, it stands to lose if the option is exercised. Therefore, the exchange is potentially unfavourable and the option is a derivative financial liability from the time the entity becomes a party to the option contract.

Clarifications

1. 'Perpetual' debt instruments (such as 'perpetual' bonds, debentures and capital notes):

Perpetual debt instruments normally provide the holder with the contractual right to receive payments on account of interest at fixed dates extending into the indefinite future, either

* The purchase option is an example of european option where the exercise happens at the expiry date whereas the written option is an american option where the exercise can happen at any time before the expiry date.

** Whether a derivative is favourable or unfavourable is determined at the end of each reporting period. At the date the contract is entered into, it is neither favourable or unfavourable. It is neutral and therefore the premium paid for the option is its fair value as on that date.

with no right to receive a return of principal or a right to a return of principal under terms that make it very unlikely or very far in the future.

For example:

An entity may issue a financial instrument requiring it to make annual payments in perpetuity equal to a stated interest rate of 8 per cent applied to a stated par or principal amount of ₹ 1,000. Assuming 8 per cent to be the market rate of interest for the instrument when issued, the issuer assumes a contractual obligation to make a stream of future interest payments having a fair value (present value) of ₹ 1,000 on initial recognition. The holder and issuer of the instrument have a financial asset and a financial liability, respectively.

2. **Leases under Ind AS 17:**

   A **finance lease** is regarded as primarily an entitlement of the lessor to receive, and an obligation of the lessee to pay, a stream of payments that are substantially the same as blended payments of principal and interest under a loan agreement.

   The lessor accounts for its investment in the amount receivable under the lease contract rather than the leased asset itself.

   An **operating lease**, on the other hand, is regarded as primarily an uncompleted contract committing the lessor to provide the use of an asset in future periods in exchange for consideration similar to a fee for a service. The lessor continues to account for the leased asset itself rather than any amount receivable in the future under the contract.

   Accordingly, a finance lease is regarded as a financial instrument and an operating lease is not regarded as a financial instrument (except as regards individual payments currently due and payable).

3. **Physical assets (such as inventories, property, plant and equipment), leased assets and intangible assets (such as patents and trademarks):**

   There is no contract existing for tangible assets recognised. Even if a contract is existing, the same is a contract to buy or sell non-financial item and hence not a financial instrument. Also, physical assets, leased assets and intangible assets are not financial assets because control of such physical and intangible assets creates an opportunity to generate an inflow of cash or another financial asset, but it does not give rise to a present right to receive cash or another financial asset.

4. **Assets (such as prepaid expenses):**

   Future economic benefit from prepaid expenses is the receipt of goods or services, rather than the right to receive cash or another financial asset. Therefore, such prepaid expenses shall not be considered as financial assets.

   Similarly, items such as deferred revenue and most warranty obligations are not financial liabilities because the outflow of economic benefits associated with them is the delivery of goods and services rather than a contractual obligation to pay cash or another financial asset.

5. **Liabilities or assets that are not contractual:**

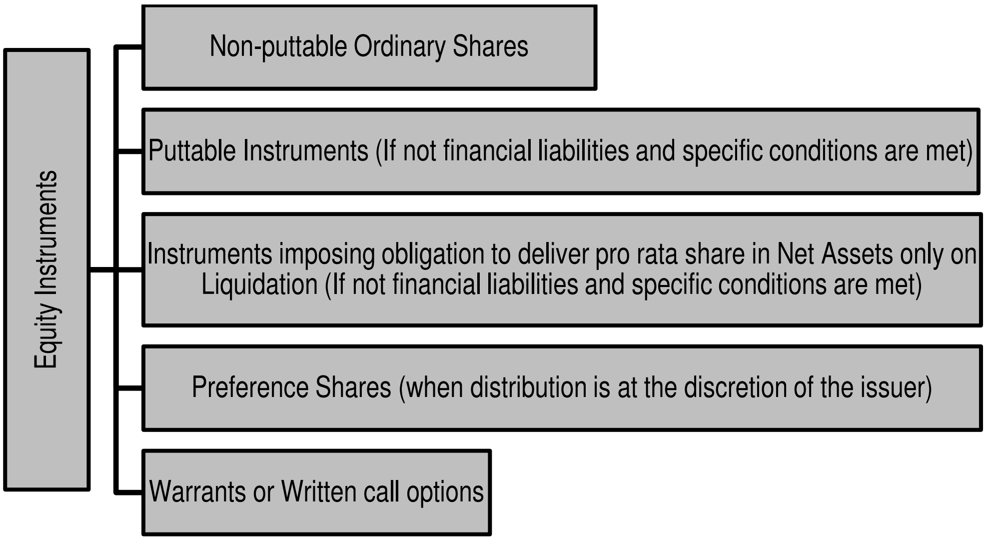
Non contractual liabilities or assets are not financial liabilities or financial assets. Income taxes that are created as a result of statutory requirements imposed by Governments are accounted in accordance with Ind AS 12.

Similarly, constructive obligations, as defined in Ind AS 37, "Provisions, Contingent Liabilities and Contingent Assets", do not arise from contracts and hence are not financial liabilities.

2.3 Meaning of Equity Instrument

An equity instrument is any contract that evidences a ***residual interest*** in the assets of an entity after deducting all of its liabilities.

Examples of equity instruments:

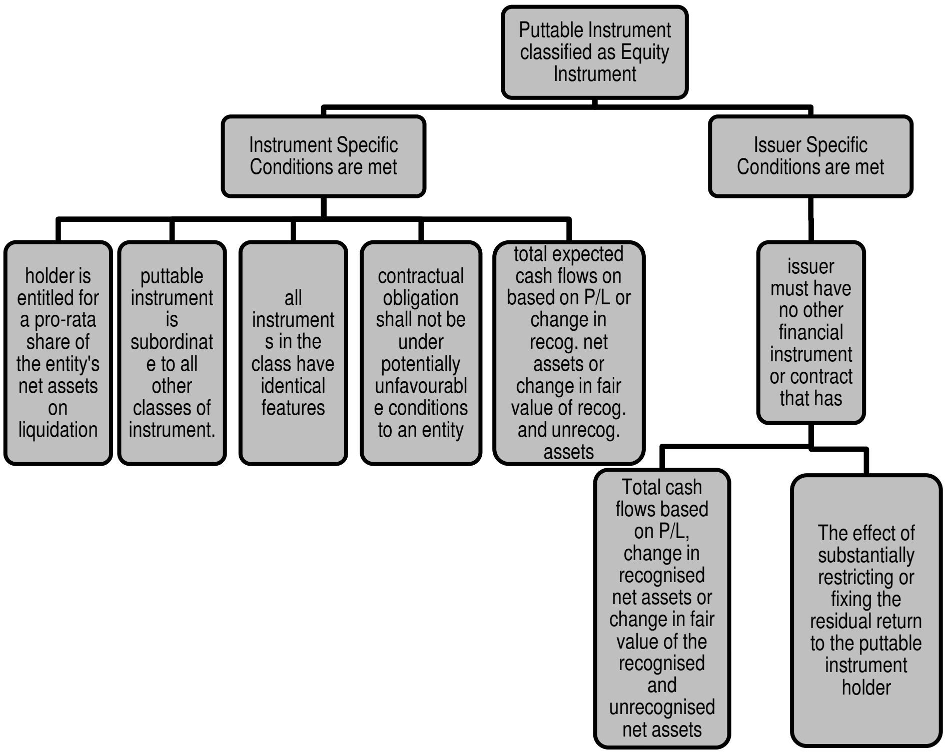


2.3.1 Criteria for Classification of Equity Instruments

1. **Puttable Financial Instrument**:

A puttable financial instrument includes a **contractual obligation for the issuer** to repurchase or redeem that instrument for cash or another financial asset on exercise of the put. Therefore, it is a financial liability.

However, as an **exception,** such an instrument is classified as an equity instrument if it has all the following features:



Instrument specific conditions

(a) It entitles the holder to a pro rata share of the entity's net assets in the event of the entity's liquidation. The entity's net assets are those assets that remain after deducting all other claims on its assets.

A pro rata share is determined by:

$$\frac{\text{Entity's net assets on liquidation}}{\text{Number of units}} \times \text{Number of the units held by the financial instrument holder}$$

(b) The instrument is in the class of instruments that is **subordinate to all other classes of instruments.**

The following conditions must be fulfilled to be in such a class the instrument:

(i) Has no priority over other claims to the assets of the entity on liquidation, and

(ii) Does not need to be converted into another instrument before it is in the class of instruments that is subordinate to all other classes of instruments

(c) All financial instruments in the class of instruments that is subordinate to all other classes of instruments shall **have identical features.**

For example:

They must all be puttable, and the formula or other method used to calculate the repurchase or redemption price is the same for all instruments in that class.

(d) Apart from the contractual obligation for the issuer to repurchase or redeem the instrument for cash or another financial asset, the instrument **does not include any contractual obligation** to deliver cash or another financial asset to another entity, or to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity**, and** it is **not a contract that will or may be settled in the entity's own equity instruments.**

(e) The **total expected cash flows** attributable to the instrument over the life of the instrument are based substantially on:

(i) The profit or loss

(ii) The change in the recognised net assets or

(iii) The change in the fair value of the recognised and unrecognised net assets of the entity over the life of the instrument (excluding any effects of the instrument)

Issuer Specific Conditions

I**n addition to the instrument having all the above features,** the issuer must have no other financial instrument or contract that has:

(a) Total **cash flows based substantially on**

(i) The profit or loss

(ii) The change in the recognised net assets or

(iii) The change in the fair value of the recognised and unrecognised net assets of the entity (excluding any effects of such instrument or contract)

(b) The **effect of substantially restricting or fixing the residual return** to the puttable instrument holders

In case an Entity cannot carry out the above 2 tests, the puttable instrument is classified as a Financial Liability an if all the above conditions are satisfied than it will be treated as an equity instrument.

2. Instruments, or components of instruments, that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation

An instrument that includes such an obligation is classified as an equity instrument if it has all the following features:

Instrument Specific Conditions

(a) It entitles the holder to a pro rata share of the entity's **net assets in the event of the entity's liquidation.** The entity's net assets are those assets that remain after deducting all other claims on its assets.

A pro rata share is determined by:

$$\frac{\text{Entity's net assets on liquidation}}{\text{Number of units}} \times \text{Number of the units held by the financial instrument holder}$$

(b) The instrument is in the class of instruments that is **subordinate to all other classes of instruments.**

To be in such a class the instrument:

(i) Has no priority over other claims to the assets of the entity on liquidation, and

(ii) Does not need to be converted into another instrument before it is in the class of instruments that is subordinate to all other classes of instruments

(c) All financial instruments in the class of instruments that is subordinate to all other classes of instruments must have an **identical contractual obligation** for the issuing entity to deliver a pro rata share of its net assets on liquidation.

Issuer Specific Conditions

In addition to the instrument having all the above features, the issuer must have no other financial instrument or contract that has:

(a) Total cash flows based substantially on

(i) The profit or loss

(ii) The change in the recognised net assets or

(iii) The change in the fair value of the recognised and unrecognised net assets of the entity (excluding any effects of such instrument or contract)

(b) The effect of substantially restricting or fixing the residual return to the puttable instrument holders.

If all the conditions stated above are satisfied then instruments, or components of instruments, that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation will be treated as an equity instrument.

3. Preference Shares

Preference shares may be issued with various rights.

In determining whether a preference share is a financial liability or an equity instrument, an issuer assesses the particular rights attaching to the share to determine whether it exhibits the fundamental characteristic of a financial liability.

Preference share is the name given to any share that has some preferential rights in relation to other classes of shares, particularly in relation to ordinary shares. These preferential rights are of great variety, but refer normally to the right to a fixed dividend, although they could also refer to the right on winding up to receive a fixed part of the capital or otherwise to participate in the distribution of the company's assets (share with such rights are often known as participating preference shares).

Redemption option:

1. A preference share that provides for redemption on a specific date or at the **option of the holder** contains a financial liability because the issuer has an obligation to transfer financial assets to the holder of the share

   Note: The potential inability of an issuer to satisfy an obligation to redeem a preference share when contractually required to do so, whether because of a lack of funds, a statutory restriction or insufficient profits or reserves, does not negate the obligation.

2. An **option of the issuer** to redeem the shares for cash does not satisfy the definition of a financial liability because the issuer does not have a present obligation to transfer financial assets to the shareholders.

   In this case, redemption of the shares is solely at the discretion of the issuer. An obligation may arise, however, when the issuer of the shares exercises its option, usually by formally notifying the shareholders of an intention to redeem the shares.

   Note: When preference shares are **non-redeemable**, the appropriate classification is determined by the other rights that attach to them. Classification is based on an assessment of the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Distributions:

When distributions to holders of the preference shares, whether cumulative or non-cumulative, are at the **discretion of the issuer**, the shares are equity instruments. Also, if distributions to the holders of the preference shares is cumulative, the issuer has an obligation to distribute and if not distributed it accumulates. Where such accumulation is to be paid only on liquidation, then the preference shares could be classified as equity.

However, a question arises that whether the accumulation of dividend payable is off the books? If the obligation to accumulated dividend and pay on liquidation does not satisfy the exceptions specified in paragraphs 16C and 16D of Ind AS 32 for classifying an instrument that is payable only on liquidation as an equity. Therefore, the accumulation of dividend will always be recognised as liability. Such an instrument is a compound financial instrument.

4. Warrants or written call options:

Warrants or written call options that allow the holder to subscribe for or purchase a fixed number of non-puttable ordinary shares in the issuing entity in exchange for a fixed amount of cash or another financial asset.

Illustration 3 (Mandatorily Redeemable Preference Shares with Mandatory Fixed Dividends)

A Company has issued 6% mandatorily redeemable preference shares with mandatory fixed dividends. Evaluate whether such preference shares are an equity instrument or a financial liability to the issuer entity?

Solution

In determining whether a mandatorily redeemable preference share is a financial liability or an equity instrument, it is necessary to examine the particular contractual rights attaching to the instrument's principal and return components.

The instrument in this example provides for mandatory periodic fixed dividend payments and mandatory redemption by the issuer for a fixed amount at a fixed future date. Since there is a contractual obligation to deliver cash (for both dividends and repayment of principal) to the shareholder that cannot be avoided, the instrument is a financial liability in its entirety.

Illustration 4 (Non-redeemable Preference Shares with Mandatory Fixed Dividends)

A Company issued non-redeemable preference shares with mandatory fixed dividends. Evaluate whether such preference shares are an equity instrument or a financial liability to the issuer entity?

Solution

When preference shares are non-redeemable, the appropriate classification is determined by the other rights attached to them. Classification is based on an assessment of the contractual arrangement's substance and the definitions of a financial liability and an equity instrument.

It is necessary to examine the particular contractual rights attaching to the instrument's principal and return components. In this example, the shares are non-redeemable and thus the amount of the principal has equity characteristics, but the entity has a contractual obligation to pay dividends that provides the shareholders with a lender's return. This obligation is not negated if the entity is unable to pay the dividends because of lack of funds or insufficient distributable profits. Therefore, the obligation to pay the dividends meets the definition of a financial liability.

The overall classification is that the shares may be a compound instrument, which may require each component to be accounted for separately. It would be a compound instrument if the coupon was initially set at a rate other than the prevailing market rate or the terms specified payment of discretionary dividends in addition to the fixed coupon. If the coupon on the preference shares was set at market rates at the date of issue and there were no provisions for the payment of discretionary dividends, the entire instrument would be classified as a financial liability, because the stream of cash flows is in perpetuity.

Illustration 5 (Non-redeemable Preference Shares with Dividend Payments linked to Equity Shares)

A company issued Non-redeemable preference shares with dividend payments linked to equity shares. Evaluate whether such preference shares are an equity instrument or a financial liability to the issuer entity?

Solution

An entity issues a non-redeemable preference shares on which dividends are payable only if the entity also pays a dividend on its equity shares.

The dividend payments on the preference shares are discretionary and not contractual, because no dividends can be paid if no dividends are paid on the equity shares, which are an equity instrument. As the perpetual preference shares contain no contractual obligation ever to pay dividends and there is no obligation to repay the principal, they should be classified as equity in their entirety.

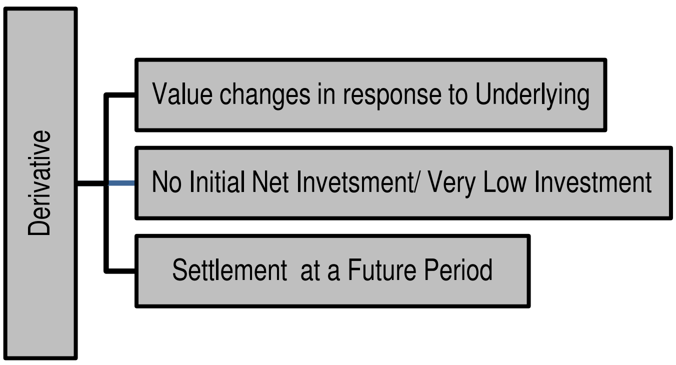
Where the dividend payments are also cumulative, that is, if no dividends are paid on the equity shares, the preference dividends are deferred, the perpetual shares will be classified as equity only if the dividends can be deferred indefinitely and the entity does not have any contractual obligations whatsoever to pay those dividends. This is an exception to the classification principle that certain instruments that are payable only on liquidation can be classified as equity (paragraphs 16C and 16D of Ind AS 32). However, generally, preference shares are not subordinate to all other classes of instruments. Hence, if the preference shares are cumulative, the accumulation is always a liability that should be recorded in books and not accumulated as an off balance sheet item.

A liability for the dividend payable would be recognised once the dividend is declared.

3. Derivatives

Financial instrument or other contract within the scope of this Standard with all three of the following characteristics.

1. Its value changes in response to the change in an underlying which can be a specified interest rate, financial instrument price, commodity price, foreign exchange rate, prices of indices, credit rating or credit index, or other variable provided in the case of a non-financial variables.
2. It requires no initial or very less investment than it would be required otherwise to enter into a contract in normal course.
3. It is settled at a future period. The settlement can either by delivery of the underlying or cash settlement. In case of cash settlement no delivery of underlying takes place rather difference is settled in cash.



Financial instruments include primary instruments (such as receivables, payables and equity instruments) and derivative financial instruments (such as financial options, futures and forwards, interest rate swaps and currency swaps). Derivatives that meet the conditions specified above are financial instruments and accordingly are within the scope of this standard.

Derivative financial instruments create rights and obligations that have the effect of transferring between the parties to the instrument one or more of the financial risks inherent in an underlying primary financial instrument. On inception, derivative financial instruments give one party a contractual right to exchange financial assets or financial liabilities with another party under conditions that are potentially favourable or a contractual obligation to exchange financial assets or financial liabilities with another party under conditions that are potentially unfavourable. However, they generally do not result in a transfer of the underlying primary financial instrument on inception of the contract and even in some cases a transfer of underlying financial instrument/s necessarily may not take place on maturity of the contract. Some instruments embody both a right and an obligation to make an exchange. Since the terms of the exchange are determined on inception of the derivative contract, as prices of underlying in financial markets change derivative contracts may become either favourable or unfavourable.

3.1 Forward Contracts

Forward Contract is the simplest form of a Derivatives Contract. Basically forward contract is a valid contract settled at some future point of time. For example, a forward contract involving settlement in six months' time in which one party (the purchaser) promises to purchase ₹ 1,000,000 face value of fixed interest rate government bonds, in exchange of ₹ 1,000,000 cash; and the other party (the seller) promises to deliver ₹ 1,000,000 face value of fixed rate government bonds in exchange for ₹ 1,000,000 cash. During the six months, both parties have a contractual right and a contractual obligation to exchange financial instruments. If the market price of the government bonds rises above ₹ 1,000,000, the conditions will be favourable to the purchaser and unfavourable to the seller; if the market price falls below ₹ 1,000,000, the effect will be the opposite. However, both parties to a forward contract have an obligation to perform at the agreed time.

3.2 Option

As mentioned above both parties to a forward contract have an obligation to perform at the agreed time. However, under Option contract the option-holder has a right not an obligation to exchange the financial asset but the writer (seller) of the option has the obligation to exchange the financial asset upon exercise of the option. The nature of the holder's right and writer's obligation are not affected by the likelihood that the option will be exercised.

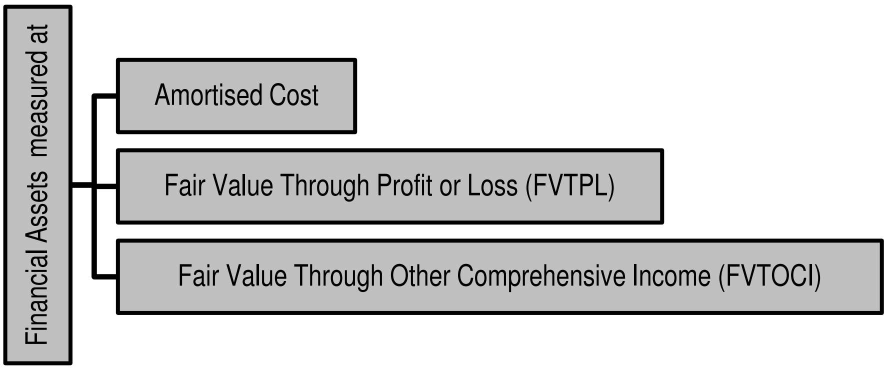
Thus, the purchaser has a contractual right (a financial asset) similar to the right under a call option held and a contractual obligation (a financial liability) similar to the obligation under a put option written; the seller has a contractual right (a financial asset) similar to the right under a put option held and a contractual obligation (a financial liability) similar to the obligation under a call option written. As with options, these contractual rights and obligations constitute financial assets and financial liabilities separate and distinct from the underlying financial instruments (the bonds and cash to be exchanged). Both parties to a forward contract have an obligation to perform at the agreed time, whereas performance under an option contract occurs only if and when the holder of the option chooses to exercise it.

3.3 Others

Many other types of derivative instruments embody a right or obligation to make a future exchange, including interest rate and currency swaps, interest rate caps, collars and floors, loan commitments and note issuance facilities. An interest rate swap contract may be viewed as a variation of a forward contract in which the parties agree to make a series of future exchanges of cash amounts, one amount calculated with reference to a floating interest rate and the other with reference to a fixed interest rate. Futures contracts are another variation of forward contracts, differing primarily in that the contracts are standardised and traded on an exchange.

4. Classification of Financial Assets and Financial Liabilities

4.1 Classification of Financial Assets



An entity shall classify financial assets depending upon the ***following 2 criteria and options*** elected by the entity:

(a) the entity's **Business Model (BM)** for managing the financial assets and

(b) the Contractual Cash Flow Characteristics (CCFC) of the financial asset

A Business Model (BM) Test

Ind AS 109 requires an entity to classify financial assets on the basis of the entity's business model for managing the financial assets.

An entity assesses whether its financial assets meet the conditions on the basis of the business model as determined by the entity's key management personnel (As defined in Ind AS 24 Related Party Disclosures).

➢ An entity's business model is determined at a level that reflects **how groups of financial assets** are managed together to achieve a particular business objective.

The entity's business model **does not depend on management's intentions for an individual instrument. Accordingly, this condition is not an instrument-by-instrument approach** to classification and **should be determined on a higher level of aggregation**.

- An entity's business model refers to how an entity manages its financial assets in order to generate cash flows.

  That is, the entity's business model determines whether cash flows will result from collecting contractual cash flows, selling financial assets or both. Consequently, **this assessment is not performed on the basis of scenarios that the entity does not reasonably expect to occur, such as so-called 'worst case' or 'stress case' scenarios.**

  For example:

  If an entity expects that it will sell a particular portfolio of financial assets only in a stress case scenario, that scenario would not affect the entity's assessment of the business model for those assets if the entity reasonably expects that such a scenario will not occur.

- If cash flows are realised in a way that is **different from the entity's expectations** at the date that the entity assessed the business model (For example: If the entity sells more or fewer financial assets than it expected when it classified the assets), that does not give rise to a prior period error in the entity's financial statements nor does it change the classification of the remaining financial assets held in that business model.

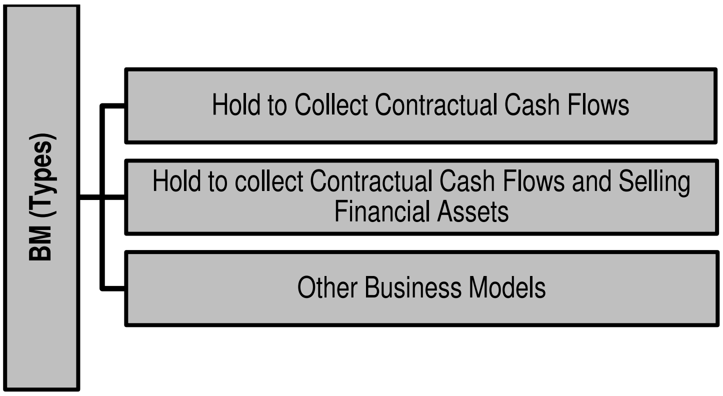
- However, when an entity assesses the business model for **newly originated or newly purchased financial assets,** it must consider information about how cash flows were realised in the past, along with all other relevant information.

- An entity's business model for managing financial assets is a **matter of fact and not merely an assertion.** It is typically observable through the activities that the entity undertakes to achieve the objective of the business model. An entity will need to use judgement when it assesses its business model for managing financial assets and that assessment is not determined by a single factor or activity. Instead, the entity must consider all relevant evidence that is available at the date of the assessment. Such relevant evidence includes, but is not limited to:

  a. how the performance of the business model and the financial assets held within that business model are evaluated and reported to the entity's key management personnel;

  b. the risks that affect the performance of the business model (and the financial assets held within that business model) and, in particular, the way in which those risks are managed; and

  c. how managers of the business are compensated (For example: Whether the compensation is based on the fair value of the assets managed or on the contractual cash flows collected).



Ind AS 109 elaborates these Models in the Application Guidance (AG) in Appendix B (B4.1.2C to B4.1.6)

Below given are various examples explaining Business Model (BM) Test:

Example 1: ABC Ltd. holds investments to collect their contractual cash flows. Funding needs of the Company are predictable and the maturity of its financial assets is matched to the entity's estimated funding needs. The Company performs credit risk management activities with the objective of minimising credit losses.

In the past, sales have typically occurred when the financial assets' credit risk has increased such that the assets no longer meet the credit criteria specified in the Company's documented investment policy.

In addition, infrequent sales have occurred as a result of unanticipated funding needs. Reports to Key Management Person focus on the credit quality of the financial assets and the contractual return. The Company also monitors fair values of the financial assets, among other information.

Analysis

Although the Company considers, among other information, the financial assets' fair values from a liquidity perspective (i.e. the cash amount that would be realised if the entity needs to sell assets), the Company's objective is to hold the financial assets in order to collect the contractual cash flows. Sales would not contradict that objective if they were in response to an increase in the assets' credit risk, for example if the assets no longer meet the credit criteria specified in the Company's documented investment policy.

Infrequent sales resulting from unanticipated funding needs (eg. in a stress case scenario) also would not contradict that objective, even if such sales are significant in value.

Example 2: ABC Company anticipates capital expenditure in a few years. The Company invests its excess cash in short and long-term financial assets so that it can fund the expenditure when the need arises. Many of the financial assets have contractual lives that exceed the Company's anticipated investment period.

The Company will hold financial assets to collect the contractual cash flows and, when an opportunity arises, it will sell financial assets to re-invest the cash in financial assets with a higher return. The managers responsible for the portfolio are remunerated based on the overall return generated by the portfolio.

Analysis

The objective of the business model is achieved by both collecting contractual cash flows and selling financial assets. The Company will make decisions on an ongoing basis about whether collecting contractual cash flows or selling financial assets will maximise the return on the portfolio until the need arises for the invested cash.

In contrast, consider a Company that anticipates a cash outflow in five years to fund capital expenditure and invests excess cash in short-term financial assets.

When the investments mature, the Company reinvests the cash in new short-term financial assets.

The Company maintains this strategy until the funds are needed, at which time the Company uses the proceeds from the maturing financial assets to fund the capital expenditure.

Only sales that are insignificant in value occur before maturity (unless there is an increase in credit risk).

The objective of this contrasting business model is to hold financial assets to collect contractual cash flows.

Example 3: Entity B sells goods to customers on credit. Entity B typically offers customers up to 60 days following the delivery of goods to make payment in full. Entity B collects the cash in accordance with the contractual cash flows of the trade receivables and has no intention to dispose of the receivables.

Analysis

Entity B's objective is to collect the contractual cash flows from the trade receivables and, therefore, the trade receivables meet the business model test for the purpose of classifying the financial assets at amortised cost.

B Contractual Cash Flow Characteristic (CCFC) Test

Principal and Interest for SPPI TEST

Ind AS 109 requires an entity to classify a financial asset on the basis of its contractual cash flow characteristics if the financial asset is held within a business model whose objective is to hold assets to collect contractual cash flows or within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets.

To do so, an entity has to determine whether the asset's contractual cash flows are solely payments of principal and interest on the principal amount outstanding.

Contractual cash flows that are solely payments of principal and interest on the principal amount outstanding are consistent with a **basic lending arrangement**. In a basic lending arrangement, consideration for the time value of money and credit risk are typically the most significant elements of interest.

However, in such an arrangement, interest can also include consideration for other basic lending risks (For example, liquidity risk) and costs (For example, administrative costs) associated with holding the financial asset for a particular period of time.

In addition, interest can include a profit margin that is consistent with a basic lending arrangement.

However, contractual terms that introduce exposure to risks or volatility in the contractual cash flows that is unrelated to a basic lending arrangement, such as exposure to changes in equity prices or commodity prices, do not give rise to contractual cash flows that are solely payments of principal and interest on the principal amount outstanding.

An entity shall assess whether contractual cash flows are solely payments of principal and interest on the principal amount outstanding for the currency in which the financial asset is denominated.

- Principal is the fair value of the financial asset at initial recognition.

However, that principal amount may change over the life of the financial asset

For example:

If there are repayments of principal

- Interest consists of consideration for:
  - o The time value of money
  - o Credit risk associated with the principal amount outstanding during a particular period of time and
  - o For other basic lending risks and costs
  - o As well as a profit margin

Below given are various examples explaining Contractual Cash Flow Characteristic (CCFC) Test:

Example 1 Illustrating contractual cash flows that are solely payments of principal and interest on the principal amount outstanding

There is a bond with a stated maturity date. Payments of principal and interest on the principal amount outstanding are linked to an inflation index of the currency in which the instrument is issued. The inflation link is not leveraged and the principal is protected.

Analysis

The contractual cash flows are solely payments of principal and interest on the principal amount outstanding. Linking payments of principal and interest on the principal amount outstanding to an unleveraged inflation index resets the time value of money to a current level. In other words, the interest rate on the instrument reflects 'real' interest. Thus, the interest amounts are consideration for the time value of money on the principal amount outstanding.

However, if the interest payments were indexed to another variable such as the debtor's performance (e.g. the debtor's net income) or an equity index, the contractual cash flows are not payments of principal and interest on the principal amount outstanding (unless the indexing to the debtor's performance results in an adjustment that only compensates the holder for changes in the credit risk of the instrument, such that actual cash flows are solely payments of principal and interest). That is because the contractual cash flows reflect a return that is inconsistent with a basic lending arrangement.

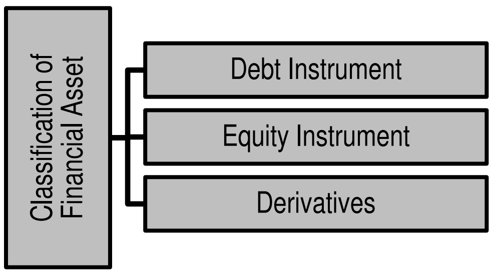
Example 2 Illustrating contractual cash flows that are not solely payments of principal and interest on the principal amount outstanding

Instrument F is a bond that is convertible into a fixed number of equity instruments of the issuer.

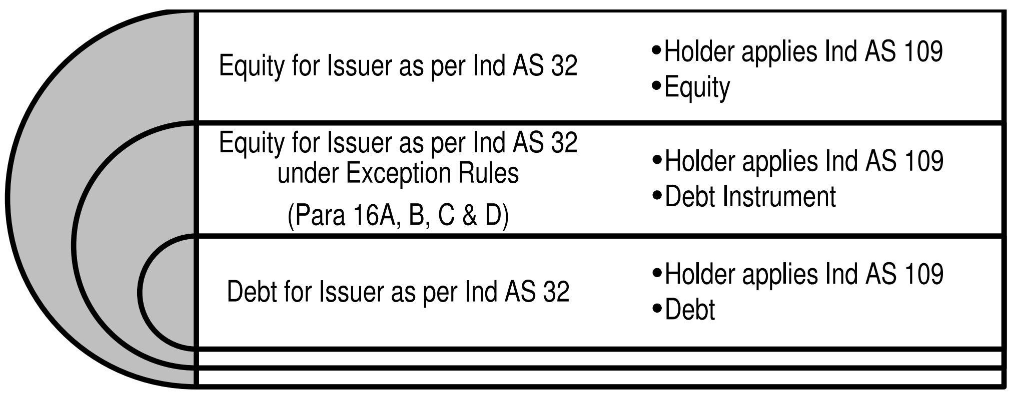
Analysis

The holder would analyse the convertible bond in its entirety. The contractual cash flows are not payments of principal and interest on the principal amount outstanding because they reflect a return that is inconsistent with a basic lending arrangement i.e. the return is linked to the value of the equity of the issuer.

Ind AS 109 elaborates the SSPI Test in the Application Guidance (AG) in Appendix B (B4.1.7 to B4.1.26)

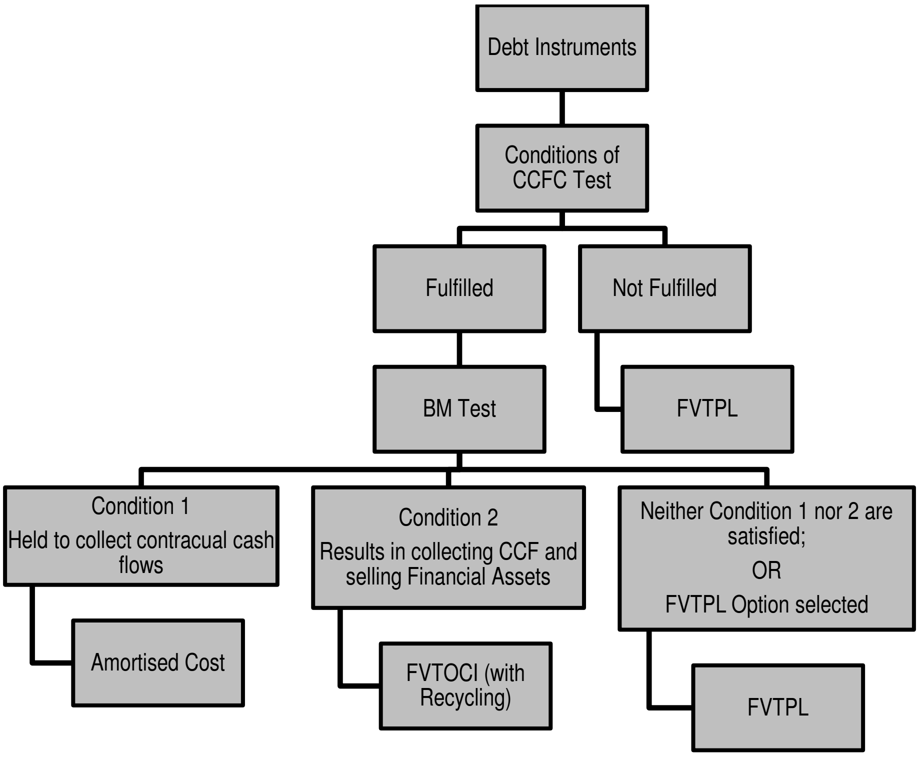


To decide whether a Financial Asset is a Debt Instrument or an Equity Instrument the holder needs to look at the issuer classification.



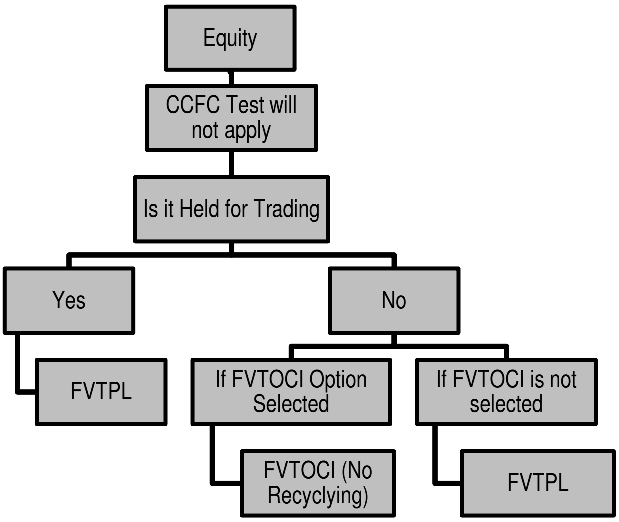
4.1.1 Classification of Debt Instruments (Financial Assets)

Classification of Debt Instruments has been explained by way of following flowchart:



4.1.2 Classification of Equity (Financial Asset)

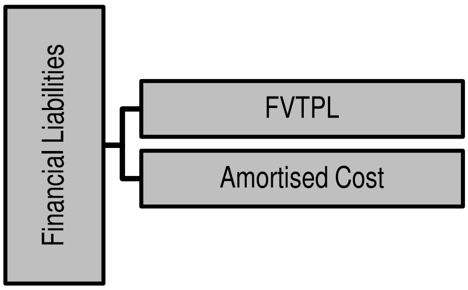
Classification of Equity which is a Financial Asset has been explained as follows:



4.1.3 Classification of Derivatives (Financial Asset)

Derivative classified as financial asset would be measured at Fair Value Through Profit and Loss (FVTPL) only. The classification of derivatives is only as per one basis i.e. Fair Value Through Profit and Loss (FVTPL)

4.2 Classification of Financial Liabilities



Financial Liabilities are classified as financial liability measured at fair value through profit or loss and financial liability measured at amortised cost.

4.3 Held for Trading

A financial asset or financial liability that:

1. Is acquired or incurred principally for the purpose of selling or repurchasing it in the near term;
2. On initial recognition is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking; or
3. Is a derivative (**Except** for a derivative that is a financial guarantee contract or a designated and effective hedging instrument).

A Table showing classification of various items into Financial Asset or Financial Liability

S.No.	Items	Financial Instrument Whether Financial Asset (FA) or Financial Liability (FL)
1.	Cash	FA
2.	Cash Equivalents	FA
3.	Bank Balance	FA
4.	Deposits given	FA
5.	Deposits received	FL
6.	Trade and other Receivables	FA

7.	Trade and other Payables	FL
8.	Bills Receivable	FA
9.	Bills Payable	FL
10.	Loans including Bank Loan	FL
11.	Investments in Equity Shares	FA
12.	Investment in Debentures	FA
13.	Promissory Note to receive Government bonds	FA
14.	Promissory Note payable in Government Bonds	FL
15.	Perpetual Debt instrument held	FA
16.	Prepaid Expenses	Not a Financial Instrument
17.	Inventory	Not a Financial Instrument
18.	Property, Plant and Equipment	Not a Financial Instrument
19.	Intangible Assets	Not a Financial Instrument
20.	Advances given for goods and services	Not a Financial Instrument
21.	Advances received for goods and services	Not a Financial Instrument
22.	Deferred Revenue	Not a Financial Instrument
23.	Warranty obligations	Not a Financial Instrument
24.	Income Taxes	Not a Financial Instrument
25.	Financial Guarantee received	FA
26.	Financial Guarantee given	FL
27.	Finance Lease – Lessor	FA
28.	Finance Lease – Lessee	FL
29.	Operating Lease – Lessor	Not a Financial Instrument
30.	Operating Lease – Lessee	Not a Financial Instrument
31.	Gold	Not a Financial Instrument
32.	Gold bond held	FA

5. Recognition of Financial Instrument

Initial recognition

An entity shall recognise a financial asset or a financial liability in its balance sheet **when, and only when**, the entity becomes party to the contractual provisions of the instrument.

The above principle will be applied on the following:

5.1 Receivables and Payables

Unconditional receivables and payables are recognised as financial assets or financial liabilities when the entity becomes a party to the contract and, as a consequence, has a legal right to receive or a legal obligation to pay cash.

5.2 Firm Commitment to Purchase or Sell Goods or Services

Assets to be acquired and liabilities to be incurred as a result of a firm commitment to purchase or sell goods or services are generally not recognised until at least one of the parties has performed under the agreement.

For example: An entity that receives a firm order does not generally recognise an asset (and the entity that places the order does not recognise a liability) at the time of the commitment but, instead, delays recognition until the ordered goods or services have been shipped, delivered or rendered.

5.3 Forward Contract

A forward contract that is within the scope of this Standard is recognised as a financial asset or a financial liability on the commitment date, instead of on the date on which settlement takes place.

When an entity becomes a party to a forward contract, the fair values of the right and obligation are often equal, so that the net fair value of the forward is zero. If the net fair value of the right and obligation is not zero, the contract is recognised as an asset or liability.

5.4 Option Contracts

Option contracts that are within the scope of this Standard are recognised as assets or liabilities when the holder or writer becomes a party to the contract.

5.5 Planned Future Transactions

Planned future transactions, no matter how likely, are not assets and liabilities because the entity has not become a party to a contract.

5.6 Regular Way Purchase or Sale of Financial Assets

A purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame is established generally by regulation or convention in the market place concerned.

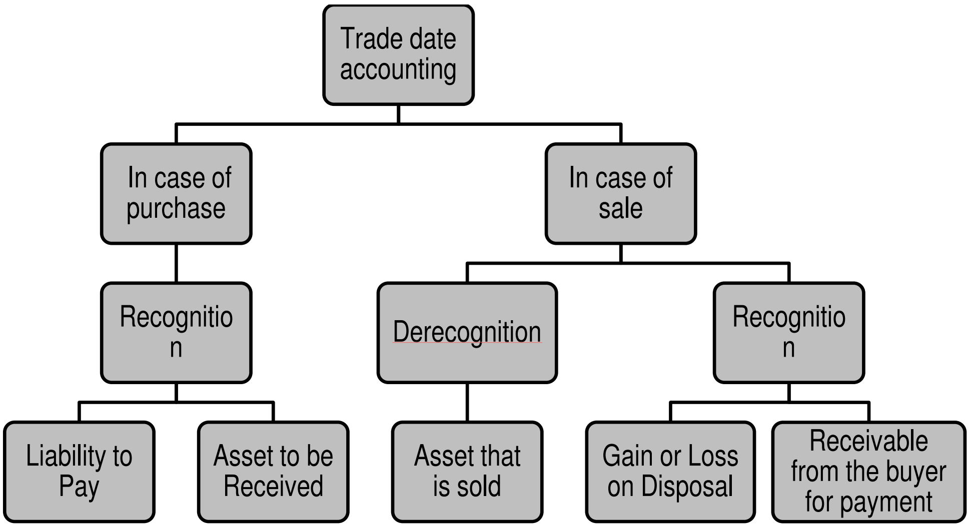
A regular way purchase or sale of financial assets shall be recognised and derecognised, as applicable, using trade date accounting or settlement date accounting.

Note: A contract that requires or permits net settlement of the change in the value of the contract is not a regular way contract. Instead, such a contract is accounted for as a derivative in the period between the trade date and the settlement date.

6. Trade Date

The trade date is the date that an entity **commits itself to purchase or sell an asset.**

Trade date Accounting:

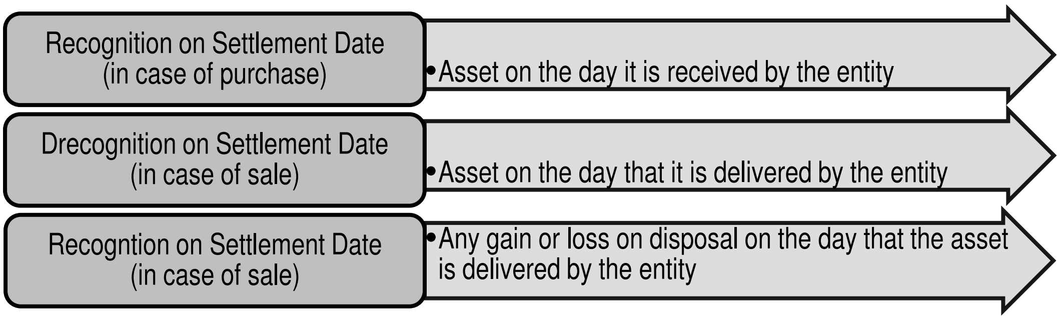


Generally, interest does not start to accrue on the asset and corresponding liability until the settlement date when title passes.

7. Settlement Date

The settlement date is the date that an **asset is delivered to or by an entity.**

Settlement date Accounting:



When settlement date accounting is applied an entity accounts for any change in the fair value of the asset to be received during the period between the trade date and the settlement date in the same way as it accounts for the acquired asset.

In other words, the change in value is not recognised for assets measured at amortised cost; it is recognised in profit or loss for assets classified as financial assets measured at fair value through profit or loss; and it is recognised in other comprehensive income for financial assets measured at fair value through other comprehensive income.

Illustration 6

Let us say on 30th March 2015 an entity enters into an agreement to purchase a Financial Asset for ₹ 100 which is the Fair Value on that date.

On Balance Sheet date i.e. 31/3/2015 the Fair Value is 102 and on Settlement date i.e. 2/4/2015 Fair Value is 103.

Pass necessary Journal entries on trade date and settlement date when the asset acquired is measured at

(a) Amortised cost

(b) FVTPL

(c) FVTOCI

Solution

Financial Asset at Amortised Cost – Trade Date Accounting

Dates	Journal Entry	Amount	Amount
30/3/2015	Financial Asset Dr.	100	
	To Payables		100

	To Fair Value Change			3

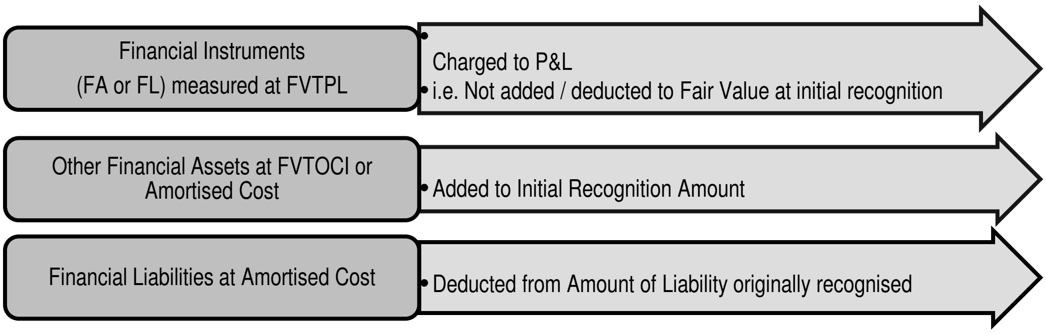
8. Measurement of Financial Instruments

8.1 Initial measurement

At **initial recognition**, an entity shall measure a financial asset or financial liability at its **fair value plus or minus**, in the case of a financial asset or financial liability not subsequently measured at Fair Value Through Profit or Loss, **transaction costs** that are directly attributable to the acquisition or issue of the financial asset or financial liability.

Transaction Costs for Initial Recognition



Transaction Costs on Disposal or Transfer are not included in measurement of all categories of Financial Assets and Financial Liabilities. These are charged to Profit and Loss.

If the fair value of the financial asset or financial liability at initial recognition differs from the transaction price, an entity shall apply as under:

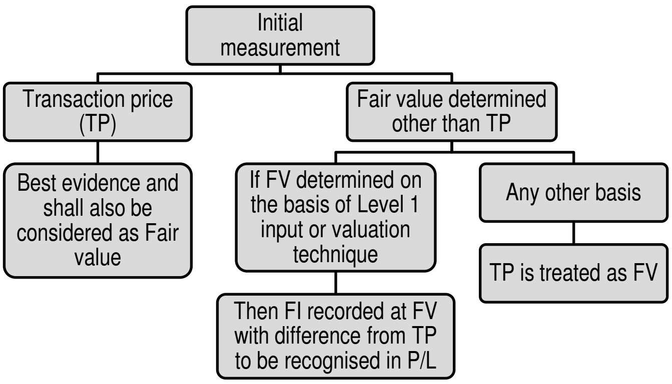
The best evidence of the fair value of a financial instrument at **initial recognition is normally the transaction price** (i.e. the fair value of the consideration given or received - Ind AS 113, Fair Value Measurements).

If an entity determines that the **fair value at initial recognition which differs from the transaction price** as mentioned above, the entity shall account for that instrument at that date as follows:

a. At the measurement if that fair value is evidenced by a quoted price in an active market for an identical asset or liability (i.e. Level 1 input) or based on a valuation technique that uses only data from observable markets.

An entity shall recognise the difference between the fair value at initial recognition and the transaction price as a gain or loss.

b. In all other cases, Fair Value is adjusted to defer the difference between the fair value at initial recognition and the transaction price. i.e. Transaction Price is treated as Fair Value.



8.2 Subsequent Measurement of Financial Assets

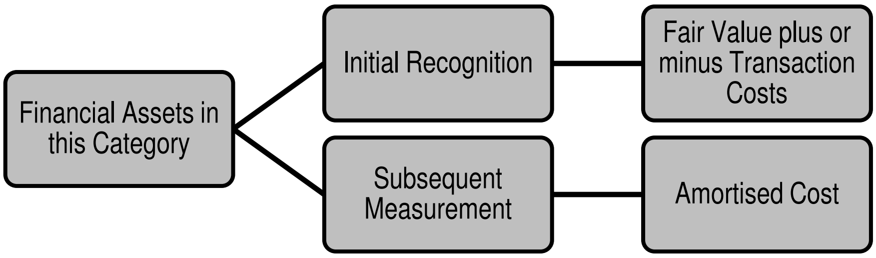
8.2.1 Financial Asset Subsequently Measured at Amortised Cost

A financial asset shall be measured at amortised cost **if both of the following conditions are met**:

A. The financial asset is held within a **business model** whose objective is to hold financial assets in order to **collect contractual cash flows**

And

B. The contractual terms of the financial asset give rise on specified dates to cash flows that are **solely payments of principal and interest (SPPI) on the principal amount outstanding**



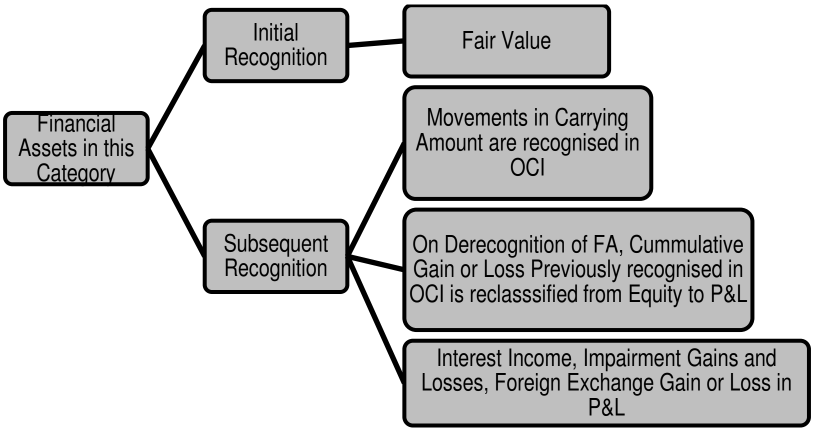
8.2.2 A Financial Asset Subsequently Measured at Fair Value Through Other Comprehensive Income (FVTOCI)

(Applicable to Debt and Equity Instruments both)

A financial asset shall be measured at fair value through other comprehensive **income if both of the following conditions are met:**

(i) The financial asset is held within a business model whose objective is achieved by **both collecting contractual cash flows and selling financial assets;** and

(ii) The contractual terms of the financial asset give rise on specified dates to cash flows that are **solely payments of principal and interest (SPPI) on the principal amount outstanding**



8.2.3 A Financial Asset Subsequently Measured At Fair Value Through Profit or Loss

(Residuary Category)

A financial asset shall be measured at fair value through profit or loss **unless** it is measured at amortised cost or at fair value through other comprehensive income.

However, an entity may make an **irrevocable selection at initial recognition** for particular investments in equity instruments that would otherwise be measured at fair value through profit or loss to present subsequent changes in fair value in other comprehensive income.

8.2.4 Option to designate a Financial Asset at Fair Value Through Profit or Loss

An entity may, at initial recognition, irrevocably designate a financial asset as measured at fair value through profit or loss if doing so eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as an 'accounting mismatch') that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different basis.

Illustration 7 (Financial Asset Accounted as FVTPL)

A Company invested in Equity shares of another entity on 15th March for ₹ 10,000. Transaction Cost = ₹ 200 (not included in ₹ 10,000)

Fair Value on Balance Sheet date i.e. 31st March 2015 = ₹ 12,000. Pass necessary Journal Entries

Solution

Date	Particulars	Dr	Cr
15/3/2015	Investment A/c Dr. Transaction Cost A/c Dr. To Bank	10,000 200	 10,200
31/3/2015	Investment A/c Dr. To Fair Value Gain A/c	2,000	 2,000
31/3/2015	P&L A/c Dr. To Transaction Cost A/c	200	 200
31/3/2015	Fair Value Gain A/c Dr. To P&L A/c	2,000	 2,000

Illustration 8 (Financial Asset Accounted as FVTOCI)

A Company invested in Equity shares of another entity on 15th March for ₹ 10,000. Transaction Cost = ₹ 200 (not included in ₹ 10,000). Fair Value on Balance Sheet date i.e. 31st March 2015 = ₹ 12,000. Pass necessary Journal entries.

Solution

Date	Particulars	Dr	Cr
15/3/2015	Investment A/c Dr. To Bank	10,200	 10,200

31/3/2015	Investment A/c Dr. To Fair Value Gain A/c	1,800	 1,800
31/3/2015	Fair Value Gain A/c Dr. To OCI A/c	1,800	 1,800
31/3/2015	OCI A/c Dr. To Fair Value Reserve A/c	1,800	 1,800

Illustration 9 (Financial Asset Accounted as Amortised Cost)

A Company lends ₹ 100 lacs to another company @ 12% p.a. interest on 1/4/2015.

It incurs ₹ 40,000 incremental costs for documentation.

Loan tenure = 5 years with Interest charged annually.

Fair Value of Loan = 99,40,000 (100 lacs – 1 lac + 40,000). Pass necessary Journal entries.

Solution

This is based on the assumption that interest rate is based on market rate of interest.

Date	Particulars	Dr	Cr
1/4/2015	Loan A/c To Bank A/c	100 lacs	 100 lacs
1/4/2015	Loan Processing Expense A/c To Bank A/c	40,000	 40,000
1/4/2015	Loan A/c To Loan Processing Expense A/c	40,000	 40,000

Subsequent entries would be explained under subsequent measurement basis.

8.3 Subsequent Measurement of Financial Liabilities

8.3.1 Financial Liabilities Subsequently Measured at Amortised Cost

An entity shall classify **all financial liabilities** as subsequently measured at amortised cost **except as discussed below.**

8.3.2 Financial Liabilities Subsequently Measured at Fair Value Through Profit or Loss (FVTPL)

a. Financial liabilities at fair value through profit or loss.

   Such liabilities, including **derivatives** that are liabilities, shall be subsequently measured at fair value.

b. Financial liabilities that arise when a transfer of a financial asset does not qualify for derecognition or when the involvement approach applies.

c. Financial guarantee contracts.

d. Commitments to provide a loan at a below-market interest rate.

e. Contingent consideration recognised by an acquirer in a business combination to which Ind AS 103 applies. Such contingent consideration shall subsequently be measured at fair value with changes recognised in profit or loss.

8.3.3 Option to Designate a Financial Liability at Fair Value Through Profit or Loss

An entity may, at initial recognition, **irrevocably designate a financial liability** as measured at fair value through profit or loss when permitted, or when doing so results in more relevant information, because either:

a. it **eliminates or significantly reduces a measurement or recognition inconsistency** (sometimes referred to as 'an accounting mismatch') that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases; or

b. a group of financial liabilities or financial assets and financial liabilities is managed and its performance is evaluated on a fair value basis, in accordance with a **documented risk management or investment strategy,** and information about the group is provided internally on that basis to the entity's key management personnel (as defined in Ind AS 24 Related Party Disclosures).

   For example: The entity's board of directors and chief executive officer.

Illustration 10

An entity is about to purchase a portfolio of fixed rate assets that will be financed by fixed rate debentures. Both financial assets and financial liabilities are subject to the same interest rate risk that gives rise to opposite changes in fair value that tend to offset each other. Comment?

Solution

In the absence of the fair value option, the entity may have classified the fixed rate assets as FVTOCI with gains and losses on changes in fair value recognised in other comprehensive income and the fixed rate debentures at amortised cost. Reporting both the assets and the liabilities at fair value through profit and loss i.e. FVTPL corrects the measurement inconsistency and produces more relevant information.

FVTOCI Category for Debt Instrument and Equity – Significant Differences

There are significant differences between Debt and Equity being classified as FVTOCI.

FVTOCI Categorisation	• For Debt compulsory if conditions met • For Equity it is Optional if not held for Trading
Recognition of Interest Income, Impairment Gain/loss & Foreign Exchange Gain/Loss	• For Debt Recognised in P&L • For Equity only dividend income is recognised in P&l. All other gains or losses are recognised in OCI.
On Derecognition of FA, Cummulative Gains/Losses recognised in OCI are recycled from Equity to P&L	• For Debt - Yes • For Equity - No

An Overview for Measurement of Financial Assets

S.No.	Particulars	Amortised Cost	FVTOCI (Debt)	FVTPL	FVTOCI (Equity)
1.	Debt	Yes	Yes	Yes	No
2.	Equity	No	No	Yes	Yes
3.	Derivatives	No	No	Yes	No
4.	On Balance sheet date	Amortised cost	Fair Value	Fair Value	Fair Value
5.	Transaction Cost on Initial Recognition	Added	Added	Charged to P&L	Added
6.	Transaction Cost on Subsequent Accounting	Indirectly amortised to P&L	Transferred to OCI and amortised to P&L	NA	Transferred to OCI
7.	Revaluation on Balance Sheet (Changes in Fair Value)	No	Yes through OCI	Yes through P&L	Yes Through OCI
8.	Interest and Dividends	P&L	P&L	NA	P&L
9.	Impairment Losses	P&L	P&L	NA	OCI
10.	Foreign Exchange Gain or Loss	P&L	P&L	NA	OCI
11.	Gain or loss on de-recognition	P&L	Transferred from OCI to P&L	NA	OCI (Recycling not allowed)

An Overview for Measurement of Financial Liabilities

S.No.	Particulars	Amortised Cost	Held for Trading	Designated as FVTPL
1.	On Balance Sheet Date	Amortised Cost	Fair Value	Fair Value
2.	Transaction Cost – on Initial Recognition	Deducted	Charged to P&L	Charged to P&L
3.	Transaction Cost – On Subsequent Accounting	Amortised to P&L	NA	NA

4.	Gain or loss due to changes in own credit risk	NA	P&L	OCI
5.	Other gain or loss	NA	P&L	P&L
6.	Interest	P&L	NA	NA
7.	Foreign Exchange Gain or Loss	P&L	NA	NA

9. Reclassification of Financial Assets and Liabilities

When, and only when, an entity **changes its business model for managing** financial assets it shall reclassify all affected financial assets.

Such changes are expected to be very infrequent. Such changes are determined by the entity's senior management as a result of external or internal changes and must be significant to the entity's operations and demonstrable to external parties.

Accordingly, a change in an entity's business model will occur only when an entity either begins or ceases to perform an activity that is significant to its operations;

For example:

When the entity has acquired, disposed of or terminated a business line.

Examples of a change in business model include the following:

a. An entity has a portfolio of commercial loans that it holds to sell in the short term. The entity acquires a company that manages commercial loans and has a business model that holds the loans in order to collect the contractual cash flows. The portfolio of commercial loans is no longer for sale, and the portfolio is now managed together with the acquired commercial loans and all are held to collect the contractual cash flows.

b. A financial services firm decides to shut down its retail mortgage business. That business no longer accepts new business and the financial services firm is actively marketing its mortgage loan portfolio for sale.

The following are not changes in business model:

a. A change in intention related to particular financial assets (even in circumstances of significant changes in market conditions).

b. The temporary disappearance of a particular market for financial assets.

c. A transfer of financial assets between parts of the entity with different business models.

An entity shall not reclassify any financial liability.

Reclassification of Financial Asset

If an entity reclassifies financial assets, it shall apply the reclassification **prospectively** from the reclassification date.

The entity shall **not restate** any previously recognised gains, losses (including impairment gains or losses) or interest.

From Amortised Cost to	•FVTPL •FVTOCI
From FVTPL to	•Amortsied Cost •FVTOCI
From FVTOCI to	•Amortised Cost •FVTPL

CASE I

AMORTISED COST TO FVTPL

- Its fair value is measured at the reclassification date.
- Any gain or loss arising from a difference between the previous amortised cost of the financial asset and fair value is recognised in profit or loss.

Example:

Bonds for ₹ 1,25,000 reclassified as FVTPL

Fair Value on reclassification ₹ 90,000

Bonds (FVTPL) A/c	Dr.	90,000	
P&L A/c	Dr.	35,000	
To Bonds (Amortised Cost) A/c			1,25,000

CASE II

AMORTISED COST TO FVTOCI

- Its fair value is measured at the reclassification date.
- Any gain or loss arising from a difference between the previous amortised cost of the financial asset and fair value is recognised in other comprehensive income.
- The effective interest rate and the measurement of expected credit losses are not adjusted as a result of the reclassification.

Example:

Bonds for ₹ 1,25,000 reclassified as FVTOCI

Fair Value on reclassification ₹ 90,000

Bonds (FVTOCI) A/c	Dr.	90,000	
OCI A/c	Dr.	35,000	
To Bonds (Amortised Cost) A/c			1,25,000

CASE III

FVTPL TO AMORTISED COST

- Its fair value at the reclassification date becomes its new gross carrying amount.
- Effective Interest rate is calculated based on the new gross carrying amount.

Example:

Bonds for ₹ 1,25,000 reclassified as FVTPL

Fair Value on reclassification ₹ 90,000

Bonds (Amortised Cost) A/c	Dr.	90,000	
P&L A/c	Dr.	35,000	
To Bonds (FVTPL) A/c			1,25,000

CASE IV

FVTPL TO FVTOCI

- The financial asset continues to be measured at fair value.
- The effective interest rate is determined on the basis of the fair value of the asset at the reclassification date.

Example:

Bonds for ₹ 1,25,000 reclassified as FVTOCI

Fair Value on reclassification ₹ 90,000

Bonds (FVTOCI) A/c	Dr.	90,000	
OCI A/c	Dr.	35,000	
To Bonds (Amortised Cost) A/c			1,25,000

CASE V

FVTOCI TO AMORTISED COST

- The financial asset is reclassified at its fair value at the reclassification date.
- However, the cumulative gain or loss previously recognised in other comprehensive income is removed from equity and adjusted against the fair value of the financial asset at the reclassification date.
- As a result, the financial asset is measured at the reclassification date as if it had always been measured at amortised cost. This adjustment affects other comprehensive income but does not affect profit or loss and therefore is not a reclassification adjustment.
- The effective interest rate and the measurement of expected credit losses are not adjusted as a result of the reclassification.

Example:

Bonds for ₹ 1,25,000 reclassified as Amortised Cost

Fair Value on reclassification ₹ 90,000

Bonds (Amortised Cost) A/c	Dr.	90,000	
OCI A/c	Dr.	35,000	
To Bonds (FVTOCI) A/c			1,25,000

CASE VI

FVTOCI TO FVTPL

- The financial asset continues to be measured at fair value.
- The cumulative gain or loss previously recognised in other comprehensive income is reclassified from equity to profit or loss as a reclassification adjustment at the reclassification date.

Example:

Bonds for ₹ 1,25,000 reclassified as FVTPL

Fair Value on reclassification ₹ 90,000

Bonds (FVTPL) A/c	Dr.	90,000	
OCI A/c	Dr.	35,000	
To Bonds (FVTOCI) A/c			1,25,000

10. Derecognition of Financial Instruments

10.1 Derecognition of Financial Assets

An entity shall derecognise a financial asset **when, and only when:**

a) the contractual rights to the cash flows from the financial asset expire, or

b) it transfers the financial asset as set out in paragraphs 3.2.4 and 3.2.5 and the transfer qualifies for derecognition in accordance with paragraph 3.2.6 of Ind AS 109.

On derecognition of a financial asset in its entirety, the difference between:

a) the carrying amount (measured at the date of derecognition) and

b) the consideration received (including any new asset obtained less any new liability assumed) shall be recognised in profit or loss.

10.2 Derecognition of Financial Liabilities

An entity shall remove a financial liability (or a part of a financial liability) from its balance sheet when, and only when, it is extinguished—i.e. when the obligation specified in the contract is discharged or cancelled or expired.

NOTE:

1. An **exchange between an existing borrower and lender of debt instruments with substantially different terms** shall be accounted for as an extinguishment of the original financial liability and the recognition of a new financial liability. Similarly, a substantial modification of the terms of an existing financial liability or a part of it (whether or not attributable to the financial difficulty of the debtor) shall be accounted for as an extinguishment of the original financial liability and the recognition of a new financial liability.
2. The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, **shall be recognised in profit or loss.**

Illustration 11

Sea Ltd. has lent a sum of ₹ 10 lakhs @ 18% per annum for 10 years. The loan had a Fair Value of ₹ 12,23,960 at the effective interest rate of 13%. To mitigate prepayment risks but at the same time retaining control over the loan, Sea Ltd. transferred its right to receive the Principal amount of the loan on its maturity with interest, after retaining rights over 10% of principal and 4% interest that carries Fair Value of ₹ 29,000 and ₹ 1,84,620 respectively. The consideration for the transaction was ₹ 9,90,000. The interest component retained included a 2% fee towards collection of principal and interest that has a Fair Value of ₹ 65,160. Defaults, if any, are deductible to a maximum extent of the company's claim on Principal portion. You are required to show the Journal Entries to record derecognition of the Loan.

Solution:

(i) Calculation of securitized component of loan

		₹	₹
Fair Value			12,23,960
Less: Principal strip receivable (fair value)		29,000	
Less: Interest strip receivable (fair value)	1,19,460		
Less: Value of service asset (fair value)	65,160	1,84,620	(2,13,620)
			10,10,340

(ii) Apportionment of carrying amount in the ratio of fair values

	Fair value (₹)		Apportionment (₹)
Securitized component of loan	10,10,340	$\frac{10,10,340 \times 10,00,000}{12,23,960}$	8,25,468
Principal strip receivable	29,000	$\frac{29,000 \times 10,00,000}{12,23,960}$	23,694
Interest strip receivable	1,19,460	$\frac{1,19,460 \times 10,00,000}{12,23,960}$	97,601

Servicing asset	65,160	$\frac{65,160 \times 10,00,000}{12,23,960}$	53,237

(iii) Entries to record the derecognition of the Loan

	₹	₹	₹
Bank A/c	Dr.	9,90,000	
To Loan A/c			8,25,468
To Profit & Loss A/c			1,64,532
(Being entry for securitization of 90% principal with 14% interest)			
Interest strip A/c	Dr.	97,601	
Servicing asset A/c	Dr.	53,237	
Principal strip A/c	Dr.	23,694	
To Loan A/c			1,74,532
(Being entry for interest, servicing asset and principal strips received)			

Illustration 12 (Factoring with / without recourse)

Entity A (the transferor) holds a portfolio of receivables with a carrying value of ₹ 1,000,000. It enters into a factoring arrangement with entity B (the transferee) under which it transfers the portfolio to entity B in exchange for ₹ 900,000 of cash.

Entity B will service the loans after their transfer and debtors will pay amounts due directly to entity B. Entity A has no obligations whatsoever to repay any sums received from the factor and has no rights to any additional sums regardless of the timing or the level of collection from the underlying debts. Comment.

Solution

Entity A has transferred its rights to receive the cash flows from the asset via an assignment to entity B. Furthermore, as entity B has no recourse to entity A for either late payment risk or credit risk, entity A has transferred substantially all the risks and rewards of ownership of the portfolio.

Hence, entity A derecognises the entire portfolio. The difference between the carrying value of ₹ 1,000,000 and cash received of ₹ 900,000 i.e. ₹ 100,000 is recognised immediately as a loss on derecognition of assets classified at amortised cost in profit or loss.

Had Entity A not transferred its rights to receive the cash flows from the asset or there would have been any credit default guarantee given by entity A, then it would have not led to complete transfer of risk and rewards and entity A could not derecognise the portfolio due to the same. Hence, the asset is recognised to the extent of continuing involvement.

11. Impairment of Financial Assets

11.1 Recognition of expected credit losses

An entity shall recognise a loss allowance for expected credit losses:

- On a financial asset that is measured at Amortised Cost or FVTOCI
- A lease receivable
- A loan commitment and
- A financial guarantee contract to which the impairment requirements apply

11.2 Credit Loss

The difference between all contractual cash flows that are due to an entity in accordance with the contract and all the cash flows that the entity expects to receive (i.e. all cash short falls), discounted at the original effective interest rate (or credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets). An entity shall estimate cash flows by considering all contractual terms of the financial instrument (For example, prepayment, extension, call and similar options) through the expected life of that financial instrument. The cash flows that are considered shall include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms. There is a presumption that the expected life of a financial instrument can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the expected life of a financial instrument, the entity shall use the remaining contractual term of the financial instrument.

Measurement of expected credit losses

An entity shall measure expected credit losses of a financial instrument in a way that reflects:

a) an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;

b) the time value of money; and

c) Reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions.

CASE I

Credit Risk on that Financial Instrument has Increased Significantly since Initial Recognition

At each reporting date, an entity shall measure the loss allowance for a financial instrument at an amount equal to the **lifetime expected credit losses** if the credit risk on that financial instrument has increased significantly since initial recognition.

CASE II

Credit Risk on a Financial Instrument has not Increased Significantly Since Initial Recognition

If, at the reporting date, the credit risk on a financial instrument has not increased significantly since initial recognition, an entity shall measure the loss allowance for that financial instrument at an amount equal to **12-month expected credit losses.**

12 MONTH EXPECTED CREDIT LOSS (ECL) MEASUREMENT - PROBABILITY OF DEFAULT (POD) APPROACH

Facts:

Entity as a lender – Single 10 year loan for ₹ 1 million

At initial recognition, the POD over the next 12 months is 0.5%

Loss given default (LGD) is determined to be 25% of gross carrying amount

Assessment:

At reporting date, no change in 12-month POD; and entity assesses that no significant increase in credit risk since initial recognition – therefore Lifetime ECL is not required to be recognised

Loan	₹ 1,000,000	A
LGD	25%	B
POD - 12 months	0.5%	C
Loss allowance (for 12-month ECL)	₹ 1,250	A x B x C

12 MONTH EXPECTED CREDIT LOSS (ECL) MEASUREMENT - LOSS RATE (LR) APPROACH

Facts:

Bank as a lender – 2,000 bullet loans with total gross carrying amount of ₹ 5,00,000

Portfolio segmented into borrower groups (X and Y) based on shared credit risk characteristics at initial recognition. Group X comprises 1,000 loans with a GCV per client of ₹ 200, for a total GCV of ₹ 200,000. Similarly, the GCV per client is ₹ 300 and the total GCV is ₹ 3,00,000 for Y.

Historical defaults per 1000 loans sample: 4 defaults (Grp X) and 2 defaults (Grp Y)

Assessment:

Bank considers forward looking information and expects an increase in defaults over the next 12 months compared to the historical rate: 5 defaults (Grp X) and 3 defaults (Grp Y)

At reporting date, the entity assesses that the expected increase in defaults does not represent a significant increase in credit risk since initial recognition for the portfolios – therefore Lifetime ECL is not considered.

Group	Client in sample	Estimated GCV per client	Expected defaults	Estimated GCV at default	PV of Observed Loss (note)	Loss Rate
	A	B	C	D = BxC	E	E /BXA
	1000	200	5	1000	750	0.375%
	1000	300	3	900	675	0.225%

These Loss rates are then used to estimate 12 month ECL on new loans in Group X and Group Y that originated during the year and for which the credit risk has not increased significantly since initial recognition.

Note: In accordance with the standard, expected credit losses should be discounted using the effective interest rate. However, for purposes of this example, the present value of the observed loss is assumed.

LIFETIME EXPECTED CREDIT LOSS (LECL) MEASUREMENT - PROVISION MATRIX FOR SHORT TERM TRADE RECEIVABLES

Facts:

Manufacturer M with a portfolio of short term trade receivables (no financing component) from a large number of small clients

Assessment:

Loss allowance at an amount equal to Lifetime ECL (simplified approach for trade receivables)

Entity creates a provision matrix that is based on its historical observed default rates over the expected life of trade receivables and adjusts it for forward looking estimates.

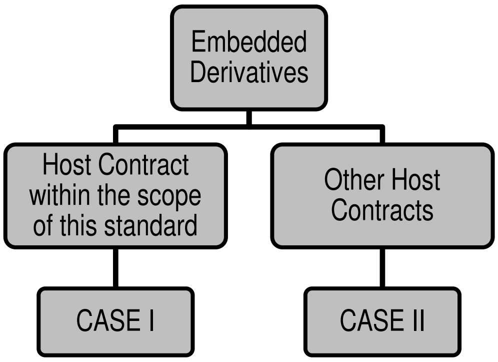
Age	Default Rate (A)	Gross Carrying Amount (B)	LECL Allowance (AxB)
Current	0.3%	150,00,000	45,000
1-30 days	1.6%	75,00,000	1,20,000
31- 60 days	3.6%	40,00,000	1,44,000
61- 90 days	6.6%	25,00,000	1,65,000
90 + days	10.6%	10,00,000	1,06,000
		300,00,000	5,80,000

12. Embedded Derivatives

An embedded derivative is a component of a hybrid contract that also includes a **non-derivative host**—with the effect that some of the cash flows of the combined instrument vary in a way similar to a stand-alone derivative.

A derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty, is not an embedded derivative, but a separate financial instrument.

12.1 Accounting Treatment of Embedded Derivatives



CASE I

If a hybrid contract contains a host that is an asset within the scope of this Standard, an entity shall apply the requirements of classification and measurement rules to the entire hybrid contract.

CASE II

If a hybrid contract contains a host that is not an asset within the scope of this Standard, an embedded derivative shall be separated from the host and accounted for as a derivative under this Standard **if, and only if**:

a) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host;

b) a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and

c) the hybrid contract is not measured at fair value with changes in fair value recognised in profit or loss (i.e. a derivative that is embedded in a financial liability at fair value through profit or loss is not separated).

   1. If an embedded derivative is separated, the host contract shall be accounted for in accordance with the appropriate Standards. This Standard does not address whether an embedded derivative shall be presented separately in the balance sheet.

   2. If an entity is required by this Standard to separate an embedded derivative from its host, but is unable to measure the embedded derivative separately either at acquisition or at the end of a subsequent financial reporting period, it shall designate the entire hybrid contract as at fair value through profit or loss.

13. Non-financial Contracts

Contracts to buy or sell non-financial items **do not meet the definition of a financial instrument** because the contractual right of one party to receive a non-financial asset or service and the corresponding obligation of the other party do not establish a present right or obligation of either party to receive, deliver or exchange a financial asset.

For example: Contracts that provide for settlement only by the receipt or delivery of a non-financial item (Example: An option, futures or forward contract on silver) are not financial instruments.

Many commodity contracts are of this type.

For example: A commodity futures contract may be bought and sold readily for cash because it is listed for trading on an exchange and may change hands many times. However, the parties buying and selling the contract are, in effect, trading the **underlying commodity**.

The ability to buy or sell a commodity contract for cash, the ease with which it may be bought or sold and the possibility of negotiating a cash settlement of the obligation to receive or deliver the commodity do not alter the fundamental character of the contract in a way that creates a financial instrument.

Nevertheless, **some contracts** to buy or sell non-financial items that can be settled net or by exchanging financial instruments, or in which the non-financial item is readily convertible to cash, are within the scope of the Standard as if they were financial instruments.

This Standard shall be applied to those contracts to buy or sell a non-financial item (Property, Plant and Equipment or Inventories) that can be as if the contracts were financial instruments

Exception: Contracts that were entered into and continue to be **held for the purpose of the receipt or delivery of a non-financial item** in accordance with the entity's expected purchase, sale or usage requirements.

This Standard shall be applied to those contracts that an entity designates as measured at fair value through profit or loss in accordance with Ind AS 109, Financial Instruments.

Illustration 13

Entity XYZ enters into a fixed price forward contract to purchase 10,00,000 kilograms of copper in accordance with its expected usage requirements.

The contract permits XYZ to take physical delivery of the copper at the end of 12 months or to pay or receive a net settlement in cash, based on the change in fair value of copper. Is the contract covered under Financial Instruments standard?

Solution

The above contract needs to be evaluated to determine whether it falls within the scope of the financial instruments standards.

The contract is a derivative instrument because there is no initial net investment, the contract is based on the price of copper and it is to be settled at a future date.

However, if XYZ intends to settle the contract by taking delivery and has no history for similar contracts of settling net in cash, or of taking delivery of the copper and selling it within a short period after delivery for the purpose of generating a profit from short term fluctuations in price or dealer's margin, the contract is not accounted for as a derivative under Ind AS 109.

Instead, it is accounted for as an executory contract and if it becomes onerous then Ind AS 37 would apply.

14. Compound Financial Instruments

IND AS 32 applies only to issuers of non-derivative compound financial instruments.

It does not deal with compound financial instruments from the **perspective of holders**.

Ind AS 109 deals with the **classification and measurement** of financial assets that are compound financial instruments from the holder's perspective.

The **issuer of a non-derivative financial instrument** shall evaluate the terms of the financial instrument to determine whether it contains both a liability and an equity component.

An entity recognises separately the components of a financial instrument that

(a) creates a financial liability of the entity and

(b) grants an option to the holder of the instrument to convert it into an equity instrument of the entity.

For example: A bond or similar instrument convertible by the holder into a fixed number of ordinary shares of the entity is a compound financial instrument.

From the perspective of the entity, such an instrument comprises two components:

- A financial liability (a contractual arrangement to deliver cash or another financial asset) and
- An equity instrument (a call option granting the holder the right, for a specified period of time, to convert it into a fixed number of ordinary shares of the entity).

Accordingly, in all cases, the entity presents the liability and equity components separately in its balance sheet.

Accounting treatment:

Initial recognition:

The issuer of a bond convertible into ordinary shares:

Step I

Determines the carrying amount of the liability component by measuring the fair value of a similar liability that does not have an associated equity component

Explanation:

On initial recognition, the fair value of the liability component is the **present value** of the contractually determined stream of future cash flows discounted at the rate of interest applied at that time by the market to instruments of comparable credit status and providing substantially the same cash flows, on the same terms, but without the conversion option.

Step II

The carrying amount of the equity instrument represented by the option to convert the instrument into ordinary shares is then determined by **deducting the fair value of the financial liability from the fair value of the compound financial instrument as a whole**

Subsequent Recognition:

On conversion of a convertible instrument **at maturity**, the entity derecognises the liability component and recognises it as equity. The original equity component remains as equity (although it may be transferred from one line item within equity to another). There is no gain or loss on conversion at maturity.

Illustration 14

On 1 April, 2015, Delta Ltd. issued ₹ 30,00,000, 6 % convertible debentures of face value of ₹ 100 per debenture at par. The debentures are redeemable at a premium of 10% on 31.03.19 or these may be converted into ordinary shares at the option of the holder, the interest rate for equivalent debentures without conversion rights would have been 10%.

Being compound financial instrument, ***you are required*** *to separate equity and debt portion as on 01.04.15.*

Solution:

Computation of Equity and Debt Component of Convertible Debentures as on 1.4.15

Present value of the principal repayable after four years	22,44,000
[30,00,000 x 1.10 x 0.680 at 10% Discount factor]	
Add: Present value of Interest	5,70,600
[1,80,000 x 3.17 (4 years cumulative 10% discount factor)]	
Value of debt component	28,14,600
Value of equity component	1,85,400
Proceeds of the issue	30,00,000

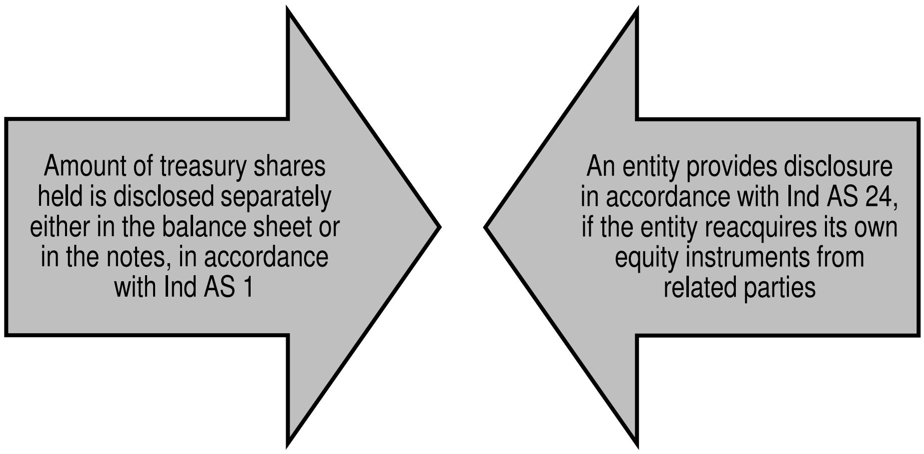
15. Treasury Shares (Entity's Own Equity Instruments)

An entity's own equity instruments are not recognised as a financial asset regardless of the reason for which they are reacquired.

However, when an entity holds its own equity on behalf of others, eg a financial institution holding its own equity on behalf of a client, there is an agency relationship and as a result those holdings are not included in the entity's balance sheet.

- If an entity reacquires its own equity instruments, those instruments ('treasury shares') shall be deducted from equity.

- No gain or loss shall be recognised in profit or loss on the purchase, sale, issue or cancellation of an entity's own equity instruments.
- Such treasury shares may be acquired and held by the entity or by other members of the consolidated group. Consideration paid or received shall be recognised directly in equity.



Example:

A Limited buys back 1,00,000 of its own equity shares in the market for ₹ 5 per share. The shares will be held as treasury shares to enable A Limited to satisfy its obligations under its employee share option scheme. The following entry will be made to recognise the purchase of the treasury shares as a deduction from equity:

Dr Equity	₹ 5,00,000	
Cr Cash		₹ 5,00,000

16. Interest, Dividends, Losses and Gains

- Interest, dividends, losses and gains relating to a financial instrument or a component that is a financial liability shall be recognised as income or expense in profit or loss.
- Distributions to holders of an equity instrument shall be recognised by the entity directly in equity.
- Transaction costs of an equity transaction shall be accounted for as a deduction from equity.
- Income tax relating to distributions to holders of an equity instrument and to transaction costs of an equity transaction shall be accounted for in accordance with Ind AS 12, Income Taxes.

The classification of a financial instrument as a financial liability or an equity instrument determines whether interest, dividends, losses and gains relating to that instrument are recognised as income or expense in profit or loss.

Thus, dividend payments on shares wholly recognised as liabilities are recognised as expenses in the same way as interest on a bond.

- An entity typically incurs various costs in issuing or acquiring its own equity instruments. Those costs might include registration and other regulatory fees, amounts paid to legal, accounting and other professional advisers, printing costs and stamp duties. The transaction costs of an equity transaction are accounted for as a deduction from equity to the extent they are incremental costs directly attributable to the equity transaction that otherwise would have been avoided. The costs of an equity transaction that is abandoned are recognised as an expense.
- Transaction costs that relate to the issue of a compound financial instrument are allocated to the liability and equity components of the instrument in proportion to the allocation of proceeds.
- Dividends classified as an expense may be presented in the statement of profit and loss either with interest on other liabilities or as a separate item.

  {In some circumstances, because of the differences between interest and dividends with respect to matters such as tax deductibility, it is desirable to disclose them separately in the statement of profit and loss. Disclosures of the tax effects are made in accordance with Ind AS 12.}
- Gains and losses related to changes in the carrying amount of a financial liability are recognised as income or expense in profit or loss even when they relate to an instrument that includes a right to the residual interest in the assets of the entity in exchange for cash or another financial asset.

Illustration 15

Entity B places its privately held ordinary shares that are classified as equity with a stock exchange and simultaneously raises new capital by issuing new ordinary shares on the stock exchange.

Transaction costs are incurred in respect of both transactions. Determine the treatment of the incurred transactions costs?

Solution

Since the issue of new shares is the issue of an equity instrument, but the placing of the existing equity instruments with the exchange is not, the transaction costs will need to be allocated between the two transactions.

Transaction costs in respect of the new shares issued will be recognised in equity whereas the transaction costs incurred in placing the existing shares with the stock exchange will be recognised in profit or loss.

Illustration 16

An entity issues a non-redeemable callable subordinated bond with a fixed 6% coupon. The coupon can be deferred in perpetuity at the issuer's option. The issuer has a history of paying the coupon each year and the current bond price is predicated on the holder's expectation that the coupon will continue to be *paid each year. In addition, the stated policy of the issuer is that the coupon will be paid each year, which has been publicly communicated. Evaluate?*

Solution

Although there is both pressure on the issuer to pay the coupon, to maintain the bond price, and a constructive obligation to pay the coupon, there is no contractual obligation to do so. Therefore, the bond is classified as an equity instrument.

Illustration 17

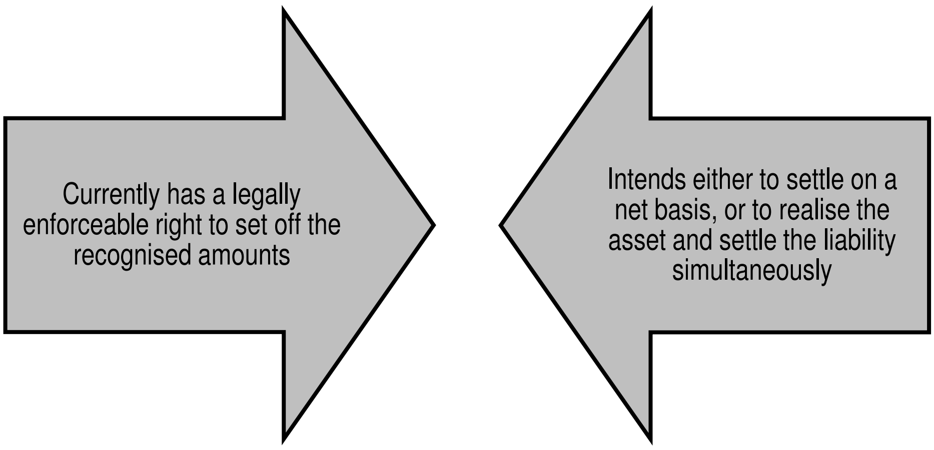
A zero coupon bond is an instrument where no interest is payable during the instrument's life and that is normally issued at a deep discount to the value at which it will be redeemed. Evaluate?

Solution

Although there are no mandatory periodic interest payments, the instrument provides for mandatory redemption by the issuer for a determinable amount at a fixed or determinable future date. Since there is a contractual obligation to deliver cash for the value at which the bond will be redeemed, the instrument is classified as a financial liability.

17. Offsetting a Financial Asset and a Financial Liability

A financial asset and a financial liability shall be offset and the net amount presented in the balance sheet when, and only when, an entity:



Example: Company X owes Company Y Rs.20 million at the end of 31 March. As part of another contract, Company Y owes Company X Rs.15 million at 31 March. Company X has the legal right to set off the asset and liability but historically, Company X has settled one month after Company Y settles.

Can Company X offset the asset and liability?

No, since Company X cannot demonstrate the intention to settle net or simultaneously for all payments.

18. Analysis of Scope of Ind AS 32 and 109

Financial Instrument	Whether out of Scope?		Which Ind AS is Applicable
	Ind AS 109	Ind AS 32	
Subsidiaries	Yes	Yes	110/27
Associates	Yes	Yes	28/27
Joint Ventures	Yes	Yes	28/27
Rights and Obligations under Leases	Yes	No	17
Employers Rights and obligations under Employee Benefit Plans	Yes	Yes	19
Financial Instruments that meet the definition of equity Instrument			
Issuer point of view	Yes	No	32
Holders point of view	No	Yes	109
Rights and Obligations under an Insurance Contract	Yes	Yes	104
Financial Guarantee Contracts	No	No	32/109
Forward contract to buy or sell an acquiree that will result in a business combination within the scope of Ind AS 103 *Business Combinations* at a future date	Yes	No	103
Loan commitments	Yes	No	37
Financial Instruments, Contracts and obligations under share based payment transactions	Yes	Yes	102
Reimbursement rights in respect of Provisions	Yes	No	37
Rights and obligations	Yes	No	115
Commodity Contracts to buy or sell Non-Financial Items net			
For expected purchase, sale or usage requirement	Yes	Yes	37
Not for Expected purchase, sale or usage requirement	No	No	32/109

19. HEDGE ACCOUNTING

19.1 Objective and Scope of Hedge Accounting

The objective of hedge accounting is to represent, in the financial statements, the **effect of an entity's risk management activities** that use financial instruments to manage exposures arising from particular risks that could affect profit or loss (or other comprehensive income, in the case of investments in equity instruments for which an entity has elected to present changes in fair value in other comprehensive income).

For the purpose of Hedge Accounting, an Entity should:

Identifies and designates Hedged Item	
Paragraph 6.3	Paragraph B6.3.1 to B6.3.25

↓

Designates Hedging Instruments	
Paragraph 6.2	Paragraph B6.2.1to B6.2.6

↓

Verifies whether Hedging satisfies Qualifying Criteria for Hedge Accounting	
Paragraph 6.4	Paragraph B6.4.1 to B6.4.19

Accounts for Qualifying Hedging Relationships	
Paragraph 6.5	Paragraph B6.5.1 to B6.5.39

↓

Consider whether it is a Hedge of a Group of Items i.e. Hedging Net Position	
Paragraph 6.6	Paragraph B6.6.1 to B6.6.16

↓

Evaluates the option to designate a credit exposure as measured at FVTPL
Paragraph 6.7

Identifies and designates Hedged Item

A hedged item can be:

- A Recognised Asset or Liability
- An Unrecognised Firm Commitment
- A Forecast Transaction
- A Net Investment in a Foreign Operation

The hedged item can be:

- a single item; or
- a group of items

NOTE:

1. The hedged item must be reliably measurable.
2. If a hedged item is a forecast transaction (or a component thereof), that transaction must be highly probable.

19.2 Designation of Hedging Instruments

A derivative measured at fair value through profit or loss may be designated as a hedging instrument, **except for some written options** (Refer Paragraph B6.2.4).

A non-derivative financial asset or a non-derivative financial liability measured at fair value through profit or loss may be designated as a hedging instrument unless it is a financial liability designated as at fair value through profit or loss for which the amount of its change in fair value that is attributable to changes in the credit risk of that liability is presented in other comprehensive income.

For a hedge of foreign currency risk, the foreign currency risk component of a non-derivative financial asset or a non-derivative financial liability may be designated as a hedging instrument provided that it is not an investment in an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income.

NOTE: For hedge accounting purposes, only contracts with a party external to the reporting entity (i.e. external to the group or individual entity that is being reported on) can be designated as hedging instruments.

19.3 Qualifying Criteria For Hedge Accounting

A hedging relationship qualifies for hedge accounting ***only if all of the following criteria are met***:

a) The hedging relationship consists **only of eligible hedging instruments and eligible hedged items.**

b) At the inception of the hedging relationship there is **formal designation and documentation of the hedging relationship and the entity's risk management objective and strategy for undertaking the hedge.** That documentation shall include identification of the hedging instrument, the hedged item, the nature of the risk being hedged and how the entity will assess whether the hedging relationship meets the hedge effectiveness requirements (including its analysis of the sources of hedge ineffectiveness and how it determines the hedge ratio).

c) The hedging relationship meets ***all of the following hedge effectiveness requirements***:

(i) there is an economic relationship between the hedged item and the hedging instrument (Refer Paragraphs B6.4.4– B6.4.6);

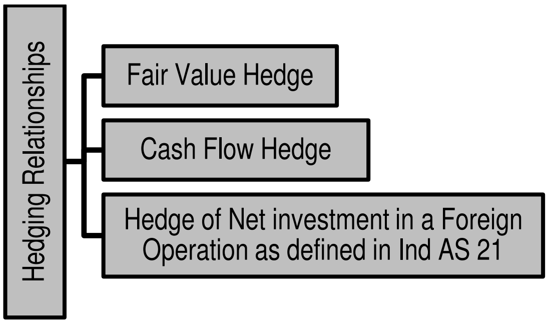
(ii) the effect of credit risk does not dominate the value changes that result from that economic relationship (Refer Paragraphs B6.4.7–B6.4.8); and

(iii) the hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the entity actually hedges and the quantity of the hedging instrument that the entity actually uses to hedge that quantity of hedged item. However, that designation shall not reflect an imbalance between the weightings of the hedged item and the hedging instrument that would create hedge ineffectiveness (irrespective of whether recognised or not) that could result in an accounting outcome that would be inconsistent with the purpose of hedge accounting (Refer Paragraphs B6.4.9–B6.4.11).

19.4 Types of Hedging Relationships

An entity applies hedge accounting to hedging relationships that meet the qualifying criteria.

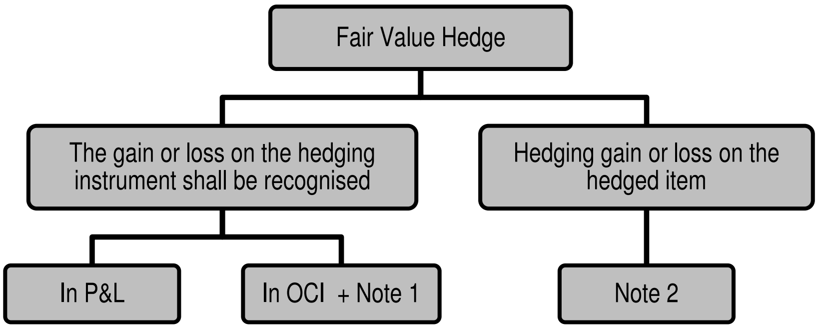
There are three types of hedging relationships:



19.4.1 Fair value hedge

A hedge of the exposure to changes in fair value of a recognised asset or liability or an unrecognised firm commitment, or a component of any such item, that is attributable to a particular risk and could affect profit or loss.

If a fair value hedge meets the qualifying criteria, the hedging relationship shall be accounted for as follows:



Note:

1. If the hedging instrument hedges an equity instrument for which an entity has elected to present changes in fair value in OCI
2. Adjust the carrying amount of the hedged item (if applicable) and be recognised in profit or loss.

   If the hedged item is a financial asset (or a component thereof) that is measured at FVTOCI, the hedging gain or loss on the hedged item shall be recognised in profit or loss.

   If the hedged item is an equity instrument for which an entity has elected to present changes in FVTOCI, those amounts shall remain in other comprehensive income.

   When a hedged item is an unrecognised firm commitment (or a component thereof), the cumulative change in the fair value of the hedged item subsequent to its designation is recognised as an asset or a liability with a corresponding gain or loss recognised in profit or loss.

19.4.2 Cash flow hedge

A hedge of the exposure to variability in cash flows that is attributable to a particular risk associated with all, or a component of, a recognised asset or liability (such as all or some future interest payments on variable-rate debt) or a highly probable forecast transaction, and could affect profit or loss.

As long as a cash flow hedge meets the qualifying criteria, the hedging relationship shall be accounted for as follows:

a) **the separate component of equity associated with the hedged item** (CASH FLOW HEDGE RESERVE) is adjusted to the ***lower*** of the following (in absolute amounts):
   (i) the cumulative gain or loss on the hedging instrument from inception of the hedge; and
   (ii) the cumulative change in fair value (present value) of the hedged item (i.e. the present value of the cumulative change in the hedged expected future cash flows) from inception of the hedge.

b) **the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge** (i.e. the portion that is offset by the change in the cash flow hedge reserve calculated in accordance with (a)) shall be recognised in other comprehensive income.

(a) **any remaining gain or loss on the hedging instrument** (or any gain or loss required to balance the change in the cash flow hedge reserve calculated in accordance with (a)) is **hedge ineffectiveness** that shall be recognised in profit or loss.

(b) the amount that has been **accumulated in the cash flow hedge reserve in accordance with (a)** shall be accounted for as follows:
   (i) if a hedged forecast transaction subsequently results in the recognition of a non-financial asset or non-financial liability, or a hedged forecast transaction for a non-financial asset or a non-financial liability becomes a firm commitment for which fair

value hedge accounting is applied, the entity shall remove that amount from the cash flow hedge reserve and include it directly in the initial cost or other carrying amount of the asset or the liability.

[This is not a reclassification adjustment and hence it does not affect other comprehensive income.]

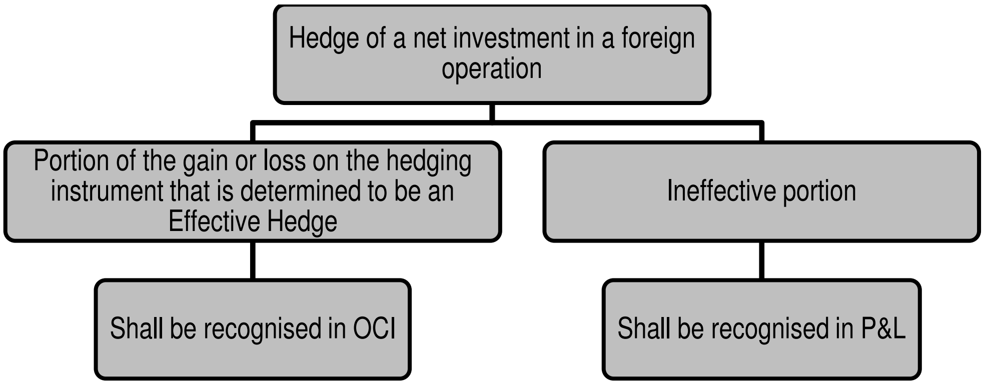
(ii) for cash flow hedges other than those covered by (i), that amount shall be reclassified from the cash flow hedge reserve to profit or loss as a reclassification adjustment in the same period or periods during which the hedged expected future cash flows affect profit or loss

For example: In the periods that interest income or interest expense is recognised or when a forecast sale occurs.

(iii) however, if that amount is a loss and an entity expects that all or a portion of that loss will not be recovered in one or more future periods, it shall immediately reclassify the amount that is not expected to be recovered into profit or loss as a reclassification adjustment.

19.5 Hedge of a Net Investment in a Foreign Operation as Defined in Ind AS 21

Hedges of a net investment in a foreign operation, including a hedge of a monetary item that is accounted for as part of the net investment (Refer Ind AS 21), shall be accounted for similarly to cash flow hedges:

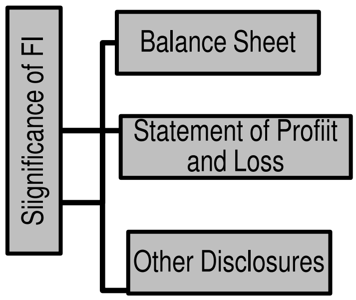


The cumulative gain or loss on the hedging instrument relating to the effective portion of the hedge that has been accumulated in the foreign currency translation reserve shall be reclassified from equity to profit or loss as a reclassification adjustment (Refer Ind AS 1) in accordance with Ind AS 21 on the disposal or partial disposal of the foreign operation.

20. Disclosures

20.1 Significance of Financial Instruments for Financial Position and Performance

An entity shall disclose information that enables users of its financial statements to evaluate the significance of financial instruments for its financial position and performance.



20.2 Balance Sheet

<u>20.2.1 Categories of financial assets and financial liabilities</u>

The carrying amounts of each of the following categories, as specified in Ind AS 109, shall be disclosed either in the balance sheet or in the notes:

(a) financial assets measured at fair value through profit or loss, showing separately

- (i) those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 and
- (ii) those mandatorily measured at fair value through profit or loss in accordance with Ind AS 109.

(b) financial liabilities at fair value through profit or loss, showing separately

- (i) those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 and
- (ii) those that meet the definition of held for trading in Ind AS 109.

(c) financial assets measured at amortised cost.

(d) financial liabilities measured at amortised cost.

(e) financial assets measured at fair value through other comprehensive income, showing separately

- (i) financial assets that are measured at fair value through other comprehensive income in accordance with Ind AS 109; and
- (ii) investment in equity instruments designated as such upon initial recognition in accordance with Ind AS 109.

20.2.2 Financial assets or financial liabilities at fair value through profit or loss

If the entity has designated as measured at fair value through profit or loss a financial asset (or group of financial assets) that would otherwise be measured at fair value through other comprehensive income or amortised cost, it shall disclose:

(a) the maximum exposure to credit risk of the financial asset (or group of financial assets) at the end of the reporting period.

(b) the amount by which any related credit derivatives or similar instruments mitigate that maximum exposure to credit risk.

(c) the amount of change, during the period and cumulatively, in the fair value of the financial asset (or group of financial assets) that is attributable to changes in the credit risk of the financial asset determined either:

  (i) as the amount of change in its fair value that is not attributable to changes in market conditions that give rise to market risk; or

  (ii) using an alternative method the entity believes more faithfully represents the amount of change in its fair value that is attributable to changes in the credit risk of the asset.

(d) the amount of the change in the fair value of any related credit derivatives or similar instruments that has occurred during the period and cumulatively since the financial asset was designated.

20.2.3 Investments in equity instruments designated at fair value through other comprehensive income

If an entity has designated investments in equity instruments to be measured at fair value through other comprehensive income, as permitted by Ind AS 109, it shall disclose:

(a) which investments in equity instruments have been designated to be measured at fair value through other comprehensive income.

(b) the reasons for using this presentation alternative.

(c) the fair value of each such investment at the end of the reporting period.

(d) dividends recognised during the period, showing separately those related to investments derecognised during the reporting period and those related to investments held at the end of the reporting period.

(e) any transfers of the cumulative gain or loss within equity during the period including the reason for such transfers.

20.2.4 Reclassification

An entity shall disclose if, in the current or previous reporting periods, it has reclassified any financial assets in accordance with Ind AS 109. For each such event, an entity shall disclose:

(a) the date of reclassification.

(b) a detailed explanation of the change in business model and a qualitative description of its effect on the entity's financial statements.

(c) the amount reclassified into and out of each category.

20.2.5 Collateral

An entity shall disclose:

(a) the carrying amount of financial assets it has pledged as collateral for liabilities or contingent liabilities, including amounts that have been reclassified in accordance with Ind AS 109; and

(b) the terms and conditions relating to its pledge.

20.2.6 Allowance account for credit losses

The carrying amount of financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109 is not reduced by a loss allowance and an entity shall not present the loss allowance separately in the balance sheet as a reduction of the carrying amount of the financial asset. However, an entity shall disclose the loss allowance in the notes to the financial statements.

20.2.7 Compound financial instruments with multiple embedded derivatives

If an entity has issued an instrument that contains both a liability and an equity component and the instrument has multiple embedded derivatives whose values are interdependent (such as a callable convertible debt instrument), it shall disclose the existence of those features.

20.2.8 Defaults and breaches

For loans payable recognised at the end of the reporting period, an entity shall disclose:

(a) details of any defaults during the period of principal, interest, sinking fund, or redemption terms of those loans payable;

(b) the carrying amount of the loans payable in default at the end of the reporting period; and

(c) whether the default was remedied, or the terms of the loans payable were renegotiated, before the financial statements were approved for issue.

20.3 Statement of Profit and Loss

20.3.1 Items of Income, Expense, Gains or Losses

An entity shall disclose the following items of income, expense, gains or losses either in the statement of profit and loss or in the notes:

(a) net gains or net losses on:

(i) financial assets or financial liabilities measured at fair value through profit or loss, showing separately those on financial assets or financial liabilities designated as such upon initial recognition or subsequently in accordance with Ind AS 109, and those on financial assets or financial liabilities that are mandatorily measured at fair value through profit or loss in accordance with Ind AS 109 (e.g. financial liabilities that meet the definition of held for trading in Ind AS 109). For financial liabilities designated as at fair value through profit or loss, an entity shall show separately the amount of gain or loss recognised in other comprehensive income and the amount recognised in profit or loss.

(ii) financial liabilities measured at amortised cost.

(iii) financial assets measured at amortised cost.

(iv) investments in equity instruments designated at fair value through other comprehensive income in accordance with Ind AS 109.

(v) financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109, showing separately the amount of gain or loss recognised in other comprehensive income during the period and the amount reclassified upon derecognition from accumulated other comprehensive income to profit or loss for the period.

(b) total interest revenue and total interest expense (calculated using the effective interest method) for financial assets that are measured at amortised cost or that are measured at fair value through other comprehensive income in accordance with Ind AS 109 (showing these amounts separately); or financial liabilities that are not measured at fair value through profit or loss.

(c) fee income and expense (other than amounts included in determining the effective interest rate) arising from:

(i) financial assets and financial liabilities that are not at fair value through profit or loss; and

(ii) trust and other fiduciary activities that result in the holding or investing of assets on behalf of individuals, trusts, retirement benefit plans, and other institutions.

20.4 Other Disclosures

20.4.1 Accounting policies

In accordance with Ind AS 1 Presentation of Financial Statements, an entity discloses, in the summary of significant accounting policies, the measurement basis (or bases) used in preparing the financial statements and the other accounting policies used that are relevant to an understanding of the financial statements.

20.4.2 Hedge accounting

An entity shall apply the disclosure requirements for those risk exposures that an entity hedges and for which it elects to apply hedge accounting. Hedge accounting disclosures shall provide information about:

(i) an entity's risk management strategy and how it is applied to manage risk;

(ii) how the entity's hedging activities may affect the amount, timing and uncertainty of its future cash flows; and

(iii) The effect that hedge accounting has had on the entity's balance sheet, statement of profit and loss and statement of changes in equity.

20.4.3 Fair value

For each class of financial assets and financial liabilities, an entity shall disclose the fair value of that class of assets and liabilities in a way that permits it to be compared with its carrying amount.

Disclosures of fair value are not required:

(a) when the carrying amount is a reasonable approximation of fair value, for example, for financial instruments such as short-term trade receivables and payables;

(b) For a contract containing a discretionary participation feature (as described in Ind AS 104) if the fair value of that feature cannot be measured reliably.

20.4.4 Nature and Extent of Risks Arising from Financial Instruments

An entity shall disclose information that enables users of its financial statements to evaluate the nature and extent of risks arising from financial instruments to which the entity is exposed at the end of the reporting period.

Qualitative disclosures

For each type of risk arising from financial instruments, an entity shall disclose:

(a) the exposures to risk and how they arise;

(b) its objectives, policies and processes for managing the risk and the methods used to measure the risk; and

(c) Any changes in (a) or (b) from the previous period.

Quantitative disclosures

For each type of risk arising from financial instruments, an entity shall disclose:

(a) Summary quantitative data about its exposure to that risk at the end of the reporting period. This disclosure shall be based on the information provided internally to key management personnel of the entity (as defined in Ind AS 24, Related Party Disclosures), for example the entity's board of directors or chief executive officer.

(b) the disclosures required by paragraphs 36–42, to the extent not provided in accordance with (a).

(c) concentrations of risk if not apparent from the disclosures made in accordance with (a) and (b).

21. Miscellaneous Illustrations

Illustration 18

XYZ Ltd. grants loans to its employees at 4% amounting to ₹ 10,00,000 at the beginning of 2015-16. The principal amount is repaid over a period of 5 years whereas the accumulated interest computed on reducing balance at simple interest is collected in 2 equal annual instalments after collection of the principal amount.

Assume the benchmark interest rate is 8%.

Show the accounting entries on 1-4-2015 and 31-3-2016.

Solution

Computation of Fair Value at Initial Recognition

Year	Estimated Cash Flows	PVIF @8%	Present Value
	₹		₹
1/4/2015		1	Nil
31/3/2016	2,00,000	0.9259	1,85,185
31/3/2017	2,00,000	0.8573	1,71,468
31/3/2018	2,00,000	0.7938	1,58,766
31/3/2019	2,00,000	0.7350	1,47,006
31/3/2020	2,00,000	0.6806	1,36,117
31/3/2021	60,000 See Working note	0.6302	37,810
31/3/2022	60,000 See Working note	0.5835	35,009
Fair Value of Loan			8,71,361

Working Notes:

Computation of Interest to be paid on 31/3/2021 and 31/3/2022

Year	Cash Flows	Principal outstanding	Interest	Cumulative Interest
	₹	₹	₹	₹
31/3/2016	2,00,000	8,00,000	40,000	40,000
31/3/2017	2,00,000	6,00,000	32,000	72,000
31/3/2018	2,00,000	4,00,000	24,000	96,000
31/3/2019	2,00,000	2,00,000	16,000	1,12,000
31/3/2020	2,00,000	Nil	8,000	1,20,000
31/3/2021	60,000			

	(1,20,000/2)			
31/3/2022	60,000 (1,20,000/2)			

Computation of Fair Value Loss

	₹
Fair Value of Loan	8,71,361
Loan Amount	10,00,000
Fair Value Loss	1,28,639

Journal Entry at Initial Recognition

Date	Particulars	Dr.	Cr.
		₹	₹
1/4/2015	Loans to Employee A/c Employee Benefits A/c To Bank A/c	8,71,361 1,28,639	 10,00,000

Note: The fair value measurement is of other than level 1. Therefore, as per paragraph B5.1.2A of Ind AS 109, an entity should defer the day 1 gain / loss over the term of the financial asset. Therefore, ₹ 1,28,369 will be amortised over a period of 7 years. There is no guidance on how to amortise the same. The simplest way is to amortise the difference in line with the interest accruals so that there is no impact on Profit or Loss.

Employee benefit is transferred to Statement of Profit and Loss.

Computation of Interest on Amortised Cost

Year	Opening Balance (1)	Interest @ 8% (2)	Repayment (3)	Closing Balance (1+2-3)
	₹	₹	₹	₹
1/4/2015				8,71,361

Date	Particulars	Dr.	Cr.
		₹	₹
31/3/2016	Loans to Employee A/c To Interest Accrued A/c	69,709	 69,709
31/3/2016	Bank A/c To Loan to Employees	2,00,000	 2,00,000

Note: Similar entries would be done at the end of each year.

Illustration 19

ABC Ltd. issued Debentures amounting to ₹ 100 lacs.

As per the terms of the issue it has been agreed to issue equity shares amounting to ₹ 150 lacs to redeem the debentures at the end of 3rd year.

Assume comparable market yield is 10% for year 0 and 1, and 10.5% for Year 2 end.

Show accounting entries.

Solution:

Value of Debentures to be recorded at initial year:

Present Value of 150 lacs at 10%

= 150 lacs x PVIF (10% at the end of 3rd year)

= 150 lacs x 0.7513

= 112,69,500

Journal Entries at Inception:

Date	Particulars	Dr.	Cr.
1st Year Beg	Bank A/c Dr. Profit & Loss A/c To Debentures	100,00,000 12,69,500	 112,69,500

Journal Entries at 1st Year End:

Date	Particulars	Dr.	Cr.
1st Year End	Interest A/c Dr. To Debentures A/c (10% of 112,69,500)	11,26,950	 11,26,950

Journal Entries at 2nd Year End:

Date	Particulars	Dr.	Cr.
2nd Year End	Interest A/c To Debentures A/c	11,78,550	 11,78,550

Working Note:

Present Value of 150 lacs at 10.5% compared to Book Value

i.e. 150 lacs x 0.905 = 135,75,000 compared to 123,96,450 = 11,78,550

Journal Entries at 3rd Year End:

Date	Particulars	Dr.	Cr.
3rd Year End	Interest A/c	14,25,000	
	To Debentures A/c		14,25,000

Working Note:

Present Value of 150 lacs at 10.5% compared to Book Value

i.e. 150 lacs x 1 = 150,00,000 compared to 135,75,000 = 14,25,000

On conversion to Equity Shares

Date	Particulars	Dr.	Cr.
3rd Year End	Debentures A/c	150,00,000	
	To Equity Share Capital		100,00,000
	To Securities Premium		50,00,000

Illustration 20

As point of staff welfare measures, Y Co. Ltd. has contracted to lend to its employees sums of money at 5 percent per annum rate of interest. The amounts lent are to be repaid alongwith the interest in five equal annual instalments. The market rate of interest is 10 per cent per annum.

Y lent ₹ 16,00,000 to its employees on 1st January, 2015.

Following the principles of recognition and measurement as laid down in Ind AS 109, you are required to record the entries for the year ended 31st December, 2015 for the transaction and also calculate the value of the loan initially to be recognized and the amortized cost for all the subsequent years.

For purposes of calculation, the following discount factors at interest rate of 10 percent may be adopted

At the end of year

1	*.909*
2	*.827*
3	*.751*
4	*.683*
5	*.620*

Solution:

(i) Calculation of initial recognition amount of loan to employees

Year end	Cash Inflow		Total	P.V. factor @10%	Present value
	Principal ₹	Interest @ 5% ₹	₹		₹
2015	3,20,000	80,000	4,00,000	0.909	3,63,600
2016	3,20,000	64,000	3,84,000	0.827	3,17,568
2017	3,20,000	48,000	3,68,000	0.751	2,76,368
2018	3,20,000	32,000	3,52,000	0.683	2,40,416
2019	3,20,000	16,000	3,36,000	0.620	2,08,320
Present value or Fair value					14,06,272

(ii) Calculation of amortised cost of loan to employees

Year	Amortised cost (Opening balance) [1] ₹	Interest to be recognised@10% [2] ₹	Repayment (including interest) [3] ₹	Amortised Cost (Closing balance) [4]=[1]+ [2]–[3] ₹
2015	14,06,272	1,40,627	4,00,000	11,46,899
2016	11,46,899	1,14,690	3,84,000	8,77,589
2017	8,77,589	87,759	3,68,000	5,97,348
2018	5,97,348	59,735	3,52,000	3,05,083
2019	3,05,083	30,917*	3,36,000	Nil

* ₹ 3,05,083 x 10% = ₹ 30,508. The difference of ₹ 409 (₹ 30,917 – ₹ 30,508) is due to approximation in computation.

(iii) Journal Entries in the books of Y Ltd.

For the year ended 31st December, 2015 (regarding loan to employees)

	Dr. Amount (₹)	Cr. Amount (₹)
Staff loan A/c Dr.	16,00,000	
To Bank A/c		16,00,000
(Being the disbursement of loans to staff)		
Staff cost A/c* ₹ (16,00,000 –14,06,272) [Refer part (ii)] Dr.	1,93,728	
To Staff loan A/c		1,93,728
(Being the write off of excess of loan balance over present value thereof in order to reflect the loan at its present value of ₹ 14,06,272)		

* This is a level 2 measurement and therefore should be deferred as per paragraph 5.1.2A instead of recognising on day 1.

Staff loan A/c	Dr.	1,40,627	
To Interest on staff loan A/c			1,40,627
(Being the charge of interest @ market rate of 10% on the loan)			
Bank A/c	Dr.	4,00,000	
To Staff loan A/c			4,00,000
(Being the repayment of first instalment with interest for the year)			
Interest on staff loan A/c	Dr.	1,40,627	
To Profit and loss A/c			1,40,627
(Being transfer of balance of staff loan Interest account to profit and loss account)			

Illustration 21

K Ltd. issued 5,00,000, 6% Convertible Debentures of ₹ 10 each on the 1st April 2015. The debentures are due for redemption on 31st March, 2019 at a premium of 10% convertible into equity shares to the extent of 50% and the balance to be settled in cash to the debenture holders. The interest rate on equivalent debentures without conversion rights was 10%. You are required to separate the debt & equity components at the time of the issue and show the accounting entry in the company's books at initial recognition.

The following Present Values of ₹ 1 at 6% and at 10% are supplied to you.

Interest Rate	Year 1	Year 2	Year3	Year 4
6%	0.94	0.89	0.84	0.79
10%	0.91	0.83	0.75	0.68

Solution

Computation of Debt Component of Convertible Debentures as on 1.4.2015

Particulars	₹
Present value of the principal repayable after four years [50,00,000 x 50% × 1.10 × 0.68 (10% Discount factor)] (a)	18,70,000
Present value of Interest [3,00,000 x 3.17 (4 years cumulative 10% discount factor)] (b)	9,51,000
Total present Value of debt component (I) (a + b)	28,21,000
Issue proceeds from convertible debenture (II)	50,00,000
Value of equity component (II – I)	21,79,000

Journal entry at initial recognition

		Dr. (₹)	*Cr. (₹)*
Cash / Bank A/c	Dr.	50,00,000

Share-Based Payments

<u>Reference:</u> The students are advised to refer the full text of the Guidance Note on Accounting for Employee Share-based Payments. This Guidance Note was issued in 2005 and deals with share-based payment to employees only.

Earlier Securities and Exchange Board of India (SEBI) issued Employees Stock Option Scheme and Employee Stock Purchase Scheme Guidelines (applicable for listed companies) in 1999 under section 11 of the Securities and Exchange Board of India Act, 1992. This guideline has now been replaced by the SEBI (Share Based Employee Benefits) Regulations, 2014 (applicable for listed companies). It covers the provisions regarding accounting policies, pricing, disclosures, administration and implementation process of various schemes and other issues relating to Employee Stock Option Scheme (ESOS), Employee Stock Purchase Scheme (ESPS), Stock Appreciation Rights Scheme (SRS), General Employee Benefits Scheme (GEBS) and Retirement Benefit Scheme (RBS). The Regulation stipulates to follow the requirements of the 'Guidance Note on Accounting for Employee Share Based Payments' or Accounting Standards as may be prescribed by the ICAI from time to time including the disclosure requirements prescribed therein.*

The International Accounting Standards Board (IASB) has also issued the International Financial Reporting Standard (IFRS) 2 on "Share-Based Payments". Based on this IFRS, the Ministry of Corporate Affairs of India have notified Ind AS 2 on "Share Based Payments". For details regarding, Ind AS 2, you may refer Chapter 2 of the Study Material Module 2 of Financial Reporting.

1. Introduction

Share plans and share option plans have become a common feature of remuneration packages for directors, senior executives and other employees in many countries. Shares and share options may also be used to pay suppliers (e.g. for professional services). Under Section 62 (1) (b) of the Companies Act 2013, where at any time a company having a share capital proposes to increase its subscribed capital by the issue of further shares, such shares may be offered to employees under a scheme of employees' stock option, subject to a special resolution passed by the company and subject to such conditions as may be prescribed.

** SEBI (Share Based Employee Benefits) Regulations, 2014 has been issued on October 28, 2014 and is applicable from the even date.*

2. Definitions

Grant: Grant of the option means giving an option to the employees to subscribe to the shares of the company.

Vesting: It is the process by which the employee is given the right to apply for shares of the company against the option granted to him in purchase of shares in pursuance of employee stock option scheme (ESOS).

Vesting Period*:* It is the time period during which the vesting of the option granted to the employee on pursuance of ESOS takes place.

Option*:* Option means a right but not an obligation granted to an employee in pursuance of ESOS to apply for shares of the company at a pre-determined price.

Exercise Period: It is the time period after vesting within which the employee should exercise his right to apply for shares against the option vested in him in pursuance of the ESOS.

Exercise Price: It is the price payable by the employee for exercising the option granted to him in pursuance of ESOS.

Intrinsic Value: It is the excess of the market price of the share under ESOS over the exercise price of the option (including up-front payment, if any).

Fair Value: It is the amount for which stock option granted or a share offered for purchase could be exchanged between knowledgeable, willing parties in an arm's length transaction.

Share-based payment arrangement

An agreement between an entity (or another group entity or a shareholder of a group entity) and another party (including an employee) which entitles the other party to receive:

- Equity instruments (including shares or share options) of the entity (or another group entity); or
- Cash (or other assets) for amounts based on the price (or value) of equity instruments of the entity (or another group entity),

Provided specified vesting conditions (if any) are met.

"**Vest**" means to become an entitlement. A party's right to shares of an entity may be free or at a pre-arranged exercise price.

Share-based payment transaction

A transaction in a share based payment arrangement in which the entity:

- Receives goods or services from a supplier (including an employee); or
- incurs an obligation (to the supplier) when another group entity receives those goods or services.

Equity instrument: A contract that gives a residual interest in the assets of an entity after deducting all its liabilities.

Share option: A contract that gives the holder the right, but not the obligation, to subscribe to the entity's shares at a fixed (or determinable) price for a specified period of time.

Vesting conditions: The conditions that must be satisfied for a person to become entitled to receive cash, other assets or equity instruments under a share-based payment arrangement.

Examples of vesting conditions include completion of a specified service period and meeting performance targets (e.g. a specified increase in revenue over a specified period of time).

3. Employee Share-Based Payments

Employee share-based payments are incentive payments to employees in form of shares. The expression employee share-based payments also include cash incentives to employees, the size of which is linked with value of shares. The payment in form of shares generally involve grant of options to employees to subscribe shares of employer's enterprise at a concessional price, called the exercise price.

The employees gain the excess of market price of share at the time of exercise over the specified exercise price. In case of employee share-based payments in form of cash incentive, the excess of market price on specified future date and a stated price is paid in cash. In either case, the value of incentive depends on increase in share value, which is the generally accepted indicator financial success of a business. By linking incentives with value of shares, the employee share-based payment plans effectively integrate personal goals of employees with that of the enterprise.

The day a share-based payment plan is announced and accepted by employees is called the grant date and the day, when the employees become entitled to such payments, is called the vesting date. The period between these two dates is called the vesting period. To qualify for the incentives, the employees put in their efforts during the vesting period to fulfill specified vesting conditions, e.g. reaching a specified sales/profit target. Exercise date is the date when an option is exercised by paying the exercise price.

The value of share-based payment depends on the market value of shares on vesting date/exercise date and hence cannot be known with certainty before these dates. Nevertheless, since the share-based payments are payments for services rendered by employees during the vesting period, the value of share-based payments should be recognised as expense during the vesting period, i.e. before value of such payments are known with certainty.

Two principal issues involved in accounting for employee share-based payments are

(i) problem of valuation of share-based payments before vesting date and

(ii) problem of allocation of the estimated value of share-based payment to a particular accounting period during the vesting period for recognition as expense.

4. Employee Share Based Payment Schemes

Employee share-based payment plans generally take the form of Employee Stock Option Schemes (ESOS), Employee Stock Purchase Schemes (ESPS), Stock Appreciation Rights

(SARS), ***General Employee Benefits Schemes (GEBS) and Retirement Benefit Schemes (RBS).***

The Employee Stock Option Schemes (ESOS) is a contract that gives the employees of an enterprise the right, but not obligation, for a specified period to purchase or subscribe to the specified number shares of the enterprise at a fixed or determinable price, called the exercise price.

The Employee Stock Purchase Plan (ESPS), is a plan under which the enterprise offers shares to its employees at a discounted price as part of public issue or otherwise.

The Stock Appreciation Rights (SAR) are rights that entitle the employees to receive cash or shares for an amount equivalent to the excess of market price on exercise date over a stated price.

The General Employee Benefits Schemes (GEBS) is the scheme dealing in the shares of the company or the shares of its listed holding company for the purpose of employee welfare including healthcare benefits, hospital care or benefits or benefits in the event of sickness, accident, disability, death or scholarship funds or such other benefit as specified by such company.

Retirement Benefit Schemes (RBS) is the scheme dealing in the shares of the company or the shares of its listed holding company for providing retirement benefits to the employees.

5. Types of Transactions

For accounting purposes, employee share-based payment plans are classified into the following three categories:

- Equity-settled share-based payment transactions;
- Cash-settled share-based payment transactions; and
- Share-based payment transactions with cash alternatives

Equity-settled

The entity receives services:

- As consideration for its own equity instruments; or
- Has no **obligation** to settle the transaction with the supplier.

Under these plans, the employees receive shares, e.g. ESOP

Cash-settled

Under these plans, the employees receive cash based on the price (or value) of the enterprise's shares, e.g. Stock Appreciation Rights (SAR). The entity acquires services by incurring liabilities for amounts that are based on the price (or value) of equity instruments of the entity or another group entity.

Share-based payment transactions with cash alternatives

Where an entity has a choice of issuing shares or paying cash then the entity shall recognise a liability if it determines that it has an obligation to settle the liability in cash. If on settlement the entity issues shares rather than paying cash then the value of the liability should be transferred to equity.

The entitlements to share-based payments are based on satisfaction of specified conditions. The specified conditions are vesting conditions and the period taken to satisfy the vesting conditions is the vesting period. The share-based payments are incentives for services rendered by employees over the vesting period and hence are recognised as Employees' Compensation Expense over the vesting period.

The examples of vesting condition include, a sales target, a profit target, a target market price of shares or service conditions such as continuous employment during the vesting period. Market condition is a vesting condition related to market price of shares of the enterprise, e.g. a condition that the payments will be made provided the market price of shares increases by at least 40% over that on grant date, within a period of three years.

6. Equity Settled Employee Share-Based Payment Scheme

Payments under these plans are made in form of shares. Under these plans, the enterprise offers new shares issued by it to its employees. The issue price for the shares issued under these plans is the exercise price. At their option, the employees may pay the exercise price and become shareholders of the enterprise. The options are granted subject to fulfillment of specified vesting conditions. This form of plan is commonly called Employees Stock Option Plans (ESOP).

Under an ESOP, the employees gain the excess of market price of underlying share on exercise date over the exercise price. The option is not exercised if market price of underlying share on exercise date falls below the exercise price. For example, consider an option at exercise ₹ 45. If market price per share on exercise date is ₹ 50, an employee gains ₹ 5, by purchasing the share at exercise price is ₹ 45. The option is not exercised if market price falls below ₹ 45. Clearly, the ESOP is a call option held by the employees, which is settled by actual delivery of underlying shares. The employer is the writer of the option, but does not charge any option premium. The employer recognises the premium sacrificed, i.e. the value of call, as expense over the vesting period. The value of call for the purpose of accounting for share-based payments can be either the intrinsic value or fair value.

The fair value of an option is defined as the amount for which stock option granted can be exchanged between knowledgeable, willing parties in an arm's length transaction. This should be present value of expected gain of employees on exercise of the option. The expected gain is excess of expected market price at the time of exercise of option over the exercise price. The fair values of options depend on factors like, exercise price, current market price of underlying shares, expected volatility of return from the shares, risk-free rate of return, expected dividends, time allowed to exercise the option after vesting (i.e. life of option) and so on. Standard option pricing models, like Black-Scholes-Merton formula are modified suitably to ascertain fair value the options granted to employees.

Intrinsic value of an option is the excess of market price of the underlying share on the grant date over the exercise price. For example, if market price per share on grant date is ₹ 50 and the exercise of the option is 48, the intrinsic value of option on grant date is ₹ 2.

The value of an Employees Stock Option plan is initially based on fair value/intrinsic value per share on grant date. This is the minimum value of ESOP an enterprise must recognise as expense over vesting period. Where, after the grant date, the terms of an option are modified in a manner to increase its value, e.g. reduction of exercise price, the enterprise must also recognise the increased value of option as expense over vesting period remaining at the time of modification.

The aggregate value of option granted depends on the number of employees satisfying the vesting conditions and the number of options granted to each employee.

Suppose fair value of an option is ₹ 15 per share. If one option is granted per employee and if each option consists of 100 shares, the value of option granted to each employee is ₹ 1,500 (₹ 15 × 100). If the enterprise expects 200 employees to satisfy the vesting conditions at the end of vesting period, the fair value of option to be recognised as expense is ₹ 3 lakh (₹ 1,500 × 200). If vesting period is 5 years, the enterprise should recognise ₹ 60,000 (₹ 3 lakh / 5) as expense per year for 5 years.

Illustration 1

Ajanta grants 120 share options to each of its 460 employees. Each grant is conditional on the employee working for Ajanta over the next three years. Ajanta has estimated that the fair value of each share option is ₹ 12. Ajanta estimates that 25% of employees will leave during the three-year period and so forfeit their rights to the share options. Everything turns out exactly as expected.

Required:

Calculate the amounts to be recognized as expense during the vesting period.

Solution

Year	*Calculation*	*Expense for Period*	*Cumulative expense*
		₹	₹
1	55,200 options x 75% x ₹ 12 x 1/3 years	1,65,600	1,65,600
2	(55,200 options x 75% x ₹ 12 x 2/3 years) - ₹ 165,600	1,65,600	3,31,200
3	(55,200 options x 75% x ₹ 12 x 3/3 years) - ₹ 331,200	1,65,600	4,96,800

An enterprise should review all estimates taken in consideration for valuation of option. The value of options recognised as expense in an accounting period is the excess of cumulative expense as per latest estimates upto the current accounting period over total expense recognised upto the previous accounting period.

7. Accounting Procedure for ESOS

The amount recognised as expense in a period is debited to 'Employees' Compensation A/c' with a corresponding credit to an equity account called Stock Options Outstanding A/c'. The amount recognised as expense can be either the intrinsic value or fair value. The Stock

Options Outstanding A/c' is transitional in nature as it gets ultimately transferred to another equity account such as share capital, securities premium account and/or general reserve at the time of settlement. Till such transfer, the credit balance of Stock Options Outstanding A/c is shown in balance sheet under a separate heading, between 'Share Capital' and 'Reserves and Surplus'.

The balance of Employees' Compensation A/c is transferred to the Profit & Loss A/c of the period. In case capitalization is justified, the balance of Employees' Compensation A/c is transferred to the concerned Asset A/c instead of the Profit & Loss A/c.

On exercise of the option, the enterprise issues shares on receipt of the exercise price. The consideration for such shares comprises of the exercise price and the aggregate value of option recognized as expense, standing to the credit of Stock Options Outstanding A/c. In a situation where the right to obtain shares or stock options expires unexercised, the balance standing to the credit of the relevant equity account should be transferred to General Reserve. The illustrations given in this chapter have been given on the basis of the Guidance Note on Share based payments.

Illustration 2

Arihant Limited has its share capital divided into equity shares of ₹ 10 each. On 1-10-2016, it granted 20,000 employees' stock option at ₹ 50 per share, when the market price was ₹ 120 per share. The options were to be exercised between 10th December, 2016 and 31st March, 2017. The employees exercised their options for 16,000 shares only and the remaining options lapsed. The company closes its books on 31st March every year. Show Journal Entries (with narration) as would appear in the books of the company up to 31st March, 2017.

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2013*
Number of employees covered	*525*
Number of options granted per employee	*100*
Vesting condition: Continuous employment for 3 years	
Nominal value per share (₹)	*100*
Exercise price per share (₹)	*125*
Market price per share on grant date (₹)	*149*
Vesting date	*March 31, 2016*
Exercise Date	*March 31, 2017*
Fair value of option on grant date (₹)	*30*

Position on 31/03/14

(a) Estimated annual rate of departure 2%

(b) Number of employees left = 15

Position on 31/03/15

(a) Estimated annual rate of departure 3%

(b) Number of employees left = 10

Position on 31/03/16

(a) Number of employees left = 8

(b) Number of employees entitled to exercise option = 492

Position on 31/03/17

(a) Number of employees exercising the option = 480

(b) Number of employees not exercising the option = 12

Compute expenses to recognise in each year by (i) fair value method (ii) intrinsic value method and show important accounts in books of the company by both of the methods.

Solution

Fair Value Method

Year 2013-14

Fair value of option per share = ₹ 30

Number of shares expected to vest under the scheme

= [(525 -15) x 0.98 × 0.98)] × 100 = 49,000 (round off)

Fair value = 49,000× ₹ 30 = ₹ 14,70,000

Vesting period = 3 years

Value of option recognised as expense in 2013-14 = ₹ 14,70,000/ 3 = ₹ 4,90,000

Year 2014-15

Fair value of option per share = ₹ 30

Number of shares expected to vest under the scheme = (525 – 15 – 10) × 0.97) × 100 = 48,500

Fair value = 48,500 × ₹ 30 = ₹ 14,55,000

Vesting period = 3 years

Number of years expired = 2 years

Cumulative value of option to recognise as expense in 2013-14 and 2014-15

= (₹ 14,55,000/ 3) × 2 = ₹ 9,70,000

Value of option recognised as expense in 2014-15 = ₹ 9,70,000– ₹ 4,90,000= ₹ 4,80,000

Year 2015-16

Fair value of option per share = ₹ 30

Number of shares actually vested under the scheme = 492 × 100 = 49,200

Fair value = 49,200 x ₹ 30 = ₹ 14,76,000

Cumulative value of option to recognise as expense in 3 years = ₹ 14,76,000

Value of option recognised as expense in 2015-16 = ₹ 14,76,000 – ₹ 9,70,000 = ₹ 5,06,000

Year 2016-17

Fair value of option per share = ₹ 30

Number of shares not subscribed = (492 – 480) × 100 = 1,200

Value of option forfeited = 1,200 × 30 = ₹ 36,000

Employees' Compensation A/c

Year		₹	*Year*		₹
2013-14	To ESOP Outstanding A/c	4,90,000	2013-14	By Profit & Loss A/c	4,90,000

	To Share Capital (48,000 × 100)	48,00,000		By Bank (48,000 × 125)	60,00,000
	To Securities Premium (48,000 × 55)	26,40,000			
		74,76,000			74,76,000

Note: Securities Premium

	₹
Exercise price received per share	125
Value of service received per share	30
Consideration received per share	155
Less: Nominal value per share	(100)
Securities premium per share	55

Intrinsic Value Method

Year 2013-14

Intrinsic value of option per share = ₹ 149 – ₹ 125 = ₹ 24

Number of shares expected to vest under the scheme

= [(525 -15) × 0.98 × 0.98] × 100 = 49,000 (round off)

Intrinsic value = 49,000× ₹ 24 = ₹ 11,76,000

Vesting period = 3 years

Value of option recognised as expense in 2013-14 = ₹ 11,76,000/ 3 = ₹ 3,92,000

Year 2014-15

Intrinsic value of option per share = ₹ 149 – ₹ 125 = ₹ 24

Number of shares expected to vest under the scheme = [(525 – 15 – 10) × 0.97] × 100 = 48,500

Intrinsic value = 48,500 × ₹ 24 = ₹ 11,64,000

Vesting period = 3 years

Number of years expired = 2 years

Cumulative value of option to recognise as expense in 2013-14 and 2014-15

= (₹ 11,64,000/ 3) × 2 = ₹ 7,76,000

Value of option recognised as expense in 2014-15 = ₹ 7,76,000– ₹ 3,92,000= ₹ 3,84,000

Year 2015-16

Intrinsic value of option per share = ₹ 149 – ₹ 125 = ₹ 24

Number of shares actually vested under the scheme = 492 x 100 = 49,200

Intrinsic value = 49,200 × ₹ 24 = ₹ 11,80,800

Cumulative value of option to recognise as expense in 3 years = ₹ 11,80,800

Value of option recognised as expense in 2015-16 = ₹ 11,80,800 – ₹ 7,76,000= ₹ 4,04,800

Year 2016-17

Intrinsic value of option per share = ₹ 49 – ₹ 125 = ₹ 24

Number of shares not subscribed = (492 – 480) x 100 = 1,200

Value of option forfeited = 1,200 x 24 = ₹ 28,800

Employees' Compensation A/c

Securities premium per share	49

8. Variation in Vesting Period

The vesting period, i.e. the time taken to satisfy the vesting conditions can be uncertain. For example, if employees are granted ESOP subject condition that the enterprise achieves a 50% market share, the vesting period can be known only when the market share of the company actually reaches the specified 50% level. In these cases, allocation of option value for recognition as expense in a particular accounting period should be based on estimated vesting period. The initial estimate of vesting period on grant date should be reviewed and revised if necessary, at the end of each accounting period. In case of revision of vesting period, the basis of allocation of option value to a particular accounting period should be based on revised estimate of vesting period.

Where the vesting condition is a market condition, e.g. when an option is granted subject to condition that the market price of the share reaches a specified level, the fair value of option is reduced due to the possibility that the vesting condition may not be satisfied. Such fair values are recognised as expense whether or not the market condition is satisfied, over the vesting period estimated on grant date. The estimates of vesting periods are not revised subsequently in these cases.

Illustration 4

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2014*
Number of employees covered	*500*
Number of options granted per employee	*100*
Fair value of option per share on grant date (₹)	*25*

The vesting period shall be determined as below:

(a) *If the company earns ₹ 120 crore or above after taxes in 2014-15, the options will vest on 31/03/15.*

(b) If condition (a) is not satisfied but the company earns ₹ 250 crores or above after taxes in aggregate in 2014-15 and 2015-16, the options will vest on 31/03/16.

(c) If conditions (a) and (b) are not satisfied but the company earns ₹ 400 crores or above after taxes in aggregate in 2014-15, 2015-16 and 2016-17, the options will vest on 31/03/17.

Position on 31/03/15

(a) The company earned ₹ 115 crore after taxes in 2014-15

(b) The company expects to earn ₹ 140 crores in 2015-16 after taxes

(c) Expected vesting date: March 31, 2016

(d) Number of employees expected to be entitled to option = 474

Position on 31/03/16

(a) The company earned ₹ 130 crore after taxes in 2015-16

(b) The company expects to earn ₹ 160 crores in 2016-17 after taxes

(c) Expected vesting date: March 31, 2017

(d) Number of employees expected to be entitled to option = 465

Position on 31/03/17

(a) The company earned ₹ 165 crore after taxes in 2016-17

(b) Number of employees on whom the option actually vested = 450

Compute expenses to recognise in each year.

Solution

Year 2014-15

Fair value of option per share = ₹ 25

Number of shares expected to vest under the scheme = 474 × 100 = 47,400

Fair value = 47,400 × ₹ 25 = ₹ 11,85,000

Expected vesting period = 2 years

Value of option recognised as expense in 2014-15 = ₹ 11,85,000 /2 = ₹ 5,92,500

Year 2015-16

Fair value of option per share = ₹ 25

Number of shares expected to vest under the scheme = 465 × 100 = 46,500

Fair value = 46,500 × ₹ 25 = ₹ 11,62,500

Expected vesting period = 3 years

Cumulative value of option to recognise as expense in 2014-15 and 2015-16

= (₹ 11,62,500/ 3) × 2 = ₹ 7,75,000

Value of option recognised as expense in 2014-15 = ₹ 5,92,500

Value of option recognised as expense in 2015-16 = ₹ 7,75,000 – ₹ 5,92,500 = ₹ 1,82,500

Year 2016-17

Fair value of option per share = ₹ 25

Number of shares actually vested under the scheme = 450 × 100 = 45,000

Fair value = 45,000 × ₹ 25 = ₹ 11,25,000

Vesting period = 3 years

Cumulative value of option to recognise as expense in 2014-15, 2015-16 and 2016-17 = ₹ 11,25,000

Value of option recognised as expense in 2014-15 and 2015-16 = ₹ 7,75,000

Value of option recognised as expense in 2016-17 = ₹ 11,25,000 – ₹ 7,75,000 = ₹ 3,50,000

Illustration 5

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2014*
Number of employees covered	*50*
Number options granted per employee	*1,000*
Fair value of option per share on grant date (₹)	*9*

The options will vest to employees serving continuously for 3 years from vesting date, provided the share price is ₹ 70 or above at the end of 2016-17.

The estimates of number employees satisfying the condition of continuous employment were 48 on 31/03/15, 47 on 31/03/16. The number of employees actually satisfying the condition of continuous employment was 45.

The share price at the end of 2016-17 was ₹ 68.

Compute expenses to recognise in each year and show important accounts in books of the company.

Solution

The vesting of options is subject to satisfaction of two conditions viz. service condition of continuous employment for 3 years and market condition that the share price at the end of 2016-17 is not less than ₹ 70. Since the share price on 31/03/14 was ₹ 68, the actual vesting as nil. Despite this, the company should recognise value of option over 3-year vesting period from 2014-15 to 2016-17.

Year 2014-15

Fair value of option per share = ₹ 9

Number of shares expected to vest under the scheme = 48 × 1,000 = 48,000

Fair value = 48,000 × ₹ 9 = ₹ 4,32,000

Expected vesting period = 3 years

Value of option recognised as expense in 2014-15 = ₹ 4,32,000 /3 = ₹ 1,44,000

Year 2015-16

Fair value of option per share = ₹ 9

Number of shares expected to vest under the scheme = 47 × 1,000 = 47,000

Fair value = 47,000 × ₹ 9 = ₹ 4,23,000

Expected vesting period = 3 years

Cumulative value of option to recognise as expense in 2014-15 and 2015-16

= (₹ 4,23,000/ 3) × 2 = ₹ 2,82,000

Value of option recognised as expense in 2014-15 = ₹ 1,44,000

Value of option recognised as expense in 2015-16 = ₹ 2,82,000 – ₹ 1,44,000 = ₹ 1,38,000

Year 2016-17

Fair value of option per share = ₹ 9

Number of shares actually vested under the scheme = 45 × 1,000 = 45,000

Fair value = 45,000 × ₹ 9 = ₹ 4,05,000

Vesting period = 3 years

Cumulative value of option to recognise as expense in 2014-15, 2015-16 and 2016-17 = ₹ 4,05,000

Value of option recognised as expense in 2014-15 and 2015-16 = ₹ 2,82,000

Value of option recognised as expense in 2016-17 = ₹ 4,05,000 – ₹ 2,82,000 = ₹ 1,23,000

Employees' Compensation A/c

9. Graded Vesting

Graded vesting refers to a situation where options under a plan vest on different dates. For example, a plan may provide that shares offered to an employee shall vest in proportion of 2:3:5 in three years commencing from fourth year. Thus if an employee is offered 100 shares under the plan, 20 shares shall vest in year 4, 30 shares shall vest in year 5 and 50 shares shall vest in year 6. In these cases, based on vesting dates, the plan is segregated in into different groups. Each of these groups is then treated as a separate plan with specific vesting period and expected life.

Since one of the factors affecting fair value of an option is expected life, the fair value for each group should be computed separately. Fair value of a group is then allocated to accounting periods and recognised as expense for the period with reference to vesting period for the group.

Intrinsic value of an option does not depend on its expected life. Intrinsic value of option per share shall therefore be same for each group. In the same way as fair value, intrinsic value of a group is allocated to accounting periods and recognised as expense for the period with reference to vesting period for the group.

Illustration 6

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2014*
Number of employees covered	*400*
Number of options granted per employee	*60*
Nominal value per share (₹)	*100*
Exercise price per share (₹)	*125*

Shares offered were put in three groups. Group 1 was for 20% of shares offered with vesting period one-year. Group II was for 40% of shares offered with vesting period two-years. Group III was for 40% of shares offered with vesting period three-years. Fair value of option per share on grant date was ₹ 10 for Group I, ₹ 12.50 for Group II and ₹ 14 for Group III.

Position on 31/03/15

(a) *Number of employees left = 40*

(b) *Estimate of number of employees to leave in 2015-16 = 36*

(c) *Estimate of number of employees to leave in 2016-17 = 34*

(d) *Number of employees exercising options in Group I = 350*

Position on 31/03/16

(a) Number of employees left = 35

(b) Estimate of number of employees to leave in 2016-17 = 30

(c) Number of employees exercising options in Group II = 319

Position on 31/03/17

(a) Number of employees left = 28

(b) Number of employees at the end of last vesting period = 297

(c) Number of employees exercising options in Group III = 295

Options not exercised immediately on vesting, were forfeited.

Compute expenses to recognise in each year and show important accounts in books of the company by both of the methods.

Solution

Expected vesting

Year	*Group*	*Number of employees expected to qualify*	*Number of shares vested to each employee*	*Total number of shares expected to vest*	*Fair value of option per share*	*Fair value of option*

Securities premium per share	35.00	37.50	39.00

10. Employees Stock Purchase Schemes (ESPS)

Under these plans, employees are given an option to subscribe to shares of employer in a public issue or otherwise. The exercise price is set at a specified rate of discount on the issue price/ market price on the date of exercise. For example, a company may offer specified number of shares to its employees at 20% discount on market price on grant date. ESPP with option features is treated as ESOP. For example, consider a case where shares are offered to employees at 80% of market price. If employees have the option to pay either 80% of market price of shares on grant date or to pay 80% of market price on date of purchase, the plan is treated as ESOP rather than ESPP. The fair value of ESPP can be less than the discount due to post-vesting restrictions on transfers and similar other factors. The fair value of ESPP is recognised over the vesting period in the same way as ESOP.

Illustration 7

On April 1, 2017, a company offered 100 shares to each of its 500 employees at ₹ 40 per share. The employees are given a month to decide whether or not to accept the offer. The shares issued under the plan shall be subject to lock-in on transfers for three years from grant date. The market price of shares of the company on the grant date is ₹ 50 per share. Due to post-vesting restrictions on transfer, the fair value of shares issued under the plan is estimated at ₹ 48 per share.

On April 30, 2017, 400 employees accepted the offer and paid ₹ 40 per share purchased. Nominal value of each share is ₹ 10.

Record the issue of shares in book of the company under the aforesaid plan.

Solution

Intrinsic value of ESPP per share = ₹ 48 – ₹ 40 = ₹ 8

Number of share issued = 400 × 100 = 40,000

Fair value of ESPP = 40,000 × ₹ 8 = ₹ 3,20,000

Vesting period = One month

Expense recognised in 2017-18 = ₹ 3,20,000

Date		₹	₹	
April 30, 2017	Bank	16,00,000		40,000 × ₹ 40
	Employees' Compensation A/c	3,20,000		40,000 × ₹ 8
	To Share Capital		4,00,000	40,000 × ₹ 10
	To Securities Premium		15,20,000	40,000 × ₹ 38

11. Modifications

If the modification reduces the fair value of the options granted, the modification should be ignored. If the modification increases the fair value of the options granted (e.g., when exercise price is reduced), the incremental fair value is recognised as expense over the remaining vesting period. The incremental fair value is the difference between (i) fair value of the modified option estimated on the date of the modification and (ii) fair value of the original option estimated on the date of modification. If the modification occurs after the vesting date, the incremental fair value is recognised immediately, or over the additional vesting period if the employee is required to complete an additional period of service before becoming unconditionally entitled to the options.

Illustration 8

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2013*
Number of employees covered	*600*

Number options granted per employee	*60*
Vesting condition: Continuous employment for 3 years	
Nominal value per share (₹)	*100*
Exercise price per share (₹)	*125*
Vesting date	*March 31, 2016*
Exercise Date	*March 31, 2017*
Fair value of option per share on grant date (₹)	*14*

Position on 31/03/14

(a) Number of employees left = 30

(b) Estimate of number of employees to leave in 2014-15 and 2015-16 = 70

(c) Exercise price was reduced to ₹ 120

(d) Fair value of original option on 31/03/14 = ₹ 13

(e) Fair value of option at reduced exercise price on 31/03/14 = ₹ 15

(f) Vesting date for modified option was March 31, 2016

Position on 31/03/15

(a) Number of employees left = 35

(b) Estimate of number of employees to leave in 2015-16 = 30

Position on 31/03/16

(a) Number of employees left = 28

(b) Number of employees entitled to exercise option = 507

Position on 31/03/17

(a) Number of employees exercising the option = 500

(b) Number of employees not exercising the option = 7

Compute the amount of expense the company should recognise in each of the years 2013-14, 2014-15 and 2015-16 and show important accounts in books of the company.

Solution

Year 2013-14

Fair value of option per share = ₹ 14

Number of shares expected to vest under the scheme = (600 – 100) × 60 = 30,000

Fair value = 30,000 × ₹ 14 = ₹ 4,20,000

Vesting period = 3 years

Value of option recognised as expense in 2013-14 = ₹ 4,20,000 / 3 = ₹ 1,40,000

Year 2014-15

Fair value of option per share = ₹ 14

Incremental fair value of option per share = ₹ 15 – ₹ 13 = ₹ 2

Number of shares expected to vest under the scheme = (600 – 95) × 60 = 30,300

Fair value of option = 30,300 × ₹ 14 = ₹ 4,24,200

Incremental fair value = 30,300 × ₹ 2 = ₹ 60,600

Vesting period = 3 years;

Remaining vesting period = 2 years (including current year)

Cumulative value of option to recognise as expense in 2013-14 and 2014-15

= (₹ 4,24,200/ 3) × 2 + ₹ 60,600/2 = ₹ 3,13,100

Value of option recognised as expense in 2013-14 = ₹ 1,40,000

Value of option recognised as expense in 2014-15 = ₹ 3,13,100 – ₹ 1,40,000 = ₹ 1,73,100

Year 2015-16

Fair value of option per share = ₹ 14

Number of shares actually vested under the scheme = 507 × 60 = 30,420

Fair value of option = 30,420 × ₹ 14 = ₹ 4,25,880

Incremental fair value = 30,420 × ₹ 2 = ₹ 60,840

Cumulative value of option to recognise as expense in 3 years

= ₹ 4,25,880 + ₹ 60,840 = ₹ 4,86,720

Value of option recognised as expense in 2013-14 and 2014-15 = ₹ 3,13,100

Value of option recognised as expense in 2015-16 = ₹ 4,86,720 – ₹ 3,13,100 = ₹ 1,73,620

	₹
Exercise price received per share	120
Value of service received per share	16
Consideration received per share	136
Less: Nominal value per share	(100)
Securities premium per share	36

12. Cancellation and Settlements during Vesting Period

If an enterprise cancels or settles a grant of shares or stock options during the vesting period (other than a grant cancelled by forfeiture when the vesting conditions are not satisfied):

(a) The entire amount of unamortised value of option should be recognised immediately.

(b) Payments made to the employees on cancellation or settlement should be debited to ESOP Outstanding A/c to the maximum extent of fair value of options granted, measured at the cancellation / settlement date. Any payment in excess of the fair value is recognised as an expense.

(c) If new options are granted to the employees in replacement for the cancelled options, the replacement is regarded as modification. The incremental fair value for the purpose is the difference between the fair value of replaced option and net fair value of cancelled option, as on the date of replacement. The net fair value of the cancelled option is their fair value, immediately before the cancellation, less the amount of any payment made to the employee on cancellation that is debited to ESOP Outstanding A/c, in accordance with (b) above.

13. Dilution of Earnings per Share (EPS) due to ESOs Granted

Dilution of EPS is anticipated fall in EPS. Dilution occurs when expected proportionate increase in number of shares is more than expected proportionate increase in profit available to equity shareholders. For example, if number of shares increases from 10,000 to 11,000 (10% increase) and profit available to equity shareholders increases from ₹ 50,000 to ₹ 52,500 (5% increase) the EPS falls from ₹ 5 to ₹ 4.77. The Accounting Standard (AS) 20, Earning per Share, requires disclosure of basic and diluted EPS.

One factor contributing to dilution of EPS is issue of shares at less than fair value. This happens because issue of shares at less than fair value implies issue of certain number of shares for no consideration. For example, consider the case of a share warrant for 4,000 shares at exercise price ₹ 40. On exercise of the warrant, the issuer collects ₹ 1,60,000. If fair value of the shares is ₹ 50, the issue proceed is equivalent of price of 3,200. The issuer, by setting the exercise price at ₹ 40, instead of ₹ 50, allows the warrant holder to have 800 shares for no consideration. The shares issued for no consideration increase number of shares but do not increase resources available to the issuer and consequently, no increase in profit can be anticipated. These shares are taken in computation of diluted EPS as potential equity.

$$\text{Number of shares issued for consideration} = \frac{\text{Expected issue proceeds}}{\text{Fair value per share}}$$

Number of shares issued for no consideration

= Number of shares issued – Number of shares issued for consideration

Issue of shares under a scheme of share-based payment, increases the number of shares outstanding. Since the shares are issued at exercise price, which is lower than the fair value of shares issued, in the same way as share warrants, an ESOP gives rise to situation of dilution of EPS. In calculating the number of shares issued for no consideration, the expected proceeds from the exercise of option is taken as sum of (i) Exercise Price (ii) Value of services to be rendered by employees in future upto the vesting date. This value of services is measured as unamortised value of option.

Illustration 9

The following particulars in respect of stock options granted by a company are available:

Number of shares	*4,00,000*
Grant date	*April 1, 2013*
Number of employees covered	*600*
Number of options granted per employee	*100*
Vesting condition: Continuous employment for 3 years	
Nominal value per share (₹)	*10*
Exercise price per share (₹)	*45*
Vesting date	*March 31, 2016*

Exercise Date	*May 31, 2017*
Fair value of option per share on grant date (₹)	*15*

Position on 31/03/14

(a) Number of employees expected to satisfy service condition = 540

(b) Number of employees left = 15

(c) Profit before amortisation of ESOP cost = ₹ 11.90 lakh

(d) Fair value per share = ₹ 60

Position on 31/03/15

(a) Number of employees expected to satisfy service condition = 552

(b) Number of employees left = 20

(c) Profit before amortisation of ESOP cost = ₹ 12.62 lakh

(d) Fair value per share = ₹ 66

Position on 31/03/16

(a) Number of employees left = 11

(b) Number of employees entitled to exercise option = 554

(c) Profit before amortisation of ESOP cost = ₹ 13.79 lakh

(d) Fair value per share = ₹ 72

Position on 31/05/17

(a) Number of employees exercising the option = 550

(b) Number of employees not exercising the option = 4

Show Employees Compensation A/c, ESOP Outstanding A/c from 2013-14 to 2016-17.

Compute basic and diluted EPS for the years 2013-14 to 2015-16.

Solution

Year 2013-14

Fair value of option per share = ₹ 15

Number of options expected to vest under the scheme = 540 × 100 = 54,000

Fair value = 54,000 × ₹ 15 = ₹ 8,10,000

Vesting period = 3 years

Value of option recognised as expense in 2013-14 = ₹ 8,10,000 / 3 = ₹ 2,70,000

Year 2014-15

Fair value of option per share = ₹ 15

Number of options expected to vest under the scheme = 552 × 100 = 55,200

Fair value = 55,200 × ₹ 15 = ₹ 8,28,000

Vesting period = 3 years

Number of years expired = 2 years

Cumulative value of option to recognise as expense in 2013-14 and 2014-15

= (₹ 8,28,000/ 3) × 2 = ₹ 5,52,000

Value of option recognised as expense in 2014-15 = ₹ 5,52,000 – ₹ 2,70,000 = ₹ 2,82,000

Year 2015-16

Fair value of option per share = ₹ 15

Number of options actually vested under the scheme = 554 × 100 = 55,400

Fair value = 55,400 × ₹ 15 = ₹ 8,31,000

Cumulative value of option to recognise as expense in 3 years = ₹ 8,31,000

Value of option recognised as expense in 2013-14 = ₹ 8,31,000 – ₹ 5,52,000 = ₹ 2,79,000

Year 2016-17

Fair value of option per share = ₹ 15

Number of shares not subscribed = (554 – 550) × 100 = 400

Value of option forfeited = 400 × ₹ 15 = ₹ 6,000

Employees' Compensation A/c

Illustration 10

PQ Ltd. grants 100 stock options to each of its 1,000 employees on 1-4-2013, conditional upon the employee remaining in the company for 2 years. The fair value of the option is ₹ 18 on the grant date and the exercise price is ₹ 55 per share. The other information is given as under:

(i) The no. of employees expected to satisfy service condition are 930 in the 1st year and 850 in the 2nd year.

(ii) 40 employees left the company in the 1st year of service and 880 employees have actually completed 2 year vesting period.

(iii) The profit of the enterprise before amortization of the compensation cost on account of ESOPs is as follows:

(A) ₹ 18,50,000

(B) ₹ 22,00,000

(iv) The fair value of share for these years was ₹ 80 and ₹ 88 respectively.

(v) The company has 6 lakhs shares of ₹ 10 each outstanding at the end of both years.

Compute basic and diluted EPS for both the years (ignore the tax impacts).

Solution

Calculation of Basic & Diluted EPS

	2013-14	2014-15
Profit before amortization of ESOP cost	18,50,000	22,00,000
Less: ESOP cost amortised	(8,37,000)	(7,47,000)
Net profit for shareholders	10,13,000	14,53,000
No. of shares outstanding	6,00,000	6,00,000
Basic EPS	1.69	2.42
Potential equity	19,200	33,000
Total no. of equity shares	6,19,200	6,33,000
Diluted EPS	1.64	2.30

Working Notes:

1. Calculation of Potential Equity

		2013-2014	2014-2015
a.	Actual no. of employees	960	880
b.	Options granted per employee	100	100
c.	No. of options outstanding	96,000	88,000
d.	Unamortised ESOP cost per option (₹)	(₹ 18-18/2)9	0
e.	Exercise price (₹)	55	55
f.	Expected exercise price to be received (c x e) (₹)	52,80,000	48,40,000
g.	Unamortised ESOP cost (c x d) (₹)	8,64,000	0
h.	Total proceeds (₹)	61,44,000	48,40,000
i.	Fair value per share	80	88
j.	No. of shares issued for consideration (h/i)	76,800	55,000
k.	Potential Equity (c-j)	19,200	33,000

2. Calculation of ESOP cost to be amortised

	2013-2014	2014-15
Fair value of options per share	₹ 18	₹ 18
No. of options expected to vest under the scheme	(930 x 100) 93,000	(880 x 100) 88,000
Fair value of options	16,74,000	₹ 15,84,000
Value of options recognized as expenses	(₹ 16,74,000 / 2) 8,37,000	(₹ 15,84,000 – ₹ 8,37,000) 7,47,000

14. Stock Appreciation Rights (SARs)

Stock Appreciation Rights (SAR) entitle the employees to claim cash payment to the extent of excess of market price of underlying shares on exercise date over the exercise price. Stock Appreciation Rights are not exercised if market price of underlying shares on exercise date is less than the exercise price. SAR is therefore a call option held by employees. The employer recognises the value of call as expense over the vesting period.

The accounting procedures for ESOP and SAR are similar except that: (i) The liability for SAR is recognised as Provision instead of ESOP Outstanding and (ii) value per option is reassessed at each reporting date.

Illustration 11

A company announced a Stock Appreciation Right on 01/04/13 for each of its 525 employees. The scheme gives the employees the right to claim cash payment equivalent to excess on market price of company's shares on exercise date over the exercise price ₹ 125 per share in respect of 100 shares, subject to condition of continuous employment for 3 years. The SAR is exercisable after 31/03/16 but before 30/06/16. The fair value of SAR was ₹ 21 in 2013-14, ₹ 23 in 2014-15 and ₹ 24 in 2015-16. In

2013-14 the company estimates that 2% of the employees shall leave the company annually. This was revised to 3% in 2014-15. Actually, 15 employees left the company in 2013-14, 10 left in 2014-15 and 8 left in 2015-16. The SAR therefore actually vested to 492 employees. On 30/06/16, when the SAR was exercised, the intrinsic value was ₹ 25 per share.

Show Provision for SAR A/c by fair value method.

Solution

Provision of SARs A/c (For 2013-14)

	₹		₹
To Balance c/d	3,42,860	By Employee Compensation Expense	3,42,860
	3,42,860		3,42,860
Provision of SARs A/c (For 2014-15)			
To Balance c/d	7,43,667	By Balance b/d	3,42,860
		By Employee Compensation Expenses	4,00,807
	7,43,667		7,43,667
Provision of SARs A/c (For 2016-17)			
To Balance c/d	11,80,800	By Balance b/d	7,43,667
		By Employee Compensation Expenses	4,37,133
	11,80,800		11,80,800
Provision of SARs A/c (For 2016-17)			
To Bank (49,200 x 25)	12,30,000	By Balance b/d	11,80,800
		By Employee Expenses	49,200
	12,30,000		12,30,000

The Provision for SAR is a liability as settlement of SAR is through cash payment equivalent to an excess of market price of company's shares on exercise date over the exercise price.

Working Notes:

Year 2013-14

Number of employees to whom SARs were announced = 525 employees

Total estimated SARs, to be vested at the end of the vesting period, as on 2013-14

= (525 -15 x 0.98 x 0.98) x 100 SARs = 48,980 SARs

Fair value of SARs = 48,980 SARs × ₹ 21 = ₹ 10,28,580

Vesting period = 3 years

Recognised as expense in 2013-14 = ₹ 10,28,580 / 3 years = ₹ 3,42,860

Year 2014-15

Total number of employees after three years, on the basis of the estimation in 2014-15

= [(525 – 15 - 10) x 0.97] x 100 SARs = 48,500 SARs

Fair value of SARs = 48,500 SARs × ₹ 23 = ₹ 11,15,500

Vesting period = 3 years

No. of years expired = 2 years

Cumulative value of SARs to recognize as expense = 11,15,500/3 × 2 = ₹ 7,43,667

SARs recognize as expense in 2014–15 = ₹ 7,43,667 – ₹ 3,42,860 = ₹ 4,00,807

Year 2015-16

Fair value of SARs = ₹ 24

SARs actually vested = 492 employees × 100 = 49,200 SARs

Fair value = 49,200 SARs × ₹ 24 = ₹ 11,80,800

Cumulative value to be recognized = ₹ 11,80,800

Value of SARs to be recognized as an expense = ₹ 11,80,800 – ₹ 7,43,667 = ₹ 4,37,133

Year 2016–17

Cash payment of SARs = 49,200 SARs × ₹ 25 = ₹ 12,30,000

Value of SARs to be recognized as an expense in 2013–14 = ₹ 12,30,000 – ₹ 11,80,800 = ₹ 49,200

15. Employee Share-based Payment Schemes with Cash Alternatives

These plans consist of two components viz., (i) liability, i.e., the employer's obligation to pay price differential in cash and (ii) equity, i.e., the employer's obligation to issue shares at exercise price. The company should first measure, on the grant date, fair value of the plan on the assumption that all employees will exercise their options in favour of (i) cash settlement (ii) equity settlement. The fair value of plan for cash settlement is the fair value of the liability component. The excess, if any, of fair value of plan for equity settlement over the liability component is the fair value of equity component. The accounting procedure for equity component is same as that for ESOP. The accounting procedure for liability component is same as that for SAR.

On the date of settlement, the company should re-measure the liability to its fair value. If the employees opt for shares, the amount of liability should be treated as the consideration for the shares issued. If the employees opt for cash settlement, the balance in ESOP Outstanding A/c should be transferred to general reserve.

Illustration 12

A company announced a share-based payment plan for its employees on 01/04/10, subject to a vesting period of 3 years. By the plan, the employees can (i) either claim difference between exercise price ₹ 150 per share and market price of those shares on vesting date in respect of 10,000 shares or (ii) can subscribe to 12,000 shares at exercise price ₹ 150 per share, subject to lock in period of 5 years. On 01/04/10, fair value of the option, without considering restrictions on transfers was ₹ 30 and that after considering restrictions on transfer was ₹ 27. The fair value estimates, without considering transfer restrictions were ₹ 31.50, ₹ 32.70 and ₹ 34 respectively, at the end of 2013-14, 2014-15 and 2015-16.

Show important accounts in books of the company if employees opt for (i) cash settlement (ii) equity settlement.

Solution

	₹	
Fair value under equity settlement = 12,000 × ₹ 27	3,24,000	
Less: Fair value under cash settlement =10,000 × ₹ 30	(3,00,000)	Liability component
	24,000	Equity component

Vesting period = 3 years

Expenses to be recognised each year for equity component = ₹ 24,000 / 3 = ₹ 8,000

Expenses recognised for liability component

2013-14

Number of shares = 10,000

Fair value = ₹ 31.50 per share

Fair value of liability component = 10,000 × ₹ 31.50 = ₹ 3,15,000

Vesting period = 3 years

Expense recognised = ₹ 3,15,000/3 = ₹ 1,05,000

2014-15

Number of shares = 10,000

Fair value = ₹ 32.70 per share

Fair value of liability component = 10,000 × ₹ 32.70 = ₹ 3,27,000

Vesting period = 3 years

Number of years expired = 2 years

Cumulative expense to be recognised upto 2014-15 = (₹ 3,27,000/3) × 2 = ₹ 2,18,000

Expense recognised in 2013-14 = ₹ 1,05,000

Expense recognised in 2014-15 = ₹ 2,18,000 – ₹ 1,05,000 = ₹ 1,13,000

2015-16

Number of shares = 10,000

Fair value = ₹ 34 per share

Fair value of liability component = 10,000 × ₹ 34 = ₹ 3,40,000

Vesting period = 3 years

Number of years expired = 3 years

Cumulative expense to be recognised upto 2015-16 = ₹ 3,40,000

Cumulative expense to be recognised upto 2014-15 = ₹ 2,18,000

Expense recognised in 2015-16 = ₹ 3,40,000 – ₹ 2,18,000 = ₹ 1,22,000

Employees' Compensation A/c

16. Disclosures

The Guidance Note on Accounting for Employee Share-based Payments issued by the Institute of Chartered Accountants of India requires enterprises to disclose the following in respect of such payments:

1. Method used to account for the employee share-based payment plans. Where an enterprise uses the intrinsic value method, it should also disclose the impact on the net results and EPS- both basic and diluted – for the accounting period, had the fair value method been used.
2. Information that enables users of the financial statements to understand the nature and extent of employee share-based payment plans that existed during the period. In particular, it should disclose:
   (a) A description of each type of employee share-based payment plan that existed at any time during the period, including the general terms and conditions of each plan,

such as vesting requirement, the maximum term of options granted, and the method of settlement (e.g., whether in cash or equity).

(b) The number and weighted average exercise prices of stock options for each of the following groups of options:

(i) Outstanding at the beginning of the period:

(ii) Granted during the period;

(iii) Forfeited during the period;

(iv) Exercised during the period;

(v) Expired during the period;

(vi) Outstanding at the end of the period; and

(vii) Exercisable at the end of the period

(c) For stock options exercised during the period, the weighted average share price at the date of exercise. If options were exercised on a regular basis throughout the period, the enterprise may instead disclose the weighted average share price during the period.

(d) For stock options outstanding at the end of the period, the range of exercise prices and weighted average remaining contractual life (comprising the vesting period and the exercise period). If the range of exercise prices is wide, the outstanding options should be divided into ranges that are meaningful for assessing the number and timing of additional shares that may be issued and the cash that may be received upon exercise of those options.

1. An enterprise should disclose the following information to enable users of the financial statements to understand how the fair value of shares or stock options granted, during the period, was determined:

(a) For stock options granted during the period, the weighted average fair value of those options at the grant date and information on how that fair value was measured, including:

(i) The option pricing model used and the inputs to that model, including the weighted average share price, exercise price, expected volatility, option life (comprising the vesting period and the exercise period), expected dividends, the risk-free interest rate and any other inputs to the model, including the method used and the assumptions made to incorporate the effects of expected early exercise;

(ii) How expected volatility was determined, including an explanation of the extent to which expected volatility; and

(iii) Whether and how any other features of the option grant were incorporated into the measurement of fair value, such as a market condition.

(b) For other instrument granted during the period (i.e., other than stock options), the number and weighted average fair value of those instruments at the granted date, and information on how that fair value was measured, including:

(i) If fair value was not measured on the basis of an observable market price, how it was determined;

(ii) Whether and how expected dividends were incorporated into the measured of fair value; and

(iii) Whether and how any other features of the instruments granted were incorporated into the measurement of fair value.

(c) For the employee share-based payment plants that were modified during the period:

(i) An explanation of those modifications;

(ii) The incremental fair value granted (as a result of those modifications); and

(iii) Information on how the incremental fair value granted was measured, consistently with the requirements set out in (a) and (b) above, where applicable.

2. An enterprise should disclose the following information to enable users of the financial statement to understand the effect of employee share-based payment plans on the profit or loss of the enterprise for the period and on its financial position:

(a) The total expense recognized for the period arising from employee share-based payment plans in which the services received did not qualify for recognition as a part of the cost of an asset and hence were recognized immediately as an expense, including separate disclosure of that portion of the total expense that arises from transactions accounted for as equity-settled employee share-based payment plans;

(b) For liability arising from employee share-based payment plans;

(i) The total carrying amount at the end of the period; and

(ii) The total intrinsic value at the end of the period of liabilities for which the right of the employee to cash or other assets had vested by the end of the period (e.g., vested stock appreciation rights).

As per the SEBI (Share Based Employee Benefits) Regulations, 2014, the Board of Directors of such a company shall also disclose the details of the scheme(s) being implemented, as specified by SEBI in this regard.

Illustration 14

The following particulars in respect of stock options granted by a company are available:

Grant date	*April 1, 2014*
Number of employees covered	*300*
Vesting condition: Continuous employment upto 31/03/14	*100*
Nominal value per share (₹)	*10*

Exercise price per share (₹)	*40*
Fair value of option per share on grant date (₹)	*20*
Exercise date	*July 31, 2017*

The number of options to vest per employee shall depend on company's average annual earnings after tax during vesting period as per the table below:

Average annual earnings after tax	*Number of options per employee*
Less than ₹ 100 crores	*Nil*
₹ 100 crores to less than ₹ 120 crores	*30*
₹ 120 crores to less than ₹ 150 crores	*45*
Above ₹ 150 crores	*60*

Position on 31/03/15

(a) The company expects to earn ₹ 115 crores after tax on average per year during vesting period.

(b) Number of employees expected to be entitled to option = 280

Position on 31/03/16

(a) The company expects to earn ₹ 130 crores after tax on average per year during vesting period.

(b) Number of employees expected to be entitled to option = 270

Position on 31/03/17

(a) The company earned ₹ 128 crores after tax on average per year during vesting period.

(b) Number of employees entitled to option = 275

Position on July 31, 2017

(a) Number of employees exercising option = 265

Compute expenses to be recognised in each year.

Solution

Calculation of expenses to be recognized in each year

Year	Calculation	Expense for Period (₹)	Cumulative expense (₹)
2014-15	(280 x 30) options x ₹ 20 x 1/3	56,000	56,000
2015-16	(270 x 45) options x ₹ 20 x 2/3 Less 56,000	1,06,000	1,62,000
2016-17	(275 x 45) options x ₹ 20 x 3/3 Less 1,62,000	85,500	2,47,500

Value of option forfeited as on July 31, 2017

Fair value of option per share= ₹ 20

Number of shares not subscribed = (275-265) x 45 = 450

Value of options forfeited = 450 x ₹ 20 = ₹ 9,000.

8

Financial Reporting for Financial Institutions

UNIT 1: MUTUAL FUNDS

Note: This chapter is also discussed in Paper 2: Strategic Financial Management of Final Course Study Material. In Financial Reporting Paper, students should emphasise upon accounting aspects of net present value and valuation only. Strategic Financial Management Paper deals with return aspect of mutual funds.

1.1 Definition

A Mutual Fund is a trust that pools the savings of a number of investors who share a common financial goal. The money thus collected is then invested in capital market instruments such as shares, debentures and other securities. The income earned through these investments and the capital appreciation realized is shared by its unit holders in proportion to the number of units owned by them.

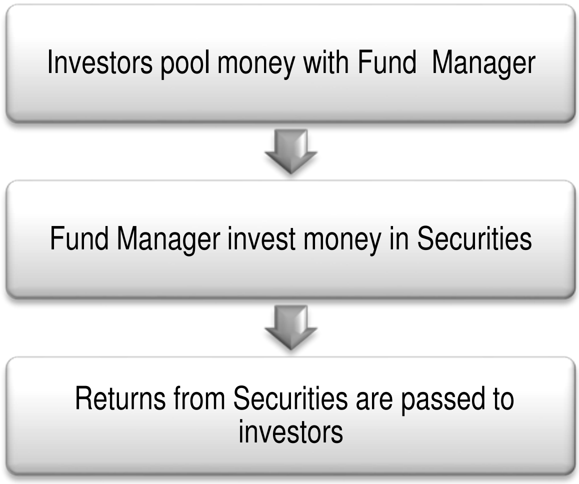
Different investment avenues are available to investors. Mutual funds also offer good investment opportunities to the investors. Like all investments, they also carry certain risks. The investors should compare the risks and expected yields after adjustment of tax on various instruments while taking investment decisions.

Investments in securities are spread across a wide cross-section of industries and sectors and thus the risk is reduced. Diversification reduces the risk because all stocks may not move in the same direction in the same proportion at the same time. Mutual fund issues units to the investors in accordance with quantum of money invested by them. Investors of mutual funds are known as unitholders.

The profits or losses are shared by the investors in proportion to their investments. The mutual funds normally come out with a number of schemes with different investment objectives which are launched from time to time. A mutual fund is required to be registered with Securities and Exchange Board of India (SEBI) which regulates securities markets before it can collect funds from the public.

As per section 2(q) of Securities and Exchange Board of India (SEBI) (Mutual Funds) Regulations, 1996, "Mutual Fund" means a fund established in the form of a trust to raise monies through the sale of units to the public or a section of the public under one or more schemes for investing in securities, including money market instruments or gold or gold related instruments or real estate assets.

The following flow chart describes broadly the working of a mutual fund:



1.2 History of Mutual Funds in India and Role of SEBI in Mutual Funds Industry

Unit Trust of India was the first mutual fund set up in India in the year 1963. In early 1990s, Government allowed public sector banks and institutions to set up mutual funds. In the year 1992, Securities and exchange Board of India (SEBI) Act was passed. The objectives of SEBI are – to protect the interest of investors in securities and to promote the development of and to regulate the securities market.

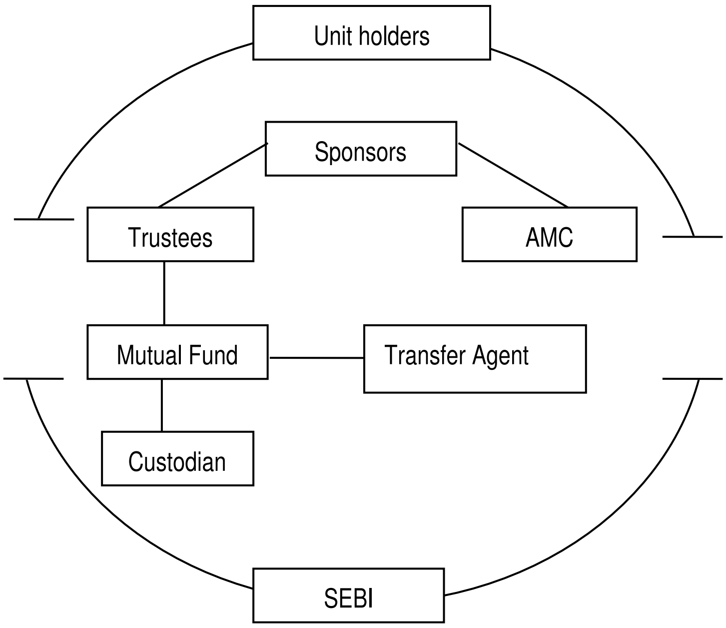
As far as mutual funds are concerned, SEBI formulates policies and regulates the mutual funds to protect the interest of the investors. SEBI notified regulations for the mutual funds in 1993. Thereafter, mutual funds sponsored by private sector entities were allowed to enter the capital market. The regulations were fully revised in 1996 and have been amended thereafter from time to time. SEBI has also issued guidelines to the mutual funds from time to time to protect the interests of investors.

All mutual funds whether promoted by public sector or private sector entities including those promoted by foreign entities are governed by the same set of Regulations. There is no distinction in regulatory requirements for these mutual funds and all are subject to monitoring and inspections by SEBI. The risks associated with the schemes launched by the mutual funds sponsored by these entities are of similar type.

1.3 Organisation of Mutual Funds

In India, mutual funds are regulated by SEBI (Mutual Funds) Regulations, 1996. A mutual fund is set up in the form of a trust, which has sponsor, trustees, asset management company (AMC) and custodian. The trust is established by a sponsor or more than one sponsor who is like promoter of a company. The trustees of the mutual fund hold its property for the benefit of the unitholders. Asset Management Company (AMC) approved by SEBI manages the funds by making investments in various types of securities. Custodian, who is registered with SEBI, holds the securities of various schemes of the fund in its custody. The trustees are vested with the general power of superintendence and direction over AMC. They monitor the performance and compliance of SEBI Regulations by the mutual fund.

SEBI Regulations require that at least two thirds of the directors of trustee company or board of trustees must be independent i.e. they should not be associated with the sponsors. Also, 50% of the directors of AMC must be independent. All mutual funds are required to be registered with SEBI before they launch any scheme.



Here, “Asset management company” means a company formed and registered under the Companies Act, 1956 or 2013 and approved as such by the Securities and Exchange Board of India to manage the funds of a mutual fund.

“Unit” means the interest of the unit holders in a scheme, which consists of each unit representing one undivided share in the assets of a scheme;

Money market instruments provide for borrowers' short-term needs and gives needed liquidity to lenders. Money market instruments includes commercial papers, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, and any other like instruments as specified by the Reserve Bank of India from time to time.

1.4 Net Asset Value (NAV) of a Scheme

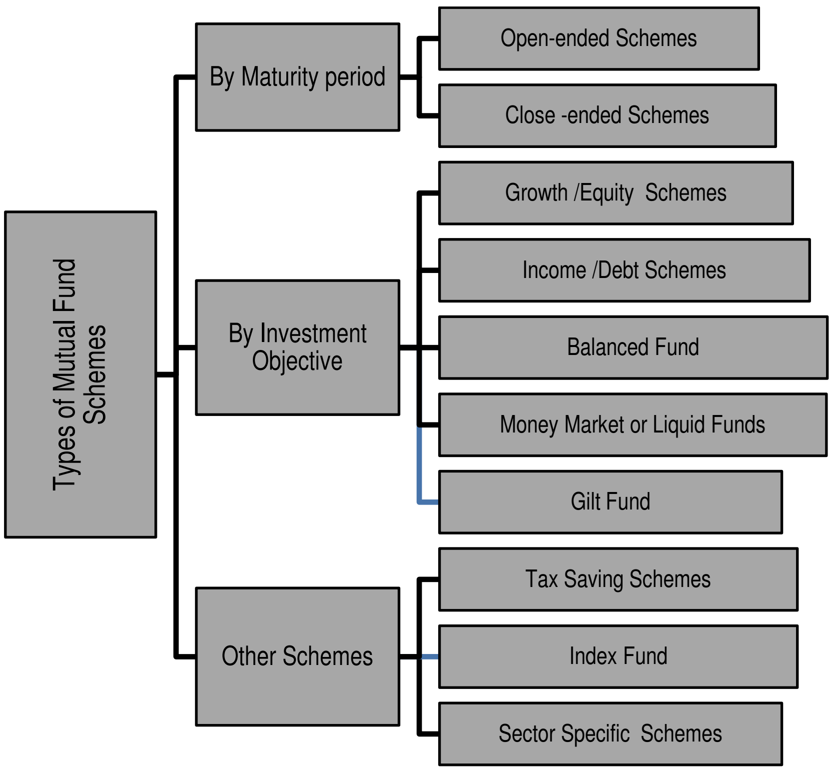
The performance of a particular scheme of a mutual fund is denoted by Net Asset Value (NAV).

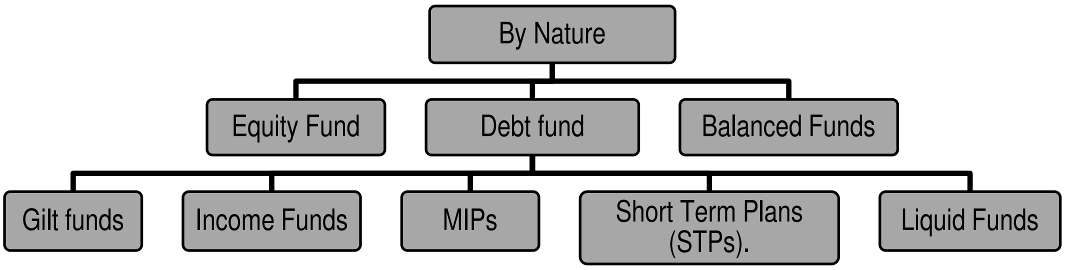
Mutual funds invest the money collected from the investors in securities markets. In simple words, Net Asset Value is the market value of the securities held by the scheme. Since market value of securities changes every day, NAV of a scheme also varies on day to day basis. The NAV per unit is the market value of securities of a scheme divided by the total number of units of the scheme on any particular date.

For example, if the market value of securities of a mutual fund scheme is Rs. 200 lakhs and the mutual fund has issued 10 lakhs units of Rs. 10 each to the investors, then the NAV per unit of the fund is Rs.20. NAV is required to be disclosed by the mutual funds on a regular basis - daily or weekly - depending on the type of scheme.

1.5 Types of Mutual Fund Schemes

Wide variety of Mutual Fund Schemes exists to cater to the needs of the investors. There are over hundreds of mutual funds scheme to choose from. The charts given below will give an overview of existing types of schemes:





All the above mentioned schemes have been discussed in brief in the succeeding paragraphs.

By Maturity Period

A mutual fund scheme can be classified into open-ended scheme or close-ended scheme depending on its maturity period.

1. **Open - Ended Schemes:** An open-end fund is one that is available for subscription and repurchase all through the year. These do not have a fixed maturity. Investors can conveniently buy and sell units at Net Asset Value ("NAV") related prices which are declared on a daily basis. The key feature of open-end schemes is liquidity.

2 **Close - Ended Schemes:** These schemes have a pre-specified maturity period. One can invest directly in the scheme at the time of the initial issue. Depending on the structure of the scheme there are two exit options available to an investor after the initial offer period closes. Investors can transact (buy or sell) the units of the scheme on the stock exchanges where they are listed. The market price at the stock exchanges could vary from the net asset value (NAV) of the scheme on account of demand and supply situation, expectations of unit holder and other market factors. Alternatively some close-ended schemes provide an additional option of selling the units directly to the Mutual Fund through periodic repurchase at the schemes NAV; however one cannot buy units and can only sell units during the liquidity window. SEBI Regulations ensure that at least one of the two exit routes is provided to the investor.

3. **Interval Schemes:** Interval Schemes are that scheme, which combines the features of open-ended and close-ended schemes. The units may be traded on the stock exchange or may be open for sale or redemption during pre-determined intervals at NAV related prices.

By Investment Objective

A scheme can also be classified as growth scheme, income scheme, or balanced scheme considering its investment objective. Such schemes may be open-ended or close-ended schemes as described earlier. Such schemes may be classified mainly as follows:

1. **Equity fund:** The aim of growth funds is to provide capital appreciation over the medium to long- term. Such schemes normally invest a major part of their corpus in equities. Such funds have comparatively high risks. These schemes provide different options to the investors like dividend option, capital appreciation, etc. and the investors may choose an option depending on their preferences. The investors must indicate the option in the application form. The mutual funds also allow the investors to change the options at a later date. Growth schemes are good for investors having a long-term outlook seeking appreciation over a period of time.

The Equity Funds are sub-classified depending upon their investment objective, as follows:

- Diversified Equity Funds
- Mid-Cap Funds
- Sector Specific Funds
- Tax Savings Funds (ELSS)

Equity investments are meant for a longer time horizon, thus Equity funds rank high on the risk-return matrix. Growth Schemes are also known as equity schemes. The aim of these schemes is to provide capital appreciation over medium to long term. These schemes normally invest a major part of their fund in equities and are willing to bear short-term decline in value for possible future appreciation.

- **Income Schemes**: Income Schemes are also known as debt schemes. The aim of these schemes is to provide regular and steady income to investors. These schemes generally invest in fixed income securities such as bonds and corporate debentures. Capital appreciation in such schemes may be limited.
- **Balanced Schemes:** Balanced Schemes aim to provide both growth and income by periodically distributing a part of the income and capital gains they earn. These schemes invest in both shares and fixed income securities, in the proportion indicated in their offer documents (normally 50:50).
- **Money Market Schemes**: Money Market Schemes aim to provide easy liquidity, preservation of capital and moderate income. These schemes generally invest in safer, short-term instruments, such as treasury bills, certificates of deposit, commercial paper and inter-bank call money.

2. Debt funds: The objective of these Funds is to invest in debt papers. Government authorities, private companies, banks and financial institutions are some of the major issuers of debt papers. By investing in debt instruments, these funds ensure low risk and provide stable income to the investors. These funds are not affected because of fluctuations in equity markets. However, opportunities of capital appreciation are also limited in such funds. The NAVs of such funds are affected because of change in interest rates in the country. If the interest rates fall, NAVs of such funds are likely to increase in the short run and vice versa. However, long term investors may not bother about these fluctuations. Debt funds are further classified as:

- **Income Funds**: Invest a major portion into various debt instruments such as bonds, corporate debentures and Government securities.
- **Monthly Income Plans (MIPs)**: Invests maximum of their total corpus in debt instruments while they take minimum exposure in equities. It gets benefit of both equity and debt market. These scheme ranks slightly high on the risk-return matrix when compared with other debt schemes.
- **Short Term Plans (STPs)**: Meant for investment horizon for three to six months. These funds primarily invest in short term papers like Certificate of Deposits (CDs) and Commercial Papers (CPs). Some portion of the corpus is also invested in corporate debentures.

- **Liquid Funds**: Also known as Money Market Schemes, These funds provides easy liquidity and preservation of capital. These schemes invest in short-term instruments like Treasury Bills, inter-bank call money market, CPs and CDs. These funds are meant for short-term cash management of corporate houses and are meant for an investment horizon of 1 day to 3 months. These schemes rank low on risk-return matrix and are considered to be the safest amongst all categories of mutual funds.

3. Balanced funds: As the name suggest they, are a mix of both equity and debt funds. They invest in both equities and fixed income securities, which are in line with pre-defined investment objective of the scheme. These schemes aim to provide investors with the best of both the worlds. Equity part provides growth and the debt part provides stability in returns. They generally invest 40-60% in equity and debt instruments. These funds are also affected because of fluctuations in share prices in the stock markets. However, NAVs of such funds are likely to be less volatile compared to pure equity funds.

4. **Money Market or Liquid Fund:** These funds are also income funds and their aim is to provide easy liquidity, preservation of capital and moderate income. These schemes invest exclusively in safer short-term instruments such as treasury bills, certificates of deposit, commercial paper and inter-bank call money, government securities, etc. Returns on these schemes fluctuate much less compared to other funds. These funds are appropriate for corporate and individual investors as a means to park their surplus funds for short periods.

5. **Gilt Funds**: These funds invest exclusively in government securities. Government securities have no default risk. NAVs of these schemes also fluctuate due to change in interest rates and other economic factors as is the case with income or debt oriented schemes.

By Other Schemes

1. **Tax Saving Schemes:** Tax-saving schemes offer tax rebates to the investors under tax laws prescribed from time to time. Under Sec. 80C (2) of the Income Tax Act, contributions made to any notified Equity Linked Savings Scheme (ELSS) are eligible for rebate. Pension schemes launched by the mutual funds also offer tax benefits. These schemes are growth oriented and invest pre-dominantly in equities. Their growth opportunities and risks associated are like any equity-oriented scheme.

2. **Index Schemes:** Index schemes attempt to replicate the performance of a particular index such as the BSE Sensex or the NSE 50. The portfolio of these schemes will consist of only those stocks that constitute the index. The percentage of each stock to the total holding will be identical to the stocks index weightage. And hence, the returns from such schemes would be more or less equivalent to those of the Index.

3. **Sector Specific Schemes:** These are the funds/schemes which invest in the securities of only those sectors or industries as specified in the offer documents. e.g. Pharmaceuticals, Software, Fast Moving Consumer Goods (FMCG), Petroleum stocks, etc. The returns in these funds are dependent on the performance of the respective sectors/industries. While these funds may give higher returns, they are riskier compared to diversified funds. Investors need to keep a watch on the performance of those sectors/industries and must exit at an appropriate time.

1.6 Fund of Funds (FoF) scheme

A scheme that invests primarily in other schemes of the same mutual fund or other mutual funds is known as a FoF scheme. An FoF scheme enables the investors to achieve greater diversification through one scheme. It spreads risks across a greater universe.

1.7 Load or No-load Fund

A Load Fund is one that charges a percentage of NAV for entry or exit. That is, each time one buys or sells units in the fund, a charge will be payable. This charge is used by the mutual fund for marketing and distribution expenses. Suppose the NAV per unit is Rs.10. If the entry as well as exit load charged is 1%, then the investors who buy would be required to pay Rs.10.10 and those who offer their units for repurchase to the mutual fund will get only Rs.9.90 per unit. The investors should take the loads into consideration while making investment as these affect their yields/returns. However, the investors should also consider the performance track record and service standards of the mutual fund which are more important. Efficient funds may give higher returns in spite of loads.

A no-load fund is one that does not charge for entry or exit. It means the investors can enter the fund/scheme at NAV and no additional charges are payable on purchase or sale of units.

1.8 Frequently Used Terms

Net Asset Value (NAV): Net asset value is the market value of the assets of the scheme minus its liabilities. The per unit NAV is the net asset value of the scheme divided by the number of units outstanding on the valuation date.

Sale Price (SP): It is the price you pay when you invest in a scheme; also called offer price. It may include a sales load.

Repurchase Price: It is the price at which units under open-ended schemes are repurchased by the Mutual Fund. Such prices are NAV related.

Redemption Price: It is the price at which close-ended schemes redeem their units on maturity. Such prices are NAV related.

Sales Load: It is a charge collected by a scheme when it sells the units. Also called ‘Front-end’ load. Schemes that do not charge a load are called ‘No Load’ schemes.

Repurchase or ‘Back-end’ Load: It is a charge collected by a scheme when it buys back the units from the unit holders.

The Association of Mutual Funds in India (AMFI): The Association is dedicated to developing the Indian Mutual Fund Industry on professional, healthy and ethical lines and to enhance and maintain standards in all areas with a view to protecting and promoting the interests of mutual funds and their unit holders.

1.9 SEBI Guidelines for Mutual Funds in India

Application for registration An application for registration of a mutual fund shall be made to the Board in Form A by the sponsor.

Furnishing information

The Board may require the sponsor to furnish such further information or clarification as may be required by it.

Eligibility criteria

(a) For the purpose of grant of a certificate of registration, the applicant has to fulfill the following, namely, the sponsor should have a sound track record and general reputation of fairness and integrity in all his business transactions;

Explanation: For the purposes of this clause "sound track record" shall mean the sponsor should,-

(i) be carrying on business in financial services for a period of not less than five years; and the net worth is positive in all the immediately preceding five years; and the net worth in the immediately preceding year is more than the capital contribution of the sponsor in the asset management company; and

(ii) the sponsor has profits after providing for depreciation, interest and tax in three out of the immediately preceding five years, including the fifth year.

(b) applicant is a fit and proper person.

(c) in the case of an existing mutual fund, such fund is in the form of a trust and the trust deed has been approved by the Board;

(d) the sponsor has contributed or contributes at least 40% to the net worth of the asset management company;

Provided that any person who holds 40% or more of the net worth of an asset management company shall be deemed to be a sponsor and will be required to fulfill the eligibility criteria specified in these regulations;

(e) the sponsor or any of its directors or the principal officer to be employed by the mutual fund should not have been guilty of fraud or has not been convicted of an offense involving moral turpitude or has not been found guilty of any economic offence.

(f) appointment of trustees to act as trustees for the mutual fund in accordance with the provisions of the regulations;

(g) appointment of asset management company to manage the mutual fund and operate the scheme of such funds in accordance with the provisions of these regulations;

(h) Appointment of a custodian in order to keep custody of the securities and carry out the custodian activities as may be authorized by the trustees.

The Board may register the mutual fund and grant a certificate in Form B on the applicant paying the registration fee as specified in Second Schedule.

Trust Deed to be registered under the Registration Act

A mutual fund shall be constituted in the form of a trust and the instrument of trust shall be in the form of a deed, duly registered under the provisions of the Indian Registration Act, 1908 (16 of 1908) executed by the sponsor in favour of the trustees named in such an instrument.

Approval of the Board for appointment of trustee

No trustee shall initially or any time thereafter be appointed without prior approval of the Board. The existing trustees of any mutual fund may form a trustee company to act as a trustee with the prior approval of the Board.

Rights and obligations of the trustees

The trustees and the asset management company shall with the prior approval of the Board enter into an investment management agreement. The trustees shall ensure before the launch of any scheme that the asset management company has;-

(a) systems in place for its back office, dealing room and accounting;

(b) appointed all key personnel including fund manager(s) for the scheme(s) and submitted their bio-data which shall contain the educational qualifications, past experience in the securities market with the trustees, within 15 days of their appointment;

(c) appointed auditors to audit its accounts;

(d) appointed a compliance officer to comply with regulatory requirement and to redress investor grievances;

(e) appointed registrars and laid down parameters for their supervision;

(f) prepared a compliance manual and designed internal control mechanisms including internal audit systems;

(g) specified norms for empanelment of brokers and marketing agents.

The trustees shall ensure that an asset management company has been diligent in empanelling the brokers, in monitoring securities transactions with brokers and avoiding undue concentration of business with any broker.

Each trustee shall file the details of his transactions of dealing in securities with the Mutual Fund on a quarterly basis.

The trustees shall be accountable for, and be the custodian of, the funds and Trustees shall exercise due diligence as under:

1. The Trustees shall be discerning in the appointment of the directors on the Board of the asset management company.
2. The trustee shall ensure that the trust property is properly protected, held and administered by proper persons and by a proper number of such persons.
3. The trustee shall ensure that all service providers are holding appropriate registrations from the Board or concerned regulatory authority.

4. The Trustees shall arrange for test checks of service contracts.
5. Trustees shall immediately report to Board of any special developments in the mutual fund.
6. The Trustees shall: obtain internal audit reports at regular intervals from independent auditors appointed by the Trustees.
7. Obtain compliance certificates at regular intervals from the asset management company.
8. Hold meeting of trustees more frequently to review the operation of the AMC function and auditor's report in order to take appropriate action.

1.10 Annual Report

Every mutual fund or the asset management company is required to prepare in respect of each financial year an annual report and annual statement of accounts of the schemes and the fund as specified in Eleventh Schedule.

As per Regulation 51, the financial year, for all the schemes, shall end as of March 31st of each year.

The scheme wise Annual Report of a mutual fund or an abridged summary thereof shall be mailed to all the unit holders as soon as may be but not later than four months from the date of closure of the relevant accounts year.

According to Eleventh Schedule, the annual report shall contain –

(i) Report of the board of Trustees on the operations of the various schemes of the fund and the fund as a whole during the year and the future outlook of the fund;

(ii) Balance Sheet and Revenue Account in accordance with paras 2, 3 and 4, respectively of this Schedule;

(iii) Auditor's Report in accordance with paragraph 5 of this Schedule;

(iv) Brief statement of the Board of Trustees on the following aspects, namely:-

   (a) Liabilities and responsibilities of the Trustees and the Settlor;

   (b) Investment objective of each scheme;

   (c) Basis and policy of investment underlying the scheme;

   (d) If the scheme permits investment partly or wholly in shares, bonds, debentures and other scrips or securities whose value can fluctuate, a statement on the following lines:

   "The price and redemption value of the units, and income from them, can go up as well as down with the fluctuations in the market value of its underlying investments in securities or fair value in underlying real estate asset, as the case may be."

   (e) Comments of the Trustees on the performance of the scheme, with full justification.

(v) Statement giving relevant perspective historical 'per unit' statistics in accordance with paragraph 6 of this Schedule;

(vi) Statement on the following lines:

"On written request, present and prospective unit holders /investors can obtain copy of the trust deed, the annual report [at a price] and the text of the relevant scheme."

1.11 Restriction on Investments

As per Seventh Schedule, a mutual fund scheme shall not invest more than ***10%*** of its NAV in debt instruments issued by a single issuer which are rated not below investment grade by a credit rating agency authorised to carry out such activity under the Act. Such investment limit may be extended to ***12%*** of the NAV of the scheme with the prior approval of the Board of Trustees and the Board of asset management company. Provided that such limit shall not be applicable for investments in government securities and money market instruments.

1. A mutual fund scheme shall not invest more than 10% of its NAV in unrated debt instruments issued by a single issuer and the total investment in such instruments shall not exceed 25% of the NAV of the scheme. All such investments shall be made with the prior approval of the Board of Trustees and the Board of asset management company.
2. No mutual fund under all its schemes should own more than ten per cent of any company's paid up capital carrying voting rights.
3. Transfers of investments from one scheme to another scheme in the same mutual fund shall be allowed only if, -
   (a) such transfers are done at the prevailing market price for quoted instruments on spot basis.

   [Explanation - "spot basis" shall have same meaning as specified by stock exchange for spot transactions.]

   (b) the securities so transferred shall be in conformity with the investment objective of the scheme to which such transfer has been made.
4. A scheme may invest in another scheme under the same asset management company or any other mutual fund without charging any fees, provided that aggregate inter scheme investment made by all schemes under the same management or in schemes under the management of any other asset management company shall not exceed 5% of the net asset value of the mutual fund.
5. Every mutual fund shall buy and sell securities on the basis of deliveries and shall in all cases of purchases, take delivery of relevant securities and in all cases of sale, deliver the securities.

   Provided that a mutual fund may engage in short selling of securities in accordance with the framework relating to short selling and securities lending and borrowing specified by the Board. Provided further that a mutual fund may enter into derivatives transactions in a recognized stock exchange, subject to the framework specified by the Board. Provided further that sale of government security already contracted for purchase shall be permitted in accordance with the guidelines issued by the Reserve Bank of India in this regard.

6. Every mutual fund shall, get the securities purchased or transferred in the name of the mutual fund on account of the concerned scheme, wherever investments are intended to be of long term nature.
7. Pending deployment of funds of a scheme in securities in terms of investment objectives of the scheme a mutual fund may invest them in short term deposits of scheduled commercial banks.
8. No mutual fund [scheme] shall make any investment in;
   (a) any unlisted security of an associate or group company of the sponsor; or
   (b) any security issued by way of private placement by an associate or group company of the sponsor; or
   (c) the listed securities of group companies of the sponsor which is in excess of 25% of the net assets.
9. No mutual fund scheme shall invest more than 10 per cent of its NAV in the equity shares or equity related instruments of any company.

   Provided that, the limit of 10 per cent shall not be applicable for investments [in case of] index fund or sector or industry specific scheme.
10. A mutual fund scheme shall not invest more than 5% of its NAV in the unlisted equity shares or equity related instruments in case of open ended scheme and 10% of its NAV in case of close ended scheme.
11. A fund of funds scheme shall be subject to the following investment restrictions:
    a. A fund of funds scheme shall not invest in any other fund or funds scheme;
    b. A fund of funds scheme shall not invest its assets other than in schemes of mutual funds, except to the extent of funds required for meeting the liquidity requirements for the purpose of repurchases or redemptions, as disclosed in the offer document of fund of funds scheme.

1.12 Cost of Investments

According to Ninth Schedule of SEBI (Mutual Fund) Regulations, 1996, cost of investments acquired or purchased should include brokerage, stamp charges and any charge customarily included in the broker's bought note. In respect of privately placed debt instruments any front – end discount offered should be deducted from the cost of the investment.

As per the Eleventh Schedule of the SEBI Regulations, in respect of all interest – bearing investments, income must be accrued on a day-to-day basis as it is earned. Therefore, when such investments are purchased, interest paid for the period from the last interest due date upto the date of purchase must not be treated as a cost of purchase but must be debited to Interest Recoverable Account. Similarly, interest received at the time of sale for the period from the last interest due date upto the date of sale must not be treated as an addition to sale value but must be credited to Interest Recoverable Account.

In determining the holding cost of investments and the gains or loss on sale of investments, the "average cost" method must be followed. As per Regulation 51A, the exit load charged, if any, shall be credited to the scheme.

1.13 Investment Valuation Norms

Eight Schedule of the SEBI (Mutual Fund) Regulations, 1996 states the Investment Valuation Norms. NAV of a scheme as determined by dividing the net assets of the scheme by the number of outstanding units on the valuation date.

1. Traded Securities:-

(i) The securities shall be valued at the last quoted closing price on the stock exchange.

(ii) When the securities are traded on more than one recognised stock exchange, the securities shall be valued at the last quoted closing price on the stock exchange where the security is principally traded. It would be left to the asset management company to select the appropriate stock exchange, but the reasons for the selection should be recorded in writing. There should however be no objection for all scrips being valued at the prices quoted on the stock exchange where a majority in value of the investments is principally traded.

(iii) Once a stock exchange has been selected for valuation of a particular security, reasons for change of the exchange shall be recorded in writing by the asset management company.

(iv) When on a particular valuation day, a security has not been traded on the selected stock exchange, the value at which it is traded on another stock exchange may be used.

(v) When a security is not traded on any stock exchange on a particular valuation day, the value at which it was traded on the selected stock exchange or any other stock exchange, as the case may be, on the earliest previous day may be used provided such date is not more than sixty days prior to the valuation date.

2. `Non-traded Securities':-

(i) When a security is not traded on any stock exchange for a period of thirty days prior to the valuation date, the scrip must be treated as a 'non-traded' scrip.

(ii) Non-traded securities shall be valued "in-good faith" by the asset management company on the basis of appropriate valuation methods based on the principles approved by the Board of the asset management company. [For example, non-traded debt and money market securities of short term maturities, as may be specified by the Board from time to time, may be valued on amortization basis provided that such valuation shall be reflective of the fair value of the securities and all investors are treated fairly.] Such decision of the Board must be documented in the Board minute and the supporting data in respect of each security so valued must be preserved. The methods used to arrive at values "in-good faith" shall be periodically reviewed by the trustees and reported upon by the auditors as "fair and reasonable" in their report on the annual accounts of the fund. For the purpose of valuation of non-traded securities, the following principles should be adopted:-

(a) Equity instruments shall generally be valued on the basis of capitalization of earnings solely or in combination with the net asset value, using for the purposes of capitalization, the price or earning ratios of comparable traded securities and with an appropriate discount for lower liquidity;

(b) Debt instruments shall generally be valued on a yield to maturity basis, the capitalization factor being determined for comparable traded securities and with an appropriate discount for lower liquidity;

(c) Investments in call money, bills purchased under rediscounting scheme and short term deposits with banks shall be valued at cost plus accrual; other money market instruments shall be valued at the yield at which they are currently traded. For this purpose, non-traded instruments that is instruments not traded for a period of seven days will be valued at cost plus interest accrued till the beginning of the day plus the difference between the redemption value and the cost spread uniformly over the remaining maturity period of the instruments; Government securities will be valued at yield to maturity based on the prevailing market rate.

(d) In respect of convertible debentures and bonds, the non-convertible and convertible components shall be valued separately. The non-convertible component should be valued on the same basis as would be applicable to a debt instrument. The convertible component should be valued on the same basis as would be applicable to an equity instrument. If, after conversion the resultant equity instrument would be traded pari passu with an existing instrument which is traded, the value of the latter instrument can be adopted after an appropriate discount for the non-tradability of the instrument during the period preceding the conversion. While valuing such instruments, the fact whether the conversion is optional should also be factored in;

(e) In respect of warrants to subscribe for shares attached to instruments, the warrants can be valued at the value of the share which would be obtained on exercise of the warrant as reduced by the amount which would be payable on exercise of the warrant. A discount similar to the discount to be determined in respect of convertible debentures (as referred to in sub-paragraph (d) above) must be deducted to account for the period which must elapse before the warrant can be exercised;

(f) Where instruments have been bought on `repo' basis, the instrument must be valued at the resale price after deduction of applicable interest upto date of resale. Where an instrument has been sold on a `repo' basis, adjustment must be made for the difference between the repurchase price (after deduction of applicable interest upto date of repurchase) and the value of the instrument. If the repurchase price exceeds the value, the depreciation must be provided for and if the repurchase price is lower than the value, credit must be taken for the appreciation.

3. Until they are traded, the value of the "rights" shares should be calculated as:

$$Vr = \frac{n}{m} \times (Pex - Pof)$$

Where	Vr	=	Value of rights
	n	=	no. of rights offered
	m	=	no.of original shares held
	Pex	=	Ex-rights price
	Pof	=	Rights Offer Price

Where the rights are not treated pari passu with the existing shares, suitable adjustment should be made to the value of rights. Where it is decided not to subscribe for the rights but to renounce them and renunciations are being traded, the rights can be valued at the renunciation value.

Value of Gold:
